Edgar L. Metts, Franklin, Tenn.

Application May 22, 1947, Serial No. 749,929

3 Claims. (Cl. 173—361)

3. An electrical connector comprising a hollow tapered core of insulating material, a flexible tube having a flared end to fit over the small end of said tapered core, a wafer of insulating material, a plurality of contact pins mounted on said wafer, a clamp having a base adapted to encircle and tightly grip the flared portion of the flexible tube, said clamp being of crown-like configuration and having a plurality of prongs extending from the base adapted to overlay the outside of said core, and means on the end of each of said prongs for pressing said wafer against said core.

2,445,634

SEALED SLIDE CONTAINER

George Arlington Moore, New York, N. Y., assignor to National Biscuit Company, New York, N. Y., a corporation of New Jersey

Application December 27, 1943, Serial No. 515,689

6 Claims. (Cl. 229—9)

1. A package of the class described comprising a tray having a bottom, two sides and open top, an inturned flap at one end of each side, each flap having a cut therein to provide a latch, an end panel connected to the end of the bottom adjacent said flaps and forming an end of the tray, said end panel lying outside said flaps, a tongue extending from each side of the end panel, said tongues extending through the respective flap cuts and being gripped by said latches, said latches permitting the tongues to be withdrawn for opening the end of the tray and to be re-inserted to reclose the end, a sealed wrapper enclosing the tray, a tear line associated with the wrapper adjacent the said end panel of the tray for severing the wrapper, a sleeve within which the wrapped tray has a sliding fit, said tray being longer than the sleeve whereby the tear line will be outside the sleeve, and means for securing the wrapped tray within the sleeve.

2,445,635

METHOD OF AND MACHINE FOR PACKING POWDER FOR SPARK PLUGS

Howard Brandeberry Munger and Harold Yost Lafferty, Fostoria, Ohio

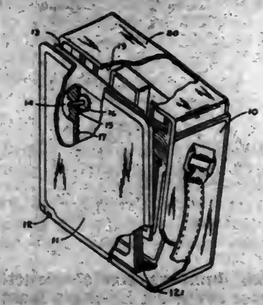
Application January 20, 1944, Serial No. 519,610

6 Claims. (Cl. 18—1)

1. The method of positioning granular compactible material into a holding and sealing body between a pair of members having a narrow annular space therebetween, comprising reciprocating a ram through a loose layer of the granular material, holding the members in predetermined relation adjacent the ram with the annular space opening downwardly to allow the ram to move upwardly into said annular space, carrying granular material into the annular space by a transverse horizontal face on the ram by moving said ram through the layer of loose granular material and into said space with sufficient force to compact the granular material in said space whereby the granular material is retained in position in the annular space between the members.

5. In a machine of the class described, a first holding means for cooperating with an insulator of a spark plug, funnel-like means surrounding the said first holding means having a floor in spaced relation with said holding means, said funnel means being adapted to contain compactible powder, a centering spindle projecting

through an aperture in the floor of said funnel-like means to cooperate with the lower end of an electrode mounted in said insulator, tubular ram means adapted to reciprocate on said spindle moving through said aperture in the floor to cooperate with the electrode and insulator adjacent the first holding means, a second holding means longitudinally movable along the axis of the spindle to cooperate with the other end of the electrode to hold the electrode in cooperative relation with the spindle, means to move the second holding means into and from cooperative relation with the electrode, and means to reciprocate the ram through the compactible powder into cooperative relation with the electrode and insulator whereby the ram carries small increments of powder into position between the electrode and insulator and compacting the same to form a holding and sealing body.



2,445,636

BED LATCH FOR CAMERAS

Russell E. Prentice, Celina, Ohio, assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application July 3, 1946, Serial No. 681,191

3 Claims. (Cl. 95—40)

1. In a camera, the combination of a case one side of which is hinged and movable to and from

an open or operative position in which it constitutes a bed, a lens carrying member movable along said bed, means positioned to remain outside the casing when the bed is closed, for moving said lens carrying member along the bed, complementary means at one side of the case with which said movable member is engaged when the camera casing is closed and by which engagement the bed is latched in closed position, resilient means for retaining said movable member in engagement with said complementary means in the casing, said means for moving the lens carrying member being effective for withdrawing it from the complementary engaging means when the casing is to be unlatched and opened.

2,445,037

ROTARY GRINDER WITH STATIONARY PERFORATED PLATE

Grant M. Richard, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey

Application February 26, 1945, Serial No. 579,728

2 Claims. (Cl. 146—132)

1. In a device of the class described, in combination, a chopper cylinder having a bore at its discharge end, a perforated plate adapted to be received in said bore, said perforated plate having a flat cut in its otherwise circular periphery, there being a radially extending arcuate recess cut in the wall of said bore, the radius of said recess being substantially smaller than the radius of said bore, and a segmentally shaped key secured in said recess and adapted to engage the flat on said plate.

2,445,038

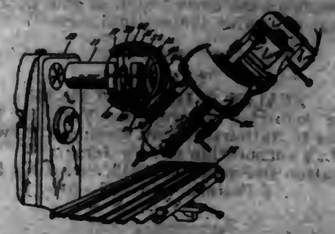
BOTTOM DUMPING MATERIAL HANDLING BOX

Edmund W. Riemenschneider and Lindsey West Shea, Canton, Ohio, assignors to The Union Metal Manufacturing Company, Canton, Ohio, a corporation of Ohio

Application July 10, 1946, Serial No. 682,498

3 Claims. (Cl. 214—117)

1. Bottom dumping box construction for use with a power lift truck having a mast and a lifting element movable thereon, including a material carrying platform forming the bottom wall of the box and adapted for resting on said lifting element, an abutment member on the front of said platform for abutting the outer end of said lifting element and preventing movement of said platform toward said mast, an open-ended box standing on end on said platform, hinge means connecting the rear side of the box to the rear edge of the platform, and hanger means at the top of said rear side for hanging the box in elevated position on said mast, whereby lowering the lifting element will move the hinge means away from the mast to lower the front edge of the platform and simultaneously raise the front of the box.



2,445,039

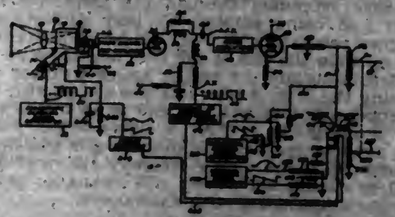
TOOL MOUNTING BRACKET

John Rassak, Chicago, Ill.

Application July 19, 1946, Serial No. 684,992

7 Claims. (Cl. 248—278)

1. A mounting construction for adjustably mounting a tool above a work-supporting table comprising a member having a substantially annular rim portion, means for rotatably mounting said member about an axis parallel to the surface of said table with the general plane of said rim portion capable of being positioned parallel to the surface of said table, and a supporting member for connection with said tool mounted on said rim portion and adjustable thereabout.



2,445,040

DARK SPOT CORRECTOR

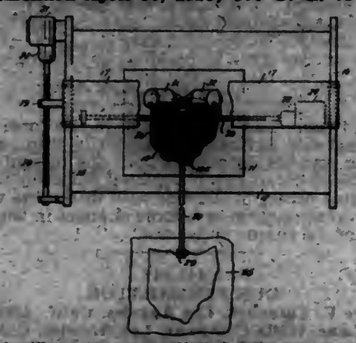
Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application May 12, 1943, Serial No. 486,766

9 Claims. (Cl. 178—7.2)

1. A television transmitting system including a television pickup tube of the electron storage type having a light responsive electrode on which an optical image may be projected, means for scanning the light responsive electrode to produce image signals which inherently include undesired dark spot signals, means for amplifying the produced image and dark spot signals, an electron switching circuit, means for operating the electron switching circuit at line scanning rate for re-setting the zero level of the amplified signals to a predetermined average voltage level, means for cyclically altering the voltage level at field scanning rate, thereby to eliminate at least a portion of the undesired dark spot signals, and common means for varying the degree of amplification and for varying the degree of cyclic alteration of the voltage level.

2,445,041



SILHOUETTE REPRODUCING MACHINE

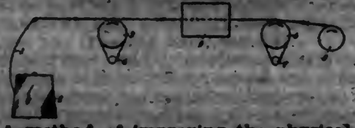
Louis A. Schein, Dayton, Ohio

Application January 1, 1945, Serial No. 570,937

3 Claims. (Cl. 33—23)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A silhouette controlled duplicating machine of the character described comprising, in combination, a support for the silhouette; means adjacent to said support and movable over the same in two opposite directions; other means carried by said movable means and movable relative thereto in two opposite directions transverse to the path of movement of the first-mentioned movable means; a pair of photocells carried on the second-mentioned movable means to scan portions of the silhouette slightly spaced apart; a pair of reversible motors for driving said two movable means independently; a discriminating circuit controlled by said photocells and including a pair of relays each actuated by separate photocells for connecting a power source to one motor for forward operation, for reverse operation and also for disconnecting said power source from said one motor; and a third relay controlled by said discriminating circuit for connecting said power source to the other motor and embodying a motor reversing means for reversing the direction of both motors after an interval of time during which said one motor is continuously connected for either forward or reverse operation.



2,445,042

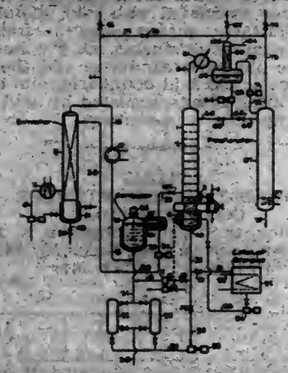
METHOD OF TREATING ORIENTED ACRYLONITRILE STRUCTURES

Shirleigh Silverman, Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application July 22, 1943, Serial No. 496,296

5 Claims. (Cl. 8—130.1)

1. A method of improving the physical properties of an oriented shaped article formed from a polymer containing a major proportion of acrylonitrile which comprises heating the shaped article in a relaxed, free-to-shrink condition at a temperature of 80° C. to 200° C. and maintaining the shrunken shaped article under a tension insufficient to stretch said shrunken article at a temperature of 80° C. to 300° C. for at least one hour, both of said heating steps being carried out in the presence of an inert heating medium.



2,445,043

METHOD AND APPARATUS FOR DISTILLATION OF MIXTURES FORMING TWO LIQUID PHASES

Mott Souders, Jr., Piedmont, and Alexander J. Chermiavsky, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

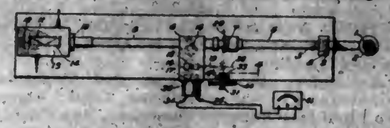
Application January 25, 1946, Serial No. 643,438

14 Claims. (Cl. 202—40)

14. A method of separating a multi-component fluid material capable of forming two liquid phases having different densities, which comprises substantially continuously introducing said material into a fractionating column at a feed rate and forming within said column two feed phases, withdrawing the components of the liquid phase having the higher density from the bottom of said column at a bottom drawoff rate, controlling one of said rates in response to changes in the interface level between the two liquid phases in the column, the rate being increased or decreased to maintain said interface level constant, removing at least a portion of the components forming the liquid phase having a lower density as vaporous overhead from said fractionating column, returning liquid reflux to the column to decrease the overall heat energy added to the column, supplying heat to the liquid material in the column to increase the overall heat energy added to the column in response to changes in the upper liquid level of said lighter liquid phase.

2,445,044

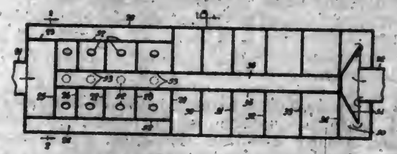
DIFFERENTIAL REFRACTOMETER



Robert Franz Stamm, Stamford, Thomas Marinace, South Norwalk, Robert Bowling Barnes, Stamford, and Charles Rule Stryker, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application November 9, 1945, Serial No. 627,638

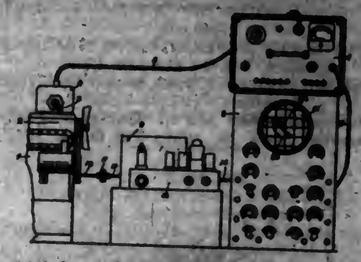
5 Claims. (Cl. 88—14)



1. A differential refractometer comprising in combination and in optical alignment a source of

monochromatic light, a triple prism of the Wernicke type, consisting of two end prisms and a center prism, the prisms being provided with means through which liquid may be introduced, a mirror behind the triple prism positioned to reflect the beam passing therethrough back through the prism at a slight angle from the beam incident on the prism, a photoelectric device having a sharply bounded sensitive area, means for forming a sharply focused image of

the source on the plane of the photoelectric device with a boundary line parallel to the boundary line of the photoelectric surface, an electrical current indicator associated with said photoelectric device, adjustable means spaced from the Wernicke prism for producing relative movement between the photoelectric device and the image of the source across said boundaries and quantitative indicating means actuated by said means for producing relative movement.



2,445,045
SOUND-TRAFFING MUFFLER CONSTRUCTION
Christopher Strachan, Madison, N. J.
Application June 26, 1944, Serial No. 542,151
4 Claims. (Cl. 181—67)

1. In a muffler for exhaust gases from an engine, a substantially cylindrical shell provided with an inlet at one end and an outlet at the other, and means in the shell for conducting the gases from the inlet to the outlet through a substantially helical path, said means comprising transversely-arranged partitions defining a set of annular sections in series communication, said sections being of progressively increasing cross-sectional area, the sections in at least one longitudinal region of said set having a common outer wall which is substantially cylindrical and of lesser diameter than said shell, said wall being provided with a plurality of relatively small perforations communicating with the annular space between said wall and shell, said space being a dead-end chamber constituting a sound trap.

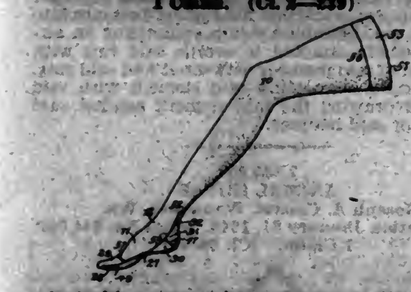
2,445,046
APPARATUS FOR SHOWING PRESSURE VERSUS VOLUME DIAGRAM
Russell J. Tinkham, Chicago, Ill., assignor to Armour Research Foundation of Illinois Institute of Technology, a corporation of Illinois
Application January 22, 1944, Serial No. 519,404
4 Claims. (Cl. 73—115)

2. In apparatus for producing a visible pressure versus volume indicator diagram for an engine, an oscilloscope, a pressure pick-up connectable with a cylinder of an engine under test and with one set of deflection plates of said oscilloscope, a photo-electric tube connected with the other set of deflection plates of said oscilloscope, a source of light for said tube, and means arranged proportionately to changes in cylinder volume during a piston cycle connectable to the crankshaft of the engine under test to be rotated thereby and positioned to vary the light from said source

on said tube, said means being in the form of a masking disc having a substantially transparent portion and an opaque portion, one of said portions being eccentrically disposed relatively to the operating center of the disc with its outline varying proportionately to volume changes in the cylinder of the engine under test.

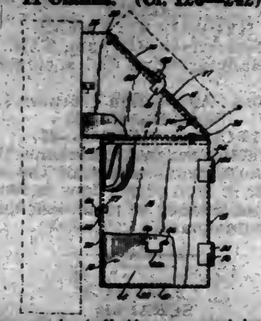
2,445,047
GUN PERFORATOR
George F. Turechek, Los Angeles, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of California
Application January 22, 1940, Serial No. 315,036
9 Claims. (Cl. 164—0.5)

1. In a gun perforator: a gun body having a pair of oppositely directed gun bores intersecting its side walls, and axially oppositely directed cartridge bores intersecting the inner ends of said gun bores and the axial extremities of said gun body; bullets for said gun bores; cartridges for said cartridge bores; and sealing means closing said cartridge bores.



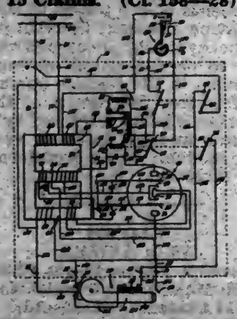
2,445,048
TILT TABLE
John G. Wallace, Toronto, Ontario, Canada
Application May 11, 1945, Serial No. 593,271
7 Claims. (Cl. 311—37)

6. A tilt table comprising a top, and a supporting frame, the frame consisting of a stable base, a pair of legs having telescopic lower and upper parts, said legs being disposed one in advance of the other and the lower part of one of them being rigid with said base and the lower part of the other one being swivelly connected to the base so that this leg may swing bodily out of the perpendicular, means for securing the telescopic parts of the legs in set position, and means



swivelly attaching the upper part of each leg to said top so that parallel axes are provided by which said top can be tilted by telescopic adjustment.

2,445,049
STOCKING
Martin J. Welch, Buffalo, N. Y.
Application August 26, 1946, Serial No. 692,957
1 Claim. (Cl. 2—239)

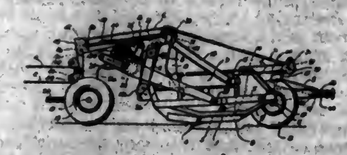


A stocking comprising an upper section and a lower section, said upper section being constructed from a sheet blank having an upper leg panel, a front instep panel and an intermediate ankle panel connecting the front part of the lower end of said leg panel with the rear edge of the instep panel connecting the front part of the lower end wise so as to engage its opposite longitudinal edges and connecting the same to form a tube adapted to receive a human leg and the lower rear part of said leg panel having transverse edge portions adjacent to its longitudinal edges, said intermediate and front panels adapted to extend forwardly over the ankle and instep of a human foot and said instep panel having parallel side edges and said ankle panel having V-notches on its opposite side edges and said lower section being constructed from a sheet blank to form a central contracted sole panel having parallel side edges and adapted to engage the sole of the foot, an enlarged under toe panel extending forwardly from the sole panel and adapted to engage the underside of the toes, an enlarged over toe panel extending upwardly and rearwardly from the front edge of the under toe panel and adapted to engage the upper side of the toes, an enlarged front heel panel extending rearwardly from the sole panel and adapted to engage the front part of the heel, a rear enlarged heel panel extending rearwardly from the front heel panel and adapted to engage with the rear part of the heel, and a narrowed ankle panel extending rearwardly from the rear heel panel and adapted to engage the ankle back of the heel and having a transverse rear edge, said front and rear heel panels being connected to form a pocket for receiving the heel, said lower and upper toe panels being connected to form a pocket for receiving the toes, and said upper and lower sections being connected along the opposing longitudinal edges of the instep and sole panels, also along the opposing transverse edges of the instep and upper toe panels, and also along the transverse edge portions between the lower part of the leg panel and the rear end of the ankle panel to form a continuous lower edge in the rear part of this tubular leg.

2,445,050
CLINKER OVEN
Don H. White, Kirksville, Mo., assignor to Ralph Eggert, Adair County, Mo.
Application August 28, 1946, Serial No. 693,422
11 Claims. (Cl. 126—242)

1. A furnace installation comprising a furnace having a firing door opening surrounded by a frame, hinge means carried by said frame, and a clinker disposal unit, said unit being provided with complementary hinge means for engaging said frame hinge means to pivotally secure said unit to the frame and enable said unit to be swung away from said opening and comprising an upper housing section and a lower housing section, the lower housing section being provided with an upper opening communicating with the upper housing section, and the upper housing section being provided with a door on its forward side for access to both the fire door opening and the lower housing section, whereby a clinker or the like may be removed from the furnace and dropped into the lower housing section.

2,445,051
ELECTRONIC BURNER CONTROL APPARATUS
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application October 19, 1942, Serial No. 462,558
15 Claims. (Cl. 158—28)



6. In a burner control system, a burner, means for controlling the delivery of fuel to said burner,

a main control device controlling said fuel controlling means, apparatus for detecting the presence of a burner flame, said apparatus comprising a thermionic discharge device having a cathode and a heater circuit therefor, energizing means normally constantly connected to said heater circuit but incapable of adequately energizing said heater circuit, and means independent of said heater circuit operable upon said control device calling for operation of said fuel controlling means to increase the power output of said energizing means to a value such that said heater circuit is adequately energized.

2,445,052
HYDRAULIC CEMENT
Oswald T. Zimmerman, Durham, N. H., assignor to Kerr Manufacturing Co., a corporation of Michigan
No Drawing. Application February 1, 1943, Serial No. 474,262
10 Claims. (Cl. 106—95)

1. A hydraulic cement comprising the finely divided heat-reaction product of the oxides of Al, Ca and Sr in such proportions as form a substantial preponderance of mono-calcium, mono-strontium dialuminate.

2,445,053
SCRAPER
George S. Allin, Seattle, Wash., assignor to Isaacson Iron Works, Seattle, Wash., a corporation of Washington
Application April 22, 1946, Serial No. 664,078
11 Claims. (Cl. 37—126)

1. In a scraper of the character described, having a bowl, a load ejector therein and an ejector actuating mechanism; an ejector snubber comprising a hydraulic cylinder, a piston in the cylinder having a rod extended therefrom, a hydraulic medium filling the cylinder at both sides of the piston; said cylinder and rod being operatively fixed one to the scraper frame and one to the ejector in a manner whereby movements of the ejector between ejecting and retracted positions is in accordance with the permitted movements of the piston in the cylinder; said piston having a passage therethrough for by-passing of the hydraulic medium from one side to the other to permit piston movement and a valve mechanism in the passage operable to permit a relatively free by-passing of the medium when the ejector is being retracted by its actuating means, and operable to resist by-passing of the hydraulic medium with a predetermined force in the other direction.

2,445,054
VULCANIZER
Harold L. Baker, Clovis, Calif.
Application May 14, 1945, Serial No. 593,644
14 Claims. (Cl. 18—18)

11. A vulcanizer of the character described comprising a table, a transversely split radially expansible ring formed with a radially outwardly facing surface adapted to fit against the radially inwardly facing surface of a bead portion of a tire casing and having a radially outwardly projecting flange adapted to extend over the axially outwardly facing surface of such portion, means for radially expanding and contracting said ring to respectively engage and disengage said bead portion, said flange being disposed against said table, from end to end thereof, and having an inlet and an outlet for steam, an arcuately extending member adapted to extend over and to circumferentially follow a portion of the inner

axially facing side of such bead portion, an arcuately extending fluid pressure bag adapted to also follow said axially facing side of said portion and to be positioned between said member and such portion, clamping means for tightly clamping said ring, table and member together and means for admitting fluid under pressure into said bag, said clamping means comprising an annular element adapted to overlie said ring with a portion of said member between it and said ring, and a screw connecting said element with said table for drawing the said element against said portion of said manner.

2,445,055
ANIMAL HOUSE
Joseph A. Capaul, Wauwatosa, Wis.
Application January 31, 1946, Serial No. 644,691
1 Claim. (Cl. 20—2)

In a knocked-down kennel having a rectangular floor, end panels hinged thereto, said panels being rabbeted along the side edges, and side panels rabbeted along the inner face of their lower edges, the floor fitting in the rabbet of the side panels, angular strips having two legs meeting at a right angle at each corner and overlapping the adjacent panels and defining together with the rabbets in the end panels channels receiving the side panels, and a hook and eye connection at the corner between the end panel and side panel.

2,445,056
SILO DISCHARGER
Nat Cordle, Bassett, Wis.
Application November 7, 1945, Serial No. 627,169
4 Claims. (Cl. 214—17)

4. The combination with a silo having a discharge opening at one side thereof; a frame arranged to travel vertically in said silo having a pair of wheels axially mounted at each end thereof, rolling vertically on the inner walls of said silo; revolving scraper means comprising a revolving head having a plurality of radial scraping arms extending therefrom; spring-held yieldable scraper blades at the end of one or more of said scraper arms arranged to contact with the side walls of said silo and remove material clinging thereto; spring-held revolvable cutter wheels having radial projections mounted on the ends of one or more of said scraper arms and contacting the side walls of said silo; and a screw conveyor

arranged at the bottom of said frame in diametrical alignment to the side opening of said silo

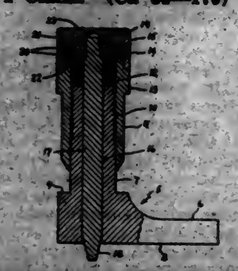
adapted and arranged to move silage outwardly toward the side opening of the silo, substantially as described.

2,445,057
SEALING ARRANGEMENT
Paul A. Driscoll, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 8, 1944, Serial No. 562,547
6 Claims. (Cl. 309—23)

1. In a cylinder for a hydraulic pressure system, a piston having a stepped inner end and a threaded projection thereon, an annular seal formed of yieldable resilient material having a base portion encircling the small diameter innermost portion of the stepped piston end and having a forwardly extending lip pressing outwardly against the cylinder wall, said lip originally having a substantially frusto-conical form with the large diameter farthest from the piston, the stepped inner end of the piston having a portion of diameter less than the full piston diameter but greater than the seal encircled small diameter, thereby relieving the piston surface behind the seal to provide an annular space into which the outer portion of the base of the seal can be forced by the pressure of the fluid, the intermediate diameter portion being frusto-conical to provide a gradually decreasing diameter toward the inner end of the piston, a washer lying against the face of the piston and against the front of the base portion of the seal to retain the same in position, and a nut screwed on the threaded projection of the piston to clamp the washer against the piston face and seal.

2,445,058
MOTOR VEHICLE CONTROL MECHANISM FOR SEQUENTIALLY CONTROLLING WHEEL BRAKING AND MOTOR SPEED
George C. Fields, Cleveland, Ohio, assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Application December 12, 1942, Serial No. 514,642
4 Claims. (Cl. 180—77)

1. In a motor vehicle having a frame, a traction wheel mounted therein, a brake for the wheel, and a motor for driving the wheel; the combination including a yoke pivoted to the frame adjacent the wheel and connected to the brake for applying the latter when moved in one direction, a lever fulcrumed to the frame, adjacent the yoke, and having a lost motion connection therewith whereby it will actuate the yoke to apply



the brake when reaching one limit of the lost motion, means for operating the lever, and a control connection operated by the lever to govern the speed of the motor within the lost motion limits of said lever with respect to the yoke.

2,445,059
HEATER
Owen L. Garretson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 10, 1945, Serial No. 634,851
6 Claims. (Cl. 62—1)

1. A heater assembly for vaporizing liquefied petroleum gas, in combination with a storage tank, comprising two semi-tubular members concentrically disposed and forming a semi-annular space therebetween and having a common longitudinal axis, said semi-tubular members positioned in substantially gas tight relation with the exterior surface of said tank and at a point approximately at the bottom thereof, two of the ends of said semi-tubular members in close proximity to one another being open while the other two ends of said semi-tubular members are closed and the closures are spaced apart; a burner means extending through said closed ends into the space between the inner semi-tubular member and the tank bottom; and an opening in said burner means intermediate the closed ends of the semi-tubular members.

2,445,060
MICROMETER DEPTH GAUGE
Carl Edward Gearhart, Wilmington, Del.
Application June 7, 1946, Serial No. 675,992
1 Claim. (Cl. 33—179)

A micrometer depth gauge comprising in combination, a block having a substantially flat gauging surface on one side thereof, a barrel formed at the relatively opposite side of said block, the bore of said barrel extending through said block,

an externally threaded portion on said barrel, an internally threaded thimble positioned on said externally threaded portion, an externally threaded portion on said thimble, an internally threaded cap positioned on the externally threaded portion of said thimble, a spindle slidably and rotatably positioned in said bore with one end thereof projecting from said gauging surface, a screw threaded shank at the remaining end of said spindle, a pair of lock nuts on said shank, said nuts being clamped between said thimble and said cap, and coacting graduations on said thimble and on said barrel, said graduations being readable in accordance with the length of the projecting portion of said spindle.

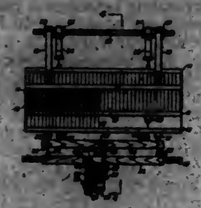
2,445,661
HYDRAULIC BRAKE ACTUATOR
Rudolph A. Goepfrich, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Continuation of application Serial No. 527,865, March 24, 1944. This application filed June 20, 1946, Serial No. 677,952
8 Claims. (Cl. 188—152)

1. In a brake structure having a friction element which is adapted to be alternatively applied and anchored at the same end depending upon the direction of drum rotation, a hydraulic actuator having a piston therein operatively associated with the friction element, a ring-shaped stop member for said piston located inside said actuator, and a reduced diameter extension on the inner end of said piston having a diameter only slightly less than the inner diameter of the ring-shaped stop member, said reduced diameter extension and said stop member constituting a restriction to limit the rate of flow of fluid toward the inner end of the piston as the piston moves to seat on the stop member under the influence of the anchoring torque of the friction element.

2,445,662
SEAL
Herman M. Goldberg and Arvid E. Karlberg, Chicago, Ill., assignors to Chicago Seal Co., Chicago, Ill., a corporation of Illinois
Application January 19, 1945, Serial No. 573,602
11 Claims. (Cl. 286—11.15)

1. A replacement seal for a rotating member, which latter has a portion extending through an opening in a wall or bearing, said seal embodying a seal element encompassing said member and comprising an annular element having a seal seat on one face and sealing means on its opposite face, the sealing means adapted for engagement with the wall or bearing around said opening, and a stop element co-operating with said seal element, said stop element embodying an arm provided with a resilient portion encompassing said annular element, said arm adapted to engage a stop whereby to contract said resilient portion about said annular element to maintain the latter against rotation with respect to the wall in one direction.

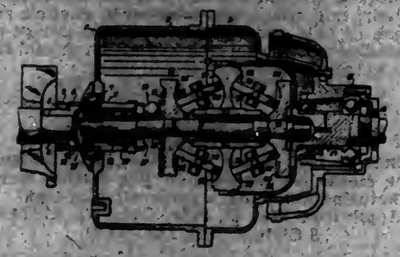
2,445,663
ELECTRIC GLASS HEATING
Edwin M. Guyer, Corning, N. Y.
Application December 19, 1946, Serial No. 717,481
6 Claims. (Cl. 219—19)



1. The method of heating a restricted area of a glass body, which comprises creating a spark discharge between spaced points along the surface of the body and forcing said spark against said glass surface by creating a potential difference between said spark and a point on the opposite side of said glass body in alignment with said spark.

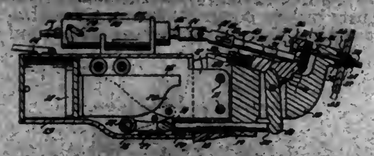
2,445,664
ALKALI METAL HYDROXIDE LIQUID REAGENT
Archibald John Hall and Frederick Charles Wood, Manchester, England, assignors to Textal Broadhurst Lee Company Limited, Manchester, England, a British company
No Drawing. Original application October 24, 1940, Serial No. 362,694. Divided and this application November 23, 1942, Serial No. 466,670. In Eire and New Zealand October 30, 1939
4 Claims. (Cl. 252—192)

1. A liquid reagent having a flash point above 60° F. by the Abel test and consisting essentially of a solution of an inorganic caustic alkali in a liquid monohydric aliphatic alcohol containing three to eight carbon atoms in the molecule and a petroleum distillate of boiling range 150–200 degrees C. whose volume is in excess of the volume of alcohol, the amount of caustic alkali being from 0.2 to 2 grams to 100 cc. of the mixed alcohol and distillate.



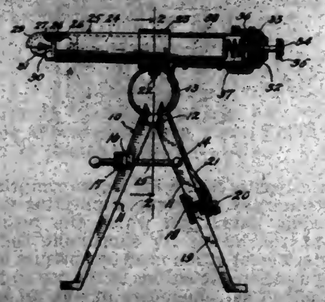
2,445,665
JACK STRAP AND STIRRUP
Fred A. Hamilton, Easley, S. C., assignor of one-half to Jerry P. Lesley, Easley, S. C.
Application May 15, 1946, Serial No. 669,887
4 Claims. (Cl. 139—93)

1. A stirrup for connecting the treadles of a loom with the jack stick comprising a member having a U-shaped portion whose lower end is adapted to fit into one of the notches in the lower surface of the treadles of the loom, and having its upper end closed by a transverse portion and provided with a hole, a bolt mounted in said hole, a jack strap having a hole in one end thereof penetrated by said bolt, said jack strap having an elongated slot in its other end, the jack strap



being adapted to be passed through a suitable slot in the jack stick and to have its free end penetrated by said bolt, a washer adapted to fit around said bolt and against the free end of said jack strap, and a thumb nut threadably secured on said bolt for forcing said washer against the free end of said strap for clamping the same in adjusted position.

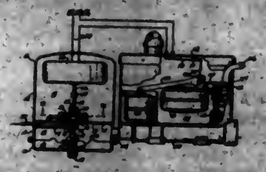
2,445,666
THRUST SUSTAINING MEANS FOR VARIABLE SPEED DRIVE MECHANISM
Frank A. Hayes, Middletown, N. J.
Application October 22, 1946, Serial No. 704,851
12 Claims. (Cl. 74—200)



1. In a variable speed transmission mechanism of the type having coaxial driving and driven discs and precessing rollers therebetween for transmission of power at variable speed, and having a driving shaft secured to at least one of said discs and a coaxial housing arranged by relative axial movement in respect to said shaft to provide thrust pressure required for the effective functioning of said transmission mechanism, the improvement which comprises, means including at least one compression spring tending to move said shaft axially in respect to said housing with a force sufficient substantially to provide no-load thrust force requirements for said mechanism, an annular nut threaded on said shaft for axial movement in respect thereto upon rotation, spring means interposed between said shaft and a part rigid with said housing so that upon tightening of said nut, its associated spring means will act substantially in parallel with the first named means in tending to move said shaft axially in respect to said housing and to provide the thrust force requirements for said mechanism, and a torsional spring coaxial with said shaft and having one end carried by said annular nut and the other end non-rotatably secured in respect to said shaft, said torsional spring being so constructed and arranged as to tend to rotate said annular nut in a direction to increase the load on its associated spring.

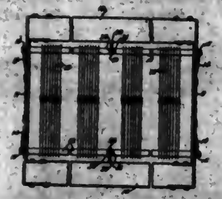
2,445,667
IMPLEMENT FOR COLLAPSING HOLLOW RIVETS
Edgar Hiler, Grand Prairie, Tex.
Application November 6, 1946, Serial No. 707,989
3 Claims. (Cl. 218—19)

3. Apparatus for installing hollow interiorly threaded rivets including a body having a head, a carriage slidably disposed on said head, a threaded mandrel rotatably and reciprocally mounted in said head and actuated by said carriage, a gear mounted on one end of said mandrel, a reversible air motor mounted on said body, an extensible shaft actuated by said motor having a gear engaging the gear of said mandrel for retracting said carriage to exert a pull on for retracting said carriage to exert a pull on said mandrel, effective to collapse said rivet intermediate its ends in juxtapositioned work pieces and means for reversing said air motor to effect withdrawal of said mandrel from an installed rivet.



2,445,668
PIVOTED CALIPER
Clarence D. Jackson, Putnam, Conn.
Application February 16, 1945, Serial No. 578,286
1 Claim. (Cl. 33—149)

A caliper comprising a long leg and a short leg pivoted together, yielding means to urge the legs open, means positively to move the legs against the urge of the yielding means, an insulating socket carried by the short leg, a contact carried by the insulating socket and forming an extension to the shorter leg whereby its effective length is substantially equal to the length of the longer leg, a casing supported on the yielding means a dry cell within the casing, a minature lamp carried by the casing, one contact of the lamp engaging one terminal of the dry cell, means establishing electrical communication between the contact carried by the insulating socket and the opposite terminal of the dry cell and the opposite contact of the lamp being grounded to the longer leg of the caliper whereby when a conductor bridges the gap between the leg of the caliper and the contact, the lamp will be lighted.



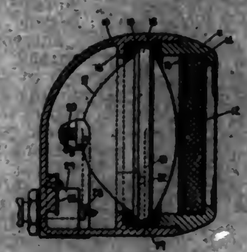
2,445,069
LIQUID FUEL FLOW CONTROL DEVICE
Roy W. Johnson, Milwaukee, Wis.
Application October 20, 1944, Serial No. 559,629
8 Claims. (Cl. 103—26)

1. A device controlling the flow of liquid fuel to a burner and comprising a casing defining a chamber, a valve controlling the flow of fuel into the chamber, a float in the chamber controlling the degree of opening of the inlet valve, a second casing connected with the inlet valve, a continuously driven pump discharging into the second casing, a by-pass connecting the second cas-

ing with the pump inlet, and means controlling the opening and closing of the by-pass and including a diaphragm in the second casing and subjected to the pressure therein, and a valve mounted on the diaphragm for movement thereby into and out of position to close the by-pass.

2,445,070
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 27, 1945, Serial No. 631,204
3 Claims. (Cl. 139—92)

1. In a heddle frame for looms comprising top and bottom rails, end struts connecting said rails, and heddle bars upon which the heddles are mounted, the means for supporting the heddle bars intermediate their ends comprising members secured at desired locations in the top and bottom rails, each of said members having an inwardly extending part having two spaced recesses of L-shape extending from a vertical edge of said inwardly extending part and then toward each other thereby providing a central bridge portion and an enlarged head portion, said recesses being spaced from each other to provide supports for the top and bottom edges of the heddle bar, and the hedddle bars having, at complemental locations, a series of T-shaped slots in the narrow portion of each of which the aforesaid bridge portion is adapted to be seated, and through the enlarged portion of which the aforesaid enlarged head portion is adapted to pass, the heddle bars being adapted to be released by being slid longitudinally to positions to permit the enlarged head portions to pass through the enlarged portions of the complemental slots in the heddle rod, and means for normally holding the heddle rods against longitudinal movement.

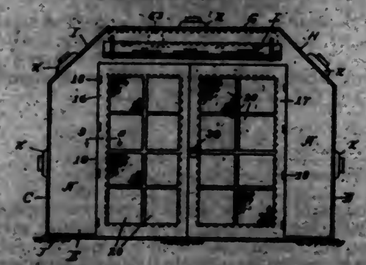


2,445,071
HAIRDRESSING RING
Stella Kovacs and Dorinda J. Fulkerson, Dearborn, Mich.
Application February 7, 1947, Serial No. 727,189
2 Claims. (Cl. 132—53)

1. A hairdressing ring comprising a pair of arcuate sections hinged together at one end for swinging movement between a closed position in which such sections cooperate to form a ring and an open position for receiving a bunch of hair therebetween, said sections having at the other end thereof means for securing said sections in closed position, each of said sections having a group of comb teeth projecting from the inner side thereof toward the other of said sections when said sections are closed to form a ring, the ends of the teeth of each group overlapping the ends of the comb teeth of the other group, said

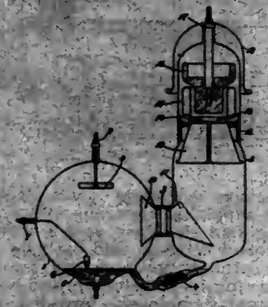
teeth being disposed within said ring and said groups being arranged in offset relation to each other, the teeth of one group being arranged in angular relation with respect to the teeth of the other group, said sections when in open position permitting the comb teeth to be slid into a bunch of hair, said ring being adapted to encircle said bunch of hair and said teeth of said groups cooperating to hold said ring in position in said hair and to loosely hold said hair in place.

2,445,072
MINING MACHINE HEADLIGHT
Arthur L. Lee, Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application May 12, 1944, Serial No. 535,513
9 Claims. (Cl. 240—11.2)



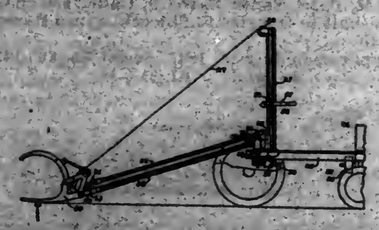
5. A light including a casing having an open front end, means in said casing forming a generally forwardly facing abutment, a combination light bulb and reflector in said casing having a peripheral rim, means positioned forwardly of said rim providing a generally rearwardly facing abutment, and metal wool interposed between said abutments, casing and edge of said rim whereby said combination light bulb and reflector is damped-resiliently supported in said casing solely through said metal wool.

2,445,073
VAPOR DETECTOR
Ralph T. Mercier and Wilbur R. Richards, Cleveland, Ohio, assignors to The Arc Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Application October 24, 1945, Serial No. 624,182
11 Claims. (Cl. 201—43)



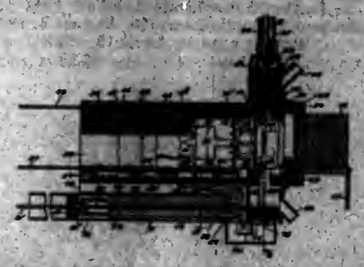
1. In a vapor detector, a plug body having a bore therethrough and adapted to be screwed into a cell block or the like, a portion of said bore being tapered, a tapered plug in said bore with the small end of the tapered plug disposed outwardly relative to said cell block, an electrical conductor entering said plug body and extending through said tapered plug and sealed in relation thereto, an electrode connected with said conductor on the inner side of said tapered plug, a second electrode adjacent the first electrode and substantially parallel thereto, and a bead of fused glass surrounding said electrodes, the ends of said electrodes being exposed to the media surrounding said bead, said second electrode being connected to said plug body to provide a grounded connection, said plug body having a tubular portion surrounding said bead and electrodes to protect them from mechanical injury.

2,445,074
SPRAY BOOTH
James H. McCue, Pasadena, Calif.
Application July 10, 1945, Serial No. 604,252
3 Claims. (Cl. 91—60)



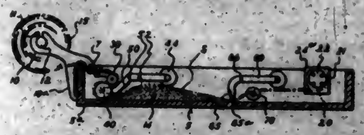
1. A spray booth for a vehicle to be sprayed with paint, having side and end walls and a substantially horizontal ceiling forming a closed chamber, said ceiling being joined laterally to said side walls by downwardly and outwardly sloping lateral side portions to reduce the volume of air contained within said enclosure and reinforce structural strength, door closure means in the forward end wall for admitting a vehicle to be sprayed in said structure, filter means in said door closure means for filtering air which is admitted into said structure, and air exhaust means near the inner end portion of said structure for creating an evenly distributed draft of air longitudinally through said structure to evenly dry the paint which is sprayed upon the vehicle therein, and a closely assembled longitudinal series of lights integral with each of said sloping portions by which the surface of a vehicle in the spray booth is evenly illuminated.

2,445,075
DEVICE COMPRISING A MERCURY CATHODE TUBE FOR INTERRUPTING ELECTRIC CURRENTS OF HIGH VOLTAGE
Johannes Gijsbertus Wilhelm Mulder and Albert Boerwers, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 17, 1946, Serial No. 662,794
In the Netherlands April 12, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 12, 1961
7 Claims. (Cl. 250—27.5)



1. A high voltage mercury-arc tube comprising a cathode chamber, a liquid cathode, an ignition electrode and a keep-alive electrode for maintaining a gaseous atmosphere in said cathode chamber, an anode chamber spaced from and interconnected to said cathode chamber, an anode in said anode chamber, and an electrical conducting member adjacent said anode, the shortest distance between said anode and said adjacent electrical conducting member being less than one half the mean free path of the electrons in the atmosphere within the tube.

2,445,076
CANE LOADER
Joseph J. Munson, Houma, La.
Application February 21, 1946, Serial No. 649,235
10 Claims. (Cl. 214—147)

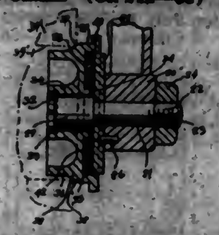


1. In a cane loader, a vehicle, a boom universally mounted on said vehicle, a grab carried by said boom, a bell-crank pivoted on the boom at a point near the free end thereof, a link arm, one end of which is pivoted to an end of the bell-crank and the other end of which is pivoted to the vehicle beneath the vertical pivot at the universal mounting of the boom, and a guide arm, one end of which is connected to the other end of the bell-crank and the other end of which is swivelly mounted on the vehicle frame adjacent the boom mounting and spaced laterally therefrom to cause a lateral swing of the boom when it is raised.

2,445,077
ELECTRON DISCHARGE DEVICE UTILIZING CAVITY RESONATORS
Leon S. Nergaard, Verona, and Don G. Burnside, East Orange, N. J., and Louis Pensak, Brooklyn, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application June 25, 1942, Serial No. 448,282
21 Claims. (Cl. 315—6)

1. An electron discharge device including a cathode for supplying electrons and a collector for receiving said electrons, and a control electrode positioned between said cathode and collector, said cathode, collector and control electrode having ring-like conductors and hollow resonant conducting members provided with expandable coupling elements engaging said ring-like conductors and providing self-shielded circuits between the cathode and control electrode and between the control electrode and collector, and means for transferring energy between the hollow resonant conducting members and including a coupling loop in one of said hollow resonant conducting members and an adjustable concentric transmission line having an inner conductor, one end of which is connected to said coupling loop and its other end extending within and coupled to the inner surface of the other hollow resonant conducting member, the outer conductor of said transmission line being electrically connected to said hollow resonant conducting members.

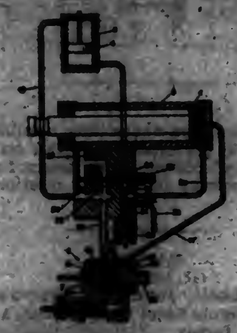
2,445,078
PLASTER BANDAGE FORMING MACHINE
Jack R. Pava, Santa Barbara, Calif., assignor of one-half to Douglas F. Pincock, Santa Barbara, Calif.
Application July 14, 1945, Serial No. 605,143
9 Claims. (Cl. 91—32)



9. In a device for impregnating a fabric strip with powdered material, a casing having a floor adapted to support a pile of dry powdered material, means for moving a strip of fabric along the casing, and means for maintaining said strip in tension throughout its contact with the top surface of the pile of material during said movement, said last named means including a pressure applying member yieldably bearing against the strip adjacent one side of the pile of material, a guide member adjacent the opposite side of the pile of material, a material confining plate adjacent said guide member, and means yieldably supporting said guide member and said plate.

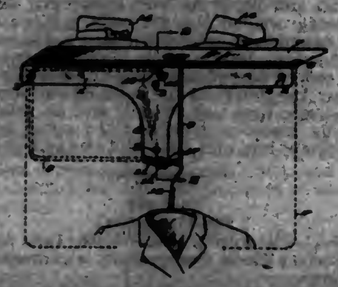
2,445,079
LAMP
Walter M. Peterdorf, Milwaukee, Wis.
Application May 26, 1947, Serial No. 750,415
1 Claim. (Cl. 240—10)

A living room and like lamp comprising a base in the form of an animal or bird including a head having a hollow chamber therein and eye openings communicating with said chamber, an electric light lamp socket carried by said base, electric feed and return wires for said socket extending through the chamber, glow lamp bulbs disposed in said chamber directly in rear of the eye openings and electrically connected at all times with the feed and return wires, a partition wall disposed in said chamber for supporting the bulbs, a guard wall positioned in said chamber and forming a compartment with said partition wall for the wires for the socket, and means for filling the compartment in rear of the guard wall.



2,445,080
WEB ROLL SUPPORT
Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois
Application June 9, 1945, Serial No. 598,479
1 Claim. (Cl. 242—68)

A mounting core for a roll of paper comprising a non-rotating stud shaft, a mounting disc, means carrying said stud shaft and having connection with said mounting disc to prevent rotation of said mounting disc relative to said shaft, a paper roll supporting core mounted on said stud shaft and having a socket portion, a friction disc mounted in said socket and supported by said core and adapted to have facial engagement with said mounting disc, substantially as described.



2,445,081
HYDRAULIC DEVICE FOR CONTROLLING SEVERAL MEMBERS WITH A PREDETERMINED AUTOMATIC INTERDEPENDENCY
Robert François Feuille, Armentieres, France
Application October 30, 1946, Serial No. 706,714
In France October 11, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires October 11, 1960
3 Claims. (Cl. 60—97)

1. Hydraulic device for the control of two members one of which has to carry out its forward and return strokes during stoppage of the other, comprising a first piston moving in a first cylinder and controlling the first member, a second piston moving in a second cylinder and controlling the second member, a slide valve controlling, in the first place, a conduit connected in series with the two working chambers (forward stroke) of the first and of the second cylinder and, in the second place, a conduit connected to the exhaust chamber (forward stroke) of the

second cylinder, and a branch conduit connecting the last named conduit with the exhaust chamber of the first cylinder, a ball valve being interposed in said branch conduit so that when the slide valve occupies its first position in which it connects the first conduit with the supply of fluid under pressure and the second conduit with the exhaust, said ball valve closes said branch conduit and prevents exhaust from the first cylinder so that alone the second piston effects its forward stroke.

2,445,082
FOLDABLE SHELF
John L. Pecon and Le Roy Houghton, Johnstown, Pa., assignors of one-third to Howard C. Faust, Johnstown, Pa.
Application September 8, 1946, Serial No. 695,650
1 Claim. (Cl. 211—93)

In a device of the class described, a T-shaped bracket bar adapted to be attached to a wall and including a longitudinal upper edge flange extending forwardly therefrom, said bar having a central depending stem, a U-shaped frame having ends hingedly connected to said bar in the vertical center of said stem with one end hinged to the lower end of the stem, said frame being swingable into forwardly extended unfolded position and into folded position parallel with said bar, a shelf panel hinged to said flange to extend along the same and be folded downwardly from horizontal position in front of the folded frame in forwardly offset relation thereto to hide the same and obviate interference with the frame when folded, said frame when unfolded supporting said panel in horizontal position, and a keeper on said panel for engaging said frame to maintain the same unfolded.

2,445,083
BUBBLE CAP STRUCTURE FOR FRACTIONATING TOWERS
Merrill R. Reed, Kansas City, Kans.
Application October 15, 1943, Serial No. 506,346
3 Claims. (Cl. 261—114)

1. Bubble cap structure for fractionating towers comprising a flue; a perforated stem projecting axially from one end of the flue; a cap, having an opening in the top thereof overlying the said one end of the flue with the stem extending through the said opening; and a key positioned in the perforation of the stem to hold the cap in place, said key having a hook formed on one end thereof.

2,445,084
PLASTICIZED ETHYL CELLULOSE COMPOSITION
Chessie E. Rehberg, Glenside, William C. Mast, Philadelphia, and Charles H. Fisher, Abington, Pa., assignors to United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 22, 1944, Serial No. 555,286
1 Claim. (Cl. 260—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A plastic composition comprising ethyl cellulose; a polymerized ester of acrylic acid with a saturated lower aliphatic monohydric alcohol; and 10% to 60% of a dicarboxylic acid esterified alkenyl lactate, based upon the total weight of ethyl cellulose, polymeric acrylic ester, and said lactate; said alkenyl radical being taken from the group consisting of allyl and methallyl; said ethyl cellulose being present in an amount greater than that of said polymerized acrylic ester.

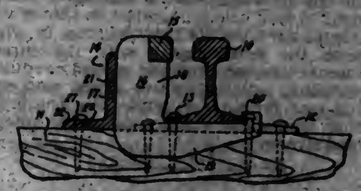
2,445,085
PLASTICIZED COMPOSITION CONTAINING A CELLULOSE ETHER AND A POLYACRYLIC ACID ESTER
Chessie E. Rehberg, Glenside, William C. Mast, Philadelphia, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Original application September 22, 1944, Serial No. 555,286. Divided and this application January 11, 1946, Serial No. 640,644
4 Claims. (Cl. 260—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A plastic composition comprising a cellulose ether, a polymerized ester of acrylic acid, and an ester of a polyhydroxy alcohol and a saturated alpha-hydroxy carboxylic acid, said acid having less than four carbon atoms per molecule.

2,445,056
CERAMIC HEATING PLATE CONSTRUCTION
Frank Redwisk, Chicago, Ill., assignor to Chicago Electric Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 13, 1944, Serial No. 544,752
1 Claim. (Cl. 219—37)

An electric heating element comprising a heat distributing ceramic member having a flat surface adapted to be engaged by a member to be heated, said ceramic member having an opposite surface provided with a substantially round bottom groove arranged in folded manner so as to cover a substantial portion of the area of said ceramic member and having shoulder portions encompassing a plurality of the groove folds, said groove extending to a depth sufficient to place a heating element in said groove in close proximity to said flat surface, a helical electric resistance heating wire positioned within said groove, and a thermosetting cement having a coefficient of expansion similar to that of said ceramic member, said cement covering said helical wire and substantially filling the space between said shoulder portions to retain said wire in place.

2,445,057
GUN SIGHT
Earl B. Rogers, Cleveland, Ohio
Application October 21, 1946, Serial No. 704,569
8 Claims. (Cl. 33—50)

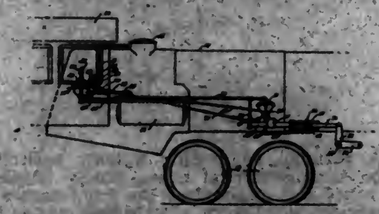


1. In combination, a gun; a bracket fixed to the gun and providing an extending internal cylindrical bearing surface, the bracket being formed with L-shaped slots having tapered sections thereon; a sight support comprising a body rotatably and reciprocably supported within the bearing surface and comprising ears extending through the slots, tapered portions on said ears and a gun sight mounted on the ears; the sight being held against rotation during use of the sight by engagement of the tapered portions of the ears with the tapered portions of the slot and being rotatable about the bearing axis upon reciprocation of the sight to align the ears with the other portion of the slot.

2,445,062
CURRENT-LIMITING TRANSFORMER
Lorell John Schilling, Galesville, Wis., assignor to Babcox Bros. Co., a corporation of Illinois
Application January 21, 1944, Serial No. 519,129
3 Claims. (Cl. 171—777)

1. In a current limiting transformer having a permeable core providing a main flux path and a shunt flux path across said main path, the shunt path having an air gap therein, apparatus of the character described, including: primary and secondary windings on the main flux path of said core; bridging means of permeable material adapted to bridge said gap and affect the reluctance of the shunt portion of the core, this bridging means comprising a selectable number of laminations of said permeable material on the outside of the shunt portion; and means for locking the bridging means in desired relation to said shunt portion.

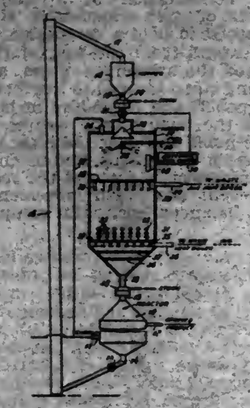
2,445,063
GUARD RAIL
Arthur R. Schulze, Johnstown, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application July 2, 1947, Serial No. 758,660
3 Claims. (Cl. 238—17)



1. A preassembled railroad track guard rail unit comprising an elongated wear-resistant steel rail of substantially rectangular cross section, a plurality of spaced L-shaped brackets of softer low-carbon steel having horizontal and upright legs, the upper inner corners of said upright legs being recessed and receiving and supporting said rail and being welded thereto, said horizontal legs being adapted to extend beneath a running rail in the spaces between ties, gauge stops on the upper extremities of said horizontal legs for hooking over the flange of the running rail and positioning said first named rail, and an angle iron assembly member welded to the outer edges of said upright legs and adapted to be spiked to ties.

2,445,069
PISTON RING
Joseph C. Thompson, Hagerstown, Ind., assignor to Perfect Circle Corporation, a corporation of Indiana
Application January 9, 1947, Serial No. 721,946
13 Claims. (Cl. 309—29)

7. A piston ring assembly comprising a sheet metal ring member comprising a pair of axially spaced cylinder-engaging flanges and webs connecting the inner edges of said flanges, said webs being outwardly bowed to provide an inwardly opening groove, a coiled spring seated in said groove for expanding the ring member, and flexible means of predetermined length extending through the spring and engaging the ends of the spring to hold it under partial compression when the ring is out of the cylinder without expanding the ring beyond a predetermined diameter whereby the spring exerts a strong expanding pressure when the ring is in the cylinder, the opening of the groove being less in width than the coil diameter of the spring to prevent the spring from being accidentally dislodged.

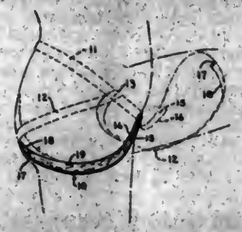


2,445,091
PRESSURE FLUID FOLLOW-UP SERVOMOTOR
William F. Triplett, Grand Junction, Colo.
Application April 16, 1945, Serial No. 588,661
12 Claims. (Cl. 121—39)

7. A control lever for a combined power and manually-operated reversing gear comprising: a pressure-operated motor operatively connected to said gear; a reversing valve controlling the operation of said motor; a lever; a connecting member between said lever and said reversing valve for controlling the latter; a hand grip on said lever; and a feed valve operable from said hand grip for controlling the fluid pressure to said reversing valve.

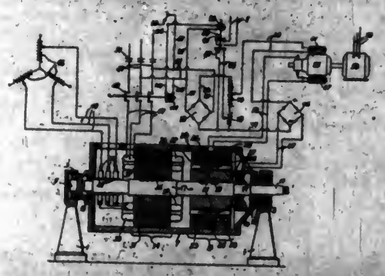
2,445,092
PROCESS AND APPARATUS FOR HEAT TRANSFER WITH GRANULAR SOLIDS
Ernest Utterback, New York, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application August 2, 1946, Serial No. 687,901
17 Claims. (Cl. 196—55)

1. A process for cracking hydrocarbons which comprises passing a granular solid heat transfer material downwardly through a heating zone as a compact moving bed, passing the heated material downwardly through a cracking zone, passing charge hydrocarbons in direct contact with said material in said cracking zone, dropping heat transfer material cooled by contact with said charge as a continuous shower of separate granules through a fuel supply zone, continuously spraying a high boiling liquid hydrocarbon fuel into said shower to thereby apply fuel to the surface of said granules and vaporize a portion of said fuel, removing vapors so generated and adding said vapors to said charge hydrocarbons for direct contact with said heat transfer material in said cracking zone, transferring said granular material from said fuel supply zone to said heating zone, and passing air through said bed of granular solid in said heating zone in concurrent flow with said downwardly moving bed to burn said fuel and heat said granules



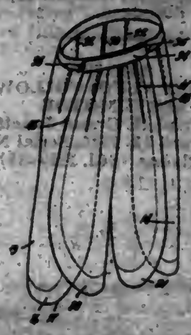
2,445,093
SELF-CENTERING GAUGE FOR PERFORATING DEVICES
Louis von Cseh, New York, N. Y., assignor to Speed Products Company, Inc., Long Island City, N. Y., a corporation of New York
Application April 24, 1946, Serial No. 664,540
8 Claims. (Cl. 164—91)

1. In a perforating device wherein punch means is adapted to be reciprocated relative to perforated anvil means; a base fixedly carrying said anvil, a housing secured within and to and underneath said base, a pinion within and having means journaled to said housing, superimposed and vertically spaced bars having rack means disposed in opposition and in mesh with said pinion and slidably guided by said base, and upstanding manipulator means extending from each of said bars.



2,445,084
SANITARY NAPKIN HOLDER
Josephine A. Wald, Detroit, Mich.
Application January 18, 1947, Serial No. 722,868
2 Claims. (Cl. 128—289)

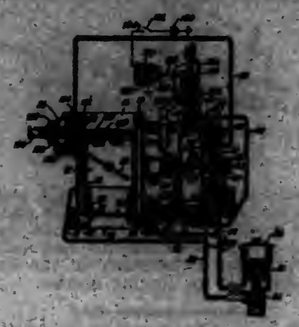
1. In a sanitary napkin holder adapted to conform and to be movable as a unit with the essentially inarticulate pelvic girdle of the wearer, the combination of a longitudinally curved pouch of soft impervious elastomeric sheeting adapted to hold a disposable absorbent pad and to extend from the base of the coccyx to the base of the symphysis pubis, a resilient body encircling strap secured to the forward portion of said pouch and extending in both directions around the body of the wearer from the region of the pubis and over the hips and across the lower portion of the back, and means to exert a vertical component of force at the rear of said pouch to prevent downward movement thereof and to exert balanced horizontal components of



force to prevent lateral displacement thereof so as to support the rear of said pouch over the base of the coccyx and including a pair of resilient leg straps symmetrically secured angularly to each other at the rear of said pouch and extending angularly and laterally from each other and upward and forward across the buttocks, the forward end of each leg strap being attached in the region of the groin of its respective thigh to said body encircling strap.

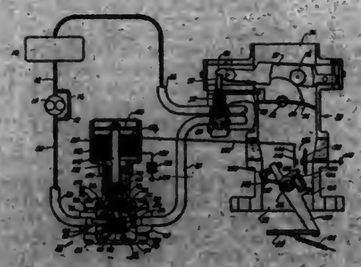
2,445,095
MOTORING DYNAMOMETER FOR ENGINE TESTING
Martin P. Winther, Waukegan, Ill., assignor to Martin P. Winther, trustee
Application May 28, 1945, Serial No. 596,251
4 Claims. (Cl. 73—116)

1. In an electric motoring dynamometer for engine testing, a rocking casing, a rotary shaft therein, a dynamometer element and a motor element each having a rotor on said shaft and a stator connected to the casing, a field coil for the dynamometer element, a D. C. circuit connected with said field coil, a D. C. generator connected with the D. C. circuit for exciting said coil, an exciter coil in the D. C. generator, a circuit for said exciter coil, a rectifier feeding said exciter coil circuit, an A. C. generator driven by the shaft and supplying said rectifier, a second rectifier connected in voltage opposition with said first-named rectifier through an adjustable by-pass resistance whereby an adjustable reference voltage may be set up against flow of current through said exciter coil circuit, a shunt circuit connected around a part of said by-pass resistance for passing current through the exciter coil circuit more easily than through the by-pass resistance, a motor switch controlling excitation of the motor element, an ignition switch controlling ignition of a test engine connected to the shaft, a shunt switch for said shunt circuit, and means for substantially simultaneously opening the motor switch and closing said ignition and shunt switches, and for closing the motor switch and substantially simultaneously opening the ignition and shunt switches.



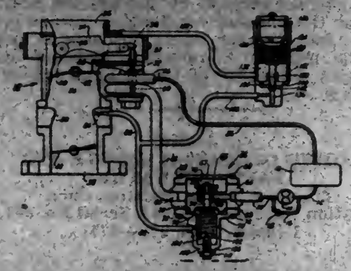
2,445,096
GARMENT
Phyllis O'Leary Whisnant, New York, N. Y.
Application March 20, 1946, Serial No. 16,112
7 Claims. (Cl. 2—227)

1. A garment comprising a body encircling portion having vertical edges closely adjacent each other and disposed at the front center of the garment when worn, a waistband at the top of said body encircling portion, a front portion connected to the central bottom of said body encircling portion so that said front portion may be brought from the rear of the wearer, between the legs and upwards to form the front face of the garment, said front portion extending substantially from side to side of the garment so as to overlap said vertical edges to a considerable degree, securing means for connecting said front portion to said waistband and further securing means on each edge of said front portion for connecting said edge thereof to said body encircling portion, said further securing means being disposed approximately midway between the halfway point along the length of the garment and the waistband.



2,445,097
CARBURETOR
Emil O. Wirth, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 27, 1943, Serial No. 515,727
3 Claims. (Cl. 261—69)

1. In a fuel supply system for internal combustion engines: an air supply passage; a fuel supply conduit; a cut-off valve controlling said conduit; means including a mixture control valve for controlling the richness of the fuel mixture delivered to the engine; means so constructed and



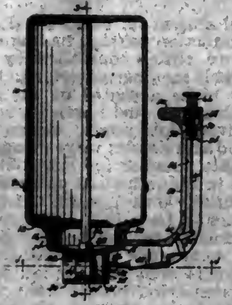
arranged to control both of said valves; and electrically operated means adapted to control the first mentioned valve independently of the means for controlling both valves.

2,445,098
FUEL SYSTEM
Emil O. Wirth, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 14, 1944, Serial No. 558,713
3 Claims. (Cl. 261—37)

1. In a fuel system for an internal combustion engine: an induction passage having a throttle therein mounted on a shaft; a throttle lever for said throttle shaft; means for controlling the throttle; a fuel conduit having the metering orifice therein; a valve responsive to air flow in the induction passage for varying the effective size of said orifice; means for supplying fuel to the metering orifice at a substantially constant pressure; means so constructed and arranged as to vary the ratio of fuel to air for the engine by varying the pressure of the fuel supplied to said metering orifice; an electrical means for controlling the second mentioned means; a circuit for said electrical means; a switch for said circuit located adjacent the throttle shaft; and a means including an arm rotatable on the throttle shaft, yieldably connected to the throttle lever, and adapted to actuate the switch at a part open throttle position and permit the throttle lever to be moved beyond the switch actuating position.

2,445,099
FUEL SYSTEM
Emil O. Wirth, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 19, 1944, Serial No. 559,434
4 Claims. (Cl. 261—37)

1. In a fuel system for an internal combustion engine: an induction passage having an air inlet and a mixture outlet controlled by a throttle valve; a movable member anterior to the throttle and adapted to be actuated by air flow in the induction passage; a fuel nozzle; a substantially constant delivery fuel pump; means connecting said pump and said nozzle; valve means controlled by the movable member for controlling the delivery of fuel to the induction passage, said valve being substantially unresponsive to fuel pressure; regulating means for varying the ratio of fuel to air uniformly to the engine by modifying the pressure of fuel anterior to the fuel valve; a venturi in the induction passage anterior to the throttle; a connection between the venturi and the regulator means whereby the latter is controlled in accordance with Venturi suction; means for bleeding air from the air inlet of the induction passage to said connection for modifying the Venturi suction; and means responsive to barometric pressure for controlling the bleed means.



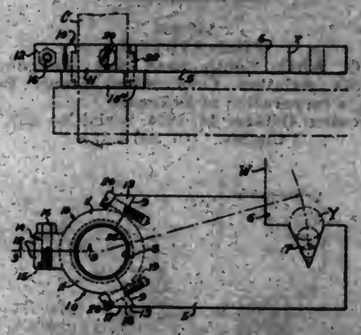
2,445,100
ANCHORING MEANS FOR WHIPSTOCKS
Stanley Wright, Long Beach, Calif., assignor, by direct and mesne assignments, to Eastman Oil Well Survey Company, Denver, Colo., a corporation of Delaware
Application July 28, 1944, Serial No. 546,994
11 Claims. (Cl. 255—1.6)

9. The combination with a whipstock having a lower pointed end of an anchoring means comprising, a bracket attached to the rear lower

portion of the whipstock, an elongate anchoring member having its lower end pointed and having its upper end pivoted to the bracket, the lower end of said member extending below the lower end of the whipstock, resilient means carried by the bracket and engaging the member for urging the member inwardly toward the whipstock, and a stop element carried by the bracket and engaged by the member for limiting inward movement of said member, said stop being so located that the member is normally disposed at an angle with respect to the longitudinal axis of the whipstock.

2,445,101
LIQUID DISPENSER HANDLE AND VALVE ACTUATOR
Theodore Bailey, Habana, Cuba
Application November 4, 1944, Serial No. 561,920
1 Claim. (Cl. 222—474)

In a dispenser having an inverted bottle-like storage container with a threaded neck, the combination, which comprises, a closure forming an inverted cap threaded on said neck having a cylindrical valve housing with vertically disposed openings therethrough depending from the under surface and an inverted channel-shaped arm extending horizontally from one side to a point spaced from the wall of the container and then upward to form a handle adapted to be gripped by hand to carry the dispenser, said channel-shaped arm being aligned with the valve housing, a piston-like slide valve longitudinally slidable in said valve housing having openings therethrough positioned to register with the vertically disposed openings through the valve housing, said closure cap having a threaded boss on the inner surface positioned to register with one of the openings therethrough, a vent tube threaded in said boss and extending upward in the said container, a bell-crank pivotally mounted in the said channel-shaped arm, a rod connecting one arm of the bell-crank to the slide valve, a vertically disposed rod with a button on the upper end connected to the other arm of the bell-crank and extending through the upper end of the handle, and a spring resiliently urging the said vertically disposed rod upward to close the valve.



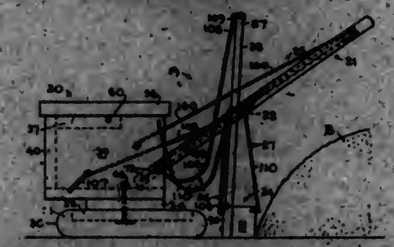
2,445,102
HUMIDITY MODIFYING AND HEAT CONSERVING MEANS
Stephen J. Beam, Philadelphia, Pa.
Application November 26, 1942, Serial No. 511,863
9 Claims. (Cl. 236—44)

3. In a humidity modifying and heat conserving means for basements, a flue section, a water jacket and an air drum surrounding said flue section wholly within the basement, a storage hot water heater, means for connecting said water jacket in circulatory communication with said storage hot water heater, means at one end of said drum for forcing air from the basement

therethrough to heat and dry the air, said drum being provided adjacent the opposite end with a discharge opening leading back into the basement, and means automatically responsive to a demand for relief of humidity in the basement for actuating said air forcing means.

2,445,103
WORK HOLDING ATTACHMENT FOR DRILL PRESSES
John T. Betts, Los Angeles, Calif.
Application August 23, 1943, Serial No. 499,684
1 Claim. (Cl. 77—63)

In a work holder of the character described, an elongated rectangular shaped plate, the outer end portion of the plate having an angular recess in one corner thereof and a V-shaped recess extending inwardly from a wall of said first recess, and adjustable clamp means at the opposite end of the plate for attaching the same to the column of a drill press for movement in a circle with the drill press column as a center.



2,445,104
FUEL CARBURETING MEANS
Charles M. Colvin, Wilmette, Ill.; John L. Cowles, executor of said Charles Colvin, deceased, assignor to Nellie M. Butterfield, Lexington, Ohio
Application Sept. 15, 1944, Serial No. 554,218
1 Claim. (Cl. 261—34)

In an air intake for liquid feeds for furnaces, internal combustion engines and the like, an adjustable means for regulating the amount of air admitted to said feed, said adjusting means comprising a tube having linearly extending air inlet means in at least one wall, a partition in said tube beyond said air inlet means and having a central opening, a linearly slotted tube adapted to slide up and down in said partition opening whereby to permit a larger or smaller volume of air to enter said slotted tube at the air inlet side of said partition and being conveyed to the air intake tube at the other side of said partition, a closure cap linearly movable on said tube at the end

adjacent the air inlet means and an actuating connection between said closure cap and said linearly slotted tube.

2,445,105
TOY STEAM SHOVEL
James G. Cullen and Edwin H. Spear, Baltimore, Md.
Application August 29, 1946, Serial No. 693,657
2 Claims. (Cl. 46—48)

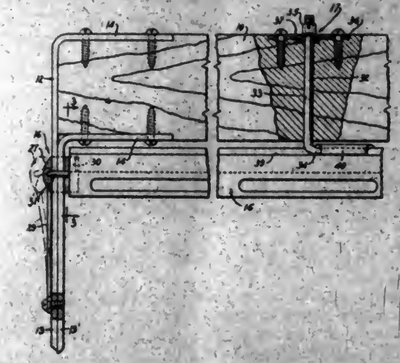
1. In a toy excavator, a housing, a boom, means securing the boom to the housing to project therefrom, a boom block slidably carried by said boom and having a slot, a forward end, a rearward end and a pair of openings, means secured to the forward end of the boom block for moving the boom block longitudinally of the boom, a dipper stick extending through said slot and having surfaces facing said ends, the length of said slot being substantially greater than the shortest distance between said surfaces, a bucket provided with a body portion and a door portion, pivoted to the body portion, means securing said bucket to said dipper stick, means to oscillate one of said portions with respect to the other portion, including a first flexible member secured at one end to one of said portions, slidably extending through one of said openings and secured at its other end to said housing, and means to support said dipper stick and to permit said member to be moved longitudinally along said slot and through said slot, including a second flexible member operatively secured at one end to said dipper stick at adjacent the lower end of the latter, extending upwardly through the other of said openings, and provided with means at its other end to permit drawing in and letting out of said flexible member.

2,445,106
AUTOMATIC HOOK
George E. [illegible], Knoxville, Tenn.
Application February 7, 1945, Serial No. 646,117
1 Claim. (Cl. 294—83)

1. An automatic hook including a pivoted body member shaped to provide a dwell and having a cam surface operable by an element to be engaged for deflecting said body member out of the path of said element as said element moves upwardly into operative relationship with said hook, and a member pivoted to said body mem-

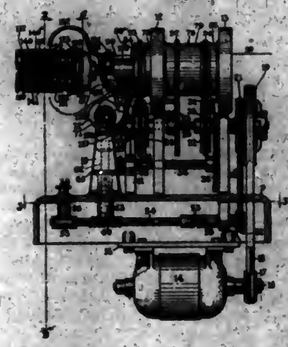
ber adjacent to and overlying said dwell, said last named member being operable automatically by gravity to rest on and follow said element into locked position in said dwell.

2,445,107
HEDDLE FRAME
Russell P. Drake, Caledonia, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Continuation of application Serial No. 514,313, December 15, 1943. This application May 31, 1946, Serial No. 673,240
14 Claims. (Cl. 139—92)



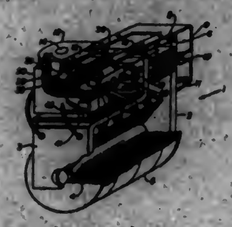
1. In a supporting frame for heddles having end hooks, the combination of a side rail and an end member, a heddle supporting bar extending parallel to said rail, said bar being of channel cross section and comprising an anchoring leg connected to said rail and a heddle leg forming a flange having a free edge for engagement by the heddle hooks, and a latch device mounted on the end member and having a detent element normally engaging between the legs of the channel shaped bar to hold the bar against lateral movement relative to the frame and a latch element engageable with the anchoring leg of the bar to hold it in laterally shifted position relative to the frame.

2,445,108
HEDDLE FRAME
Russell P. Drake, Caledonia, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Original application December 15, 1943, Serial No. 514,313. Divided and this application April 30, 1945, Serial No. 591,008
5 Claims. (Cl. 139—92)



1. A heddle frame comprising top and bottom rails and end members connecting said rails,

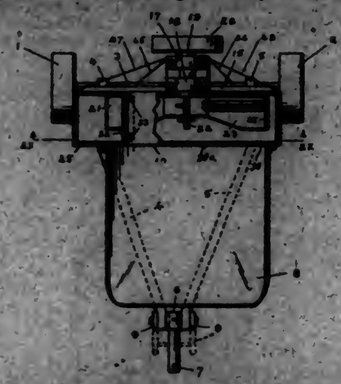
heddle supporting means carried by the frame including a bar, an anchoring device carried by one of said rails and having a connection with said bar intermediate the ends thereof, and means connecting the ends of the bars to said end members including a latch device carried by one of the end members and disengageable from



one end of the bar to permit lateral deflection of the bar out of the plane of said end member, the connection between said bar and the anchoring device permitting disengagement of the bar from the device by moving the bar a short distance endwise when the said one end thereof is deflected out of the plane of the end member.

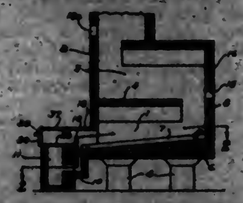
2,445,109
COIL WINDER
Andrew W. Ferguson, Great Neck, N. Y., assignor to Ferd Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application December 14, 1946, Serial No. 716,262
8 Claims. (Cl. 140—92.2)

1. A coil winding machine comprising a pair of spindles mounted for rotation about parallel axes, helical grooves in the surfaces of the respective spindles, means rotating said spindles at the same speed to cause said grooves to feed in the same axial direction, a wire guide rotatable about said spindles to wind turns of wire around the spindles and in the diametrically opposed positions of said grooves, means advancing said wire guide axially with the axial feed of said grooves, and means operable after a coil section of a predetermined number of turns has been built up to retract said wire guide to another groove position for winding a second coil section therein, said grooves being arranged to advance said coil sections axially and to progressively discharge the wound sections from the ends of said spindles.



2,445,110
OVERLOAD RELAY HAVING AN INSTANTANEOUS PRIMARY MOVEMENT AND A DELAYED SECONDARY MOVEMENT
Alphonse Perron Gauvreau, East Cleveland, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application November 20, 1944, Serial No. 564,329
4 Claims. (Cl. 175—294)

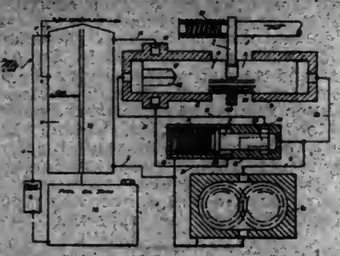
4. An overload relay comprising a magnetic circuit including a movable armature, adjustable spring tensioning means for said armature, a power conductor arranged to produce a flux for magnetizing said circuit to produce at least a primary movement of said armature, a holding coil for magnetizing said circuit, a pair of contacts carried by said armature, a spring tensioned resilient abutment contact arranged for engagement by one of said armature contacts upon a primary movement of said armature, a bimetallic delay element having a heater circuit established by said engagement, contact means operable by said delay element to energize said holding coil to produce a secondary movement of said armature displacing said abutment contact, a power control switch operable by the displacement of said abutment contact, an additional holding coil circuit and a signal circuit established by the other of said armature contacts upon said secondary movement, and a variable resistance for controlling the heating current in said bimetallic heater circuit to regulate the delay between said primary and secondary movements produced by said delay element.



2,445,111
MACHINE FOR STACKING HAY OR STRAW
Edward V. Geminiock, Warsaw, N. Y.
Application November 22, 1945, Serial No. 630,525
2 Claims. (Cl. 302—37)

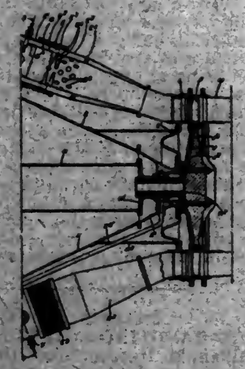
1. In a machine for stacking hay or straw, the combination of a fan casing and a fan mounted to rotate therein, said fan having blades thereon, and the fan casing being deeper from front to back than the width of the blades, a spout having a long and a short side connected tangentially to the fan casing through which the fan can discharge hay or straw, a triangular shaped plate placed with its narrow base in the upper corner of the fan casing in front of the fan and just below where the short side of the spout and the fan casing come together, the tip of the plate being placed downwardly on the inside of the front of the casing, said plate tapering from its point upwardly and rearwardly toward the fan blades and causing the hay or straw to be

deflected from the front of the fan casing toward the fan blades and into the spout.



2,445,112
METHOD FOR FORMING SO_2 BY BURNING SULFUR
Worthington T. Grace, Upper Darby, Pa., and Joseph C. Muller, Jr., Little Falls, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application December 28, 1940, Serial No. 372,076
9 Claims. (Cl. 23—179)

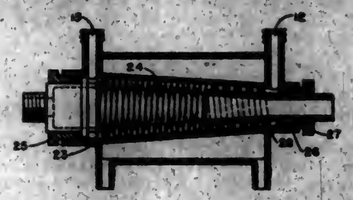
1. In the manufacture of sulfur dioxide by the vaporization of sulfur and the combustion of sulfur vapor the steps of continuously causing fluent sulfur to flow down a flat sloping surface having sides converging to an outlet, continuously vaporizing sulfur from said fluent sulfur in its passage down said sloping surface, continuously burning said sulfur vapor in proximity to said fluent sulfur passing down said sloping surface, continuously withdrawing fluent sulfur from said outlet into a settling pit, permitting the sulfur to settle, withdrawing supernatant sulfur from said pit and returning it as said first-named fluent sulfur and introducing raw sulfur as required to maintain a substantially constant level of sulfur in said settling pit.



2,445,113
HYDRAULIC GOVERNOR
George Wilfrid Acland Gowe and Jakub Bujak, Staines, and Richard Ernest Rutherford, Windsor, England, assignors to Lagonda Limited, Staines, Middlesex, England
Application [illegible], Serial No. 486,664
In Great Britain July 15, 1942
19 Claims. (Cl. 244—14)

1. In a fluid operated governor for variable speed engines the combination of a displacement pump adapted to be driven at a speed proportional to that of the engine for volumetrically pumping fluid in proportion to the speed of the engine in a single closed circuit, intake and discharge connections for said pump, a double ended cylinder supplied with fluid pressure through said connections, a double acting plunger in said cylinder spring-loaded in a direction to shut off the fuel and having both ends subjected to fluid pressure created by the pump, a manually variable leak-off orifice controlling the pressure fluid acting on one end of the plunger, automatic means compris-

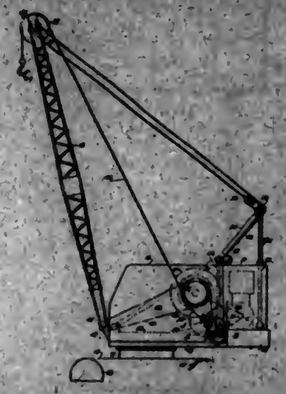
ing a leak-off orifice the area of which is varied automatically by said plunger as the plunger moves towards a position affording minimum fuel admission enabling greater percentage run-up at lower speeds with respect to the run-up at higher speeds, and an automatic release valve connected with the intake and discharge connections of said pump for controlling the fluid pressure acting on the other end of the plunger, whereby the governor is safeguarded should the engine start to run in reverse or should the fluid supply to the governor fail.



2,445,114
ARRANGEMENT OF JET PROPULSION ENGINE ELEMENTS
Frank Bernard Halford, Edgware, England, assignor to The De Havilland Aircraft Company Limited, Edgware, England, a company of Great Britain
Application July 20, 1943, Serial No. 495,517
In Great Britain November 21, 1941
13 Claims. (Cl. 60—35.6)

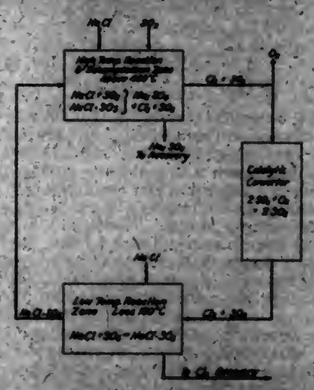
2. A fluid jet propulsion apparatus having a nozzle discharging to the rear thereof comprising a generally conical casing, disposed with its

larger diameter towards the forward end of said apparatus, a shaft journalled within said casing and extending lengthwise of its principal axis, an impeller of the single side radial flow type fixed on said shaft adjacent to the larger diameter of said casing with its entry towards the front, walls forming a compression chamber in the casing around said impeller, a plurality of tubular combustion means disposed circumferentially around said casing and having their axes converging rearwardly, the intake ends of said tubular combustion means each communicating with said compression chamber, a turbine wheel fixed on said shaft adjacent to the smaller end of said casing and enclosed by an extension thereof, and conduit means forming communication between the discharge ends of said tubular combustion means and said casing extension adjacent to the periphery of the turbine wheel, said impeller, compression chamber, tubular combustion means, conduit means and turbine wheel being disposed in sequence providing a continuously rearward path for air and products of combustion through said apparatus.



2,445,115
HEAT EXCHANGER
Francis P. Hanrahan, Washington, D. C., assignor to United States of America as represented by the Secretary of Agriculture
Application April 7, 1944, Serial No. 529,970
2 Claims. (Cl. 257—246)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

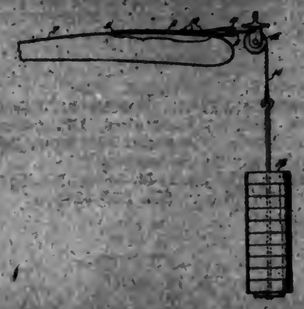
1. A heat exchanger comprising a conical outer shell through the walls of which heat exchange is effected, a jacket for holding a heat exchange fluid against the exterior of the shell, a removable conical inner shell within said outer shell adapted to carry a heat exchange fluid through its center and having a spiral channel at its outer surface adapted to carry a fluid in contact with the inner surface of the outer shell, the ends of said channel being at opposite ends of said inner shell, means for introducing a fluid into one end of said channel, means for withdrawing fluid from the other end of the channel, a packing gland at the smaller end of and slidably engaged with the outer shell, means for adjustably securing said packing gland in different positions on said inner shell, another packing gland at the other end of and slidably engaged with the inner shell, and means for adjustably securing said last-mentioned gland in different positions on said outer shell.



2,445,116
LOAD HANDLING EQUIPMENT
William M. Huston, Lima, Ohio
Application October 31, 1942, Serial No. 464,006
7 Claims. (Cl. 212—59)

1. In a load-handling machine having a boom hoist shaft and a second shaft from which power is to be taken and delivered to a hoist drum on said boom hoist shaft, a clutch unit on the second mentioned shaft positioned adjacent to a location provided for crowd mechanism, and adapted to cooperate therewith, a gear drive adapted to displace said crowd mechanism and to co-operate with said clutch unit for driving a

hoist drum on the boom hoist shaft from said other shaft, and a casing for said gear drive, configured also to support an idler gear shaft, and removable as a unit with said gear drive from said boom hoist shaft.

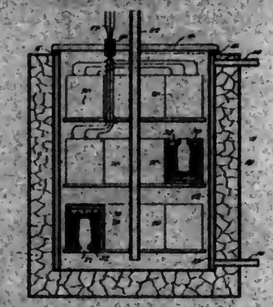


2,445,117
MANUFACTURE OF CHLORINE AND SODIUM SULFATE
Ralph K. Iler, East Cleveland, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application December 23, 1939, Serial No. 310,323
1 Claim. (Cl. 23—219)

In the manufacture of chlorine and sodium sulfate by the interaction of sodium chloride and sulfur trioxide the steps of bringing sodium chloride in contact with essentially pure sulfur trioxide at a temperature above the decomposition temperature of sodium pyrosulfate for a time sufficient to convert substantially all of the sodium chloride to sodium sulfate, separating the gaseous products of the reaction from the solid products, treating the gaseous products to oxidize the sulfur dioxide to sulfur trioxide, contacting the sulfur trioxide-containing gas thus obtained with sodium chloride at a temperature below 150° C. but sufficiently high to produce

sodium chlorosulfonate for a time sufficient to convert substantially all of the sulfur trioxide to sodium chlorosulfonate, separating the gaseous products of the last named reaction from the solid products thereof and introducing the solid product of the second named reaction into the first named reaction wherein the heat of the reaction decomposes the sodium chlorosulfonate.

2,445,118
SHEAR AND TENSION PATCH
John Kintas, Wichita, Kans., assignor to Beech Aircraft Corporation, Wichita, Kans., a corporation of Delaware
Application December 2, 1943, Serial No. 512,653
5 Claims. (Cl. 72—88)

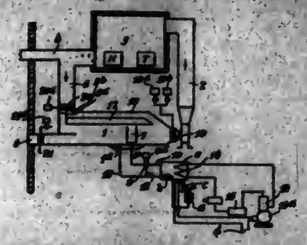


3. A loading patch for the strength testing of aircraft structures comprising a load applying layer of thin, flat, flexible, non-stretching, strong interwoven fabric sufficiently pliable to be conformable to the varying surface contours of aircraft structure, said pad having incorporated therein, in its flexible, conformable state, an adhesive which can be treated to bond the pad to the surface of a part to be tested and whereby said pad may be applied directly to the surface by simply pressing the same into smoothly conformed engagement over the surface and treating the adhesive in the pad to bond the pad in its conformed state to such surface, and a load applying pull connection flexibly connected with a considerable area of said pad and thereby arranged to transmit the test load substantially uniformly to the pad and thus to distribute the load substantially uniformly over the surface to which the pad is attached irrespective of variations in contour of the surface.

2,445,119
LOCK
Charles Lodin, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application October 30, 1945, Serial No. 625,066
10 Claims. (Cl. 292—33)

10. In a lock of the class described, a casing, a latchbolt movably mounted in said casing, a spring pressing said latchbolt relatively to said casing and toward latching position relatively to a strike, the contact of said latchbolt with said strike moving said latchbolt into retracted position against the force of said spring, a deadbolt slidably mounted in said casing and adapted to interlock with said strike, a portion of said latchbolt so related to the strike whereby to contact the strike in advance of said deadbolt when said latch bolt and deadbolt are fully projected from said casing and said casing swings with a door from an open toward a closed position, whereby said latchbolt impinges first against the strike, and means whereby the consequent retraction of said latchbolt by said strike retracts said deadbolt into said casing.

2,445,120
DRYING OF FROZEN MATERIALS BY HEAT RADIATION
Sidney O. Lawinson and Franz Oppenheimer, Chicago, Ill., assignors to Michael Reese Research Foundation, Chicago, Ill., a corporation of Illinois
Application September 8, 1947, Serial No. 772,727
5 Claims. (Cl. 34—4)



1. In a process for the drying of a liquid containing solids, the steps of maintaining such material in a frozen state by exhausting the atmosphere in a closed system to reduce the temperature below the freezing point of the liquid, supplying the heat of sublimation thereto by the radiation of a hot body emitting at least 60% of its radiation in the spectral range of 1μ to 10μ and having a maximum intensity of radiation within the range of from 1.6μ to 5.5μ, and removing vapors liberated by such sublimation, said radiation from said hot body being continuously applied during the drying operation.

2,445,121
AIR-CONDITIONING SYSTEM
Kurt Nehab, Stretford, England, now by change of name Kenneth Emanuel Ney
Application December 29, 1942, Serial No. 470,458
In Great Britain January 9, 1942
12 Claims. (Cl. 257—3)

1. An air-conditioning plant including a temperature-responsive device and humidity-responsive device, the plant having means adjustable between zero and a maximum for cooling the air and means adjustable between zero and a maximum for varying the quantity of air admitted to the cooling means; and means for causing simultaneous influences of the two condition-responsive devices in the same direction from normal to effect adjustments of the cooling means and the quantity-varying means in opposite directions; and for causing simultaneous influences of the two-condition-responsive devices in opposite di-

rections from normal to effect adjustments of the cooling means and the quantity-varying means in the same direction, said temperature-respon-

sive device and humidity-responsive device being each operable to bring cooperative action between air tempering means and flow varying means when the other is not affected.

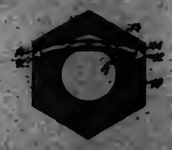
2,445,122
COVER AND FILTER FOR MILKER PAILS
Theophil J. Pfetcher, Norwalk, Wis.
Application December 18, 1945, Serial No. 635,636
1 Claim. (Cl. 31—4)

A cover and filter for a milker pair comprising a tubular body having an annular peripheral channel intermediate its ends, an outstanding annular flange at one end of the tubular body, a dome-shaped top fixed to the flange and closing the adjacent end of the tubular body, a bail fixed at opposite ends to the flange and extending over the dome-shaped top in spaced relation thereto, a second tubular body adapted to encircle the first-mentioned tubular body adjacent the end remote from the flange thereon, an inwardly extending annular flange at one end of the second-mentioned tubular body, a perforated filter plate, an offset outstanding annular flange adjacent the periphery of the filter plate for engaging the inturned annular flange and supporting the filter plate in spaced parallel relation to the plane of the inturned flange, a removable filter pad supported on the filter plate, peripherally spaced substantially parallel spring arms fixed to the second-mentioned tubular body for engagement with the walls of the annular groove in holding the tubular bodies assembled, and an arched bail fixed to the second-mentioned body and extending across the filter plate in spaced relation thereto.

2,445,123
CABLE GRAB BLOCK
George Radde, Center Line, Mich.
Application February 22, 1943, Serial No. 476,789
7 Claims. (Cl. 24—123)

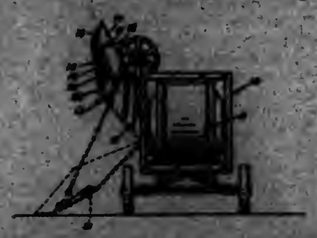
1. A clamping device for cables or the like comprising a support having spaced substantially parallel side members, a cam lever pivotally mounted between said members and shiftable therebetween to grip a cable between curved clamping surfaces on the lever and support, one of said side members comprising a part attached to the other side member and a second part swingable relatively to

said first part to form between said parts an opening through which a portion of the cable between its ends may be inserted bodily into the space between said members.



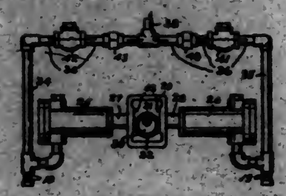
2,445,124
CABINET TYPE COOKING STOVE
Herbert M. Reeves, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application May 26, 1944, Serial No. 537,379
6 Claims. (Cl. 126—37)

1. In a stove having a cooking top with a plurality of burners arranged in the forward portion thereof, an oven compartment located above said cooking top and rearwardly of said burners, an oven burner mounted below said compartment, a two part cover comprising independently movable front and top cover members, a track supporting said top cover member above said burners in a horizontal closed position spaced substantially midway between said cooking top and the bottom of said oven compartment, said top member having an upright wall portion effective when the member is in closed position to close the space between the member and the bottom of said oven compartment, means supporting said front cover member adjacent the front edge of said cooking top for pivotal movement from a horizontal position flush with the cooking top to a vertical position effective to close the space between the cooking top and said top cover member when the latter is in the closed position, and an extension of said track operative to guide said top cover member in a rearward movement from said closed position into an open position below said oven compartment, said extension being downwardly and rearwardly inclined to enable the upright wall portion of the member to clear the oven burner in such movement.



6. In a stove having a cooking top with a plurality of burner grids arranged in the forward portion thereof, an upper compartment located above said cooking top rearwardly thereof and having a front wall with its lower edge spaced vertically a substantial distance above the cooking top rearwardly of said burner grids, a top cover having a rear edge terminating adjacent the lower edge of said front wall of the upper compartment, means supporting said top cover for opening movement rearwardly beneath the oven compartment, said top cover when in closed position being spaced a sufficient distance above said cooking top to clear utensils standing on said burner grids, and a hinged front cover extending vertically between the top cover and the front edge of the cooking top to close the space at the front of the stove between said top cover and said cooking top, said cooking top being entirely exposed in upward and forward directions when said covers are in their open positions.

2,445,125
LOCK NUT
John R. Reyburn, Fairfield, and Leopold Kuhnl, Stratford, Conn., assignors to American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York
Application February 6, 1945, Serial No. 576,423
1 Claim. (Cl. 151—26)



A lock nut for a bolt comprising a nut body having a tapped hole therethrough, a transverse hole extending into the nut body and intersecting the tapped hole, said transverse hole being bent in configuration, an elongated resilient member received within the transverse hole and deformed by the walls of the hole, said member upon engagement with the threads of a bolt in the tapped hole being further deformed in the same direction as the deformation caused by the walls of the hole, and means retaining said member in said hole.

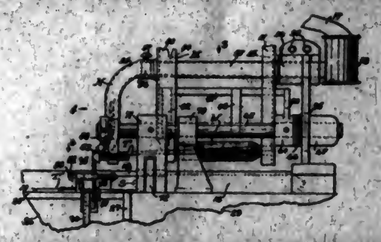
2,445,126
VIBRATOR FOR CONCRETE MIXERS
Anthony F. Schmuck, Alden, N. Y.
Application September 3, 1947, Serial No. 771,899
1 Claim. (Cl. 259—167)

In a concrete mixer, a rotatable mixing drum, a charging skip pivoted to move about a horizontal axis from a load-receiving position to a load-discharging position adjacent said drum, a bracket carried by the bottom of the skip and a hammer pivoted to the bracket to swing about an axis which lies parallel to the axis about which the skip moves and strike the bottom of the skip when the latter reaches its discharge position to facilitate the discharge of material from the skip.

2,445,127
HOT LIQUID PUMP
Earl B. Schwenk, Seattle, Wash.
Application May 15, 1946, Serial No. 669,968
2 Claims. (Cl. 103—44)

1. Means for pumping hot liquid comprising a continuous run of conduit; a hot liquid inlet pipe connected therewith; a hot liquid outlet pipe connected with said continuous run of conduit at a point spaced from the point of connection therewith of said hot liquid inlet pipe; two reciprocating plunger pulsators positioned below said continuous run of hot liquid conduit; two J-shaped conduits adapted to contain cooler liquid, each J-shaped conduit having a loop portion extending below one of said pulsators and having a shorter branch connected with said pulsator and having a longer branch connected with said continuous run of conduit, the points of connection of said longer branches with said continuous conduit being at opposite sides of said hot liquid inlet and outlet pipes; and four check valves in said continuous conduit positioned so that a check valve is interposed between each J-shaped conduit and each hot liquid pipe that connects with said continuous run of conduit, each of said check valves permitting a flow of hot water from said inlet to said outlet pipe and preventing a flow of hot water in the opposite direction.

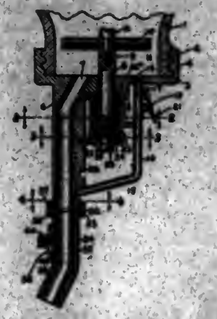
2,445,128
BIOLOGICAL PROCESS FOR THE PRODUCTION OF RIBOFLAVIN
Fred W. Tanner, Jr., Lynford J. Wickerham, and James M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application January 11, 1946, Serial No. 640,645
8 Claims. (Cl. 195—28)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The method of producing high yields of riboflavin comprising cultivating *Ashbya gossypii* under aerobic conditions in a growth medium comprising 0.5 to 10.0 percent fermentable carbohydrate, a proteinaceous material, and a lipid.

6. A process of preparing riboflavin comprising cultivating *Ashbya gossypii* under aerobic conditions in an aqueous growth medium comprising 0.5 to 10 percent of a fermentable sugar, corn steep liquor, and proteinaceous material.

2,445,129
THREAD CONTROL FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application May 21, 1945, Serial No. 594,925
23 Claims. (Cl. 139—247)

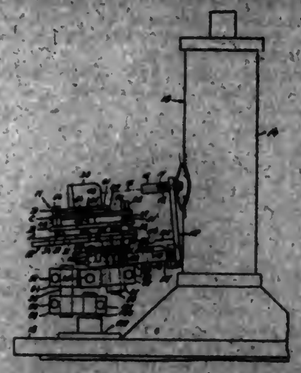


17. In a weft replenishing loom having a group of weft ends, a pneumatic thread holder within which subatmospheric pressures exist having an

intake mouth opening toward the fabric in the loom, and a shuttle having a thread extending therefrom, the weft ends and thread approaching the intake mouth in a direction toward the fabric

in the loom and entering the mouth, the shuttle after being picked in a direction toward the fabric causing the thread to approach the mouth in a direction from the fabric toward the mouth.

2,445,130
LIQUID DISPENSER
William E. Turner, Summerville, Ga.
Application June 1, 1945, Serial No. 597,062
6 Claims. (Cl. 222—482)

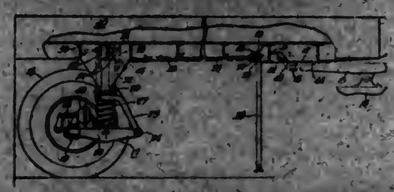


1. A liquid dispenser, comprising an open mouthed liquid container, a dispensing device removably attached to the container over its mouth and having a base constituting a cap for the container, a liquid outlet nozzle on the base, an air inlet tube mounted on the base and leading into an air inlet conduit at the end of the liquid outlet nozzle, and a valve closure for the liquid outlet nozzle and the air inlet tube, said valve closure provided with means normally holding the valve in closed position, and means for holding the valve in open position, a portion of the length of the air inlet tube being spaced from the liquid outlet nozzle and the actuating means for the valve being located between the air inlet and the liquid outlet.

2,445,131
DOOR MOUNTING
Avagim Wartian, Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application August 10, 1944, Serial No. 548,813
4 Claims. (Cl. 244—129)

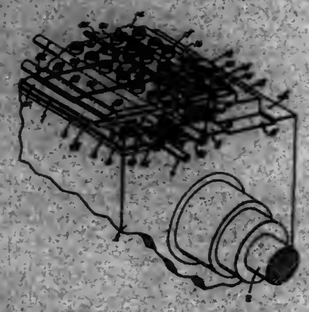
3. An airplane fuselage having an exterior wall with a doorway formed therein providing access to the interior of the plane, a door for said doorway, and rollers and trackways mounting said door for movement inwardly into nested relation to said doorway and outwardly relatively to said doorway and for movement from a position outwardly of said doorway to one side of said doorway.

2,445,132
APPARATUS FOR DETERMINING ELECTRICAL AXIS OF QUARTZ CRYSTALS
Harry Berman, Cambridge, Mass., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application November 26, 1943, Serial No. 511,262
6 Claims. (Cl. 250—83)



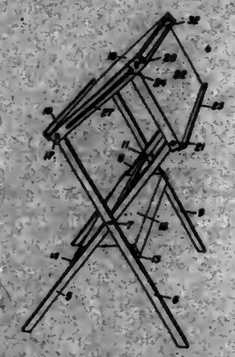
3. In apparatus for manufacturing quartz oscillator plates, in which an electrical axis of the crystal is located by passing X-rays onto and deflecting them from the crystal, the improvement comprising an X-ray machine, means associated with the X-ray machine for emitting X-ray in a predetermined direction, a guide support, a holder provided with a reference base having a part adapted to engage the guide support in parallel alignment with X-rays passed into the crystal, an intermediate support mounted pivotally on the base and tiltable at right angles to the optical axis, a second intermediate support mounted pivotally on the first intermediate support and tiltable in parallel alignment with the optical axis, a rotatable base carried by the second intermediate support on which to mount the crystal, said rotatable base and second intermediate support being independently adjustable on axes substantially at right angles with respect to one another and to the first intermediate support to locate the optical axis of the crystal and to fix the optical axis in parallel alignment with said reference base part and to lock the crystal, rotatable base, second intermediate support and first intermediate support as a unit in their adjusted positions, means pivotally mounting said guide support for pivotal adjustment about an axis substantially normal to the X-rays from said machine, said first intermediate support being adjustable with respect to the reference base part to fix an electrical axis of the crystal at right angles to the reference base part while the optical axis remains in fixed parallel alignment with the reference base part, and a fluorescent screen located at a suitable distance from and at a suitable angle to the holder so that X-rays deflected from the crystal supported thereon may impinge on the screen for visual inspection.

2,445,133
PUMP JACK
Rees T. Cruikshank, Minneapolis, Minn., assignor, by direct and mesne assignments, of forty-five per cent to Carl A. Andersen, Minneapolis, Minn., and ten per cent to Louis Wigen
Application March 1, 1944, Serial No. 651,359
6 Claims. (Cl. 74—25)



5. In combination with a cylindrical member having a longitudinally reciprocable element mounted therein, a jack having in combination a combined base and cap member secured axially to one end of said cylindrical member, a pair of parallel guides rigidly affixed at their ends to said base, a reciprocating carriage mounted in said guides and adapted to be connected with said longitudinally reciprocable element, a stub shaft journaled in said reciprocating carriage, a gear wheel eccentrically affixed to said stub shaft and having its body disposed perpendicularly to said shaft, said base and guides constituting portions of a rigid frame, a second stub shaft journaled in said frame at a point spaced outwardly of said first mentioned stub shaft with the axes of said shafts extending in a common plane disposed parallel with said guides, a second gear wheel affixed eccentrically to said second stub shaft and of similar diameter to said first gear wheel and intermeshed therewith, a link pivotally connected at one end to the axial portion of said first gear wheel and pivotally connected at its opposite end to the axial portion of said second gear wheel and means for driving said last mentioned shaft.

2,445,134
TRACTOR-TRAILER CONSTRUCTION
Randal B. Carell, Jr., Lansdowne, Pa.
Application August 9, 1945, Serial No. 609,777
17 Claims. (Cl. 280—33.95)

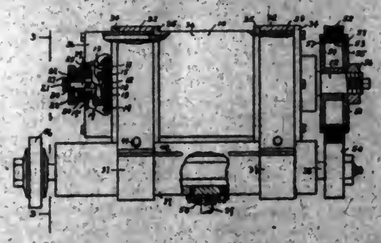


1. A truck-trailer having rear supporting wheels and having at its forward end a fifth wheel element for engagement with the mating element of a tractor, a [illegible] mounted load supporting road wheel unit adjacent each side of the trailer intermediate the rear wheels and said fifth wheel element, and means connecting said wheel units insuring similar caster movements thereof.

2,445,135
DOCTOR HOLDER
John R. Curtis, Jr., Norwood, Pa., assignor to Scott Paper Company, Chester, Pa., a corporation of Pennsylvania
Application December 18, 1944, Serial No. 568,769
4 Claims. (Cl. 92—74)

2. In a doctor assembly, an adjustable body structure, a flexible blade, a plurality of rigid blade-carrying elements arranged in series longitudinally of said structure, said elements backing the blade on both faces to an extent precluding any material flexure of the blade in the transverse direction and being spaced apart to afford freedom for limited relative angular movements and thereby provide for flexure of the blade in the longitudinal direction, a flexible diaphragm forming a common seat for said elements in the structure, means for applying fluid pressure to said diaphragm thereby to exert a uniform pressure to the said elements tending to displace the entire series simultaneously as a unit, and flexible means for anchoring said elements to the body structure.

2,445,136
EASEL
Dominic Egyed, Los Gatos, Calif.
Application April 10, 1948, Serial No. 20,269
3 Claims. (Cl. 248—197)



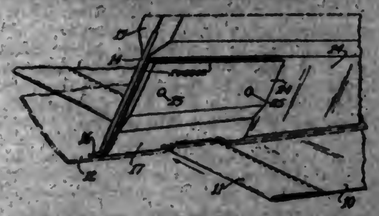
1. An easel, comprising a pair of spaced, pivoted legs, each pair of legs having a working surface pivoted thereto, the free ends of said working surfaces being slideably pivoted to each other.

2,445,127
CONVERSION OF FURFURYL-ALCOHOL
Eduard Farber, New Haven, Conn., assignor to Polyxer Chemical Co., Inc., a corporation of New Jersey
No Drawing. Application January 27, 1944, Serial No. 519,952
7 Claims. (Cl. 260—92.6)

1. The process of converting furfuryl-alcohol which comprises maintaining together with the furfuryl-alcohol, nitric acid in proportions ranging from three one-thousandths of a part of the acid and one part of diluent to ten parts of acid and ten thousand parts of diluent, to one hundred parts of the furfuryl-alcohol.

2,445,138
GRINDER
Louis O. French, Milwaukee, Wis.
Application November 13, 1946, Serial No. 710,791
6 Claims. (Cl. 51—259)

5. A grinding unit consisting of a base support, an electric motor of the series type carried by said support and having an armature shaft extended to form a drive shaft, a quill carried by said support and having a spindle parallel to said armature shaft, a grinding wheel on one end of said spindle, a friction wheel on the other end of said spindle, a friction wheel on said drive shaft in direct friction pressure drive connection with the friction wheel on said spindle to drive said spindle, means for moving said spindle relative to said armature shaft to effect said drive connection, means for maintaining said connection, and a variable motor speed governor on said motor, said governor including a switch in the motor circuit responsive to the speed of said motor to maintain its speed substantially constant under varying demands placed upon it by the grinding wheel, and manually settable means for the governor for varying the governed speed of said motor to vary the speed of said spindle for varying diameters of grinding wheels.



2,445,139
SHOCK ABSORBING DEVICE FOR AIRCRAFT AND OTHER POWER-DRIVEN VEHICLES
Charles Albert Gret, Wolverhampton, England
Application November 3, 1942, Serial No. 464,370
In Great Britain November 3, 1941
6 Claims. (Cl. 267—64)

1. In a shock absorbing device for aircraft, a casing including a chamber for gas under pressure, a piston in the casing to contain liquid and arranged to receive the impact force of the airplane on landing, means to cause the impact movement of the piston to force liquid into the gas chamber to compress the gas therein, the means for admitting the liquid from the piston to the primary gas chamber being formed to restrict liquid flow into the primary gas chamber to reduce the otherwise incident rise in gas pressure in the primary gas chamber, a secondary gas chamber arranged in the casing, a valved communication between the respective gas chambers and opening to establish communication between said chambers, and means including

ing an operable connection to the valve operable by the difference of pressure between the gas in the primary gas chamber and the liquid in the piston to operate said operative connection and establish communication between the primary gas chamber and the secondary gas chamber.

2,445,140
DOCTOR BLADE STRUCTURE
Charles A. Hazlagten, Freeport, N. Y.
Application October 5, 1946, Serial No. 701,487
6 Claims. (Cl. 101—114)

1. A doctor blade structure for use in printing and like machines for spreading matter to be applied to a surface having uneven portions comprising a metal blade presenting a longitudinally extending lower edge for normal engagement with a stencil in engagement with said surface, said blade having a cut-out portion in said lower edge, a piece of rubber in strip form attached to said blade, a strip of fiber secured to said rubber and extending therebeyond at the lower edge of said blade for engagement with the stencil, and said rubber and fiber strips filling the space afforded by said cut-out for yielding to an inward movement of the stencil as it passes over an uneven surface of said material.

2,445,141
METHOD AND MEANS FOR MAKING CASTINGS
Peter S. Hardy, Bridgeport, Conn.
Application June 27, 1942, Serial No. 448,748
10 Claims. (Cl. 22—111)

8. For making a mold for use in casting metal, a pattern and plate for supporting the same; an

open-top flask having internal surfaces forming an enlarged configuration of the outline of the high points of said pattern, the plate of said pattern covering the top of said flask and said pattern and flask forming relatively narrow spaces between them for receiving moulding

sand; sand-supporting nails adjustably mounted in the flask from the exterior thereof and extending into the sand-receiving space between the flask and the pattern; and means for adjustably locking said nails in adjusted positions in said flask.

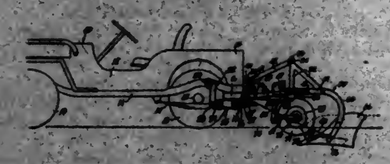
2,445,142
PREPARATION OF THIOLESTERS
Chester M. Himel, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application February 12, 1946, Serial No. 647,191
6 Claims. (Cl. 260—455)

1. The process of preparing a thiolester having the general formula

where R is a radical selected from the group consisting of alkyl and aryl radicals having not more than 6 carbon atoms and where R' is a tertiary alkyl radical having at least 8 carbon atoms, which comprises slowly adding a tertiary alkyl mercaptan having at least 8 carbon atoms per molecule to a solution containing an organic acid anhydride of a monobasic organic carboxylic acid having not more than 7 carbon atoms per molecule, and an acidic catalyst, agitating said solution during said addition and maintaining the reaction mixture during said addition at a temperature within the range of from 40 to 90° C., the mol ratio of said anhydride to said mercaptan being slightly greater than one to one, maintaining the resulting mixture at a temperature within the range of from 40 to 90° C. for a period of time of from one to three hours while agitating same, and recovering said thiolester from the resulting mixture.

2,445,143
PAPER FEED GAUGE FOR PRINTING PRESSES
Carl Lanzendorfer, San Francisco, Calif.
Application October 1, 1946, Serial No. 700,791
1 Claim. (Cl. 101—413)

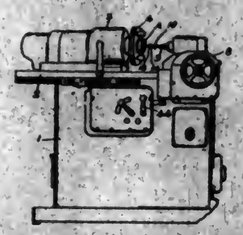
In a device of the character described, a pair of spaced brackets mounted parallel to the sides of the platen of a printing press, each of said brackets having upstanding lugs, a bar slideably supported in the lugs of each of said brackets, means for adjusting said bars longitudinally of said brackets, a slider mounted on each of said bars, means for retaining said sliders in adjusted position on said bars, a holding strip extending between said sliders, a tightening band surrounding one of said bars and movably positioned by one of said sliders and having hooked engagement with one end of said holding strip, and means for rotating said band about said bar to effect a



tightening of said holding strip, whereby paper holding means may be positioned on said platen.

2,445,144
AUXILIARY GIRTH FOR WOMEN
Gordon J. Leverage, Dryden, N. Y.
Application August 22, 1945, Serial No. 611,955
4 Claims. (Cl. 2—43)

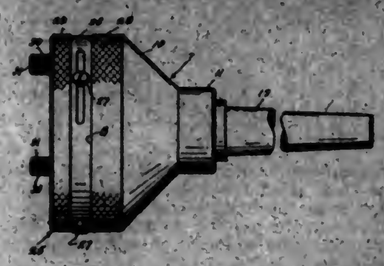
3. A belt form apron-like girth adapted to be worn in conjunction with and situated between a regular girdle and an associated brassière comprising an abdominal contacting, embracing and restraining girth, said girth being of general V-shaped form and being made up of duplicate complemental sections, each section being substantially triangular in outline and form, the respective lower end base portions of said sections converging, being disposed in crossed overlapping relationship and secured together and provided with means for detachably securing same to an upper central edge portion of a girdle, the diverging free end portions of said sections being provided with fasteners adapted to be secured to anchoring members provided therefor on the rear portion of a brassière, and said terminal end portions being adapted to diagonally embrace the sides and back of the wearer, crossed one over the other, and then anchored in place.



2,445,145
IMPLEMENT HITCH
James A. Love, Eau Claire, Mich.
Application August 2, 1946, Serial No. 687,839
10 Claims. (Cl. 97—47)

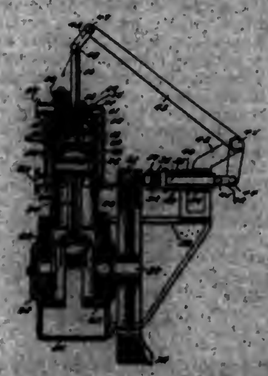
1. The combination with a tractive vehicle and an implement to be drawn thereby, of a

rock shaft, a mounting secured to said vehicle for journaling said shaft in transverse relation to said vehicle, a lever fixed to said shaft, an actuator carried by said vehicle and connected to and adapted to rotate said shaft, said shaft being rotatable in one direction independently of said actuator, a plurality of rigid links each pivotally connected to said implement and to said vehicle, and a rigid connector connecting an intermediate portion of one link with said lever, and spring means carried by said vehicle for controlling the elevation of said rock shaft above ground level responsive to variations in the downward component of the tractive load imposed on said vehicle and thereby varying the longitudinal tilt of the implement relative to the ground.



2,445,146
INTERNAL GRINDING MACHINE
Max A. Mathys, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application January 15, 1943, Serial No. 472,444
2 Claims. (Cl. 51—95)

1. A grinding machine comprising, in combination, a base, a traverse slide mounted for reciprocation on said base, a cross-feed slide mounted on said base for transverse movement, a rotary work spindle mounted on one of said slides for supporting a workpiece having an internal surface to be ground, a rotary spindle supporting a grinding wheel and mounted on said other slide, means for automatically advancing said traverse slide in an approach movement from a position external of said workpiece to an operative grinding position, and then reciprocating said traverse slide with said grinding wheel in engagement with said surface, and means including a hydraulic actuator controlled by an electrically-operated valve for maintaining said grinding wheel laterally retracted out of line with said surface during said approach movement, and electric control means for said valve including a limit switch actuated by said traverse slide to effect movement of said grinding wheel laterally into cutting engagement with said surface after entry of said wheel into said workpiece.

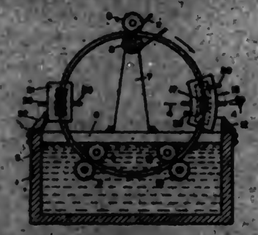


2,445,147
STOCK CENTERING CHUCK
Albert E. Meunier, South Attleboro, Mass.
Application June 10, 1943, Serial No. 490,357
1 Claim. (Cl. 77—18)

A stock centering chuck comprising a circular body having an axial shank socket in its inner end and a larger axial work-receiving socket in its outer end, said body further having an axial opening connecting said sockets and provided with radial grooves opening at their inner ends into the work-receiving socket, a shank for said body having its outer end portion fitted in said shank socket and formed in said outer end portion thereof with an axial tool socket, a tool secured in said socket and projecting through said axial opening into said work-receiving socket, radially adjustable work-centering jaws slidable in said radial grooves and having forwardly projecting threaded stems, a manually adjustable cap for said jaws secured on the outer end of said

body for limited rotation relative to the latter, said cap having a central work-admitting opening and a series of cam slots about said central opening through which said threaded stems project, and clamping nuts threaded on said threaded stems outwardly of said adjusting cap for securing the latter in rotatably adjusted positions and the jaws in radially adjusted positions.

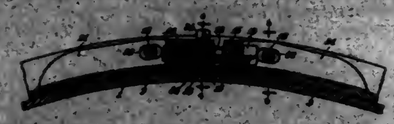
2,445,148
COMBINED PUMP AND MOTOR CYLINDER COAXIAL
Raymond E. Minnix, Balboa, C. Z.
Application July 23, 1946, Serial No. 685,704
2 Claims. (Cl. 123—46)



1. An internal combustion engine of the type described, comprising a cylinder block, a piston in said block, means for operating said piston, a second piston in said block in opposed relation to said first piston, a piston rod for said second piston, a valve in said second piston, means for operating said second piston, said means comprising a link connected to said rod, a rocker arm connected to said link, a second link connected to said rocker arm, and a spring pressed rod connected to said last mentioned link, and means for mounting said rod at right angles to said cylinder block, and means coacting with the means for operating said first piston connected to the means for operating said second piston.

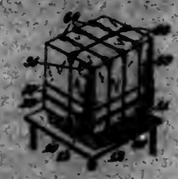
2,445,149
CONVEYER MECHANISM FOR PROPELLED VEHICLES
Robert Daniel Moon, Edmonton, Alberta, Canada
Application May 10, 1946, Serial No. 671,787
In Canada August 29, 1945
1 Claim. (Cl. 198—42)

A car loading device for pieces of timber and the like comprising a platform, conveying means including a plurality of sets of conveying rolls turnably mounted on said platform, each of said sets comprising driven lower rolls and upper idler rolls, means to drive the lower rolls, means mounting the upper rolls for free vertical movement towards and from the lower rolls, an upwardly inclined chute at the outlet of said conveying means, an endless chain conveyor extending up to the pair of rolls at the inlet of said conveying means, and driving means for such chain conveyor mounted coaxially with the lower roll of said last pair.



2,445,150
METHOD OF HEAT-TREATING A METALLIC ANNULUS
Homer L. Mueller, Cleveland, Ohio, assignor to The Cleveland Welding Company, Cleveland, Ohio, a corporation of Ohio
Application November 2, 1942, Serial No. 464,185
1 Claim. (Cl. 148—13)

In the manufacture of a metallic annulus, rotatably supporting the annulus on its inner periphery at a plurality of circumferentially spaced locations to maintain the annulus as a true circle, and heating simultaneously from within and without to a substantially uniform degree throughout its cross section a circumferentially progressing local segment of such annulus by radiant heat and flame together.

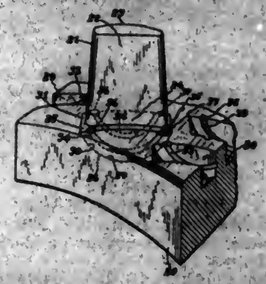


2,445,151
PIPE COUPLING
Frederick T. Nowell, Bradford, Pa., assignor to Dresser Industries, Inc., Cleveland, Ohio, a corporation of Pennsylvania
Application November 13, 1944, Serial No. 563,864
6 Claims. (Cl. 285—142)

1. A pipe coupling comprising a flexible middle ring split transversely of its circumference and having its adjacent ends beveled to provide a V-shaped space between said ends, means for drawing the ends of the middle ring toward one another to draw said ring into close conformity with the pipe surface around its circumference, a V-shaped gasket, means for pressing said gasket into the V-shaped space between the ends of the middle ring and into sealing engagement with said ends, a follower ring on each side of

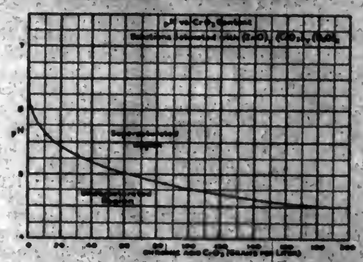
said middle ring, annular gaskets between said middle ring and follower rings, and means for drawing said follower rings toward said middle ring to apply sealing pressure to said annular gaskets.

2,445,152
SHIPPING PACKAGE
William David Poole, Baltimore, Md., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application February 25, 1943, Serial No. 477,095
12 Claims. (Cl. 206—60)



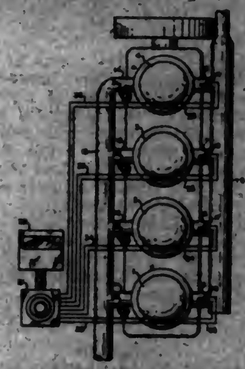
1. An article of manufacture, comprising two oppositely disposed pans arranged with their outer edges adjacent to each other to define a space, steel sheets contained within the space defined by the pans, a sealing strip lapping said edges to form a substantially moisture-proof container, and an inert atmosphere within the container formed by said pans and sealing strip.

2,445,153
GLARE REDUCING DEVICE
Charles B. Rearick, Flushing, N. Y.
Application May 12, 1945, Serial No. 593,391
3 Claims. (Cl. 2—14)



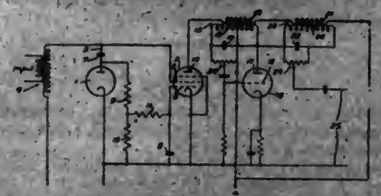
3. Driver's goggles comprising translucent and clear portions alike for each eye, the translucent area arranged entirely above the lens horizontal axis with clear vision areas both right and left of straight ahead line of vision and above this horizontal axis, that to the left rising at an angle of about 45° with a central part limited by a horizontal just above the eye pupil and a little each side thereof and to the right a second horizontal starting just above this central horizontal and about ⅛ inch higher and terminating at the goggles rim, the clear vision portion being delimited thereby upwardly and covering the remainder of the goggle area below, thereby providing a clear vision of the roadway both right and left for a considerable distance ahead of the wearer at times when the translucent area is interposed over the eye pupil by dipping the wearer's head and a clear view of all the roadway at all other positions.

2,445,154
BLADE MOUNTING
Robert H. Reed, Stewartsville, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application March 4, 1944, Serial No. 524,998
3 Claims. (Cl. 230—134)



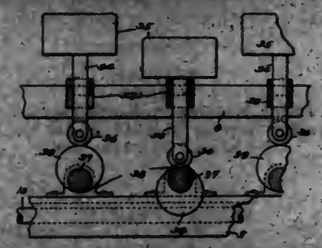
1. A blade mounting for axial blowers and the like, comprising a body having a cylindrical surface and an arcuate slot of uniform width in the surface, a blade, a root portion of arcuate shape on the blade having a slide fit in the slot, there being registering arcuate grooves in the opposed surfaces of the root portion and the slot that open at both ends into the cylindrical surface, depressions in the cylindrical surface at the ends of the grooves, flexible means in the grooves and insertable into either end thereof, and means on the opposite ends of the first said means, that cooperate with said depressions for locking the blade to the body.

2,445,155
PROTECTION OF CUPRIFEROUS SURFACES
Albert J. Saukaitis, Wayne, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
Application October 3, 1944, Serial No. 557,015
3 Claims. (Cl. 148—6.20)



1. A process for increasing the resistance of cupriferous surfaces to corrosive influences, which process comprises the steps of treating a cupriferous surface with an aqueous zinc chromate solution, rinsing the surface with water, and treating it with a dilute zinc chromate solution, the solutions being formed by dissolving in water chromic acid and a zinciferous component consisting of at least one of the group zinc oxide, zinc hydroxide, and zinc carbonate; the proportion of total dissolved chromic acid in the solution first mentioned being from 8.5 to 175 grams per liter, and the proportion of total dissolved chromic acid in the solution last mentioned being from 0.075 to 15 grams per liter, and at least one of the solutions being saturated as respects the zinc chromate phase in equilibrium therewith; said process further being characterized in that the cupriferous surface is dried by evaporation following treatment with a saturated solution.

2,445,156
TEMPERATURE MEASURING INSTRUMENT
Edgar M. Smith, Trenton, N. J., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 29, 1943, Serial No. 504,281
3 Claims. (Cl. 73—341)



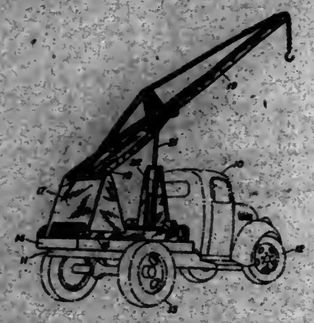
3. For use with a multiple cylinder internal combustion engine having a cooling water supply passage leading to each cylinder and having an exhaust gas passage leading from each cylinder, a thermocouple for each cylinder, each thermocouple having its hot junction located in the exhaust gas passage of one of the cylinders and having its cold junction located in the cooling water passage of the same cylinder, thermocouple extension lead wires of substantially the same length extending between the hot and cold junctions of each thermocouple, a selector switch, low resistance leads of any necessary length extending between each thermocouple cold junction and said selector switch, and an exhibiting instrument adapted to be connected to any one of said thermocouples by said selector switch.

2,445,157
INTERFERENCE REDUCTION FOR RADIO SIGNAL RECEIVERS
Wilbert Brockhouse Smith, Ottawa, Ontario, Canada
Application June 1, 1944, Serial No. 538,268
In Canada May 26, 1944
3 Claims. (Cl. 250—20)

3. A noise eliminating system for radio receivers comprising a regenerative filter section and a balancing section connected in series in phase opposition, means for injecting a normal input signal plus noise into both said sections, said filter section having means for amplifying substantially only the wanted components of said signal plus noise, means for applying said amplified wanted components plus noise to said balancing section and said balancing section having means for substantially balancing out the unamplified components of said signal plus noise.

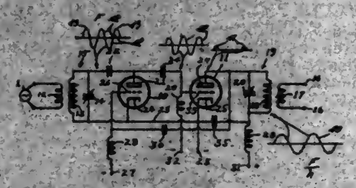
2,445,158
HOSPITAL BED
Frank Sparhawk, Akron, Ohio
Application April 13, 1946, Serial No. 662,176
3 Claims. (Cl. 5—66)

1. A hospital bed comprising a supporting surface embodying a plurality of independent supporting members, a plurality of spaced longitudinal bars having openings, rods secured to the supporting members and being extended through the openings of the bars, rollers mounted on the lower ends of the rods, shafts disposed under the longitudinal bars, cams secured to the shafts directly under said rollers, a crank for operating the shafts, whereby the rods and supporting members are moved vertically.



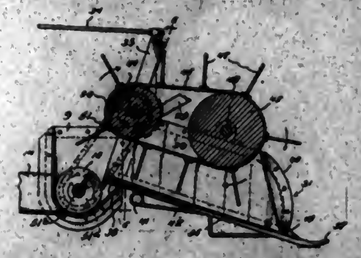
2,445,159
THERMOCOUPLE TUBE WITH EXPOSED JUNCTION
Carlton S. Tagge, Haddon Heights, N. J., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 12, 1943, Serial No. 498,328
6 Claims. (Cl. 136—4)

1. A thermocouple assembly comprising a pair of thermocouple wires, a glass member surrounding said wires and in intimate engagement with the same, a tube having the same coefficient of expansion as said glass member receiving the same and integrally fastened to the member, a protecting tube adapted to extend through an opening and be fastened to the wall of a space whose temperature is to be measured, said protecting tube having an open end, and means to integrally attach said first mentioned tube to the open end of said protecting tube whereby a pressure tight construction is obtained and the thermocouple assembly serves to plug said opening.



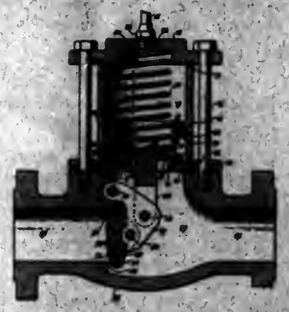
2,445,160
HYDRAULIC ACTUATING MECHANISM FOR MOBILE LOADING APPARATUS
Norman E. Tetreault, Bowling Green, Ohio, assignor to The Dayfresh Systematic Corporation, Bowling Green, Ohio, a corporation of Ohio
Application November 2, 1946, Serial No. 707,401
6 Claims. (Cl. 212—39)

1. Hoisting apparatus comprising an overhanging boom, a platform frame carrying said boom, a horizontal base frame carrying said platform frame, means for pivotally mounting the platform frame on the base frame for angular movement about a vertical axis relative to said base frame, actuating means for effecting said angular movement in both directions comprising



a horizontally disposed hydraulic power cylinder having a two-ended piston rod with each end extending from and beyond a respective end of the cylinder, said cylinder being attached to one of said frames while said piston rod ends are adapted to operatively engage respective opposed portions of the other frame.

2,445,161
FREQUENCY SUBDIVIDING SYSTEM
Vernon H. Vogel, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application December 28, 1945, Serial No. 637,647
9 Claims. (Cl. 250—36)



4. A frequency-changing system including an input circuit connected to a source of periodic waves, an output circuit tuned to a frequency which is a sub-multiple of the input frequency, a first grid-controlled tube, a second grid-controlled tube, each of said tubes having at least an anode, grid and cathode, the waves from said input circuit being applied to the grid of the second tube and to the plate of the first tube, circuit connections for biassing the grid of the first tube under control of the plate potential of the second tube to cause the first tube to clip the peaks only of alternate positive half-waves of the input frequency applied to the control grid of the second tube, means for applying steady bias to the grid of the second tube with respect to its cathode so that the said second tube is normally at plate current cut-off, and circuit connections between the grid of said second tube and the plate of the first tube to cause the second tube to become plate current conductive in synchronism only with the unclipped peaks of the half-waves from the said input circuit.

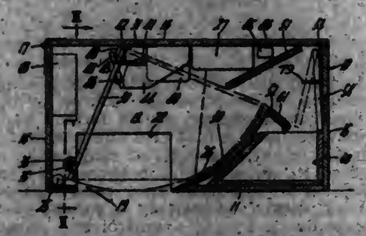
2,445,162
COMB-TYPE COTTON HARVESTER
William M. Wallace, Lubbock, Tex., assignor to William A. Robinson, Lubbock, Tex.
Application November 28, 1944, Serial No. 565,475
4 Claims. (Cl. 56—34)

1. For use in a cotton harvester of the type having a toothed cotton boll stripping scoop and conveying means operatively associated therewith for conveying stripped cotton bolls rearwardly along the teeth of the scoop, the improvement in which the scoop comprises supporting means extending transversely of the scoop and connected to the rear end portions of the teeth maintaining the teeth spaced apart less than the diameter of the cotton bolls being harvested, said teeth inclining downwardly and extending forwardly from said transverse supporting means, each tooth being channel-shaped in cross section from said supporting means to the forward end portion of the tooth and having the mouth of the channel at the top of the tooth, and a barb-like arm of substantially the same width as each tooth extending from the top of the forward end portion thereof rearwardly at an acute angle relatively to the tooth.

2,445,163
FLUID PRESSURE OPERATED VALVE
Hilding V. Williamson, Chicago, Ill., assignor, by mesne assignments, to Cardex Corporation, Chicago, Ill., a corporation of Illinois
Application September 28, 1942, Serial No. 460,069
16 Claims. (Cl. 137—139)

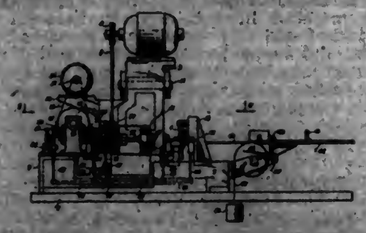
1. A fluid pressure operated valve, comprising a casing, a fluid pressure chamber formed in the casing and having an inlet and an outlet with an annular valve seat surrounding the outlet, a power cylinder formed in the casing and opening into said fluid pressure chamber, a valve disc cooperating with the valve seat, a lever pivotally mounted in the fluid pressure chamber and carrying the valve disc for opening movement against the flow of fluid through the casing, a power piston in the power cylinder and pivotally connected to the lever, a spring in the power cylinder bearing against the power piston to yieldably hold the valve disc seated, a pilot line connecting the casing inlet with the power cylinder above the power piston, a pilot valve in the pilot line for effecting flow of fluid into the power cylinder or venting of fluid from the power cylinder, and means rendered operative by the movement of the power piston into the position it assumes when the valve is in its fully open position for preventing leakage of fluid from the fluid pressure chamber into the power cylinder above the power piston when the power cylinder is being vented.

2,445,164
SCREEN
Irving Werthman, Brooklyn, N. Y.
Application October 24, 1946, Serial No. 705,615
6 Claims. (Cl. 160—127)



5. A folding screen comprising three panels hinged together, certain of said panels being provided with a plurality of recesses at their rear, shelves pivotally secured in some of the recesses, said shelves being foldable into and out of the associated recesses, garment supports hinged in some of the other recesses and being foldable into and out of the associated recesses, the shelves and garment supports, when folded into the recesses lying within the thickness of the panels, whereby the panels can then be folded into overlying relation without interference from the shelves and garment supports.

2,445,165
POULTRY FEEDER
John J. Carmo, Arlington, Mass.
Application October 18, 1945, Serial No. 622,990
4 Claims. (Cl. 119—54)



4. In a poultry feeder the combination of a trough, a hopper positioned over said trough, and an agitator for causing feed to flow from said hopper to the sides of said trough, said agitator comprising a strip of rigid material extending transversely of said trough and beyond the sides thereof, said strip having attached thereto close to its midpoint a bar extending substantially at right angles to said strip, said strip being so shaped that said bar will be located close to the bottom of said trough, and means fixed with respect to said trough for guiding the transverse movement of said strip as it may be pushed back and forth by birds feeding from said trough.

2,445,166
ANIMAL TRAP
Chester W. Cramerine, Irondequoit Township, Monroe County, N. Y., assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y., a corporation of New York
Application December 17, 1942, Serial No. 469,388
2 Claims. (Cl. 43—99)

1. An animal trap comprising a housing having an opening extending longitudinally therethrough at its bottom side to provide an unobstructed longitudinal animal passageway, said housing having a casing portion laterally adjacent said passageway, means normally adjacent said passageway opposite said casing portion and movable across said passageway to project an animal into said casing portion, an electrical operator for said movable means, and light sensitive means actuated by the presence of an animal in said passageway for energizing said operator to move said movable means quickly from normal position to said casing portion to project an animal thereinto, an electrocuting portion in said casing portion, said electrocuting portion being energized simultaneously with said operator, and time delay means for maintaining said electrocuting portion energized for a predetermined interval of time.

2,445,167
AUTOMATIC DISK CUTTER
Harry Dahl and Ernest William Huebner, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 16, 1945, Serial No. 594,114
14 Claims. (Cl. 51—98)

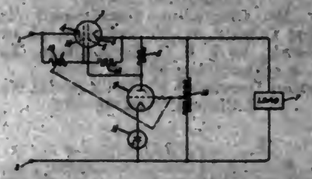
1. In an automatic machine for cutting stock, a support for the stock, a holder, a cutter wheel mounted in said holder, means for cyclically moving the cutter wheel toward and away from the support to thereby form a cut in the stock during each cycle, means for advancing the stock a predetermined distance along the support after each cut, an adjusting device for decreasing the distance between the cutter wheel and the stock independently of said cyclic movement, and means responsive to the penetration of the stock by said cutter wheel for operating said adjusting device.

2,445,168
CARPET JOINED WITH TAPE
Ara T. Dildilian, Suffield, Conn., assignor to Bigelow-Sanford Carpet Co., Inc., Thompsonville, Conn., a corporation of Massachusetts
Application June 27, 1947, Serial No. 757,584
3 Claims. (Cl. 154—43)

1. A carpet comprising mutually abutting pieces of carpeting forming therebetween a seam, an openly woven, sized tape extending warpwise along and weftwise across said seam, and an adhesive between and securing together said tape and the backings of said pieces, said tape being composed of fine glass fiber weft shots and pairs of fine fibrous warp ends, of which pairs one member of each crosses under said weft shots and between adjacent weft shots over the other member which crosses over said weft shots.

2,445,169
ELECTRICAL TRANSFORMER AND PRIMARY WINDING THEREOF
Cleon F. Frey, Greenfield, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application December 5, 1944, Serial No. 566,734
2 Claims. (Cl. 175—359)

1. A transformer adapted to fit into the barrel of a spark plug which comprises a cup shaped coil form of insulative material, the walls of the cup defining a cylindrical coil form of slightly less diameter than the inner surface of the spark plug barrel, a secondary winding on the outer surface of said coil form comprising a single row of turns of substantially uniform diameter, a plug having a cylindrical end portion fitting snugly against the inner surface of the coil form and a flange for engaging the rim of the cup shaped coil



form whereby the plug is removably socketed in the cup, and a primary winding supported by said plug and extending into said coil form, said primary winding comprising a single row of turns, the part of the primary winding adjacent the high tension end of the secondary winding being of reduced diameter as compared to the part of the primary winding adjacent the low tension end of the secondary winding.

2,445,170
FOUNTAIN PEN CAP HAVING A MULTIPLE CYLINDER, SINGLE AXIS CALENDAR
Sophie Gonczi, Union City, N. J.
Application July 29, 1944, Serial No. 547,140
1 Claim. (Cl. 40—108)

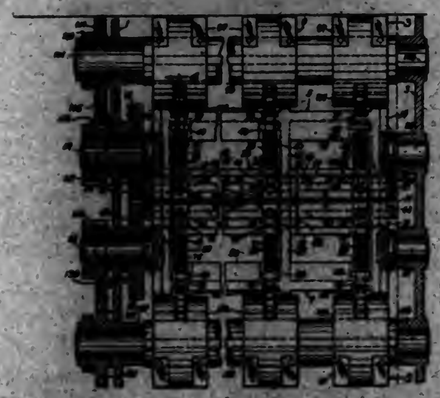
A fountain pen cap comprising a cylindrical barrel having at its bottom, an inner short wall interiorly threaded, a lower cylindrical portion spaced from said short wall, a bottom wall connecting said walls, the upper portion of said barrel being stepped twice providing an upper cylindrical portion and an intermediate cylindrical portion, the upper cylindrical portion of said barrel being exteriorly threaded, said upper cylindrical portion having a small window, said intermediate cylindrical portion having a small window, a longitudinal window in said lower cylindrical portion, the latter having the days of the week indicia thereon along one side of said longitudinal window and the first two numbers of the year indicia along one side of the window in said upper cylindrical portion, three interfitting cylinders disposed in said cylindrical barrel with their lower ends disposed on said bottom wall, each of said cylinders having a neck at its upper end, the innermost cylinder neck extending through and beyond the intermediate cylinder neck and the intermediate cylinder neck extending through and beyond the outer cylinder neck, said outer cylinder neck extending above said barrel, said intermediate and outer cylinders each having a longitudinal window and said three cylinders having indicia of the days of the month, two additional cylinders, one of said cylinders being disposed within said intermediate cylindrical portion and having a neck surrounding and shorter than said outer cylinder neck, months of the year indicia on the said one cylinder, the other of said cylinders being disposed within said upper cylindrical portion and having a neck surrounding and shorter than the neck of the first of said additional cylinders, the second two numbers of a series of years indicia on said other cylinder, and a retaining ring surrounding said other cylinder neck and upper cylindrical portion and screwed on the exterior threads of said upper cylindrical portion for retaining all of the aforesaid parts of said cap together.

2,445,171
REGULATOR
William S. Graff-Baker, Rugby, England, assignor to General Electric Company, a corporation of New York
Application January 29, 1946, Serial No. 644,142
In Great Britain May 30, 1945
4 Claims. (Cl. 323—22)

4. A direct voltage regulator comprising, in combination, a direct voltage source, a load, a first electron discharge device having at least an anode, cathode, a first grid and a second grid, the anode to cathode path of said device being connected in series circuit between said source and load, a first potentiometer connected across said load, means comprising a second electron discharge device having a control grid connected to said first potentiometer for developing a first control voltage, means for impressing said control voltage on said first grid to vary the impedance of said path in a sense to oppose load voltage variations, a second potentiometer connected in shunt to said first discharge device, means for impressing a second control voltage on said second grid from said second potentiometer, means for simultaneously adjusting said two potentiometers to adjust said two control voltages in the same direction.

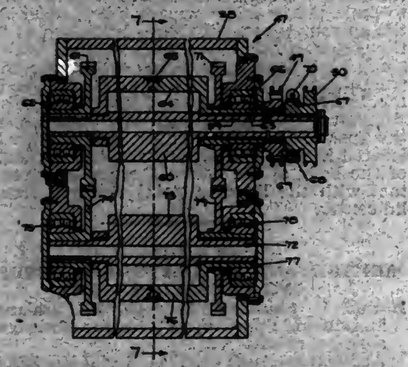
2,445,172
SCREW LOCK FOR EYEGLASSES AND THE LIKE
Frank A. V. Gravinese, Bronx, and Ignatius G. Failla, Elmhurst, Long Island, N. Y.
Substituted for abandoned application Serial No. 499,052, August 18, 1943. This application December 3, 1946, Serial No. 713,760
3 Claims. (Cl. 151—1)

1. A device of the class described having a screw upon the end of which a cap nut is engageable, fusible material in said cap nut between the inner end of said screw and the base wall of said cap nut, and means in the adjacent end of said screw and base wall of said cap nut engageable by the fusible material for locking the cap nut and screw together as a unit.



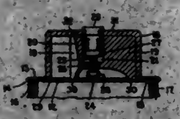
2,445,173
JOINT BRACE FOR REDUCING SWELLINGS
Rosabelle Halyard, Brooklyn, N. Y.
Refiled for application Serial No. 520,224, January 29, 1944. This application October 10, 1945, Serial No. 621,455
1 Claim. (Cl. 128—156)

A joint brace for reducing swelling, comprising a flexible band for encircling one's joint or limb and having a tab portion for assisting in engaging it in position, and a support strip adjustably mounted on said band for transmitting a firm supporting pressure upon said joint or limb, said flexible band being formed of superimposed layers



having their edge portions stitched together, said support strip comprising a length of metallic material disposed between the layers of said band and having their ends rolled and extended from said band through a slot formed in one of said layers.

2,445,174
WEB CUTTER
Burton A. Hannewald and Harold D. Reimer, Indianapolis, Ind., assignors to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri
Application May 8, 1946, Serial No. 668,230
21 Claims. (Cl. 164—66)



11. A rotary web cutter adapted to sever a travelling web into lengths, comprising a rotary knife carrier having a plurality of axially spaced transverse bearings therein, a cam follower rod reciprocable in each bearing, one end of each rod being secured to a knife, said rods and knife being reciprocable between a first position wherein the knife is disposed within the periphery of the carrier and the other ends of said rods project substantially beyond said periphery and a second position wherein the knife projects beyond the periphery of the carrier, means for biasing said rods and knife to said first position, cam means adapted intermittently to engage said projecting ends of the rods to move said knife to said second position, abutment means cooperable with said knife in said second position for severing the web, said cam means comprising rotary cams adapted to engage said rods upon each revolution of the cams, and means for driving said cams at one of a plurality of different drive ratios as related to said carrier.

2,445,175
VARIABLE THROW VIBRATORY HEAD FOR SCREENS, CONVEYERS, AND THE LIKE
Harker H. Hitteen, Upper Arlington, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application June 13, 1947, Serial No. 754,562
27 Claims. (Cl. 74—61)

5. Vibratory mechanism including a deck frame to be vibrated, a vibratory head attached to said frame to impart vibratory motion thereto, said vibratory head including a head frame, a pair of similar eccentric weights mounted for rotation on said head frame, gearing interconnecting said pair of weights providing for their rotation in synchronized opposite directions to develop a resultant periodic substantially rectilinear vibratory force, means for driving said pair of weights, a second pair of similar eccentric weights mounted for rotation on said head frame, gearing interconnecting said second pair of weights providing for their rotation in synchronized opposite directions to develop a resultant periodic substantially rectilinear vibratory force, means for driving said second pair of weights at least in part separate from the driving means for said first pair of weights, said two driving means acting normally to drive the two pair of weights in synchronism, and control means operative to alter the action of said two driving means whereby one pair of weights is driven at a different speed from the other pair thereby altering the phase relation of the resulting vibrating forces of the two pair of weights to adjust the resulting amplitude of vibration of said deck frame, each of said driving means including a belt and a driving head pulley.

2,445,176
FLUSH PIN INDICATOR
Philip Hoffman, Mount Healthy, Ohio
Application November 11, 1943, Serial No. 509,886
6 Claims. (Cl. 33—169)

5. In a device to test a vacuum packed commodity for its keeping qualities within a container closed by a flexible lid having a marginal seal upon the mouth of the container, the combination which comprises a cylindrical body of lesser

diameter than the lid, said body being in the form of a substantially vertically apertured block including supporting means to contact the lid near its relatively flexible margin, the top face of the block being substantially flat about the upper edge of the aperture, a freely slidable plunger in the aperture having an upper substantially flat end, and a lower end to abut the container lid, means associated with the plunger to limit sliding movement of the plunger within the aperture, from an elevated position at which the upper end thereof extends slightly above the block, to a position at which said upper end retracts below the level of the top face of the block, for indicating a desired concavity of the lid through the sense of touch at the upper end of the aperture and the plunger, said plunger being located in offset relationship to the vertical axis of the body of the device thereby to make contact with the lid at a point removed from the lid center.

2,445,177

METHOD AND APPARATUS FOR DEPOSITING METALLIC LAYERS

Harald L. Lindblad, Chicago, Ill., assignor to Metallizing Company of America, Chicago, Ill., a copartnership

Application April 24, 1944, Serial No. 532,450
2 Claims. (Cl. 117—93)

1. A method of depositing a layer of metal on a fusible electrically conductive surface of a workpiece from a fusible consumable electrode, said method comprising the steps of traversing said electrode across said surface while holding the electrode against the same, passing electric current through said surface and electrode under conditions of resistance heating to bond metal deposited from said electrode to said surface, and at the same time blowing a gas non-combustible with air against the metal being deposited, and simultaneously rapidly vibrating said electrode through a small amplitude toward and away from said workpiece so as to make and break contact between said electrode and surface and to forge the already deposited metal against the workpiece whereby the deposited metal is worked to compact the same into a dense layer.

2,445,178

FASTENER-APPLYING IMPLEMENT

Charles M. Lindstrom, East Greenwich, R. I., assignor to Boston Wire Stitcher Company, Warwick, R. I., a corporation of Maine

Application September 11, 1943, Serial No. 501,931
5 Claims. (Cl. 1—49)

1. In a fastener-applying implement, a magazine for containing a supply of fasteners, a guide-block at one end of the magazine, said block having an opening provided with shoulders at its sides, an abutment in the magazine cooperating with said shoulders to form a throat, means for feeding fasteners from the magazine into the throat, an operating lever pivoted to the magazine to adapt it to swing relatively thereto, a fastener-driver rockably mounted on the operating lever to move therewith, and relatively short lugs projecting from the sides of the driver and engageable in the throat during its movement through the guide-block to cause the driver to adjust it-

self to the plane of the throat as it rocks in said throat during its arcuate movement with the lever.

2,445,179

FASTENER-APPLYING IMPLEMENT

Arthur H. Maynard, Warwick, R. I., assignor to Boston Wire Stitcher Company, Warwick, R. I., a corporation of Maine

Original application December 2, 1944, Serial No. 567,221. Divided and this application February 2, 1946, Serial No. 645,940
12 Claims. (Cl. 1—3)

1. A fastener-applying implement comprising a base, clinching means at the forward end of the base, an arm pivoted at the rearward end of the base, staple-driving means carried by the arm, and means for adjusting the arm longitudinally of the base to position the staple-driving means in cooperative relation to the clinching means or to displace the staple-driving means forwardly beyond the end of the base to position it out of range of said clinching means.

2,445,180

MAGAZINE AND FEED MEANS FOR STAPLING MACHINES

Arthur H. Maynard, Warwick, R. I., assignor to Boston Wire Stitcher Company, Stonington, Conn., a corporation of Maine

Application January 15, 1947, Serial No. 722,119
7 Claims. (Cl. 1—3)

1. In a fastener-applying implement, a magazine for holding a supply of U-shaped fasteners arranged in series extending thereacross, a pusher for feeding the fasteners forwardly along the magazine, yieldable means on the pusher adapted to contract to pass between the legs of the fasteners, means to withdraw the pusher through the fasteners to adapt it to engage the rearmost fastener in the series, and resilient means for advancing the pusher longitudinally of the magazine to feed the fasteners forwardly.

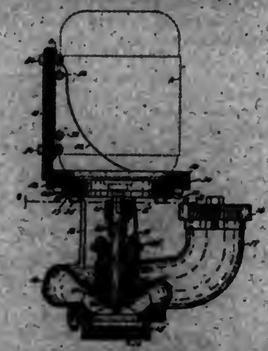
2,445,181

POLYMERS AND COPOLYMERS OF ACENAPHTHYLENE

Harry F. Miller and Ralph G. Flowers, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York

No Drawing. Application September 26, 1944, Serial No. 555,295
7 Claims. (Cl. 260—96)

2. A composition of matter comprising an interpolymer of a mixture of copolymerizable ingredients comprising (1) acenaphthylene and (2) a compound containing a polymerizable



grouping, the said interpolymer containing from 10 to 33⅓ per cent, by weight, of acenaphthylene.

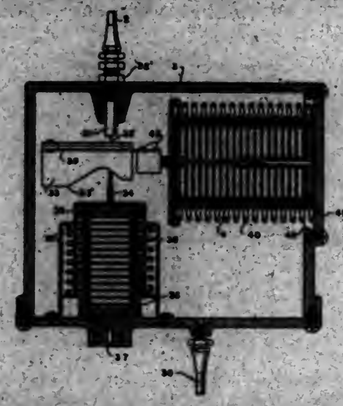
2,445,182

MEANS FOR CONNECTING A DRIVING MOTOR TO THE SHAFT OF A ROTARY PUMP

Ralph E. Odey, Salem, Ohio, assignor to The Deming Company, Salem, Ohio, a corporation of Ohio

Application November 1, 1946, Serial No. 707,685
12 Claims. (Cl. 103—87)

1. The combination with a pump having a frame, an impeller and a vertical shaft for operating the impeller, an adapter plate adapted to be secured to the top of the frame, an L-shaped bracket adapted to be secured to the adapter plate and presenting a projecting portion, and means for securing a motor on said projecting portion into position to have its shaft coact with the impeller shaft.



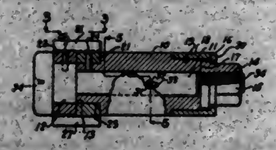
2,445,183

CAM-CONTROLLED PRESSURE REGULATOR

Glenn Orieb, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware

Application August 17, 1945, Serial No. 610,950
11 Claims. (Cl. 98—1.5)

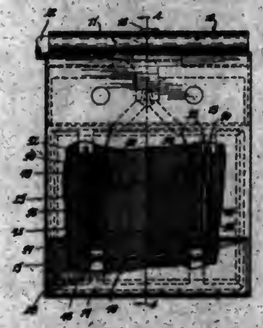
1. Mechanism for controlling air pressure within an aircraft cabin, comprising cabin air pressure regulating means operable to control the pressure of air within the cabin, a pressure pattern member having atmospheric pressure elements which correspond respectively to different atmospheric pressures, a pattern tracing member cooperating with said pressure pattern member, a control member operable to control the operation of said cabin air pressure regulating means and regulated by said pattern tracing member in accordance with the disposition of said pattern tracing member relative to an atmospheric pressure element of said pressure pattern member, and atmospheric pressure sensitive means responsive to atmospheric pressure and operable to shift relatively said pressure pattern member and said pattern tracing member in response to



changes in atmospheric pressure, thereby to dispose different atmospheric pressure elements of said pressure pattern member in registry with said pattern tracing member in response to corresponding changes in atmospheric pressure.

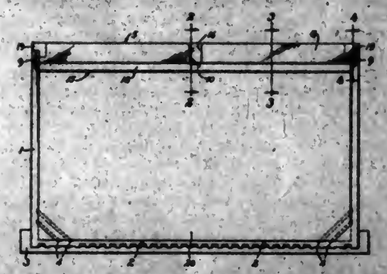
2,445,184

MANDREL



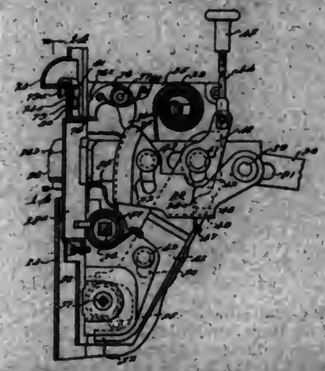
John J. Parker and London T. Merawski, Detroit, Mich.

Application September 10, 1947, Serial No. 773,166
9 Claims. (Cl. 279—1)



9. A mandrel for gears and the like comprising a pair of interfitting cylindrical members having inner peripheral surfaces arranged to be arranged in end to end relationship, said members being arranged for both relative axial and rotative movement, a plurality of partial teeth spaced on the peripheral surface of each of said members and having portions projecting axially over the peripheral surface of said other member, said teeth being arranged in pairs with the projecting portions of the teeth in each pair overlapping a portion of the complemental teeth, so as to form a plurality of composite teeth having substantially uniform cross sections between the overlapping portions thereof, the inner adjacent faces of the teeth in each pair being disposed at an angle to the direction of axial movement of said members, means for moving one of said members axially relative to the other to vary the overlapping extent of said partial teeth and thereby vary the effective width of said composite teeth, and means urging the inner faces of said partial teeth in each pair to a contacting position when the relative axial movement of said members is such that the effective size of the composite teeth is diminished.

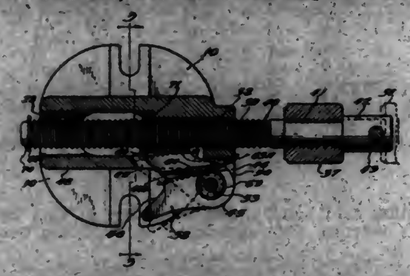
2,445,185
ELECTRIC CLAMP-ON HEATER
Alfred A. Reiser, Buffalo, N. Y., assignor to H. & A. Manufacturing Co., Inc., Buffalo, N. Y., a corporation of New York
Application November 17, 1944, Serial No. 563,877
4 Claims. (Cl. 219—19)



1. An electric contact heater, comprising a heating pad including a heating element housed within a metal casing having a face wall adapted to be held in contact with the surface of the part to be heated and having a back plate at its opposite side, and means for holding said face wall in contact with said surface, comprising a U-shaped length of spring wire extending along three sides of said back plate, means at spaced intervals along said wire and securing said length of spring wire to said casing to extend generally parallel with said black plate and with the legs of said U-shaped wire in spaced relation to said back plate, a holder in rear of said pad and held in fixed relation to the part to be heated, and means on said holder and engaging each of said legs intermediate the corresponding securing means to yieldingly urge said pad toward the part to be heated.

2,445,186
REAR INDEX CARD AND HOLDER FOR VISIBLE INDEXES
Robert W. Rigg, Stamford, Conn., assignor to Remington Rand, Inc., Buffalo, N. Y., a corporation of Delaware
Application December 21, 1946, Serial No. 717,764
2 Claims. (Cl. 129—16.7)

2. In a card holder having a supporting sheet, means on one margin thereof for attachment to a support, a hinge formed on said margin so the remainder of said sheet may be swung on said hinge relative to said margin, a folded transparent tip of sheet material embracing the opposite margin of said sheet to form retaining flanges on both sides thereof, said tip having an inturned lip on the front marginal portion thereof, means securing the ends of the fold portions of said tip to said sheet, means securing the central portion of the margin of said tip at the back side of said sheet thereto, and card holding means on said sheet adjacent said hinge for holding card margins on both sides of said sheet adjacent said hinge, the combination of an insert formed of strip material having one margin engaged between said tip and the margin of said sheet, said insert having a slot in said one margin receiving said means securing the central portion of said tip to said sheet, the opposite margin of said insert projecting outwardly beyond the edge of said tip to provide a rear card retaining flange, said insert having projections at opposite ends engaged in interlocking relation with said means securing the ends of said tip to said sheet, and a rear index card supported at the rear side of said sheet with one margin detachably engaged between said sheet and rear card retaining flange of said insert and the opposite margin detachably engaged with said card holding means.

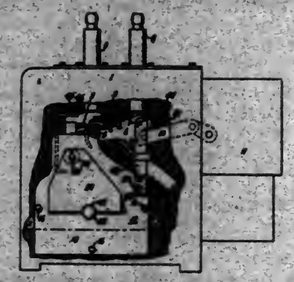


2,445,187
DOOR LOCK
John H. Reethel, Detroit, Mich.
Application November 2, 1944, Serial No. 561,512
12 Claims. (Cl. 292—164)

1. In a latch for a swinging door, a longitudinally extending latch bolt, a vertically swinging member pivoted to the bolt, a shiftable cam element engageable with said member for retracting the latch bolt in an endwise direction, manual means for vertically shifting said member out of engagement by said element, and a dog element shiftable into position when the door is opened for blocking said member against vertical movement.

2,445,188
QUICK-CLAMPING VISE
Anthony M. Saggau, Chicago, Ill., assignor to Grand Specialties Company, Chicago, Ill., a corporation of Illinois
Application July 9, 1945, Serial No. 603,979
4 Claims. (Cl. 81—36)

1. In a vise, a body having clamping means thereon for securing the body in a stationary relationship on a support, a stationary jaw on said body, a movable jaw mounted on said body for generally rectilinear movement in a rearward clamping direction toward said stationary jaw and in a forward releasing direction away from said stationary jaw, spring means normally urging said movable jaw in a releasing direction, said body having a horizontal guide passage formed therein and a horizontal slot formed in one side thereof and opening into said guide passage, an operating screw slidably disposed in and guided by said guide passage and operatively associated at its forward end with said movable jaw for rotative but against axial movement with respect to said movable jaw, a pair of spaced lugs on said body and extended outwardly therefrom above and below said slot, and means affording a releasable



nut for cooperation with said screw and comprising a bell crank having two arms, means pivoting said bell crank on a vertical axis between said lugs so that a first arm extends rearwardly and laterally through said slot, while the second of said arms extends outwardly and rearwardly beyond said lugs to afford a manually engageable operating arm, said first one of said arms having screw threads formed on the end thereof for operative engagement with said screw, and spring means acting on said bell crank to rock the same in a direction to normally engage said screw threads with said screw.

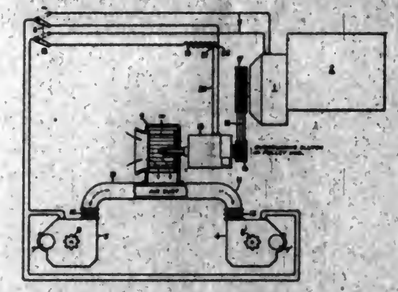
2,445,189
POLYMERIZATION OF UNSATURATED COMPOUNDS IN THE PRESENCE OF A PEROXIDE AND A HYDROGEN HALIDE
Edward C. Shokal, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 21, 1944, Serial No. 527,490
6 Claims. (Cl. 260—78.4)

6. In a process wherein a resin is formed by the polymerization of an unsaturated ester of a polycarboxylic acid, which acid is devoid of any unsaturated linkage between any two carbon atoms of aliphatic character, and wherein the hydrogen atom of at least one of the carboxyl groups of the acid is replaced by an unsaturated aliphatic hydrocarbon radical wherein the unsaturation is olefinic, which polymerization is effected in the presence of an organic peroxide catalyst and in the absence of solvents and non-solvent diluents for said ester, the improvement which comprises avoiding discoloration by conducting said polymerization in the presence of from 0.01% to 5% of a hydrogen halide.

2,445,190
ELECTRIC CIRCUIT BREAKER
Benjamin E. Spire, Philadelphia, and Ralph J. Baskerville, Merwood Park, Pa., assignors to General Electric Company, a corporation of New York
Application December 29, 1944, Serial No. 568,983
3 Claims. (Cl. 200—144)

1. In an electric circuit breaker, supporting structure, an arc chute constructed of complementary parts, grooves in adjacent surfaces of said complementary parts, said grooves having one portion thereof angularly disposed with respect to another portion thereof, a supporting member having a portion thereof adapted to project outwardly from said arc chute and another portion thereof having an offset portion and be-

ing adapted to fit within the grooves in the complementary parts of said arc chute, whereby said supporting member is secured in position with respect to said arc chute, and means cooperating with the portion of said supporting member which projects outwardly from said arc chute for securing said supporting member to said supporting structure.



2,445,191
MIXED POLYSULFIDE CONDENSATION PRODUCT AND METHOD OF MAKING
Theodore A. Te Grotenhuis, Olmsted Falls, Ohio, and Gilbert Holm Swart, Wabash, Ind., assignors to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application February 17, 1943, Serial No. 476,214
6 Claims. (Cl. 260—79)

1. A method of preparing a vulcanizable condensation product which comprises reacting in the presence of water with a water-soluble, inorganic alkaline polysulfide a mixture of ethylene dichloride and butadiene dichloride, said butadiene dichloride and said ethylene dichloride being proportioned to provide in the reaction mixture between 15 and 500 carbon atoms based on the original reactants in said mixture for each unsaturated group, said butadiene dichloride and said ethylene dichloride being reacted with said polysulfide in the presence of each other and in the presence of ethyl alcohol, whereby said condensation product is formed having unsaturated linkages provided by said butadiene dichloride distributed through the polymer chain in sufficient amounts for cross-linking by vulcanizing agents to eliminate cold flow but in insufficient amounts to materially reduce the chemical resistance of the product.

2,445,192
TRACTION MOTOR BLOWER CONTROL
John W. Teker, Wesleyville, Pa., assignor to General Electric Company, a corporation of New York
Application December 19, 1946, Serial No. 717,182
9 Claims. (Cl. 318—255)

9. A traction motor blower system for a prime mover driven self-propelled vehicle comprising, in combination, an electric traction motor, means for establishing dynamic braking connections for said motor, a ventilating blower for said motor,

power transmission means for driving said blower from said prime mover, auxiliary means for driving said blower at a speed proportional to the dynamic braking energy developed in said motor,

and means for disabling said power transmission means when the speed of said auxiliary drive means exceeds the speed of said power transmission means, said disabling means comprising a unidirectional power transmission device.

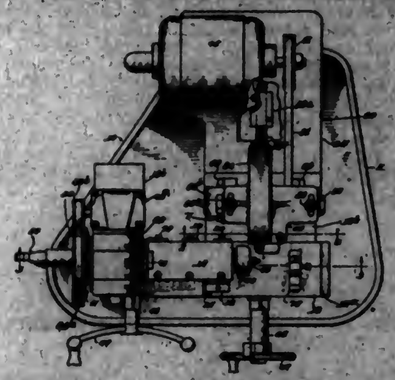
2,445,193

DEASHING SULFONATED COUMARONE-INDENE RESINS

Andries Voet, New York, N. Y., assignor to The Neville Company, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application December 7, 1943, Serial No. 513,299
8 Claims. (Cl. 260—81)

1. That method of de-ashing resin of pure still residues remaining from distillation of fractions of light oil produced in high temperature by-product coking of coal and containing ash composed of inorganic sulfate and inorganic salts of coumarone and indene sulfonates, which comprises mixing the pure still residues with a solvent for pure still residues, agitating the resultant solution with a dilute solution of a strong mineral acid while keeping it at a temperature of the order of normal room temperature and below 50° C., then settling the reaction mixture to form an acid layer containing ash present in said residues, an oily layer overlying said acid layer, and a supernatant layer of a solution of said residues substantially free from ash, separating said layers, neutralizing said solution layer with an aqueous solution of an alkali carbonate, and distilling the neutralized solution and recovering an aromatic oil and a resin comprising sulfonated polymers of coumarone and indene that is completely soluble in said solvent and contains not over about 0.5 per cent of ash.



2,445,194

GRINDING MACHINE

Walter Umbdenstock, Chicago, Ill., assignor to Lion Manufacturing Corporation, Chicago, Ill., a corporation of Illinois

Application October 30, 1943, Serial No. 508,281
10 Claims. (Cl. 51—94)

2. In a machine of the class described, a base, a grinding member and spindle head carried thereby, a spindle journalled in said head, means to rotate said spindle, said head being mounted for rocking movement, a cam carried by and rotatable with said spindle, a lever pivotally mounted on said head and having a follower coacting with said cam, a block carried by said base, said lever being provided with means con-

tacting said block under actuation of said cam and coacting with said block to rock said head.

2,445,195

PURIFICATION OF HALOGENATED AROMATIC HYDROCARBONS

Robert R. Umhoefer, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

No Drawing. Application June 24, 1944, Serial No. 542,017
2 Claims. (Cl. 260—649)

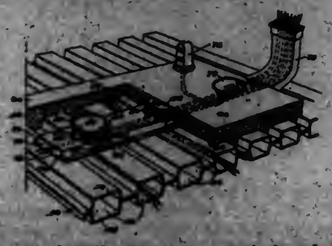
1. The method of purifying a halogenated aromatic composition containing aliphatic impurities which consists in heating said composition for several hours to about 180 to 280° C. in the presence of a catalyst chosen from the group consisting of chlorides of aluminum and iron and until said impurities are decomposed, removing the gaseous decomposition products from said composition by volatilization of the gaseous products and removing the solid decomposition products by filtration.

2,445,196

SEALED VIBRATOR

Harold E. West, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Application June 21, 1944, Serial No. 541,417
5 Claims. (Cl. 174—18)



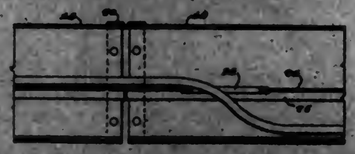
1. A hermetically sealed electrical appliance comprising in combination a metal casing open at one end thereof, an electrical mechanism within said casing, a base plug constituted of substantially rigid insulating material inserted into the end of said casing and having contact prongs extending therefrom electrically connected to said mechanism, a layer of elastic insulating material completely covering said base plug, an annular metallic member on the outer surface of said base plug and forming at one of its faces a hermetic seal with said layer of elastic insulating material on the plug, and a metal to metal seal between the other face of said annular member and the terminal edges of said casing for hermetically sealing the casing.

2,445,197

WIRE DISTRIBUTING APPARATUS

Joseph W. Wiesmann, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application September 9, 1944, Serial No. 553,262
1 Claim. (Cl. 72—16)



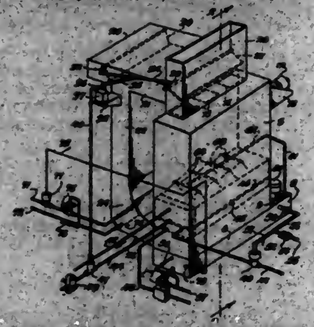
In a wire distributing system of the character described, a cross over duct comprising an elongated hollow rectangular member provided with an access opening in the top wall thereof defined by an upstanding tubular extension from said wall, an annular cover member telescopically fitted around the outside of said tubular extension and having an outwardly extended flange at its lower edge, a plurality of screws threaded through said flange and having the lower ends resting on said top wall for vertically and angularly adjusting said cover member with relation to the duct to vary the height and level thereof, and a second set of screws extending through said flange and threadedly engaged with brackets secured to said duct to secure the cover member to the duct and to lock it in its adjusted position.

2,445,198

WIRE DISTRIBUTING SYSTEM

Joseph W. Wiesmann, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application October 18, 1944, Serial No. 559,192
2 Claims. (Cl. 174—99)



2. A wireway for distributing wiring to different areas of a building comprising a long sheet metal conduit adapted to be erected in the building to extend in a horizontal direction across a plurality of different areas of the building to which it is desired to provide electrical service, said conduit being provided with a horizontally disposed partition member coextensive with the conduit arranged to subdivide the interior of the conduit into an upper and a lower compartment, the said upper compartment having permanently closed outer walls and one wall of the lower compartment being provided with closure means adapted when opened to afford ready access to the lower compartment only, the partition member being provided with spaced openings along the length thereof through which wiring from the upper compartment may be drawn down into the lower compartment, whereby the upper compartment may serve as a through way for containing the major portion of the wiring and whereby the circuits for servicing the areas intermediate the ends of the conduit may be drawn at intervals along the length of the partition member from the upper to the lower compartment.

2,445,199

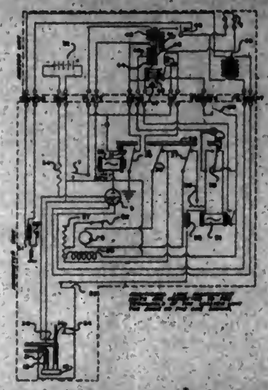
APPARATUS FOR EVAPORATIVE COOLING OF LIQUIDS

Allan E. Williams, White Plains, N. Y., assignor to Niagara Blower Company, Buffalo, N. Y., a corporation of New York

Application December 22, 1943, Serial No. 515,320
16 Claims. (Cl. 62—146)

1. A heat exchange device for cooling a stream of fluid, comprising means forming a chamber having an air inlet and an air outlet, a fan arranged to force a stream of air from said inlet, through said chamber and out through said outlet, a cooling coil arranged in the stream of air passing through said chamber, means for discharging and distributing a stream of water over said cooling coil to wet the exterior of said cooling coil and to evaporate and absorb heat therefrom, means for continuously conducting said stream of fluid to be cooled through said cooling coil whereby said stream of fluid is cooled by said evaporation of said water in said stream of air, means in addition to said streams of water and air for cooling said stream of fluid, and thermostat means responsive to the temperature of one of said streams to adjust said additional cooling means and prevent the temperature of said stream of fluid from rising above a predetermined maximum temperature.

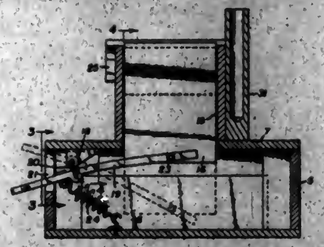
2,445,200



MANOMETER

Charles Morgan Wolfe, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware

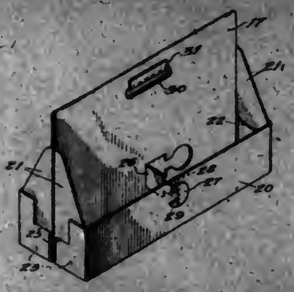
Application December 20, 1943, Serial No. 514,961
19 Claims. (Cl. 177—351)



11. In a manometer system, master operating means, a plurality of individual manometer units energizable by said master operating means, each such unit including a manometer tube containing a mercury column, a contact rod for each tube,

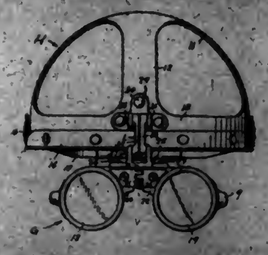
means operable to effect engagement of said rod with the mercury in said tube and disengagement of the rod therefrom, control means for said master operating means operable at will to initiate simultaneously downward movement of the contact rods in all said individual manometer

units, and automatic control means for each individual manometer unit operable automatically to reverse the direction of movement of its control rod by engagement thereof with the mercury, entirely independently of the other of said manometer units.



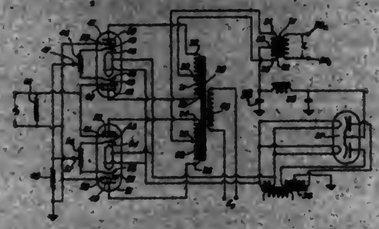
2,445,201
CIGARETTE DISPENSER
Charles C. Anderson, Dayton, Ohio
Application May 13, 1947, Serial No. 747,704
1 Claim. (Cl. 312—78)

A cigarette dispenser comprising a cigarette container and a supporting base therefor, a vertically slidable dispensing member working in the container to raise cigarettes singly to the top of the container, a lever pivotally and swingably carried by the base and connected at one end to said member for actuating the latter, and a coil spring connected to the lever to hold the dispensing member in a raised position, said spring being arranged to exert its influence longitudinally on the lever when the dispensing member is in its lowered position to bind the member against the sides of the container and also to hold the member in its lowered position.



2,445,202
CARRIER DEVICE FOR BOTTLES AND THE LIKE
Albert P. D. Belanger, Alton, Ill.
Application March 22, 1944, Serial No. 527,533
2 Claims. (Cl. 229—52)

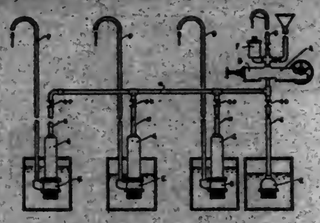
1. In a carrier device for bottles and the like, the combination of a back wall panel formed of sheet material, a bottom wall panel formed integrally with said back wall panel and folded at substantially right angles thereto, a front wall panel formed integrally with said bottom wall panel and folded upwardly opposite to said back wall panel in spaced relationship thereto, end wall panels formed integrally with said back wall panel and folded forwardly into position across the ends of said bottom wall panel, end-flaps formed integrally with said bottom wall panel and extending upwardly at the inner faces of said end wall panels, and other end flaps formed integrally with said front wall panel along their front edges and folded backwardly along the outer faces of the end wall panels, said other end



flaps being split intermediately along lines parallel with the lines of fold to provide tuck-in flaps adjacent to the back wall panel adapted to be folded downwardly through horizontally positioned slits in the end wall panels about the upper edges of portions of said end wall panels and extending downwardly between said end wall panels and said second-named end flaps substantially to the bottom wall panel so as to hold the parts firmly in the form of a pocket, said tuck-in flaps serving by broad elongated bearings on the end wall panels to provide streng effective support for the bottom wall panel and the front wall panel from said back wall panel so as to prevent movement of such supported panels either downwardly or forwardly.

2,445,203
HEADGEAR GOGGLES
Charles E. Bowers, Chester, Pa., assignor to Fibre Metal Products Company, Chester, Pa., a partnership consisting of Frederick M. Bowers, Charles E. Bowers, and John W. Bowers
Application January 15, 1945, Serial No. 572,810
6 Claims. (Cl. 2—10)

1. In a headgear goggles, a bracket adapted to be mounted on a headgear and formed with a pair of spaced ears, a second bracket adapted to be mounted on a pair of goggles and provided with a pair of spaced ears, a link consisting of complemental halves and having one end disposed between the ears on said first bracket and the other end disposed between the ears on said second bracket, said ears and said link halves having aligned openings, the openings in said link halves having counterbores, pivot pins passing through said aligned openings, and expansion springs disposed about said pivot pins in the counterbores for urging said link halves against said ears to create friction.



2,445,204
SINUSOIDAL MODULATOR
John W. Bozeman, New York, N. Y., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application April 10, 1947, Serial No. 740,649
11 Claims. (Cl. 179—171.5)

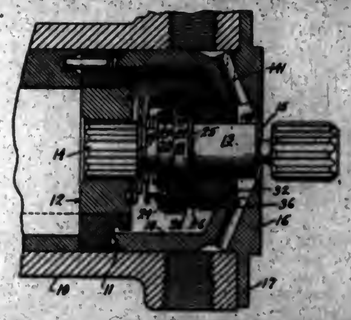
1. A modulator of the character described comprising means for separating a carrier frequency voltage of constant amplitude into out of phase components and for superimposing said components of carrier frequency voltage upon a direct current voltage, a plurality of vacuum tubes, transformer means having a plurality of mutually coupled windings to utilize the separated components of carrier frequency voltage and direct current voltage for energizing the anodes of said vacuum tubes in pairs, means to vary the conductance of said vacuum tubes for energizing, in pairs, those grids thereof which are not already paired together with a modulating voltage, the remaining grids being grounded, the second named means co-acting with the variations in conductance of said vacuum tubes to vary the current flow in said vacuum tubes due to said components of carrier frequency voltage and to direct current voltage, and to mutually couple the variations in conductance of carrier frequency voltage to an output circuit.

2,445,205
PUMPING DEVICE FOR LIQUIDS
Lewis Burn, London, England
Application June 20, 1944, Serial No. 541,226
In Great Britain November 6, 1942
5 Claims. (Cl. 103—44)

1. Pumping apparatus comprising a primary pumping system including a suction pipe having an inlet valve at its lower end, a delivery pipe communicating with the suction pipe and having a length sufficient to provide a substantial head of liquid, an intermittent pressure pump operative to set up resonant pressure waves in a column of liquid in the suction and delivery pipes, and means for regulating the effective delivery of the pump comprising a liquid receiving chamber in permanent communication with said column of liquid and having a volume at least equal to the swept volume of the pump, a resiliently mounted piston movable in said chamber and responsive to said resonant pressure waves, and piston abutment means for varying at will the capacity of said chamber, and a secondary pumping system in communication with the suction pipe of said primary pumping system, comprising a plurality of pumping units having respec-

tively spring controlled plungers responsive to the pressure waves in said column of liquid in said primary pumping system for operating said secondary pumping system.

2,445,206
BAILER
Pink T. Bynum, Beeville, Tex.
Application February 22, 1943, Serial No. 476,674
4 Claims. (Cl. 166—19)



1. In a bailer, a hollow debris receptacle having an opening at its lower end, a barrel element within the receptacle, a piston element reciprocable in said barrel element for pumping fluid from the upper interior portion of said receptacle, one of said two last mentioned elements being secured to said receptacle, means for forcibly moving the piston element first in one direction and then in the otherwith respect to the barrel element when said receptacle is held stationary, and a one-way valve connecting the opposite ends of said barrel whereby said piston may move freely with respect to said barrel in one direction but not in the other, and laterally open ports in said barrel element providing communication between the interior of said barrel and the interior of said receptacle on one side of said piston.

2,445,207
SHAFT SEAL
Michele Caserta, Detroit, Mich.
Application November 27, 1944, Serial No. 565,227
4 Claims. (Cl. 286—11)

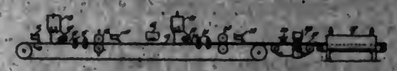
1. In a shaft seal assembly including a shaft having an annular groove, a sealing ring rotata-

ble with said shaft and a diaphragm between said rotary sealing ring and said shaft, a spring having inwardly looped portions normally of lesser diameter than said groove so as to be sprung

into said groove and thereby be anchored on said shaft and having a helical portion extending against and constantly urging said diaphragm into sealing engagement with said shaft.

2,445,208
SOLUTIONS OF RIBOFLAVIN
Jesse Charney, New York, N. Y., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application February 4, 1946, Serial No. 645,498
4 Claims. (Cl. 167—81)

1. An aqueous solution comprising riboflavin in a concentration higher than that obtainable with water alone and a solubilizing agent selected from the group consisting of l-tyrosine amide and its acid-addition salts.



2,445,209
ABSORPTIVE HEADWEAR PAD
Edward S. Clark, Philadelphia, Pa.
Application February 27, 1946, Serial No. 650,527
7 Claims. (Cl. 2—181)

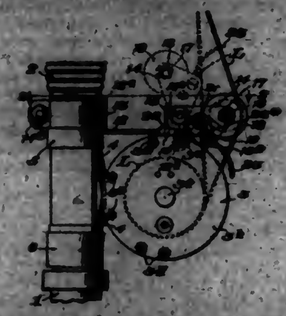
1. An absorptive headwear pad member comprising, in combination, a backing element of absorptive material from the surface of which a pad element protrudes, a covering for said backing element impervious to moisture, and means for mounting said pad member in headwear having a sweatband, characterized in that the backing element and covering are positioned between the sweatband of the headwear and the wall of the headwear, with the absorptive pad element extending through an opening in the sweatband and protruding beyond the inner face thereof.

2,445,210
MANUFACTURE OF FIBRO-CEMENTITIOUS SHEETS
Dudley T. Colton, Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application December 4, 1945, Serial No. 632,689
5 Claims. (Cl. 18—60)

5. The method of manufacturing hard and dense asbestos-cement shingles having an irregular textured surface which comprises, forming a dry mixture layer comprising finely divided hydraulic cement, finely divided silica and asbestos fibers, compressing said layer and wetting it with sufficient water to hydrate the cement, uniformly distributing dry finely divided mineral grains over the moist face of the base layer to form a thin parting and coating layer, uniformly distributing over the parting and coating layer another dry mixture layer comprising finely divided hydraulic cement and finely divided silica and asbestos fibers, compressing the top layer thus

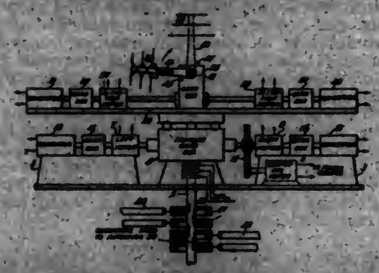
formed and wetting it with sufficient water to hydrate the cement, densifying the composite sheet under a pressure of at least 5000 lbs. per square inch, developing a hardening set of the cement component of the composite sheet by curing it in an atmosphere of saturated steam under a pressure of the order of 75–150 lbs. per square inch gauge, and splitting the sheet along irregular intersecting planes of cleavage formed about and between interlocking grains in the parting and coating layer to form two shingles each having some of said grains bonded to and protruding from the textured surface thereof.

2,445,211
RADIO TUNING MECHANISM
Frederick H. Drake, Beaunton, N. J., assignor to Aircraft Radio Corporation, Beaunton, N. J., a corporation of New Jersey
Application January 4, 1946, Serial No. 639,129
5 Claims. (Cl. 74—553)



1. A manually adjustable knob assembly for attachment to a rotatable shaft, said knob assembly comprising a knob and an attached sleeve carrying means for securing the knob to a shaft, said knob having a cylindrical passage therethrough parallel to and radially spaced from the axis of the knob, a handle assembly slidably mounted in said passage, and impositive locking means for yieldingly retaining said handle assembly in retracted position with its forward end substantially flush with the front face of said knob or alternatively in extended position projecting forwardly from the front face of said knob.

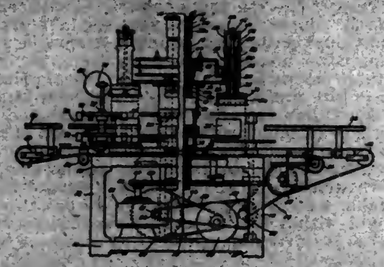
2,445,212
LEVEL WINDING ATTACHMENT FOR REELS
Paul M. Kaby, deceased, late of Lancaster, Pa., by Alice Virginia Urey executrix, Lancaster, Pa., assignor to Grace A. Kaby
Application October 21, 1946, Serial No. 704,716
7 Claims. (Cl. 242—84.4)



1. A level winding attachment for fishing reels, comprising a base plate adapted to be mounted on a fishing reel; a frame pivotally mounted on said base plate; a shaft fixedly mounted in the frame adjacent its outer end and having a double ended worm therein; a guide pulley reciprocably

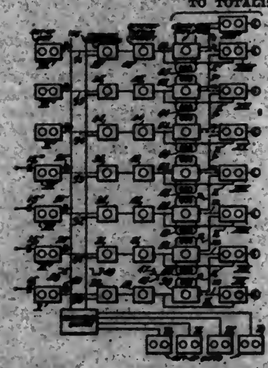
mounted on said shaft engaging the worm; a second shaft mounted in the frame parallel with the first shaft; a block reciprocably mounted on the second shaft and connected for reciprocatory

movement with the guide pulley; a guide in the frame adjacent the second shaft; and a guide loop carried by the block and slidably engaging the guide, said loop extending beyond the pulley and curving towards the reel.



2,445,213
OBSTACLE DETECTOR
John Evans, Palmyra, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 30, 1941, Serial No. 391,167
11 Claims. (Cl. 343—7)

2. A radio echo device including, in combination, means for radiating a beam including distance determining radio pulses, means for indicating the distance of a pulse reflecting object as a function of the propagation time of said pulses after their reflection, means for radiating a plurality of beams adjacent to said distance determining beam, each of said plurality of beams including distinctive signals, means for selecting said distinctive signals from said plurality of beams after reflection from said object, means for orienting simultaneously said plurality of beams, and means for controlling automatically said orienting means as functions of said selective signals so that said orienting means automatically directs said plurality of beams toward said object.

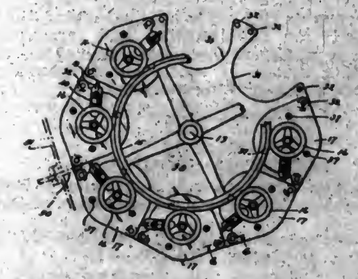


2,445,214
VERTICAL SHRINKER APPARATUS
John Lee Ferguson, Joliet, Ill., assignor to J. L. Ferguson Company, Joliet, Ill., a corporation of Illinois
Application January 26, 1946, Serial No. 643,297
15 Claims. (Cl. 93—35.1)

1. In an apparatus of the character described, an assembly of shrinker heads, means for presenting cans having unshrunk caps thereon, means for in-feeding said cans progressively under an unoccupied head, means for operatively shrinkingly associating said heads with said

capped cans as the latter are juxtaposed therewith and for maintaining said association through a predetermined shrinking cycle, and out-feeding means for positively disassociating cans from said shrinking means.

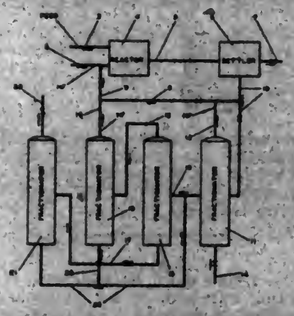
2,445,215
ELECTRONIC COMPUTER
Leslie E. Flory, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 21, 1943, Serial No. 507,131
12 Claims. (Cl. 235—61)



2. The combination of means for producing potentials representative of a multiplicand, a totaliser for establishing potentials representative of a product, means for establishing potentials representative of a multiplier, means including a capacitor and a resistor responsive to said multiplicand and multiplier potentials for transferring said multiplicand to said totaliser once for each occurrence of a predetermined digit in said multiplier, and means for shifting said multiplicand potentials by one digital position once for each digital position of said multiplier.

2,445,216
MATERIAL MIXING MACHINE
Harold H. Feltz, Cleveland, Ohio, assignor to The Arco Company, Cleveland, Ohio, a corporation of Ohio
Application March 26, 1945, Serial No. 584,878
2 Claims. (Cl. 259—54)

1. In a liquid mixing, storage and dispensing device, the combination comprising: a frame; a



primary shaft vertically supported within and by said frame for rotation with respect thereto; a disk-like, horizontally-placed turntable co-axially encircling said primary shaft and freely rotatable with respect thereto and a bearing on said frame rotatably supporting said turntable; a plurality of individual containers having a removable supporting cover member associated therewith; said turntable having a plurality of peripheral recesses each of size and shape to snugly receive one of said containers and cover engaging means on the upper side of said turntable adjacent each of said recesses for removably engaging and holding one of said supporting covers within each of said recesses; each of said cover members supporting a rotatable secondary shaft having an agitator on one end within the respectively-associated container and a driveable wheel at its other end out-

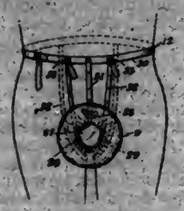
side of said respectively-associated container; a driving wheel on said primary shaft supported by said turntable and freely rotatable with respect to said turntable, said driving and driveable wheels being of such respective diameters that they will engage each other on a circle lying, with respect to the turntable, near the radially innermost parts of the said containers for frictional driving of the driveable wheel by the driving wheel; means for rotating said primary shaft, whereby rotation of said primary shaft will rotate said turntable when same is free to rotate and will rotate said agitators when said turntable is held against rotation and any container may be freely inserted into place or removed therefrom without tilting at any time when said turntable is non-rotating regardless of whether the primary shaft is rotating.

2,445,217
TREATMENT OF HYDROGEN FLUORIDE SOLUTIONS
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application April 19, 1946, Serial No. 663,453
5 Claims. (Cl. 260—683.4)

1. In a process for the alkylation of a low-boiling isoparaffin with an olefin in the presence of hydrogen fluoride as a catalyst in which a hydrocarbon alkylation effluent is separated into a liquid hydrocarbon-rich phase and a liquid hydrogen fluoride-rich phase and said hydrogen fluoride-rich phase is distilled at approximately atmospheric pressure under conditions such that an overhead fraction comprising substantially anhydrous hydrogen fluoride and a liquid bottom fraction comprising substantially an azeotropic mixture of water and hydrogen fluoride are formed, the improvement which comprises in a first step distilling said azeotropic mixture at a subatmospheric pressure of less than about 50 mm. of mercury, recovering from said first step a vaporous overhead fraction comprising hydrogen fluoride and water having a substantially greater acid concentration than in the original azeotropic mixture and a liquid kettle product comprising hydrogen fluoride and water having a substantially less acid concentration than in the original azeotropic mixture, in a second step distilling said overhead fraction from said first step at approximately atmospheric pressure, recovering from said second step a vaporous overhead fraction of substantially anhydrous hydrofluoric acid and a kettle product comprising an

aqueous hydrofluoric acid solution having approximately the same acid concentration as the original azeotropic mixture, in a third step distilling said kettle product from said first step at approximately atmospheric pressure, recovering from said third step a vaporous overhead fraction of water and a kettle product comprising an aqueous hydrofluoric acid solution having approximately the same acid concentration as the original azeotropic mixture, passing the kettle products from said second step and said third step to said first step, and recycling said overhead fraction of substantially anhydrous hydrofluoric acid from said second step to the alkylation reaction as a catalyst.

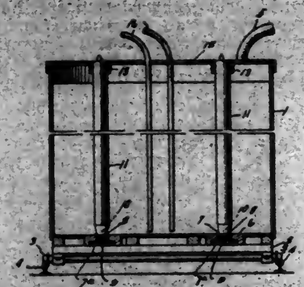
2,445,218
DRILLING MACHINE
George H. Fuehrer, Phillipsburg, N. J., and Charles W. Hosking, Easton, Pa., assignors to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application December 21, 1945, Serial No. 636,440
9 Claims. (Cl. 255—49)



1. A drilling machine, comprising a tubular rotary feed screw, a working implement coaxial with the feed screw and having a passage therethrough, sealing means in the feed screw to seat against the working implement having an aperture to register with and convey cleansing fluid into the passage and being subjected to the pressure of such cleansing fluid for pressing said sealing means against the working implement, and means for securing the working implement to the feed screw.

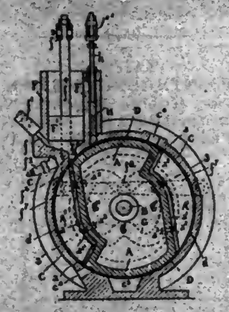
2,445,219
VEHICLE SUSPENSION
Raymond Greaves, Scarborough, England
Application May 24, 1945, Serial No. 595,632
In Great Britain May 25, 1944
5 Claims. (Cl. 280—104)

1. A suspension means, between a supporting wheel and a vehicle chassis-frame, including a shackle, a pair of arms respectively pivotally connected at one end to said shackle at spaced points, a pivotal connection between the other ends of said arms to said chassis-frame respectively on opposite sides of said shackle, and prestressed resilient means connected between said shackle and said chassis-frame; said arms orientating said shackle to cause it to convey movement from the wheel axle to said prestressed resilient means to provide a progressively increasing resistance to movement as said wheel axle moves from its freely suspended position to its full load position.



2,445,220
URINARY PAD
Susan Louise Isaacson, Monrovia, Calif.
Application November 13, 1945, Serial No. 628,231
5 Claims. (Cl. 128—295)

2. A liquid absorbing device comprising a flattened, water-impervious pouch having an opening defined by a tube projecting into the pouch, and a plurality of absorbent pads arranged in the pouch, one of said pads having an opening through which said tube projects, and another of said pads having a slit aligned with the opening in the pouch.

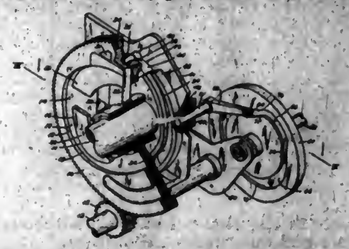


2,445,221
HYDRAULIC REMOVAL OF GEL
Paul D. Isaacs and Mahlon H. Keplogle, Baltimore, Md., assignors to The Davison Chemical Corporation, Baltimore, Md.
Application June 21, 1944, Serial No. 541,440
4 Claims. (Cl. 252—359)

2. A method of setting an inorganic hydrosol and cascading removing the resulting hydrogel from a setting vessel having a drain in the bottom thereof, comprising closing the drain, introducing an inorganic hydrosol into the vessel, setting the hydrosol to a hydrogel, forming a channel substantially vertically through the hydrogel to the bottom of the vessel to communicate with the drain, said hydrogel constituting the walls of said channel, opening the drain in the vessel, and directing a stream of water of large volume onto the mass of hydrogel to cut and break away pieces of the hydrogel from the mass, and sluicing the broken away pieces of

hydrogel to the channel and down through said channel and out through the drain.

2,445,222
ROTARY ENGINE
James Jelly, Blackpool, England
Application July 21, 1945, Serial No. 607,959
1 Claim. (Cl. 123—14)

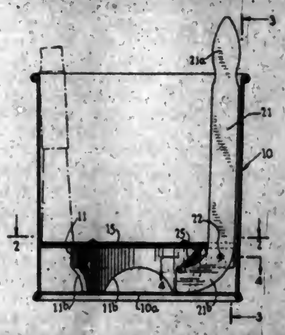


A rotary internal combustion engine, comprising a casing having a cylindrical chamber therein, a substantially cylindrical rotor mounted rotatably in said chamber in the casing and having a chamber in its periphery, the casing having a port for admitting an explosive medium to the chamber in the rotor, an abutment slidably mounted in the casing and movable into the chamber in the rotor, a peripherally-split cylindrical liner on the periphery of the rotor and having an aperture therein corresponding with the chamber in the rotor, the liner having inturned flanges at its side edges which engage the lateral peripheral edges of the rotor, and annular plates interposed between the outer sides of said flanges on the liner and the inner faces of the end walls of the casing and forming fluid tight joints between the periphery of the rotor and the casing.

2,445,223
INTERMITTENT CAM
Raymond J. Kieffer, Tonawanda, N. Y., assignor to Columbus McKinnon Chain Corporation, Tonawanda, N. Y., a corporation of New York
Application November 13, 1946, Serial No. 709,471
6 Claims. (Cl. 74—567)

6. In an intermittent cam having alternate paths of cam roller travel, a fixed cam part and a movable cam part for defining said paths, and shifter means for controlling the movements of said movable part to guide the cam roller into

either of the paths, of means for actuating said shifter, comprising a fixed annular holding track formed with a cut-away portion and having an outer periphery and an inner periphery, a roller carried by said shifter means and engageable with either periphery of said holding track, a deflector mounted in a cut-away portion of said track and



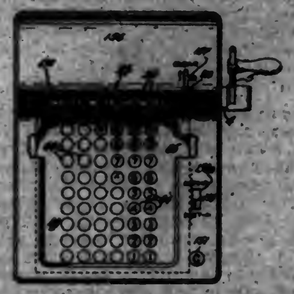
movable to a position for completing the outer periphery of said track, said deflector having a fixed axis of oscillation and formed with a transfer groove registrable alternately at opposite ends with one end of the outer track periphery and the opposite end of the inner track periphery, a separately operated control cam, and means connecting said deflector with said control cam.

2,445,224

PAINTBRUSH HOLDER

Stanley Kubiak, Bayonne, N. J.

Application April 26, 1945, Serial No. 590,410
8 Claims. (Cl. 206—15.1)



1. A paint brush device of the class described, comprising a container having bottom and side walls, a screen member in said container disposed a predetermined distance from said bottom wall and adapted to have paint brushes rest thereupon, a support for said screen member, said support normally resting freely on said bottom wall a handle member, and means including a pivot shaft for rotatably mounting said handle on said support, said handle member comprising a portion above said pivot shaft extending upwardly of said container and a cammed portion below said pivot shaft adjacent to and adapted to contactively engage said bottom wall, the distance between said pivot shaft and said bottom wall being less than the distance between said pivot shaft and said cammed portion whereby upon pivotal movement of said handle in one direction about said pivot shaft, said cammed portion will contactively abut said bottom wall to cause said support to be lifted from said bottom wall, for the purposes set forth.

2,445,225

CALCULATING MACHINE

Harry L. Lambert, Enfield, N. Y., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Application February 12, 1943, Serial No. 475,729
27 Claims. (Cl. 235—62)

1. In a calculating machine, a keyboard unit having operable keys in which numbers corresponding to the items of the calculation are to be set up in succession by selective operation of said keys; a totalizer; means mounting said unit for bodily movement between two positions; means cooperating with the keys of said keyboard and said totalizer for entering the amounts of successive numbers set up on said keyboard in said totalizer according to one type of calculation when said keyboard is in one of said positions, and for entering the amounts of successive numbers set up on said keyboard in said totalizer according to another type of calculation when said keyboard is in the other of its said positions; said keyboard having means to latch all operated keys in effective position; means yieldingly urging said keyboard into said one position; a latch device for releasably securing said keyboard in said other of its positions; said keyboard having a key release member which when operated will unlatch all operated keys of said keyboard; means operated by the key release member for operating the latch to release the keyboard for movement into said one position; means operated automatically at each calculating operation after all operated keys have performed their function for operating said key release member, to release all operated keys and to release the keyboard for return to said one position if displaced therefrom; a total key; a control element manually operable into one position by said total key; and means operable by said control element, when the latter is moved into said one position, to operate said key release member to release any operated keys and to release the keyboard for movement into said one position if displaced therefrom.

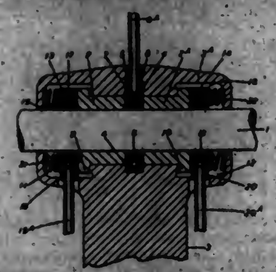
2,445,226

COATED GRANULES OF A DRY WATER-SOLUBLE SALT OF CARBOXYMETHYL CELLULOSE

Manfred Landers, New York, N. Y., assignor to Lanco Products Corporation, New York, N. Y., a corporation of New York

No Drawing. Application March 23, 1946, Serial No. 656,781
10 Claims. (Cl. 106—136)

1. A readily water-soluble dry granular composition primarily consisting of relatively small granules of a water-soluble salt of carboxymethylcellulose individually coated with thin



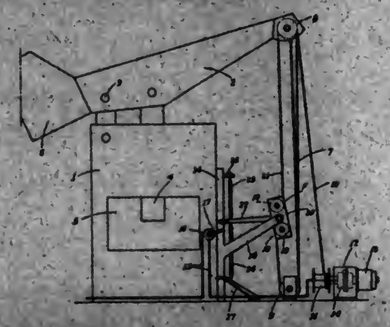
films of a glyceride selected from the class consisting of the mono- and the diglycerides of the higher fatty acids and the mixed diglycerides of a higher fatty acid and an aromatic carboxylic acid.

2,445,227

LUBRICATION OF HIGH-SPEED SHAFTS OR SPINDLES

Camille Clare Sprankling Le Clair, Acton, London, England

Application October 12, 1944, Serial No. 558,223
In Great Britain November 17, 1943
16 Claims. (Cl. 308—36.3)



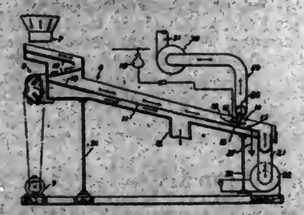
1. Apparatus for withdrawing any excess of oil supplied to a bearing rotatably supporting a shaft, including in combination, a porous wiper and oil collector in contact with the shaft in proximity to the bearing, and means including a suction conduit in communication with said porous wiper and collector for creating a slight vacuum therein, whereby oil exudate is removed from the surface of the shaft and prevented from traveling along the shaft beyond said wiper and collector.

2,445,228

FULL CABLE CONTROL

Robert G. Le Tourneau, Longview, Tex., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California

Substituted for abandoned application Serial No. 511,499, November 23, 1943. This application March 25, 1947, Serial No. 737,053
4 Claims. (Cl. 254—173)



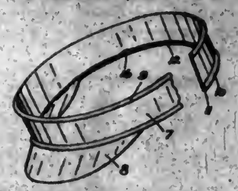
4. A pull cable control device for a cable system which includes a live cable reach and a power unit to actuate said reach, the power unit having a movable control member; said device comprising a frame, a pair of sheaves mounted on the frame in adjacent but spaced relation, the axes of the sheaves being parallel and at right angles to said cable reach, the latter passing about said sheaves from opposite sides, means pivotally mounting said frame for swinging movement about an axis parallel to the sheave axes, a trigger arm fixed on and projecting from the frame at an angle to its axis, and means yieldably securing said arm in a position so that the frame and sheaves are positioned to deflect a portion of the cable reach out of straight line relationship with the remainder of said reach, the frame when so positioned being responsive to the tendency of said cable reach portion to straighten out under increased tension therein, and the trigger arm being in position to actuate the control member upon movement of the frame in response to such increased tension; said arm securing means comprising a tension spring fixed at one end and having its other end connected with the trigger arm, a second spring, and a foot lever, the second spring being connected at one end to the foot lever and at its opposite end to the trigger arm.

2,445,229

METHOD AND APPARATUS FOR ELECTROSTATICALLY SEPARATING PARTICLES HAVING DIFFERENT ELECTRICAL PROPERTIES

Thomas Jerome Maase, Alexandria, near Sydney, New South Wales, Australia

Application April 5, 1944, Serial No. 529,584
In Australia April 14, 1943
15 Claims. (Cl. 209—127)



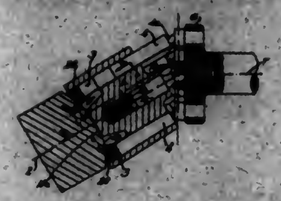
1. The method of separating components of a mixture of disintegrated materials having different electrical properties, which comprises passing a stream of such mixture over a support into a high tension electrostatic field between a repelling electrode constituting part of said support and an attracting electrode spaced thereabove having a face of dielectric material, holding said electrodes so spaced from each other and so charged that selective particles are lifted from said mixture by said field as the stream enters said field to form a mass of such particles contacting said dielectric material and yet maintaining contact with said stream, continuing the movement of said stream through said field so that said stream drags said mass of lifted particles along said face into a zone of separation across its path, and suctionally drawing and conducting such lifted articles away from said stream in said zone.

7. In an apparatus for separating electrostatically components of a mixture of materials having different electrical properties, a stationary attracting electrode of extended surface area having a face of dielectric material, a repelling electrode therebelow, means for charging said attracting electrode to establish an electrostatic field between said electrodes, means to move such mixture on said repelling electrode into and through said field, said electrodes being so spaced apart and so charged that selective particles of the mixture entering said field are lifted to form

a suspended mass of such particles contacting said face and yet maintaining contact with the residue of said mixture, whereby said mass is dragged along said face as said mixture continues to be moved into and through said field, and suction means opening at said face across the path of movement of said mass to create a zone of suction for drawing and conducting such lifted particles away from said mixture.

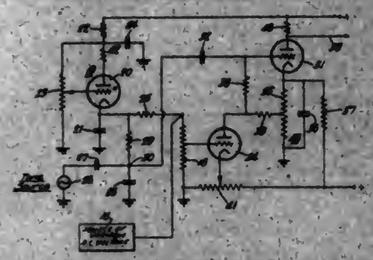
2,445,230
FRAME FOR CAPS
John-Erik Mattsson and Stig Mattsson, Malmo, Sweden
Application October 24, 1945, Serial No. 624,200
In Sweden October 31, 1944
3 Claims. (Cl. 2—195)

1. A frame structure for caps, comprising an annular flexible strip and a visor integral therewith, said strip having a peripheral groove extending along its lower edge and opening towards the inside thereof, the width of said groove being reduced at the mouth thereof, a sweatband placed along the inner face of said strip, a ribbon fastened with a marginal portion to the lower edge of said sweat-band, the opposite marginal portion of said ribbon being enlarged and adapted to enter said groove to fasten said sweatband to said strip.



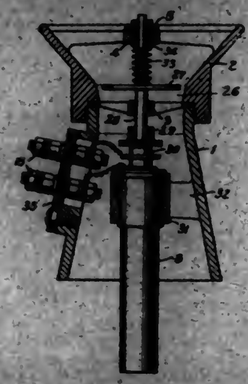
2,445,231
METHOD OF AND APPARATUS FOR MAKING TUBULAR COVERINGS
Paul F. McDermott, Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application September 9, 1944, Serial No. 553,376
15 Claims. (Cl. 66—9)

1. In the method of making a tubular covering, the steps comprising knitting a seamless, distortable, tubular liner, knitting a seamless, distortable, tubular sleeve surrounding said liner to define an annular space between the sleeve and liner and substantially simultaneously therewith pneumatically conveying a loose filler into the space between said liner and sleeve.



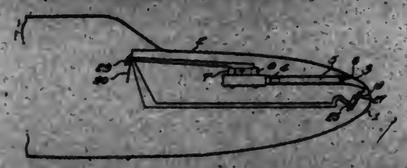
2,445,232
PUMP
Hans Molly, Berlin-Tempelhof, Germany; vested in the Attorney General of the United States
Application January 7, 1939, Serial No. 249,805
In Germany January 5, 1938
Sections 3 and 10, Public Law 690, August 8, 1946
Patent expires January 5, 1958
1 Claim. (Cl. 103—162)

A hydraulically operating transmission device of the piston type, comprising, in combination, a cylinder block formed with a plurality of cylinder bores approximately parallel to the axis of said block, each of said cylinder bores being provided with and communicating with a respective controlling orifice in the end face of said block and said end face being spherical; means for supporting said block for rotation about its axis, said means having a spherical controlling surface cooperating with said controlling orifices in said spherical end face and supporting only said end face of said block; a driving flange mounted for rotation about an axis which latter is inclined to the axis of rotation of said cylinder block; a



centering joint for concentrically guiding said driving flange and said cylinder block with respect to one another, the center of said joint coinciding with the driving plane of said driving flange; pistons in said cylinder bores; a piston rod for each of said pistons operatively connected to said driving flange and to its respective piston, said piston rods transmitting the driving movement between the cylinder block and the driving flange by engaging their respective pistons; and an equilibrium chamber for hydraulically relieving the controlling surfaces, said chamber being centrically arranged so as to relieve said surfaces without creating any turning moment.

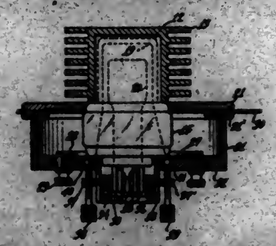
2,445,233
SIGNALING SYSTEM
Andrew P. Montgomery, Narberth, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 1, 1944, Serial No. 552,275
6 Claims. (179—171.5)



1. In a signaling system, means responsive to a control voltage for producing a low frequency sawtooth voltage wave whose frequency varies according to the magnitude of said control voltage, means for superimposing on said voltage wave an audio frequency signal voltage of higher frequency than said voltage wave, and means for selecting a portion of the resultant voltage wave so as to produce an intermittent audio signal whose frequency of recurrence varies according to the magnitude of said control voltage.

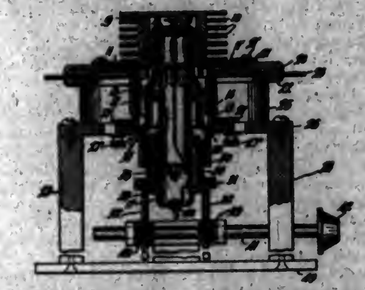
2,445,234
VELOCITY INDICATOR
Jacques Muller, La Garenne Colombes, France
Application May 31, 1939, Serial No. 276,713
In France May 31, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires May 31, 1958
2 Claims. (Cl. 201—51)

2. A velocity indicator comprising a converging-diverging flow tube supporting arms extending across the interior of the tube, a rod axially slidably mounted in bosses carried by said arms, a disc lying in a plane perpendicular to and carried by said rod and movable axially of the tube toward and away from the portion of the tube of smallest diameter, a spring urging the disc toward the portion of the tube of smallest diameter, said disc being adapted to be displaced by the flow of fluid through the tube against the force of the spring, a carbon pile having a movable element positioned in contact with one end of the rod so that the spring will compress the carbon pile and the pressure exerted by the spring on the pile will vary in relation to the velocity of fluid flow through the tube, means for varying the pressure exerted by the spring, and means for locking the spring pressure varying means in adjusted positions.



2,445,235
AIRCRAFT WITH BLAST OR LIKE TUBE AND CLOSURE THEREFOR
Joseph C. Myers, Arlington, Va.
Application February 15, 1944, Serial No. 522,469
10 Claims. (Cl. 89—37.5)

1. An aircraft having a surface subject to air pressure incident to flight and an opening in said surface, a gun mounted on the aircraft in position to fire outwardly through said opening and having its muzzle end spaced inwardly from said surface; a closure for said opening; means mounting said closure on said aircraft as a permanent part thereof to be moved selectively to a position for closing said opening or to a retracted position within said aircraft and out of the line of fire of said gun; gun control means for selectively conditioning said gun to fire or conditioning said gun so that it can not fire; operating means for moving said closure selectively to said two positions; and means interlocking said gun control means and said operating means for effecting movement of the closure to open position when the gun is conditioned to fire and for effecting movement of said closure to closed position when said gun is conditioned so that it can not fire.



7. An aircraft having a surface subject to air pressure incident to flight and an opening in said surface, a blast tube mounted in said aircraft interiorly of said surface with its outer end terminating at said opening; a closure for said opening; means pivotally mounting said closure on said aircraft eccentrically of the tube longitudinal axis to be swung selectively to an outer position for closing said opening or to an inner position within said tube for leaving the interior of said tube open and substantially unobstructed, said mounting means being offset laterally of said blast tube and said tube being formed internally adjacent its outer end with a recessed seat of a size and depth to receive said closure when the latter is moved to said inner position so that said closure in said position will merge smoothly with the inner contour of said tube; operating means mounted in said aircraft; and means connecting said operating means to said closure for swinging said closure selectively to said two positions, said operating means and said connecting means being disposed entirely outside the blast tube when said closure is in both of said positions.

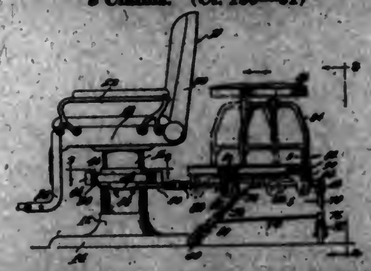
2,445,236
APPARATUS EMPLOYING CAVITY RESONATORS
Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 28, 1944, Serial No. 547,010
3 Claims. (Cl. 315—39)

1. An electron discharge device having an anode, a grid and a cathode, said grid having a radially directed flat conducting member connected therewith, said cathode having terminals extending normal to the plane of and through said conducting member, a collar having one end connected to said conducting member and surrounding said terminals and coaxial with said terminals, and a first means including an inner and outer conducting ring having resilient fingers thereon contacting said terminals and said collar, said rings being secured together insulatingly from each other by means of an insulating collar, said terminals, collar and means providing a resonator, and a second means for adjusting said first means longitudinally of said collar and terminals and including a screw means supported adjacent said collar, and means extending between said rings and said screw means whereby said first means may be adjusted longitudinally.

2,445,237
ELECTRON DISCHARGE DEVICE AND ASSOCIATED CIRCUIT
Robert P. Stone, Griggstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 28, 1944, Serial No. 547,669
7 Claims. (Cl. 250—27.5)

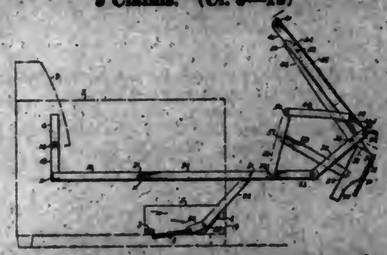
4. An electron discharge device having an envelope, a cathode and another electrode mounted within said envelope, said other electrode having a collar sealed at one end to said envelope and the inside surface of said collar forming an outside portion of said envelope, said cathode having a tubular lead extending from said envelope within and coaxial of said collar, and a seal connected between the inside surface of said collar and tubular lead at a point remote from the end of the collar sealed to the envelope.

2,445,238
PRODUCTION OF SKELETONIZED LOW REFLECTANCE GLASS SURFACE WITH FLUOSILICIC VAPOR
Frederick H. Nicoll and Ferd E. Williams, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application October 8, 1946, Serial No. 701,992
7 Claims. (Cl. 41—42)



1. The method of reducing the index of refraction of a glass surface with an acid vapor derived from a fluosilicic acid solution having between 3% and 10% by weight more silica than called for by the theoretical proportions of the formula H_2SiF_6, which includes the step of subjecting a surface of said glass to said vapor, while maintaining said glass and said vapor at substantially the same temperature.

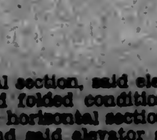
2,445,239
TIE CLASP OR CRAVAT HOLDER
George W. Owen, North Attleboro, Mass.
Application December 5, 1944, Serial No. 566,685
3 Claims. (Cl. 24—49)



1. A tie-clasp or cravat-holder comprising a relatively flat clamping element provided with means for releasably engaging it with a shirt front, a pivot at one end of the element disposed with its axis in a horizontal plane and projecting at right-angles to the plane of the clamping element, a crossbar hinged on said pivot to adapt it to swing in an arc concentric to the horizontal axis of the pivot in a plane parallel with the plane of the clamping element and parallel to the front of the shirt to open the clasp, and means at the end of the clamping element opposite from the pivot for yieldingly retaining the crossbar in parallel spaced relationship to the front of the clamping element.

2,445,240
STOOL ATTACHMENT FOR BARBERS' CHAIRS
Charles E. Faden, Pittsburgh, Pa.
Application February 8, 1946, Serial No. 646,263
5 Claims. (Cl. 155—91)

1. A device of the character described for use with a barber's chair comprising an annulus surrounding the pedestal base of the chair, rollers mounted in said annulus, sockets on said annulus receiving arms of a chassis, movable with relation to said chair by means of caster wheels, a platform movably mounted on said chassis and a stool supported by said platform.



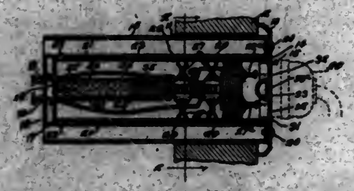
2,445,241
ADJUSTABLE SOFA CONSTRUCTION
Louis Pokorny, Ronkonkoma, and Louis Pokorny, Jr., Lake Ronkonkoma, N. Y.
Application January 25, 1947, Serial No. 724,276
5 Claims. (Cl. 5—12)

1. A device of the type having a sofa body and a frame foldable for reception therein and unfoldable to form a bed, said frame comprising companion members at each side thereof constituting sections, said sections including in the folded condition of the frame: a rear vertical section having at its upper end a perpendicular arm pivoted at its distal end to the sofa body, a lower horizontal section articulated to the lower end of the first-named section, a front vertical section articulated at its lower end to said lower horizontal section, and an upper horizontal section articulated to the upper end of said front vertical section; an elevator arm pivoted at a low point of said sofa body and articulated to said lower horizontal section, said elevator arm being aligned, in said folded condition of the frame, with said lower horizontal section; said rear vertical section and said elevator arm being turnable about their respective pivots to bring the rear vertical and lower horizontal sections into a raised, aligned horizontal position; said front vertical section having a perpendicularly disposed lug, a middle leg pivoted at the distal end of said lug; a rear toggle link pivoted to the lower horizontal section and a front toggle link pivoted to the upper horizontal section, said two links being articulated to form a toggle, a tie link connecting the rear toggle link and the middle leg, said middle leg being in said folded condition of the frame in parallel abutment with the front vertical section; said section being turnable around its articulation to the lower horizontal section into horizontal alignment with the latter; a front leg pivoted to the upper horizontal section and having an extension, a link pivotally connecting the distal end of said extension and said front vertical section, said front leg being in said folded condition of the frame aligned with said upper horizontal section; said section being turnable around its articulation to the front vertical section into horizontal alignment with the latter; said front leg being turnable by its connecting link into a position perpendicular to said upper horizontal section; and said toggle links being adapted when straightened out to cause the tie link to turn the middle leg on its pivot to a position perpendicular to the front vertical section.

2,445,242
PROCESS FOR PRODUCING A 4-AMINO SALICYLIC ACID
Karl-Gustaf Rosdahl, Malmo, Sweden, assignor to Aktiebolaget Ferrosan, Malmo, Sweden, a corporation of Sweden
No Drawing. Application February 26, 1947, Serial No. 731,936. In Sweden December 7, 1945
4 Claims. (Cl. 260—519)

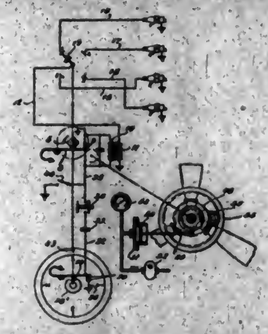
4. A method of producing chemotherapeutics against tuberculosis, comprising diazotising a compound of the formula

wherein R stands for a member selected from the group consisting of hydrogen, lower alkyl, carboxy and sulfo, by dissolution in concentrated sulphuric acid while cooling and by the action on the solution of nitrous acid, diluting the solution obtained with water, boiling the diluted solution in the presence of copper salt to form the corresponding R-substituted 2-hydroxy-4-nitrobenzoic acid, and reducing the compound thus formed to the corresponding R-substituted 2-hydroxy-4-aminobenzoic acid, R always having the aforerecited significance.



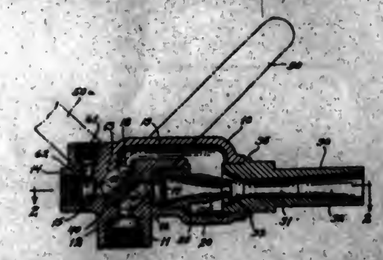
2,445,243
ASSEMBLY FOR ELECTRON MICROSCOPES
Frank E. Rungo, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 12, 1944, Serial No. 530,584
6 Claims. (Cl. 250—49.5)

1. In an electron microscope, a column portion formed by electron lens sections and an intermediate section forming a chamber, said intermediate section having an access opening and a door for said opening, a bellows unit in said intermediate chamber and forming a portion of the electron channel of said column, and means accessible through said opening for collapsing said unit for removal.



3. A bellows unit for the column of an electron microscope comprising a pair of annular heads, a tubular flexible bellows between said heads, spring means normally repelling one head with respect to the other, and manually operable means for squeezing said heads toward each other to reduce the length of the unit for removal and replacement from the column.

2,445,244
MULTIPLE CONNECTION
Lee M. Seaver, Kokomo, Ind.
Application November 3, 1945, Serial No. 626,500
5 Claims. (Cl. 173—334)

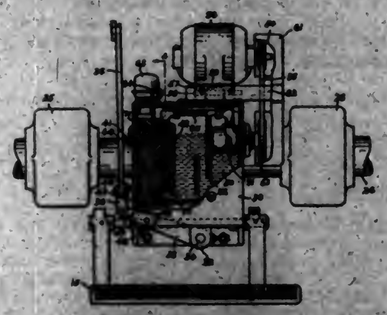


1. A multiple-purpose cord connecting outlet of the class described, comprising a receptacle having means whereby same may be fixedly mounted on a wall, floor or the like, said receptacle being provided interiorly with longitudinally extending current delivering arms and coacting means for connection with a source of electrical current, a shell telescopically mounted for sliding in said receptacle, said shell being slidably keyed to said receptacle, an adapter shaft mounted longitudinally and centrally in said shell, said shaft being provided with a multiplicity of selectively usable contact clips, said clips being adapted to accommodate prongs on cord plugs and the like, said shaft being provided with longitudinally extending contact fingers, said contact fingers having slidable resilient contact with said arms.

2,445,245
ENGINE IGNITION AND POWER TESTING APPARATUS
Robert L. Sexton, Flushing, N. Y.
Application April 16, 1945, Serial No. 588,565
3 Claims. (Cl. 73—116)

1. Engine and ignition power testing apparatus comprising an auxiliary cam driven from the engine, contact points actuated by said auxiliary cam, a housing for carrying said contact points, said housing being angularly adjustable with respect to said auxiliary cam to thereby effect the closing of said contact points simultaneously with the firing of any selected engine cylinder, a circuit connecting the engine ignition through said contact points to ground, switch means in said circuit for closing said circuit to cut off the ignition of such selected cylinder, and a torque indicator operable from the engine, for showing changes in the torque output of the engine responsive to the operation of said switch means.

2,445,246
JET AND VALVE ASSEMBLY
Walter Shallenberg, Salem, Ohio, assignor to The Deming Company, Salem, Ohio, a corporation of Ohio
Application January 31, 1946, Serial No. 644,585
11 Claims. (Cl. 103—262)

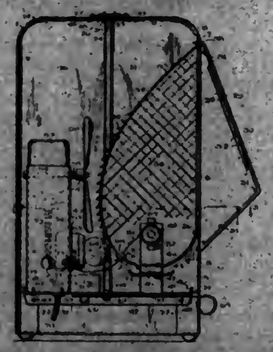


1. The combination of a hollow body, a nozzle mounted within the same, a jet tube carried by the body adapted to receive the discharge of the nozzle, a seat for a valve having a port communicating with the nozzle and a port communicating by a passage within the body with the space about the nozzle leading to the tube, means for connecting two conduits to the body, each conduit terminating in a port at the valve seat and valve means coacting with said seat adapted to couple the two conduits together or to couple one of the conduits with the nozzle and the other with the jet tube via said passage.

2,445,247
SHAFT SEAL
Thomas R. Smith, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a corporation of Delaware
Application August 23, 1946, Serial No. 692,567
3 Claims. (Cl. 286—11.15)

1. A seal assembly adapted to rotate or oscillate with and encompassing a shaft extending through a wall separating regions of different pressures, comprising an annular, resilient sealing ring mounted upon and rotatable with the shaft on the pressure side of the wall, said sealing ring having an initially smaller bore than the diameter of the shaft and being unconfined on its outer periphery and of substantially cylindrical form having an axial length greater than its thickness, one face of the sealing ring contacting the adjacent surface on the wall, and spring-actuated means for applying pressure to the other end of the sealing ring for maintaining the ring in sealing engagement with the shaft and wall.

2,445,248
CUTTING MACHINE
William E. Spiller, Dayton, Ohio, assignor to Harris-Seybold Company, Cleveland, Ohio, a corporation of Delaware
Application July 22, 1946, Serial No. 685,429
15 Claims. (Cl. 164—52)



1. In a cutting machine of the character described having a clamp member both for clamping work material to be cut and for gauging the cut line on said material, means for the preliminary operation of said clamp member independently of the main operating mechanism of said machine and comprising, in combination, a cylinder and piston mounted for relative movement in response to fluid pressure within said cylinder, means effective upon relative movement of said piston and cylinder to cause clamping movement of said clamp member, means for providing a supply of hydraulic fluid under pressure, means forming a passage for supplying said pressure fluid to said cylinder, means forming a by-pass passage for said fluid by-passing said cylinder, valve means controlling the flow of said pressure fluid through said by-pass, means limiting the maximum pressure developed within said cylinder, and externally operable means controlling the movement of said valve means.

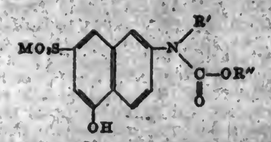
2,445,249
WELL TUBING
Charles W. Sproull, Houston, Tex.; Edith M. Sproull executrix of said Charles W. Sproull, deceased
Application March 11, 1946, Serial No. 653,595
6 Claims. (Cl. 285—22)

1. In a tubing having tubular sections, a one piece tubular coupling connecting said sections and having a single channel within the wall thereof whose ends terminate within the tubing and tubular fittings in the tubing connected into the channel ends.

2,445,250
AIR-CIRCULATING HEATER
George Steingruber, Atlanta, Ga.
Application February 4, 1946, Serial No. 645,352
18 Claims. (Cl. 219—39)

1. An electric heater of the class described, comprising an outer shell composed of front, back, side and top walls, said front wall having an opening therein, a reflector shell disposed within the outer shell, said reflector shell including vertical side walls spaced inwardly from the side walls of the outer shell, and a continuous back wall spaced from the back wall of the outer shell and joining the vertical side walls of the reflector shell, said back wall of the reflector shell curving downwardly and rearwardly from a point above the opening in the front wall of the outer shell, with the lower portion of the back wall curving downwardly and forwardly to a point below the opening aforesaid, and thence curving upwardly and forwardly towards the front wall of the outer shell and terminating at the bottom of the opening therein, an electric heating element horizontally disposed within the bottom of the reflector shell between the side walls of the latter, said reflector shell having an opening in the bottom thereof below the heating element for permitting air to enter the reflector shell and pass upwardly around the heating element to heat the air before discharge of the air forwardly through the opening in the front wall of the outer shell, a plurality of louvers formed in the curved back wall of the reflector shell above the heating element, and means disposed within the outer shell behind the reflector shell for forcing air entering at the bottom of the outer shell into the space between the outer shell and the reflector shell, through the louvers and outwardly through the opening at the front of the outer shell.

2,445,251
MECHANICAL RAKE CLASSIFIER
Fred F. Tessin, Santa Rosa, Calif.
Application January 28, 1944, Serial No. 520,018
10 Claims. (Cl. 209—462)

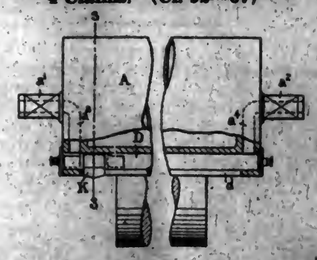


1. A classifier of the character described, comprising a tank for holding pulp having an inclined bottom and a rake operable for raking action over the bottom, the rake having flat vertical blades perforated to allow pulp to pass therethrough and to keep the pulp in a loose flowing condition, whereby the denser and smaller particles are made to sift and crowd downward to form a lower stratum and the lighter and larger particles are made to form an upper stratum, and the tank bottom having undercut slots in the upper end thereof for shearing off the lower stratum as the pulp advances, with a box underneath the slots for receiving the lower stratum, and means associated with the box for controlling the flow of water therethrough.

2,445,252
PHOTOGRAPHIC ELEMENTS CONTAINING URETHANES OF N-SUBSTITUTED J ACIDS AS COLOR FORMERS
Vsevolod Tulagin, Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application April 10, 1947, Serial No. 740,726
7 Claims. (Cl. 95—6)

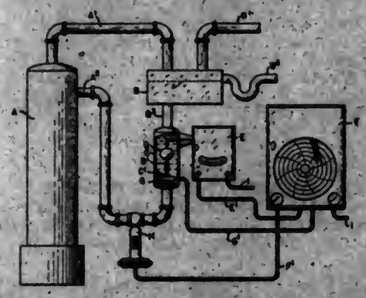
1. The process of producing dyestuff images in an exposed photographic silver halide emulsion which comprises developing the emulsion with a primary aromatic amino developer in the pres-

ence of a urethane of J acid having the following formula:



wherein R' is a member of the class consisting of an aliphatic radical and an aromatic radical, R'' is alkyl, and M is a member selected from the class consisting of hydrogen and a salt-forming radical.

2,445,253
METHOD OF PRODUCING MIRRORS BY CHEMICAL DEPOSITION
Frank H. Verhoek, Worthington, Ohio, and Willard L. Morgan, Haverford, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application February 6, 1946, Serial No. 645,940
9 Claims. (Cl. 117—6)



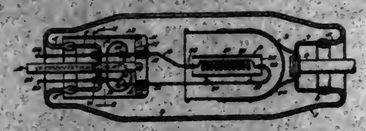
1. The method of making mirrors by chemical deposition of an alkaline mirroring solution upon one surface of a sheet-like support, which comprises substantially completely contacting one surface of the support with a water-wet gelatinous coating so as to protect said surface from contact with said alkaline mirroring solution to be applied to the other surface of the support, said gelatinous coating consisting of gelatinous water-insoluble inorganic metallic compound material and a sufficient amount of water to form a stiff non-flowable gel that closely adheres to said surface, said coating being insoluble in said alkaline mirroring solution and being sufficiently stiff to prevent displacement by any of such solution which might reach it after being applied to said other support surface, and then applying to said other support surface, while the gelatinous coating is still on said first support surface and is still wet, said alkaline mirroring solution and depositing a mirror deposit upon such other surface.

2,445,254
MACHINE FOR THE MANUFACTURE OF WET PAPERBOARD
Joseph Winterburn, Bury, England
Application October 18, 1945, Serial No. 623,023
In Great Britain October 26, 1944
4 Claims. (Cl. 92—67)

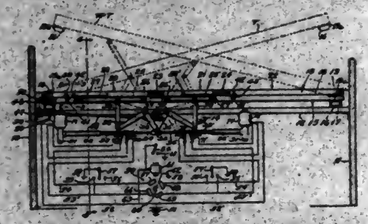
2. In a machine for the manufacture of wet paper board, the combination with the cylinder onto which the paper is wound into a roll, of a tube situated within the cylinder and extending longitudinally from end to end thereof and having a longitudinal slot between its bore and the outer surface of the cylinder, means for admitting compressed gas to each end of the tube, a body freely movable longitudinally in the tube and adapted to be impelled from end to end thereof by compressed gas admitted to either end of the tube according to the position of said body therein, cushioning means carried by said body and operative at each end of the travel of said body, a knife carried by said body and projecting through said slot and movable longitudinally in said slot to sever the roll of paper on the cylinder during the traverse of said body from one end to the other end of the tube, and means located behind said longitudinal slot through which the knife projects and controlled by the movement of said body longitudinally of the tube for directing some of the compressed gas in the tube onto the roll of paper near its severed edge for detaching it from the cylinder.

2,445,255
REGULATING MECHANISM RESPONSIVE TO VARIATIONS IN DENSITY AND TEMPERATURE OF LIQUIDS
Gavin S. Younkin, Tulsa, Okla., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 4, 1942, Serial No. 449,836
4 Claims. (Cl. 202—160)

1. Regulating mechanism for maintaining an air pressure varying in accordance with changes in the density of a liquid which are independent of the temperature of the liquid flowing through a container; comprising in combination with said container, a float immersed in the liquid in said container and subject to a floatative force by said liquid, float loading means adjusting said float to levels varying on and in accordance with changes in the weight of the liquid displaced by said float, a pressure transmitting instrument including an expansible and collapsible vessel and means for maintaining a measuring air pressure in said vessel varying with changes in the density of said liquid comprising a bleed nozzle and valve, an operating connection between said float and valve moving said valve toward and away from said nozzle to decrease and increase the pressure in said vessel in respective accordance with a change in the level of said float in one direction or the other, an operating connection between said valve and said vessel through which the expansion and contraction of said vessel moves said valve toward and away from said nozzle as the pressure in said vessel respectively increases and decreases, an air control instrument of the known type comprising a bleed orifice flapper valve for maintaining a regulating air pressure dependent on the adjustment of said flapper valve, a follow-up and resetting mechanism to which said regulating pressure is transmitted, an operating connection through which said mechanism gives follow-up and resetting adjustments to said flapper valve on changes in the pressure transmitted to the mechanism, and means for giving said flapper valve control adjustments on changes in the density and temperature of the liquid flowing through said container comprising two expansible chambers mechanically connected to said control flapper so that each tends to adjust the latter in one direction or the other on an increase or decrease in the pressure in the chamber, a fluid pressure thermometer bulb responsive to the temperature of the liquid in said container and maintaining a fluid pressure varying with said temperature, and means for transmitting the last mentioned pressure to one of said chambers, and means for transmitting said measuring pressure to the second of said chambers.



2,445,256
FILAMENT BY-PASS CONDENSER
Robert M. Page, Washington, D. C., and Merril F. Distad, Cheverly, Md.
Application August 25, 1942, Serial No. 456,044
6 Claims. (Cl. 250—16)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In combination for use in a multiple tube oscillator, a pair of conductors constituting the filament leads of an oscillator tube, a tubular conducting member constituting a filament frame for coupling the output of said tube to an antenna feed line, said conducting member surrounding said conductors for a portion of their length and being insulated therefrom and means forming a radio frequency bypass between said conductors and between each of said conductors and said conducting member, said means comprising a stack of four condenser plates, dielectric material separating said plates, means rigidly and conductively connecting the two outermost of said plates together and to one end of said conducting member to form a unitary assembly with the axis of said conducting member extending normal to the lateral surfaces of said plates, said conductors extending into said stack in parallelism to said axis, means rigidly and conductively connecting each of said conductors to a separate one of the intermediate plates of said stack, and means insulating each of said conductors from the remainder of said plates.

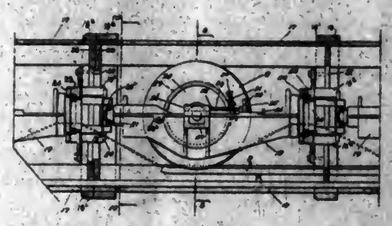
2,445,257
THERMIONIC EMITTING DEVICE
Zed J. Atlee, Elmhurst, Ill., assignor to General Electric X-Ray Corporation, Chicago, Ill., a corporation of New York
Application July 3, 1944, Serial No. 543,269
1 Claim. (Cl. 250—27.5)

An electron flow device comprising an enclosing envelope, a cathode emitter having a columbium surface arranged inside of said envelope, a filament heater arranged adjacent said surface and indirectly heating said surface, a conductor stem for the filament, and getter means of columbium on the emitter extending below the end of the filament a predetermined distance and acting as a getter.

2,445,258
HOSPITAL BED
Marvel D. Beem, West Los Angeles, Calif., assignor of one-half to The Beem Foundation, Los Angeles, Calif., a charitable trust of California
Application October 15, 1945, Serial No. 622,337
11 Claims. (Cl. 128—33)

1. In a hospital bed, a mattress supporting frame including a subframe; a head rest and a thigh section hinged to said subframe, and a foot rest hinged to said thigh section to provide a knee joint; lift mechanism operative to exert lifting pressure against said head rest and knee joint respectively; and means for locking said head rest and knee joint to said subframe to permit said mattress supporting frame to be elevated as a rigid unit.

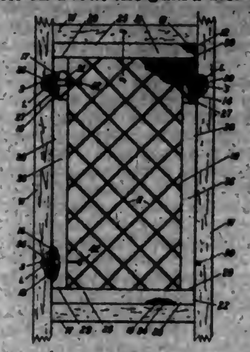
2,445,259
TWIN-COOLED RADIO TUBE
Abraham Binneweg, Jr., Oakland, Calif.
Application November 11, 1942, Serial No. 465,207
15 Claims. (Cl. 250—27.5)



1. A radio unit having a main compartment, a cover for said compartment, cathode, grid and plate elements within said compartment, a chamber within said plate element, waterways in the walls of said compartment communicating with said chamber, a water compartment in the cover of said main compartment, a pipe connecting said waterways with said cover compartment and entering said compartment, and orifices near the end of said pipe.

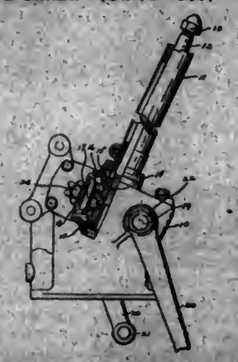
2,445,260
HAULING SCRAPER
Kirk L. Brimhall, San Gabriel, Calif., assignor to Len O. Bird
Application July 18, 1944, Serial No. 545,473
16 Claims. (Cl. 37—129)

1. In a hauling scraper for attachment to a tractor-carried power operated vertically movable draft unit, the improvement which includes a wheel-supported sectional frame having upper and lower sections, means affording a draft connection between the lower section and the draft unit, means connecting said sections so that both may be raised and lowered responsive to operation of said draft unit, and the upper section may be raised and lowered relative to the lower section, a scraper bowl supported by said upper section for movement into and out of loading, carrying and dumping positions, and power operated means for raising the upper section relative to the lower section.



2,445,261
TUBULAR REEL STRANDER
Carl O. Brucstle, Rahway, N. J., assignor to Syncro Machine Company, Perth Amboy, N. J., a corporation of New Jersey
Application March 13, 1947, Serial No. 734,524
4 Claims. (Cl. 57—59)

1. A tubular housing for a stranding machine composed of at least two parts, each of which in turn comprises at least two plates of arcuate cross-section, at least two discs having peripheral diametrically arranged slots in which said plates die, and rings surrounding said plates at said discs, at least one terminal disc of each part being provided with cooperating seats which when engaged cause the adjacent rings to abut.

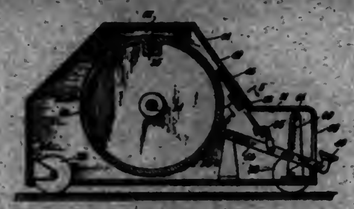


2,445,262
METAL SCREEN
Bill E. Butler and Emmett A. Shaw, Shreveport, La.
Application April 1, 1946, Serial No. 658,644
4 Claims. (Cl. 160—394)

1. A metal screen, comprising a guard member, a screen layer laid on the guard member, the screen layer clamped to the guard member along its peripheral area by a channel shaped spring type clamping frame member mounted in an embracing position about the guard member and the

screen layer along an edge portion of the guard member.

2,445,263
STEERING GEAR
Roy E. Farmer, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application July 17, 1946, Serial No. 684,365
1 Claim. (Cl. 74—500)



In a vehicular steering gear, a steering column shaft mounted obliquely to the vertical, an hour glass worm secured to the steering column shaft, a pair of offtake shafts, one of which is located ahead of and one of which is located behind the steering column shaft and whose axes are parallel and fall in a common plane normal to the steering column shaft, a pair of rotary followers rigidly mounted upon said offtake shafts and operatively connecting the worm gear and offtake shafts, the axes of said rotary followers falling outside that plane normal to the offtake shafts and bisecting the hour glass worm a small but significant distance and adjusting means to move each of said rotary followers parallel to the axes of the offtake shafts, said adjusting means being located on opposite sides of the gear case.

2,445,264
CALCULATOR
Millard C. George, El Cerrito, Calif.
Application June 14, 1946, Serial No. 676,675
2 Claims. (Cl. 235—87)

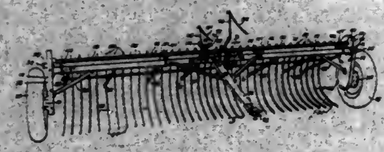
1. A calculator of the class described adapted to rest upon a desk or other suitable support, said

calculator comprising a cylinder having calculating tables disposed on the face thereof, a casing enclosing said cylinder, said casing comprising dial windows for viewing said calculating tables on the cylinder, key means for selectively closing

or opening said dial windows, and friction means for rotating said cylinder to present different tabulations at said windows by shifting said calculator either forward or backward upon said support.

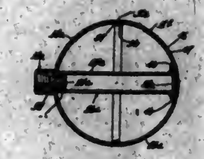
2,445,265
DETACHABLE HANDLE
John Edward Hargrave, Sublime Point Kiosk, Thirroul, and Edward George Chamberlain, Thirroul, Australia
Application August 31, 1946, Serial No. 694,178
In Australia October 15, 1945
1 Claim. (Cl. 294—31)

An improved detachable handle for cans, comprising a pair of can engaging members each having a hooked end and a slot medially thereof and having their upper ends bent inwardly from the said hooked ends, said upper ends being slotted, a channelled toggle portion pivoted to one of the can engaging members and having a pair of lugs, and a second toggle portion pivoted to the other of the can engaging members and also pivoted to the said lugs of the channelled toggle portion.



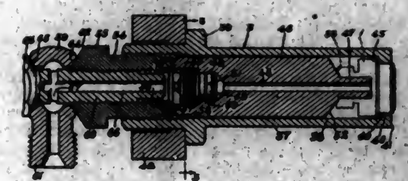
2,445,266
FUEL PUMPING AND DISTRIBUTING DEVICE
Carl F. High, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Original application April 4, 1940, Serial No. 327,834. Divided and this application July 17, 1944, Serial No. 545,266
5 Claims. (Cl. 103—2)

1. A fuel pump comprising, in combination, a housing, a fuel distributor rotatable in said housing and having an inlet port and an odd number of outlet ports arranged for communication in uniformly timed sequence successively with said inlet port once during each distributor rotation, a plurality of pumping devices, each including a rotary and reciprocatory plunger and having inlet and outlet means controlled by the rotation of said plunger for ejecting two charges of fuel during each plunger rotation and double reciprocation, the outlet means of said pumping devices being connected in common to said distributor inlet port, and means for driving said distributor and said pumping devices in timed relation to cause said pumping devices to deliver their collective charges in timed sequence and



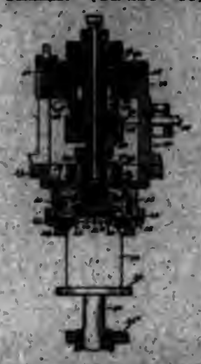
concurrently with connection of said inlet port respectively with said outlet ports.

2,445,267
DUMP RAKE
Samuel E. Hillblom, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application December 27, 1943, Serial No. 515,685
4 Claims. (Cl. 56—386)



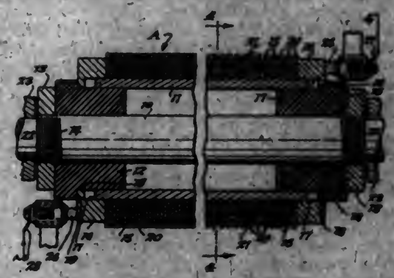
1. In a dump type hay rake, a generally transversely extending fixed frame, wheels journaled on and supporting the ends of said fixed frame, a tongue attached to and extending forwardly from said fixed frame, a substantially vertically disposed plate attached to and forming a part of said fixed frame and extending upwardly therefrom, said plate having a notched upper surface, a rake head having raking tines, said rake head and raking tines hingedly mounted on the rear of the fixed frame for movement between a ground engaging position and an up crop dumping position, lock means for holding said rake head in an upwardly hinged position, said lock means comprising a lever arm pivotally attached intermediate its ends to said fixed frame and disposed substantially vertically and adjacent said vertically disposed plate, a tension coil spring attached at one end to the lower extension of said lever arm and at its other end to said fixed frame to urge the upper extension of said lever arm rearwardly, a bracket attached to the upper extension of said lever arm and extending rearwardly therefrom, said bracket having a downwardly and rearwardly inclined lower edge adapted to overlie and hold said rake head in its upwardly hinged position, a detent mounted on said lever arm, means for pulling the upper extension of said lever arm forwardly against the action of the tension spring, and said detent arranged and constructed to engage the notched upper surface of said plate to hold the lever arm and its bracket out of rake head engaging position.

2,445,268
FLOAT OR THE LIKE
Sydney M. Hodgins, Lakewood, Ohio
Application October 30, 1942, Serial No. 463,868
4 Claims. (Cl. 137—104)



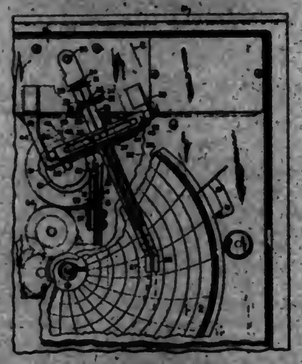
1. A hollow float, comprising: steel shell parts having mutually engaging joint portions; metallic bonding material adhering to and uniting said joint portions, the fusion temperature of said bonding material being substantially below the fusion temperature of said steel and higher than approximately 1000° F., and said bonding material having been fused in place at a temperature substantially below the fusion temperature of said steel; and at least the external surfaces of said shell parts and said bonding material having a coating of corrosion-resisting metallic material deposited thereon, the relative thickness of said corrosion-resisting material and said steel being a ratio of approximately one to three to a ratio of approximately one to two.

2,445,269
COMBINED INJECTOR NOZZLE AND FILTER
James F. Hoffer, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Original application March 1, 1939, Serial No. 259,088. Divided and this application May 6, 1944, Serial No. 534,440
4 Claims. (Cl. 210—164)



1. A fuel injection nozzle comprising, in combination, a holder having an external cylindrical casing formed in one end with an internal peripheral flange, a nozzle tip removably mounted in said one end of said casing and having an external peripheral flange engaging said first mentioned flange and having an axial inlet bore, a cylindrical filter holder removably inserted in said casing and having an axial stem inserted in said bore, said holder being formed with an axial passage opening therethrough and communicating at the discharge end with said bore and formed with an enlarged stepped counterbore in the inlet end of said passage, a nut threaded into the other end of said casing and serving to clamp said casing, nozzle tip and filter holder rigidly in assembled relation and formed with an inlet passage opening to said counterbore and adapted to be connected to a source of fuel, and a filter removably inserted in said counterbore.

2,445,270
MACHINE FOR TIGHTENING CAPS ON CONTAINERS
John Hohl, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application January 11, 1945, Serial No. 572,251
7 Claims. (Cl. 226—38)

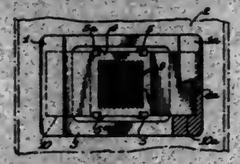


1. A machine for tightening caps on containers, comprising a support for a container, a pusher plate, means for holding said pusher plate spaced above said support with the plate positioned over a container on the support and a cap loosely seated on the container, a vertical cap tightening spindle mounted over said plate, means for rotating the spindle about its axis, and means providing driving connections between the spindle and pusher plate including a screw shaft fixed to said plate and an internally screw-threaded element attached to said spindle for rotation therewith and in threaded engagement with said screw shaft, whereby rotation of the spindle causes vertical movement of said pusher plate, said means for rotating the spindle comprising a coil spring surrounding and connected to the spindle for rotating it in one direction, and positive means for rotating the spindle in the opposite direction.

2,445,271
STATIC ELIMINATING MEANS
William C. Huebner, New York, N. Y.
Application March 17, 1945, Serial No. 583,336
1 Claim. (Cl. 175—264)

Means for eliminating electrostatic charges from travelling print-receiving sheet material in a printing apparatus, including a roller arranged to rotate with its periphery in conductive contiguity with said travelling sheet, said roller comprising a central longitudinal shaft, a tube surrounding and spaced from said shaft, opposite insulating sleeves secured on said shaft and extending within opposite ends of said tube and supporting and insulating the tube from said shaft, a series of relatively thin electrically conductive transverse annular disks loosely sleeved on said tube approximately face to face with each other and provided around their outer edges with outwardly directed projections having closely spaced outer ends, electrically conductive clamping rings supported by said insulating sleeves at opposite ends of said series of disks, at least one of said sleeves being adjustable toward the other within said tube and the clamping ring supported thereby having a portion movably surrounding said tube and being adjusted axially relatively to the tube by adjustment of said adjustable sleeve for clamping said disks between said clamping rings, and an electrical conductor in electrical connection with one of said clamping rings.

2,445,272
RECORDING INSTRUMENT HAVING PLURAL PENS AND AN OSCILLATING ACTUATOR
James H. Keegan, North Wales, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 15, 1944, Serial No. 568,257
6 Claims. (Cl. 346—49)



2. In a recording instrument having a chart upon which a record is to be made, the combination of a movable member, a plurality of arms attached to said member and extending over the chart, a marking element attached to each of said arms and normally biased towards said chart, and means acting on said arms to move individually said arms and thereby bring said marking element on said arm into engagement with the chart whereby a single record at a time may be made on the chart by said marking element.

2,445,273
SEALING SLEEVE FOR TUBE UNITS
William M. Kennedy, Lyndhurst, N. J.
Application November 8, 1945, Serial No. 627,464
8 Claims. (Cl. 285—54)

1. A sealing unit for sealing tube mountings in tube sheets, said unit comprising an elongated sleeve of a length materially greater than the thickness of a tube sheet, said sleeve having a flanged outer end, a fibre sleeve fitting snugly on the periphery of the first named sleeve, the inner end of the fibre sleeve extending beyond the end of said first named sleeve, the bore of the inner end portion of both of said sleeves having a common and alined taper, and said unit being adapted to be forceably fitted in the end portion of a tube mounted in a tube plate with the flange of said unit abutting the outer open end of the tube.

2,445,274
CIGARETTE EXTINGUISHER
Otto Lewotsky, Ferndale, Mich.
Application March 20, 1947, Serial No. 735,962
4 Claims. (Cl. 131—237)

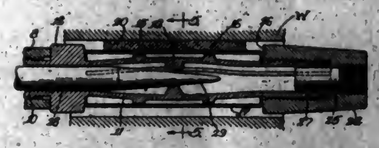
2. A cigarette extinguisher including two opposed walls, a resilient apertured member supported by and projecting at an upward inclination from each wall, the outer portions of the two members overlapping, clips holding the said overlapping portions substantially contiguous to one another whereby they together extend in the form of an arch, and said members being mounted for sliding movement relative to one another by said clips whereby downward pressure exerted upon the overlapping portions flattens the arch and moves each member toward the wall opposite the one by which it is supported so that the apertures through one member move into and out of registry with the apertures through the other member.

2,445,275
SAFETY FUEL TANK AND TOOLBOX COMBINATION
William Allan Listern and John N. H. Christman, Jr., Berea, Ohio, assignors to The Listern Corporation, Berea, Ohio, a corporation of Ohio
Application November 21, 1946, Serial No. 711,448
8 Claims. (Cl. 280—5)

1. A safety fuel tank combination for highway tractors and comprising front and rear rigid cross members adapted to overlie but be supported by the longitudinal rails of a tractor chassis and to extend therebeyond laterally of the chassis, a pair of fuel tanks, each tank being connected to both of said cross members in a position to be supported thereby with a portion depending therefrom, one tank at each side of the chassis, the cross members forming the upper part of front and rear walls respectively of each tank, laterally spaced inboard partition walls extending between the cross members adjacent the planes of the inboard side walls of the tanks respectively

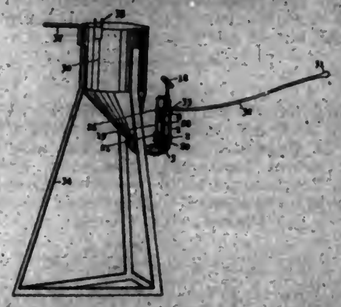
and forming the upper portions of the inboard side walls, means closing the bottom of the space enclosed by the cross members and inboard partition walls, and providing therewith a tool box, top wall means secured to the cross members and forming a top on said box with an opening therein affording access to the interior of the box and a cover for opening and closing said opening.

2,445,276
ELECTRODYNAMIC LOUDSPEAKER
Frank Massa, Cleveland Heights, Ohio
Application May 4, 1945, Serial No. 591,982
8 Claims. (Cl. 179—115.5)



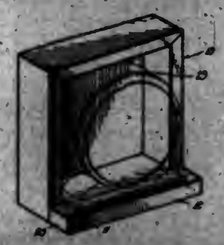
1. In combination in a loud speaker, a magnetic structure having an air gap, a coil of electrically conducting material located in said air gap, a direct radiating diaphragm rigidly attached to said coil and the assembly flexibly suspended so that it may freely vibrate when driven by forces generated in said coil, the mass in grams of said coil lying in the range between $D^2/250$ and $D^2/50$ where D is the effective diameter in inches of the vibrating area of said diaphragm.

2,445,277
HONE
Wallace F. Mitchell, Chicago, Ill., assignor to Ammco Tools, Inc., a corporation of Illinois
Application September 8, 1945, Serial No. 615,165
13 Claims. (Cl. 51—184.3)



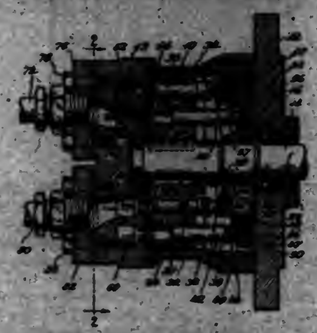
1. A hone comprising body structure provided with angularly spaced radial openings, a plurality of channel-shaped stone carriers mounted in said openings for radial movement, and a pair of longitudinally spaced cam members mounted in said body structure for longitudinal movement, each stone carrier having a pair of transverse ribs extending between and connected to the channel flanges and engaging said cam members, said ribs being symmetrically shaped and positioned relative to the ends of the carrier to permit end-for-end reversal of the stone carriers.

2,445,278
HONE
Wallace F. Mitchell, Chicago, Ill., assignor to Ammco Tools, Inc., a corporation of Illinois
Application November 19, 1945, Serial No. 629,375
14 Claims. (Cl. 51—184.3)



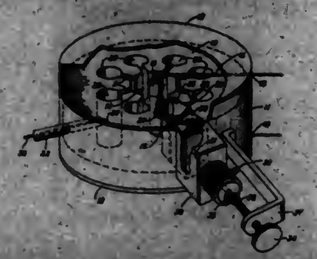
1. In a honing device, the combination of a rotatable tubular drive shaft, an expansible mandrel connected to said drive shaft, an expansible sleeve mounted on said mandrel, a plurality of honing stones carried by said sleeve, and means including a wedge member slidable longitudinally in said drive shaft and engageable with said mandrel to expand the same and said sleeve to move said stones radially outwardly.

2,445,279
MEASURING PUMP WITH ADJUSTABLE STOP
George Alfred Vincent Palm and Milton Albert Palm, Pilliana, South Australia, Australia
Application November 3, 1945, Serial No. 627,327
In Australia November 20, 1943
2 Claims. (Cl. 222—309)



1. An improved drenching gun comprising: a cylinder, means to place the cylinder into communication with a supply of drenching fluid, a piston rod, a piston within such cylinder and carried on said piston rod, valve means arranged to allow the fluid to be drawn through said cylinder and piston in one direction only, a plurality of adjustable stops, a stroke controlling member attached to said piston rod, said member being adapted to be positioned in line with any one of said stops by rotating said piston rod, graduations on said stroke controlling member, means upon said cylinder against which the graduations can be read, and stop means to limit the rotation of said piston rod.

2,445,280
SHIPPING AND DISPLAY CARTON
Henry K. Powell, Chicago, Ill., assignor to Morris Paper Mills, Chicago, Ill., a corporation of Illinois
Application April 30, 1945, Serial No. 590,995
8 Claims. (Cl. 206—44)

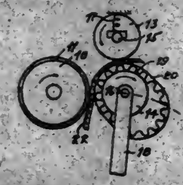


1. In a carton of the character described, the improvement which comprises a center panel, walls oppositely extending from said center panel, said walls comprising outer wall sections and inner wall sections, said inner wall sections each having a first panel member extending from said outer wall sections toward said center panel and a second panel member, spaced from said outer wall section, also extending toward said center panel, a spacer strip connecting said first and second panel members and providing a shoulder and spacing said second panel member from said outer wall section, said wall sections having portions removed from the ends of the spacer strip and the second panel member to provide a recessed area, and walls extending from the remaining sides of said center panel, comprising an outer wall section and an inner wall section, said inner wall section extending toward said recessed area.

2,445,281
HYDRAULIC PUMP
Charles H. Eystrom, Rockford, Ill.
Application October 4, 1945, Serial No. 620,846
3 Claims. (Cl. 103—162)

2. A pump of the swash plate type having a rotatable cylinder barrel having two concentric rows of cylinders therein, a spring retracted plunger in each of said cylinders, means to rotate the cylinder barrel, and a stationary swash plate engaging the ends of the plungers in each row, the swash plates being inclined in opposite directions with respect to the axis of the cylinder barrel.

2,445,282
TUNING ARRANGEMENT FOR CAVITY RESONATORS
John C. Slater, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 19, 1944, Serial No. 536,298
3 Claims. (Cl. 315—39)

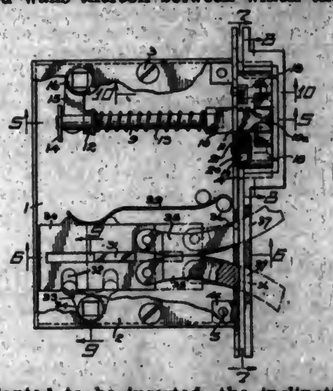


1. A tunable cavity resonator device comprising a perforated cylindrical block of conductive material, the perforations of which include a cylindrical interaction space, and a plurality of cylindrical cavity resonators surrounding said reaction space and spaced therefrom, a central axis of said interaction space and of said cavity resonators being parallel to the central axis of said block, which block also has a plurality of coupling slots each interconnecting one of said cavity resonators with said interaction space, and has a tuning slot which is open at its two ends and is bounded by only two surfaces of said block, said surfaces being parallel with each other and with the central axis of said block, said tuning slot forming a parallel plate transmission line for electromagnetic waves of the operating frequency of said resonator device, said tuning slot extending from end to end of said block and from the interior of one of said cavity resonators outwardly through the outer surface of said block, and a tuning bridge slidably mounted between the two plates of said parallel plate transmission line.

2,445,283
CURING OLEFIN-DIOLEFIN COPOLYMERS
Robert R. Sterrett, Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application January 15, 1944, Serial No. 518,415
1 Claim. (Cl. 260—79)

A method of reducing the rate of cure of a rubbery copolymer of a major proportion of a mono-iso-olefin and a minor proportion of a conjugated diolefin vulcanized with an oxidizing agent and p-quinone dioxime, which comprises additionally adding to the stock before cure a small amount of tetramethyl thiuramdisulfide.

2,445,284
FLESHING MACHINE
Sam Tandiorio, Forest Hills, N. Y., assignor to Alaska Chemical Corporation, Paterson, N. J., a corporation of New Jersey
Application January 3, 1947, Serial No. 719,988
2 Claims. (Cl. 69—41)



1. In a fleshing machine having a revolving cutter and a pair of feed rollers adapted to hold a pelt against the cutter, in combination, a sleeve of flexible rubber, said sleeve having corrugations on its inner surface and having a larger internal diameter than the external diameter of the lower feed roller, said sleeve being mounted on the lower feed roller loosely and serving as a surface with which the upper feed roller cooperates and on which the pelt is placed during the fleshing operation.

2,445,285
LOCK
Avagim Wartian, Detroit, Mich.
Application March 21, 1946, Serial No. 656,007
6 Claims. (Cl. 292—49)

1. A lock including a casing having an opening through one side, a latch mounted for movement through said opening to retracted or outwardly projected position, jaws pivoted on the outer face of the casing on opposite sides of the latch, and means for turning the jaws when the latch is moved whereby when the latch is

retracted the outer faces of the jaws are parallel and when the latch is outwardly projected the said outer faces are inclined to one another, in combination with a striker plate having opposed inclined walls thereon between which the jaws

are adapted to be inserted, the inclination of the walls corresponding to that of the outer sides of the jaws when inclined to one another whereby said jaws are engaged by said walls when the lock is closed.

2,445,286

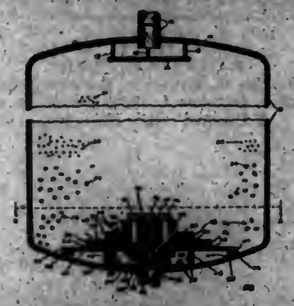
PORTABLE STAGING OR THE LIKE

Daniel H. Weislander, Portland, Maine

Application April 6, 1946, Serial No. 660,175
15 Claims. (Cl. 304—6)

1. A staging or the like comprising a support consisting of first and second slidably interconnected sections, a pair of legs hinged to opposite ends of each of said sections, and brace means for each of said pair of legs, the brace means for at least one of said pairs of legs comprising a first element transversely hinged to that section supported by that pair of legs, a slide on said first element, a second element pivotally connected to each of the legs of that pair and to said slide, said first and second elements having portions interlocking when said legs are in their supporting position.

2,445,287



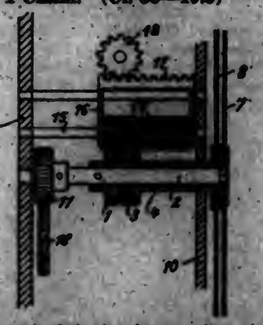
LIQUID FILTERING MECHANISM

Clayton W. Woods, Omaha, Nebr.

Application December 29, 1944, Serial No. 570,243
6 Claims. (Cl. 210—171)

1. In a liquid filtering system, at least three discs each having an area in plan different with respect to each other, said discs being arranged in approximate axial juxtaposition progressively smaller in area from one side of the assembly to the other side thereof, discs disposed at one side of the smallest disc each having a substantially medially disposed passageway, spacing rings disposed between said discs in alignment with said passageways, said rings each being provided with at least one aperture disposed through their respective walls, and maintaining means for holding the discs and rings in operative position with respect to each other.

3. A liquid filtering system having in combination, a tank provided with an inlet at its top, an outlet at its bottom and laminations of filtering material therein; a plurality of discs within said tank between said bottom and a major portion of said laminations, certain of said discs being provided with passageways, said discs being disposed substantially axially of said tank; apertured spacing rings between said discs in alignment with said passageways, said rings be-



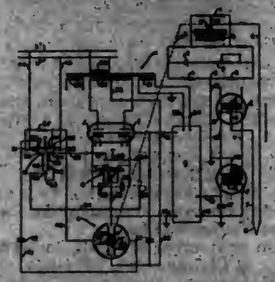
ing foraminous for permitting a flow of liquid to said passageways; and a conduit for guiding liquid from said apertures and passageways to said outlet; said discs being arranged progressively smaller in plan from said conduit toward said inlet, the area in plan of each disc being complemental to that portion of the cross sectional area of said tank respectively served by the discs for causing said liquid to descend approximately evenly through said laminations.

2,445,288

SHUTTER CONTROL DEVICE FOR MOVING PICTURE APPARATUS

Jacques Jean Breide, Joinville-le-Pont, and Jean Weisbredt, Paris, France

Application March 1, 1945, Serial No. 580,421
In France November 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 29, 1961
1 Claim. (Cl. 88—19.3)



A shutter control device for moving picture apparatus, comprising in combination two concentric shafts adapted to actuate the respective shutter blades and alter the relative position thereof, an oblique pinion keyed to each of said shafts, means for connecting one of said shafts with the driving mechanism of the moving picture apparatus, a secondary shaft parallel with said concentric shafts, an axially movable intermediate pinion slidable along said secondary shaft and having two intersecting sets of oblique teeth of reverse pitch adapted to mesh with said first-mentioned pinions, respectively, and means for moving said intermediate pinion axially.

2,445,289

INDUCTION MOTOR DAMPING SYSTEM

Lloyd B. Cherry, Beaumont, Tex., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania

Application December 4, 1944, Serial No. 713,953
10 Claims. (Cl. 318—269)

1. An alternating current motor comprising in combination a rotor, a power winding, a control winding, first energizing circuit connections arranged to maintain an alternating current flow of predetermined frequency and phase in said power winding, second energizing circuit connections arranged to maintain an alternating current flow in the control winding which is of the same frequency as, and normally differs in phase from the current supplied to the power winding by the first mentioned connections so that the currents flowing in the two windings create a revolving magnetic field which rotates said rotor, means for varying the character of the current flow in the control winding to vary the motor operation, and a motor damping mechanism comprising a current modifying device associated with said first energizing circuit connections and operative when actuated to modify the current supplied to the power winding, and comprising a control device responsive to the character of the current flow in the control winding and arranged to actuate said current modifying device to thereby produce an effect tending to interrupt the motor operation when the current flow in the control winding attains a predetermined character.

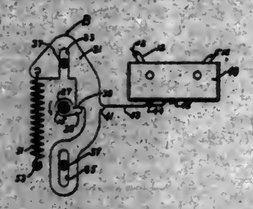
2,445,290

HOLLOW CAVITIED BODIES SUCH AS RIGID HOLLOW PANEL STRUCTURES AND METHOD OF MAKING THE SAME

Desiré Gonda, London, England, assignor to Holoplast, Limited, New Hythe, near Maidstone, England, a British corporation

Original application December 22, 1941, Serial No. 424,090. Divided and this application February 23, 1945, Serial No. 579,429
10 Claims. (Cl. 154—116)

1. A method of producing a rigid hollow panel structure which includes the steps of (a) winding



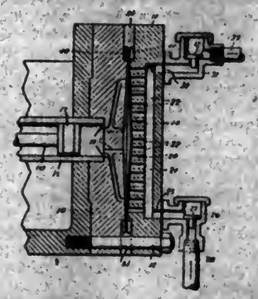
continuous lengths of uncured thermo-setting resin impregnated fibrous strip or sheet material into a plurality of convolutions to make a plurality of individual channel defining multi-ply web forming members; (b) placing said individual web forming members side by side between substantially parallel groups of superposed uncured thermo-setting resin impregnated fibrous sheets or laminae so that said web forming members are substantially parallel to one another and have web portions extending transversely of the major surfaces of said groups of sheets or laminae at spaced intervals across the widths of said groups of sheets or laminae; (c) temporarily supporting said web forming members internally by supporting means conforming to the shape of the channels defined by the said web forming members; (d) temporarily applying confining means solely to said web forming members and their supporting means to hold them in their assembled positions between the said parallel groups of sheets or laminae; (e) subjecting all of the said plurality of spaced multi-ply web portions to pressure exerted transversely of the lengths of such web portions and substantially parallel to the said major surfaces of the said parallel groups of sheets or laminae and also exerting pressure on the assembly, produced as specified, transversely of said major surfaces of the said parallel groups of resin impregnated sheets or laminae; (f) and, while maintaining pressure on said assembly, applying heat thereto for a predetermined time so as to compress and densify all fibrous portions of the assembly inclusive of the said web portions and to bond and harden all such portions into an integral rigid structure; (g) relieving the pressure on said assembly; (h) and removing the said confining means and internal supporting means from the panel so produced.

2,445,291

REMOTE INVENTORY CONTROL SYSTEM

Edmund W. E. Kamm and John J. Delaney, Fort Wayne, Ind., assignors to S. F. Bowser & Company, Incorporated, Fort Wayne, Ind., a corporation of Indiana

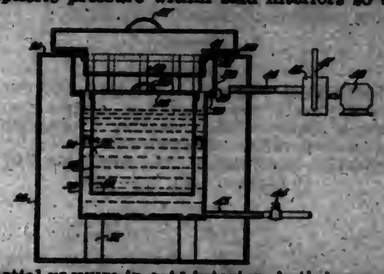
Application April 15, 1940, Serial No. 329,628
16 Claims. (Cl. 222—14)



1. In a liquid dispensing system the combination of liquid storage means, a plurality of liquid dispensers connected to said storage means, each dispenser comprising a meter, a device connected to control the operation of all of said dispensers, a check presettable stop apparatus associated with said control device and adapted to condition it to permit operation of said dispensers when a credit is set up on said apparatus and to operate said device to prevent operation of said dispensers when said credit is exhausted, and means for connecting the meters of all of said dispensers to actuate said apparatus to reduce the credit set up on said apparatus in proportion to the liquid dispensed through each meter.

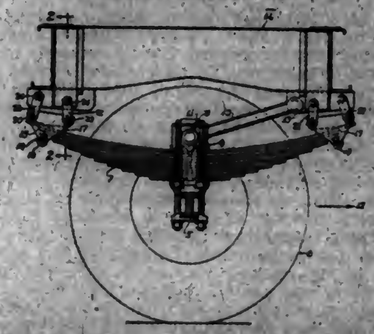
2,445,292
VANILLYL ALCOHOL-FORMALDEHYDE RESINS
Harry F. Lewis and Irwin A. Pearl, Appleton, Wis., assignors, by mesne assignments, to Sulphite Products Corporation, Appleton, Wis., a corporation of Wisconsin
No Drawing. Application May 17, 1944, Serial No. 536,028
4 Claims. (Cl. 260—53)

1. A resin formed by heat condensation in the presence of an acid catalyst, from hot vanillyl alcohol and formaldehyde in the ratio of about 7 parts of alcohol to about 1 part of formaldehyde.



2,445,293
DIAPHRAGM PUMP
Stanley S. Lippincott, Palmyra, N. J., assignor to Flexitallic Gasket Company, Camden, N. J., a corporation of New Jersey
Application January 30, 1947, Serial No. 725,325
1 Claim. (Cl. 103—44)

In a diaphragm pump, a cylinder containing a fluid chamber and inlet and outlet ports communicating therewith, a head attached to said cylinder and a diaphragm interposed between said cylinder and said head to form a closure for said chamber and means flexing said diaphragm for displacing the fluid in said chamber, sealing means for said diaphragm comprising a pair of gaskets disposed on opposite sides of said diaphragm and engaging said cylinder and said head respectively, each gasket comprising a longitudinally beaded metal strip and a strip of compressible material spiral wound in alternate layers with the longitudinal bead extending around the outer periphery of the gasket, a supporting ring having a pair of annular parallel grooves in its inner peripheral surface, said beads being seated in said grooves to secure said gaskets in said ring and means securing said ring with the gaskets and diaphragm between said head and said cylinder.

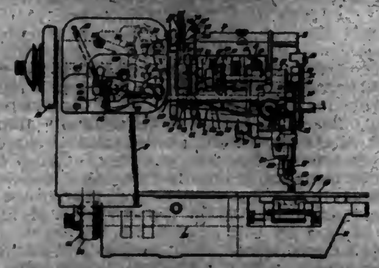


2,445,294
COOLING APPARATUS FOR TREATING CUTTING TOOLS
Arthur L. Nelson, Cincinnati, Ohio, assignor to Super Treat, Inc., Cincinnati, Ohio, a corporation of Ohio
Application March 3, 1945, Serial No. 580,849
3 Claims. (Cl. 62—91.5)

1. An apparatus adapted for use in the cold treatment of cutting tools, said apparatus comprising an outer shell and an inner shell spaced from it, the latter adapted to hold an organic liquid and solid carbon dioxide, the interiors of said shells being sealed from the atmosphere and communicating with each other in the upper portion of said apparatus, means for holding cutting tools immersed in liquid contained within the inner shell, and means for establishing a sub-atmospheric pressure within said interiors so that

a partial vacuum in said interiors both lowers the temperature within the inner shell, and insulates the inner shell thermally from the outer shell.

2,445,295
SPRING SUSPENSION
Clarke P. Pond, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 21, 1942, Serial No. 503,186
2 Claims. (Cl. 267—54)



1. In a spring suspension: a leaf spring, a first structure, a second structure firmly connected to one point of said spring and guided with said point of the spring on a predetermined path relative to said first structure, a supporting member between said first structure and one end of said spring remote from said point thereof, said spring end and said member having mutually engaging contact surfaces divergently curved relative to each other so as to decrease the effective length of the spring when it is stretched with increase of load, means connecting said member and said first structure bodily movable in the longitudinal direction of the spring, and connecting means between said spring end and said member forming a positive connection against relative movement in the longitudinal direction of the spring and forming a lost motion connection enabling movement in the direction of flexure of the spring.

2,445,296
PROCESS OF MANUFACTURING RESISTANCE ELEMENTS DURABLE AT HIGH TEMPERATURE AND PROOF AGAINST CHEMICAL ACTION
Axel Richard Wejnarth, Stockholm, Sweden
No Drawing. Application November 27, 1942, Serial No. 512,854. In Sweden October 20, 1942
5 Claims. (Cl. 201—76.4)

1. Electrical resistance element durable at high temperature and proof against chemical action,

consisting of a sintered mass, containing as main component silicon carbide and moreover, in smaller quantity, at least one compound, belonging to the group of chromium carbide, chromium nitride, chromium silicide and chromium boride, and at least one compound, belonging to the group of beryllium carbide, beryllium nitride, beryllium silicide and beryllium boride.

2,445,297
FEEDING AND PRESSER MECHANISMS FOR SEWING MACHINES
Frederick F. Zeier, Stratfield, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application April 2, 1946, Serial No. 658,963
23 Claims. (Cl. 112—212)

1. In a sewing machine, a frame including a bracket-arm, a feed-lift arm pivotally carried upon said bracket-arm, a four-motion upper feed-foot, means to connect said foot to said arm, a lever pivotally mounted upon said feed-lift arm, means to impart a vibratory motion to said lever, means reacting upon said bracket-arm to arrest the motion of said lever in one direction thereby to impart a feed-lift motion to said foot, and means for imparting feed-advance and -return motions to said foot.

2,445,298
PROCESS FOR PREPARING CELLULAR GLASS SLABS
Arvid H. Baker, Port Allegany, Pa., assignor to Pittsburgh Corning Corporation, Allegheny County, Pa., a corporation of Pennsylvania
Original application March 31, 1945, Serial No. 585,833. Divided and this application August 22, 1946, Serial No. 692,210
1 Claim. (Cl. 49—89)

In the process of forming cellular glass slabs having relatively wide faces and narrow edges, by sintering pulverized glass admixed with a gassing agent in bread pan-like molds each comprising a section of frustopyramidal shape and having sloping sides and a flat bottom whereby to impart to slabs formed therein beveled edges designed to admit of ready release of the slabs from the molds; the steps of removing the freshly formed slabs from the molds rubbing one of the edges of each upon an abrasive member to provide a flat base at right angles to the faces of the slab, setting the slabs in spaced relation upon said edge surfaces in vertical position in an annealing lehr, then annealing the slab in that position by circulation of air about and between them.

2,445,299
DRIED EGG POWDER
Mildred M. Boggs and Harry L. Fevold, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application February 28, 1946, Serial No. 650,932
2 Claims. (Cl. 99—210)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of producing and packaging dried egg powder consisting of adding hydrochloric acid to an emulsion of egg to adjust the pH to about 5.5, then drying the acidified emulsion, adding to the dried product dry sodium bicarbonate in an amount equivalent to the hydrochloric acid added, and packaging the mixture of dry acidified egg emulsion and dry sodium bicarbonate.

2,445,300
VIRUS VACCINES
Leslie A. Chambers, Upper Darby, Pa., assignor to The Trustees of the University of Pennsylvania, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application December 5, 1941, Serial No. 421,780
10 Claims. (Cl. 167—78)

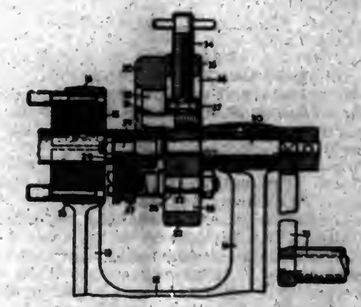
1. A virus vaccine eliciting in man or other mammal the production of antibodies capable of neutralising the corresponding viruses of infectious diseases in man or other mammal, which vaccine comprises a basic-protein-precipitant-animal-infectious-disease virus complex, the virus constituent of which was derived from an antigenic virus of an infectious disease of man or other mammal.

2,445,301
INFLUENZA VACCINE
Leslie A. Chambers, Upper Darby, Pa., assignor to The Trustees of the University of Pennsylvania, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application December 5, 1941, Serial No. 421,781
14 Claims. (Cl. 167—78)

1. An influenza vaccine eliciting in man or other animals the production of antibodies capable of neutralising the corresponding influenza virus, comprising influenza virus associated with a basic-protein-precipitant as a basic-protein-precipitant-influenza virus complex.

2,445,302
APPARATUS FOR BURNING LIQUID FUEL
Alick Clarkson, Bloomingdale Township, Du Page County, Ill.
Application December 24, 1942, Serial No. 515,555
4 Claims. (Cl. 158—53)

1. A liquid fuel burner comprising in combination, a burner member, a retort positioned above



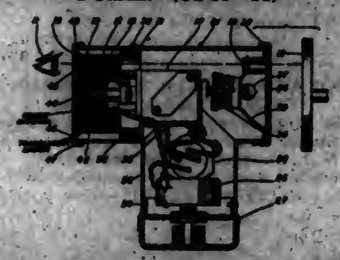
said burner member to be heated thereby and having a laterally extending conduit of suitable cross-sectional area for admitting a restricted quantity of air into the retort to be heated therein, means for delivering a controlled volume of liquid fuel into said retort, whereby the fuel is simultaneously vaporized by contact with the hot walls of the retort and by intimate contact with the heated air therein, to provide a rich gaseous mixture, means defining a passageway leading from the bottom portion of the retort at a location above its inner bottom surface into the underlying burner member, upwardly extending projections on the burner member having openings through which the gaseous mixture is discharged, means for directing a stream of combustion air around the discharged gaseous mixture comprising an air distributing plate formed with openings defining air passages adjacent said projections, and means for varying the quality of the flame by varying the elevation of the point of discharge of said gaseous mixture relative to said air control plate.

2,445,303

APPARATUS FOR PROVIDING A RIDGE ON A PIPE OF DUCTILE MATERIAL

Mark Fisher, Coventry, England, assignor to Sir W. G. Armstrong Whitworth Aircraft Limited, Baginton, Coventry, England

Application April 3, 1947, Serial No. 739,230
In Great Britain March 23, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 23, 1965
7 Claims. (Cl. 153—9)



1. A manually-operable apparatus for providing a ridge on a pipe of ductile material, near an end thereof, which includes a U-shaped frame having, in one arm thereof, a stationary clamping device for the pipe, a member supported by the other arm of the frame so as to be rotatable coaxially with respect to the pipe and provided with a crank handle, co-planar rollers which have, respectively, appropriate complementary concave and convex peripheral surfaces and which are rotatively mounted on pins extending from said member parallel to the rotational axis thereof with the convex roller to be in the bore of the pipe and with the concave roller exteriorly thereof, means for setting the pin of the latter roller so that the roller will contact the pipe, and means for moving the pin of the convex roller in a direction towards the concave roller so that the ridge will be formed by a rolling action on the rotation of said member.

2,445,304

VISUAL VIBRATING REED STROBOSCOPE

William J. Grace, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy

Application January 5, 1945, Serial No. 571,431
1 Claim. (Cl. 88—14)

A stroboscopic device for indicating the frequency of rotation of an object that has a visible reference mark thereon, said device comprising a casing, means including a dynamically unbalanced rotating element in mechanical contact with the remaining components of the device, whereby mechanical impulses having a frequency corresponding to the frequency of rotation of said element are imparted to the device, a sighting tube carried by said casing, an apertured dial having a translucent indicia portion and mounted in said casing, with the aperture in line with the sighting tube, and a plurality of reeds mounted in the casing in operating alinement with the indicia on the dial, said rotating element having a single opening therethrough and being mounted in the casing with its said opening positioned for periodic alinement with the aperture in the dial, for cyclically opening a sighting path through said sighting tube, said opening, and said aperture, to said reference mark, and means for rotating said element at a frequency having a functional relationship to the rotation frequency of said object, whereby the reeds will be excited into vibration directly by the mechanical impulses produced by the rotation of said object and will indicate by resonance the corresponding frequency and thus afford an indication of the rotation frequency of the said object.

2,445,305

RADIATION DETECTOR

Frank P. Hochgesang, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application December 13, 1944, Serial No. 568,001
16 Claims. (Cl. 250—83.6)

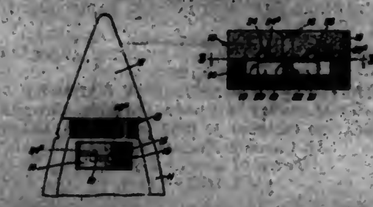
11. An apparatus for recording a wave length band spectrum of penetrating radiation, such as gamma or X-rays, having a plurality of wave lengths that comprises in combination a multiple detector, said detector having a housing, an ionizable medium in said housing, a plurality of spaced concentrically disposed electrodes in said housing dividing the interior thereof into a plurality of ionization chambers, said electrodes being formed of a material having a selected radiation coefficient of absorption, electrode circuits for said ionization chambers, a source of potential in each electrode circuit, means for amplifying the ionization current produced in each ionization circuit, a multiple recorder, and means for transmitting the amplified currents to the recorder for actuation of the same.

2,445,306

ELECTROLYTE FOR PRIMARY CELLS COMPRISING LITHIUM BROMIDE

Herbert E. Lawson, Chevy Chase, Md., assignor to the United States of America as represented by the Secretary of the Navy

No Drawing. Application October 6, 1943, Serial No. 505,225
4 Claims. (Cl. 136—155)



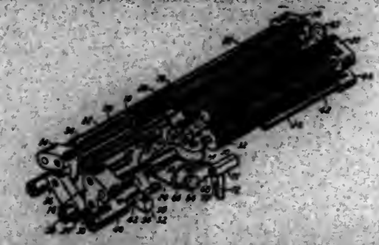
1. A contact electrolyte solution for use in primary wet cell, deferred action type batteries comprising a lithium bromide, hydrobromic acid and water.

2,445,307

FORCE GAUGE

Raymond D. Mindlin, New York, N. Y., assignor to the United States of America as represented by the Secretary of the Navy

Application March 31, 1942, Serial No. 481,315
4 Claims. (Cl. 73—167)



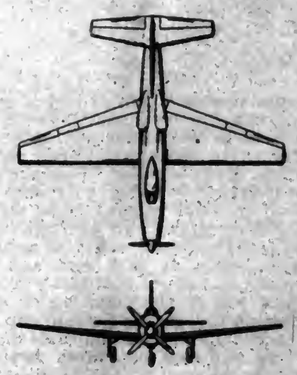
1. A setback gauge for rotary projectiles which comprises a pair of markers operable by a force of setback, a pair of slugs for receiving from said markers an indication of the magnitude of the force of setback, and means for holding the slugs in predetermined positions relative to the markers and operable by centrifugal force to release the slugs, the slugs when released being movable by centrifugal force to different positions relative to the markers.

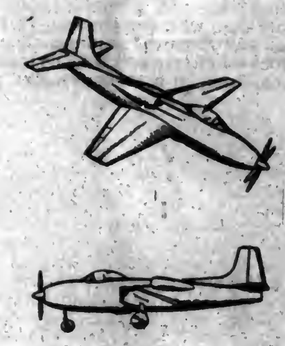
2,445,308

TUCK END SUPPORT

Clifford F. Randolph, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a corporation of New Jersey

Application September 15, 1943, Serial No. 502,419
1 Claim. (Cl. 131—30)

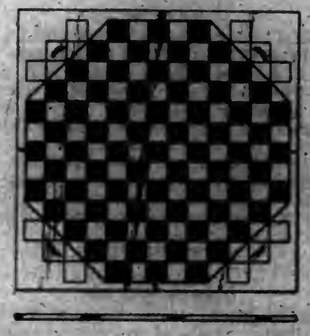




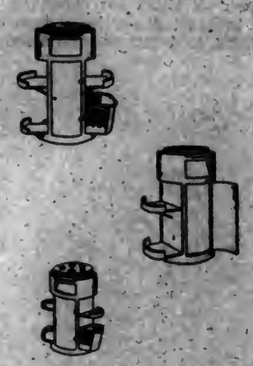
In a cigar machine provided with rollers coacting to revolve a cigar bunch about which a wrapper is to be wound spirally, and a header block adapted to support the head end of said cigar bunch; a cup adapted to engage and support the lower sides of the tuck ends of cigar bunches of the same general shape but varying diameters, said cup having a generally horizontal elongated trough-shaped cavity of semi-circular cross-section open at each end and tapering longitudinally in general conformity to the taper of the tuck end of the cigar bunch supported thereon, supporting means for said cup arranged directly below the longitudinal axis of said cup whereby the cup may be shifted vertically and longitudinally to position the head end of said cigar bunch in a predetermined position on said header block, said cup supporting means including a stem projecting downwardly from the cup, a support provided with a hole to receive said stem, and a device adapted to clamp the stem in said support to prevent undesired vertical movement of said cup, and permit vertical adjustment of said cup, whereby through vertical and longitudinal adjustment of said cup cigar bunches of different diameters and lengths may be supported on said cup in a predetermined position.

DESIGNS

JULY 18, 1948

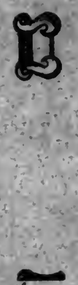


150,190
DESIGN FOR AN AIRPLANE
Franklin C. Albright, San Marino, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application May 25, 1946, Serial No. 130,666
Term of patent 3½ years
(Cl. D71—1)



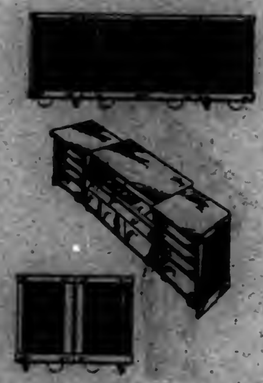
The ornamental design for an airplane, substantially as shown.

150,191
DESIGN FOR A GAME BOARD
George G. Allenbaugh, Wadsworth, Ohio
Application June 10, 1946, Serial No. 130,569
Term of patent 14 years
(Cl. D34—5)



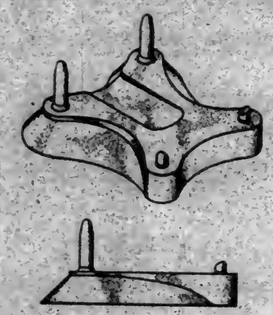
The ornamental design for a game board, as shown.

150,192
DESIGN FOR A NURSERY CABINET
Walter H. Baker, Toronto, Ontario, Canada
Application October 1, 1946, Serial No. 133,665
In Canada August 22, 1946
Term of patent 7 years
(Cl. D32—19)



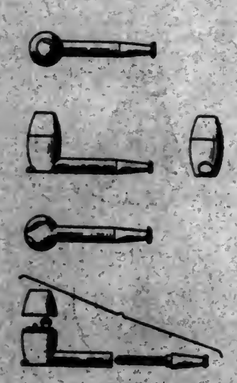
The ornamental design for a nursery cabinet, as shown.

150,193
DESIGN FOR A JEWELRY FINDING
Paul Bardash, Providence, R. I.
Application June 18, 1947, Serial No. 139,366
Term of patent 7 years
(Cl. D45—1)



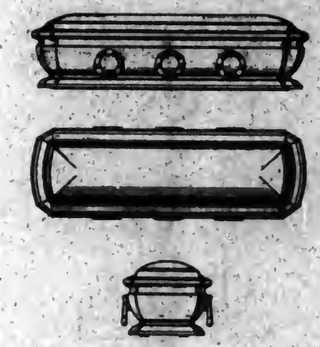
The ornamental design for a jewelry finding, substantially as shown.

150,194
DESIGN FOR A FOLDING, PORTABLE BAR
Maynard J. Barrett, Philadelphia, Pa.
Application January 18, 1947, Serial No. 136,246
Term of patent 14 years
(Cl. D32—19)



The ornamental design for a folding, portable bar, as shown and described.

150,195
DESIGN FOR A KICKING TEE
Mell M. Barton, San Marino, Calif., assignor to W. J. Voit Rubber Corporation, Los Angeles, Calif., a corporation of California
Application June 7, 1947, Serial No. 139,519
Term of patent 14 years
(Cl. D34—5)

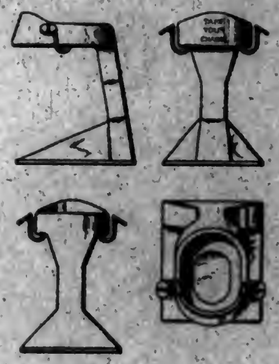


The ornamental design for a kicking tee, as shown.

150,196
DESIGN FOR A COMBINATION LIGHTER, TAMPER, AND KNIFE
Irwin G. Bauer, Cincinnati, Ohio
Application September 7, 1946, Serial No. 133,164
Term of patent 7 years
(Cl. D42—37)

The ornamental design for a combination lighter, tamper, and knife, as shown and described.

150,197
DESIGN FOR A BURIAL CASKET
John M. Beach, Grand Rapids, Mich.
Application April 10, 1946, Serial No. 125,461
Term of patent 3½ years
(Cl. D19—1)



The ornamental design for a burial casket as shown.

150,198
DESIGN FOR A DIVING BELL
Ross H. Bird, Houston, Tex.
Application July 26, 1946, Serial No. 132,603
Term of patent 14 years
(Cl. D71—1)

The ornamental design for a diving bell, substantially as shown.

150,199
DESIGN FOR A CHANGE HANDLER
Nicholas J. Blum, Detroit, Mich.
Application August 7, 1946, Serial No. 132,325
Term of patent 14 years
(Cl. D32—4)

The ornamental design for a change handler, as shown.

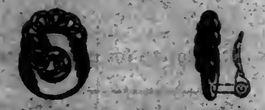
150,200
DESIGN FOR A LINED OVERSHOE
Harry W. Bostige, Berlin, Wis., assignor to Berlin Tanning & Mfg. Co., Berlin, Wis., a corporation of Wisconsin
Application October 10, 1947, Serial No. 141,865
Term of patent 7 years
(Cl. D7—4)

The ornamental design for a lined overshoe, substantially as shown and described.

150,201
DESIGN FOR AN ELECTRICALLY OPERATED HAIR BRUSH OR THE LIKE
Arthur R. Botham, Great Barrington, Mass.
Application January 13, 1947, Serial No. 136,119
Term of patent 3½ years
(Cl. D06—10)

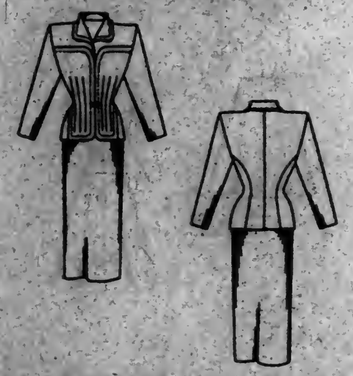
The ornamental design for an electrically operated hair brush or the like, substantially as shown.

150,202
DESIGN FOR A JEWELRY FINDING
Michael Chernow, New York, N. Y.
Application March 20, 1947, Serial No. 137,775
Term of patent 7 years
(Cl. D45—1)



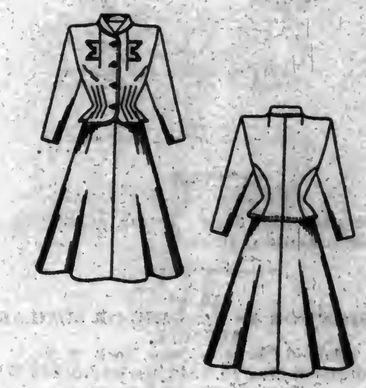
The ornamental design for a jewelry finding, substantially as shown.

150,203
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,550
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or the like, substantially as shown.

150,204
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application May 10, 1948, Serial No. 146,271
Term of patent 7 years
(Cl. D45—9)

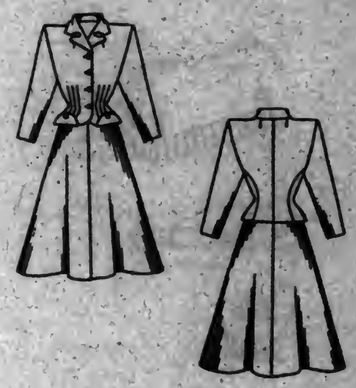


The ornamental design for an earring or similar article, substantially as shown.

150,205
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 20, 1947, Serial No. 142,212
Term of patent 3½ years
(Cl. D2—4(5.1))

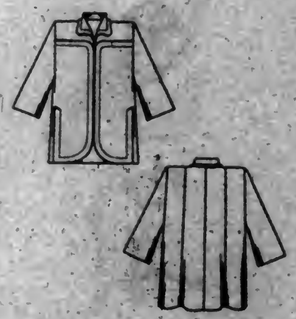
The ornamental design for a suit, substantially as shown.

150,206
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,215
Term of patent 3½ years
(Cl. D2—4)



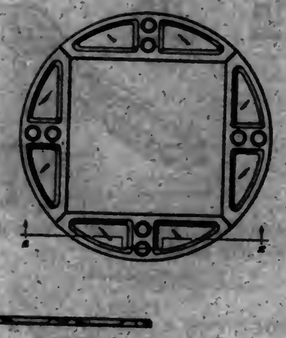
The ornamental design for a suit, substantially as shown.

150,207
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,216
Term of patent 3½ years
(Cl. D2—4)



The ornamental design for a suit, substantially as shown.

150,208
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,217
Term of patent 3½ years
(Cl. D2—4)



The ornamental design for a suit, substantially as shown.

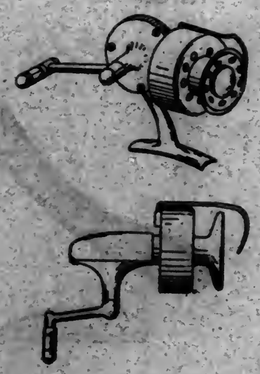
150,209
DESIGN FOR A COAT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,219
Term of patent 3½ years
(Cl. D2—4)

The ornamental design for a coat, substantially as shown.

150,210
DESIGN FOR A TABLE TOP EXTENSION
William D. Craig, Webster Groves, Mo.
Application April 30, 1946, Serial No. 123,214
Term of patent 14 years
(Cl. D32—14)

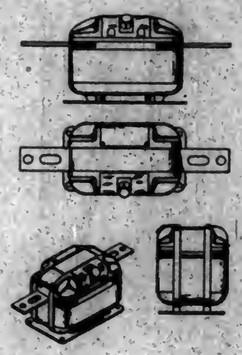
The ornamental design for a table top extension, substantially as shown.

150,211
DESIGN FOR A STEREOSCOPIC INSTRUMENT
Charles E. Crandall, Meadville, Pa., assignor to Keystone View Company, Meadville, Pa., a corporation of Pennsylvania
Application May 26, 1947, Serial No. 139,155
Term of patent 14 years
(Cl. D97—1)



The ornamental design for a stereoscopic instrument, as shown and described.

150,212
DESIGN FOR A BOILER SECTION
Robert C. Cress, Western Springs, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application August 16, 1946, Serial No. 132,580
Term of patent 14 years
(Cl. D61—2)

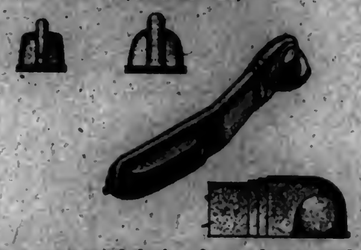


The ornamental design for a boiler section, substantially as shown and described.

150,213
DESIGN FOR A FISHING REEL
Lucian Demyr, Detroit, Mich., assignor to Hautau Tuynman Company, Detroit, Mich., a corporation of Michigan
Application October 19, 1946, Serial No. 134,069
Term of patent 7 years
(Cl. D21—4)

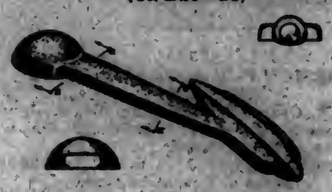
The ornamental design for a fishing reel, as shown.

150,214
DESIGN FOR A TRANSFORMER
Wilbur K. Dickinson, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application August 9, 1946, Serial No. 122,281
Term of patent 14 years
(Cl. D26—13)



The ornamental design for a transformer, substantially as shown.

150,215
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application January 6, 1947, Serial No. 125,961
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

150,216
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application January 6, 1947, Serial No. 125,962
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

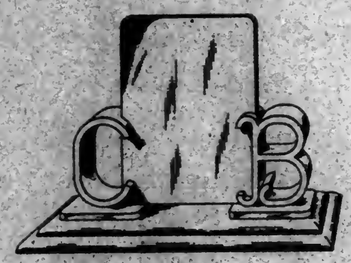
150,217
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application January 6, 1947, Serial No. 125,963
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

150,218
DESIGN FOR A COMBINATION SHOE BRUSH AND DIRT PICK
William J. Fournier, Toledo, Ohio, assignor to Birtle-Brush Manufacturing Company
Application October 19, 1946, Serial No. 124,695
Term of patent 14 years
(Cl. D9—8)

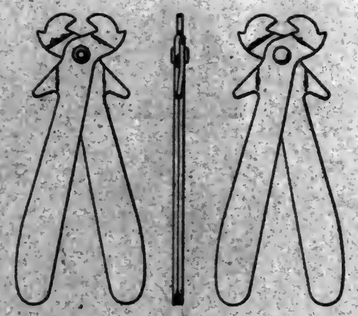
The ornamental design for a combination shoe brush and dirt pick, substantially as shown.

150,219
DESIGN FOR A PIPE
Frank Furedy and Marvin William Dynes, Chicago, Ill., assignors to Sun-Kraft, Inc., Chicago, Ill., a corporation of Delaware
Application February 8, 1947, Serial No. 136,776
Term of patent 14 years
(Cl. D65—8)



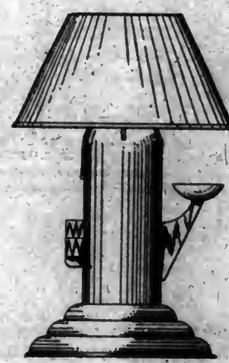
The ornamental design for a pipe, substantially as shown.

150,220
DESIGN FOR A VACUUM CLEANER CASING
Albert G. Geistert, Grand Rapids, Mich.
Application November 12, 1946, Serial No. 124,699
Term of patent 14 years
(Cl. D9—3)



The ornamental design for a vacuum cleaner casing, as shown.

150,221
DESIGN FOR A PICTURE HOLDER OR SIMILAR ARTICLE
Andrew G. Giegold, Jr., Mount Vernon, N. Y.
Application March 2, 1948, Serial No. 127,051
Term of patent 7 years
(Cl. D29—20)

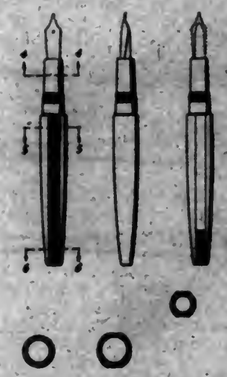


The ornamental design for a picture holder or similar article, as shown and described.

150,222
DESIGN FOR A TIRE CHAIN TOOL
Everett L. Gile, Billerica, Mass.
Application January 15, 1947, Serial No. 136,151
Term of patent 14 years
(Cl. D54—13)

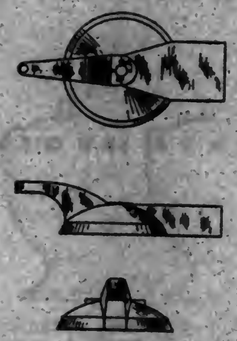
The ornamental design for a tire chain tool, substantially as shown.

150,223
DESIGN FOR A COMBINED READING LAMP, BANK, AND SMOKING STAND
Willard H. Graham, Lansing, Mich.
Application April 9, 1947, Serial No. 138,269
Term of patent 14 years
(Cl. D48—26)



The ornamental design for a combined reading lamp, bank, and smoking stand, as shown.

150,224
DESIGN FOR A FOUNTAIN PEN BARREL
Warren Green, Newton Heights, Conn., and Peter Schladermundt, Bronxville, N. Y., assignors to Stratford Pen Corporation, New York, N. Y., a corporation of New York
Application December 14, 1946, Serial No. 135,501
Term of patent 14 years
(Cl. D74—17)

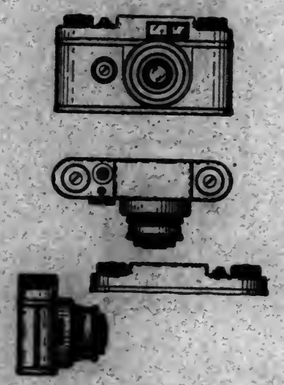


The ornamental design for a fountain pen barrel, substantially as shown and described.

150,225
DESIGN FOR A WATER HEATER
Lurelle Guild, Darien, Conn., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application April 17, 1947, Serial No. 138,461
Term of patent 14 years
(Cl. D61—2)

The ornamental design for a water heater, as shown.

150,226
DESIGN FOR A LAWN MOWER HOUSING
Vern N. Hagland, Lakewood, Colo., assignor of one-third to Clarence J. Grunfelt and one-third to Charles F. Medley, both of Denver, Colo.
Application June 7, 1946, Serial No. 136,516
Term of patent 14 years
(Cl. D46—1)

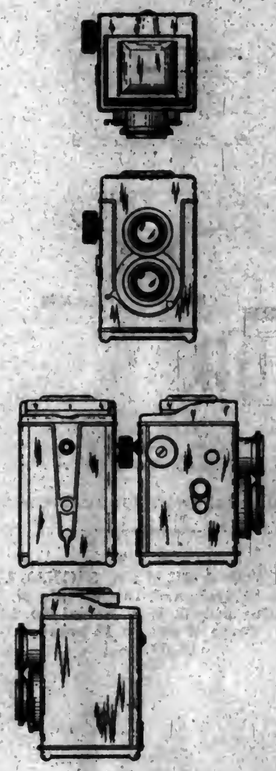


The ornamental design for a lawn mower housing, as shown.

150,227
DESIGN FOR A DOLL
Agnes S. Hammerly, Duluth, Minn.
Application May 24, 1947, Serial No. 139,251
Term of patent 7 years
(Cl. D34—4)

The ornamental design for a doll, as shown.

150,228
DESIGN FOR A CAMERA
James E. Harvey, Ann Arbor, Mich., assignor to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application November 21, 1947, Serial No. 142,717
Term of patent 14 years
(Cl. D61—1)

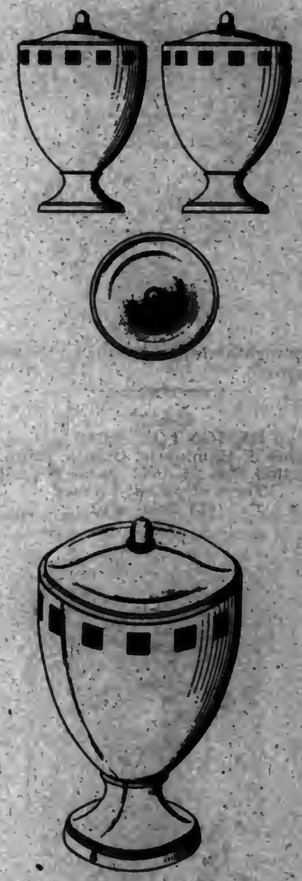


The ornamental design for a camera, as shown.

150,229
DESIGN FOR A TRAFFIC SIGNAL LIGHT
Hans H. Haugard, Little Falls, N. Y.
Application July 1, 1947, Serial No. 140,049
Term of patent 14 years
(Cl. D72—1)

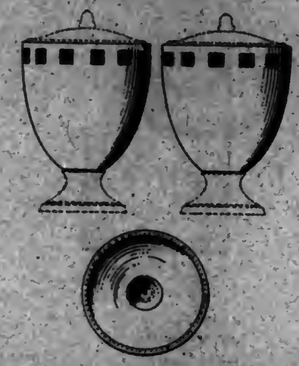
The ornamental design for a traffic signal light, substantially as shown.

150,230
DESIGN FOR A CAMERA
Frederick W. Hertzler, Detroit, Mich., assignor to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application March 26, 1947, Serial No. 138,010
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a camera, as shown.

150,231
DESIGN FOR A COMB
Crofton C. Holden, Leominster, Mass., assignor to Tilton & Cook Co., Leominster, Mass., a corporation of Massachusetts
Application May 22, 1946, Serial No. 129,976
Term of patent 14 years
(Cl. D86—8)



The ornamental design for a comb, substantially as shown and described.

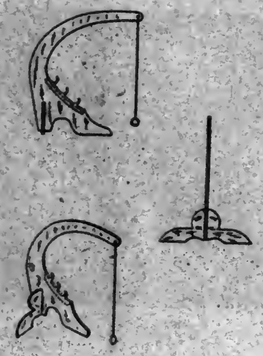
150,232
DESIGN FOR A FUNERAL URN OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application March 12, 1947, Serial No. 137,562
Term of patent 14 years
(Cl. D19—1)

The ornamental design for a funeral urn or similar article, as shown.

150,233
DESIGN FOR A FUNERAL URN OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application March 12, 1947, Serial No. 137,563
Term of patent 14 years
(Cl. D19—1)

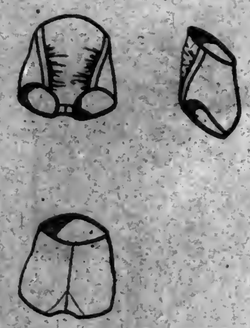
The ornamental design for a funeral urn or similar article, as shown and described.

150,234
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,694
Term of patent 7 years
(Cl. D45—19)



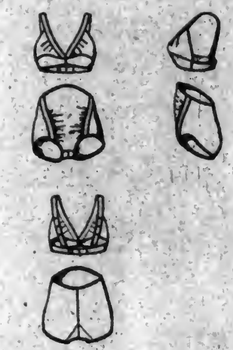
The ornamental design for a brooch or similar article, substantially as shown.

150,235
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,695
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,236
DESIGN FOR A GAME OF SKILL
Arthur H. Kresser, Milwaukee, Wis.
Application February 12, 1947, Serial No. 136,858
Term of patent 3½ years
(Cl. D34—5)



The ornamental design for a game of skill, substantially as shown and described.

150,237
DESIGN FOR SWIMMING TRUNKS
Margit Fellegi Lamle, Los Angeles, Calif., assignor to Cole of California, Inc., a corporation of California

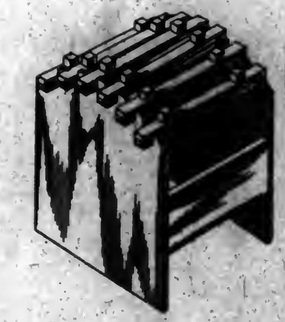
Term of patent 7 years
(Cl. D2—17)

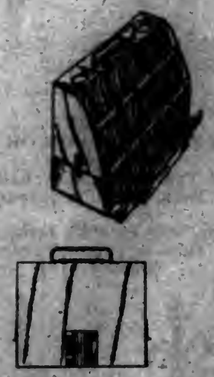


The ornamental design for swimming trunks, as shown.

150,238
DESIGN FOR A TWO-PIECE SWIM SUIT
Margit Fellegi Lantis, Los Angeles, Calif., assignor to Cole of California, Inc., a corporation of California
Application March 25, 1947, Serial No. 137,873
Term of patent 7 years
(Cl. D2—17)

The ornamental design for a two-piece swim suit, as shown.

150,239
DESIGN FOR A HOSIERY DISPLAY STAND
Kenan Barrett Lawrence, Columbus, Ga.
Application July 21, 1947, Serial No. 140,411
Term of patent 3½ years
(Cl. D80—9)

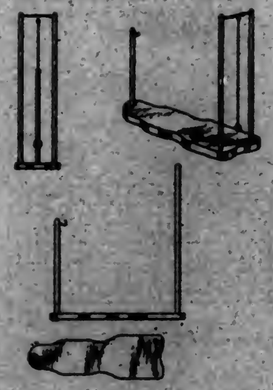


The ornamental design for a hosiery display stand, as shown.

150,240
DESIGN FOR A SWITCH BOX
Adolph J. Lippold, Milwaukee, Wis., assignor to Cherry-Burrell Corporation, Chicago, Ill., a corporation
Application May 4, 1946, Serial No. 129,328
Term of patent 14 years
(Cl. D26—13)

The ornamental design for a switch box, substantially as shown.

150,241
DESIGN FOR A ZONE CHECK TICKET HOLDER
Andrew Main, Willoughby, Ohio
Application December 12, 1946, Serial No. 135,417
Term of patent 14 years
(Cl. D74—1)

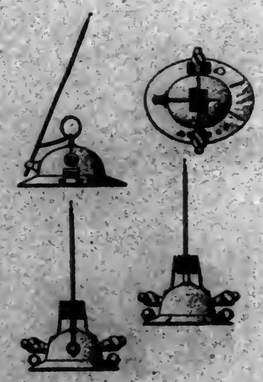


The ornamental design for a zone check ticket holder, as shown.

156,243
DESIGN FOR A PLUG RECEPTACLE ESCUTCHEON PLATE
James D. McDonald, Los Angeles, Calif.
Application July 19, 1947, Serial No. 140,338
Term of patent 14 years
(Cl. D26—13)

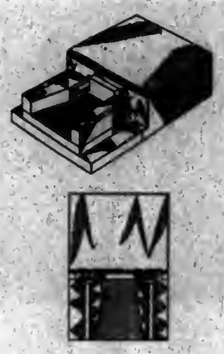
The ornamental design for a plug receptacle escutcheon plate, substantially as shown.

150,242
DESIGN FOR A GAME APPARATUS
William H. Mellier, Willard D. Wolff, and Arthur J. Wolff, Buffalo, N. Y.
Application November 8, 1946, Serial No. 134,622
Term of patent 7 years
(Cl. D34—5)



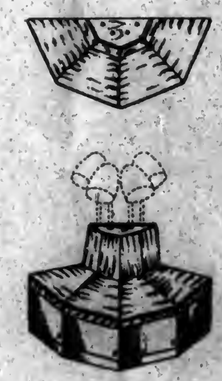
The ornamental design for a game apparatus, substantially as shown.

156,244
DESIGN FOR A LADY'S HANDKERCHIEF
Murray Morenstein, New Rochelle, N. Y.
Application July 15, 1947, Serial No. 140,359
Term of patent 14 years
(Cl. D2—12)



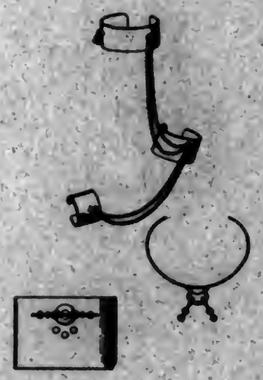
The ornamental design for a lady's handkerchief, as shown.

150,245
DESIGN FOR A COMBINED HAT AND RADIO OR SIMILAR ARTICLE
Olin Mumford, Atlanta, Ga.
Application October 17, 1946, Serial No. 134,006
Term of patent 3½ years
(Cl. D2—13)



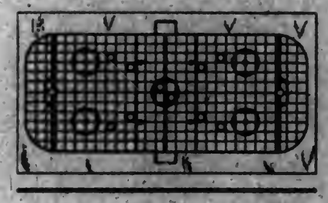
The ornamental design for a combined hat and radio or similar article as shown.

150,246
DESIGN FOR AN INNER RACE GAUGE
Joseph J. Neff, South Euclid, Ohio, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application September 6, 1946, Serial No. 133,690
Term of patent 3½ years
(Cl. D52—1)



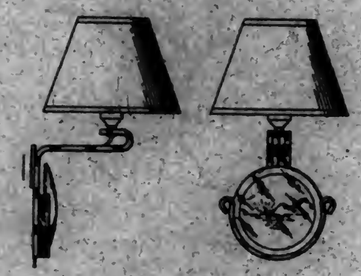
The ornamental design for an inner race gauge, substantially as shown.

150,247
DESIGN FOR A BEAUTY SALON DRYING LOUNGE
Sunshine Nichols, Miami Beach, Fla.
Application October 15, 1946, Serial No. 133,972
Term of patent 14 years
(Cl. D15—11)



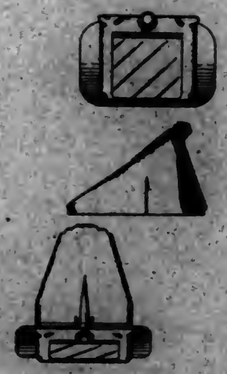
The ornamental design for a beauty salon drying lounge, as shown and described.

150,248
DESIGN FOR A COMBINED NECKLACE, ARMBAND, AND BRACELET
Ernie Ralph Ornatti, Los Angeles, Calif.
Application March 19, 1947, Serial No. 137,729
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a combined necklace, armband, and bracelet, substantially as shown.

150,249
DESIGN FOR A HOCKEY GAME BOARD
Arthur Parrilla and Irving Pinsker, New York, N. Y.
Application February 1, 1947, Serial No. 136,620
Term of patent 7 years
(Cl. D24—5)



The ornamental design for a hockey game board, substantially as shown.

150,250
DESIGN FOR A PIN-UP LAMP
Ethelbert T. Paxton, Dearborn, Mich., assignor, by direct and mesne assignments, to Pico Company, Inc., Detroit, Mich., a corporation of Michigan
Application October 10, 1946, Serial No. 134,099
Term of patent 7 years
(Cl. D42—4)

The ornamental design for a pin-up lamp, as shown and described.

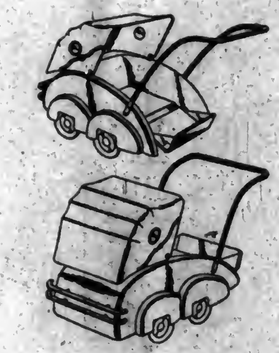
150,251
DESIGN FOR A TELEVISION CABINET OR SIMILAR ARTICLE
James W. Pettigrew, Springfield, Nova Scotia, Canada
Application May 20, 1947, Serial No. 139,164
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a television cabinet or similar article, as shown.

150,252
DESIGN FOR A RADIO CABINET OR THE LIKE
Joseph B. Platt, New York, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 17, 1946, Serial No. 133,375
Term of patent 3½ years
(Cl. D56—4)

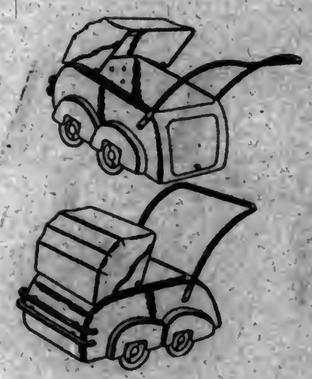
The ornamental design for a radio cabinet or the like, as shown.

150,253
DESIGN FOR A COAT
Harry Rodman, New York, N. Y.
Application November 18, 1947, Serial No. 142,599
Term of patent 3½ years
(Cl. D2—4)



The ornamental design for a coat, substantially as shown.

150,254
DESIGN FOR A SUIT
Harry Redman, New York, N. Y.
Application November 18, 1947, Serial No. 142,600
Term of patent 3½ years
(Cl. D3—4)

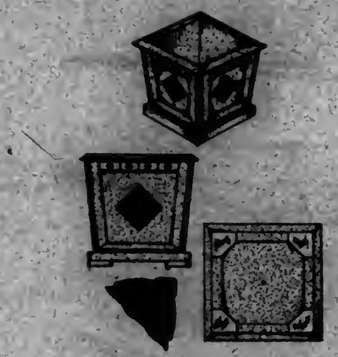


The ornamental design for a suit, substantially as shown.

150,255
DESIGN FOR A BABY STROLLER
Emil Reinhold, Chicago, Ill.
Application January 25, 1947, Serial No. 136,418
Term of patent 7 years
(Cl. D14—14)

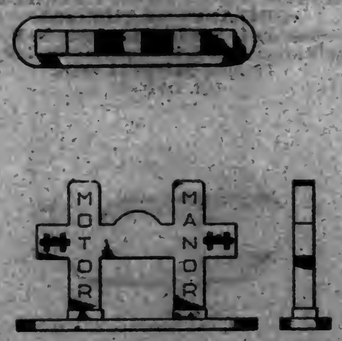
The ornamental design for a baby stroller, as shown.

150,256
DESIGN FOR A BABY CARRIAGE
Emil Reinhold, Chicago, Ill.
Application January 25, 1947, Serial No. 136,419
Term of patent 7 years
(Cl. D14—14)



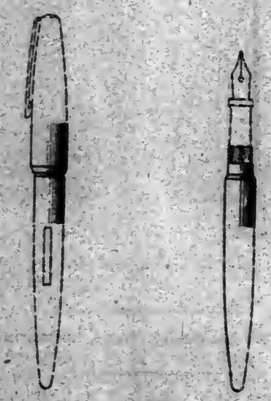
The ornamental design for a baby carriage, as shown.

150,257
DESIGN FOR A FRONT FOR A REFRIGERATED DISPENSING CABINET
John Le Roy Rennee, Wilkes-Barre, Pa.
Application March 8, 1947, Serial No. 137,296
Term of patent 14 years
(Cl. D60—11)



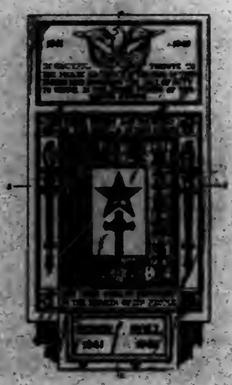
The ornamental design for a front for a refrigerated dispensing cabinet, as shown and described.

150,258
DESIGN FOR A FLOWER POT
Samuel Rosenberg, Wilmington, Del.
Application September 13, 1947, Serial No. 141,870
Term of patent 14 years
(Cl. D65—3)



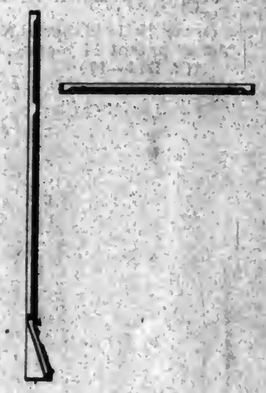
The ornamental design for a flower pot, as shown.

150,259
DESIGN FOR A HIGHWAY SIGN
William Rossman, Pecos, Tex.
Application November 4, 1946, Serial No. 134,494
Term of patent 14 years
(Cl. D1—12)



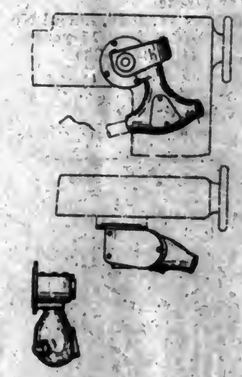
The ornamental design for a highway sign, as shown.

150,260
DESIGN FOR A FOUNTAIN PEN OR SIMILAR ARTICLE
Peter Schladermundt, Bronxville, and Olive Emslie, New York, N. Y., assignors to Stratford Pen Corporation, New York, N. Y., a corporation of New York
Application November 19, 1946, Serial No. 134,900
Term of patent 14 years
(Cl. D74—17)

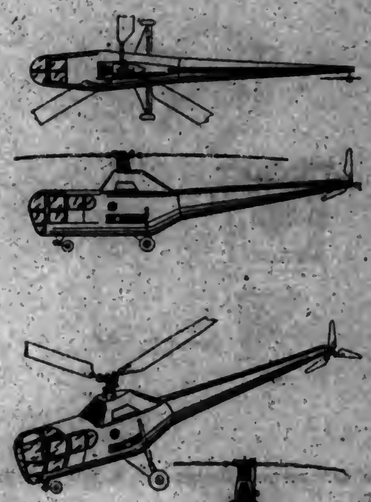


The ornamental design for a fountain pen or similar article, substantially as shown and described.

150,261
DESIGN FOR A MEMORIAL TABLET
Daniel W. Sheeran, New York, N. Y., and Henry P. Mertel, Weehawken, N. J.; said Sheeran assignor to said Mertel
Application May 11, 1946, Serial No. 129,698
Term of patent 14 years
(Cl. D29—23)

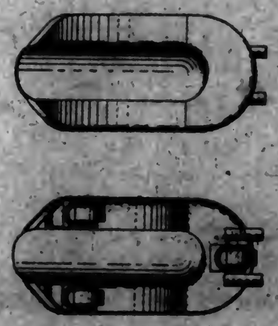


150,261—Continued



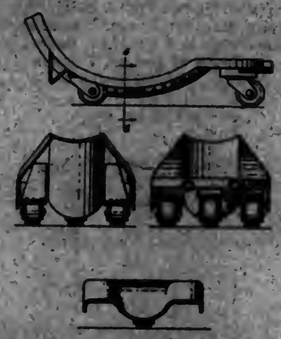
The ornamental design for a memorial tablet, as shown.

150,262
DESIGN FOR A POWER TAKE-OFF ATTACHMENT FOR SEWING MACHINES
Victor J. Sigoda, Great Neck, Long Island, N. Y., assignor to Man-Sew Corporation, New York, N. Y., a corporation of New York
Application January 27, 1947, Serial No. 136,453
Term of patent 14 years
(Cl. D70—2)



The ornamental design for a power take-off attachment for sewing machines, substantially as shown and described.

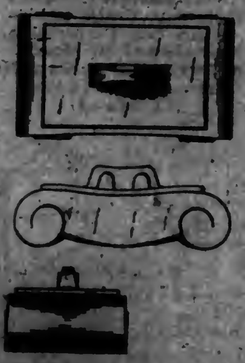
150,263
DESIGN FOR A HELICOPTER
Igor I. Sikorsky, Long Hill, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application March 20, 1946, Serial No. 127,693
Term of patent 7 years
(Cl. D71—1)



The ornamental design for a helicopter, as shown and described.

150,264
DESIGN FOR A DOLLY FOR TRANSPORTING AIRPLANES OR THE LIKE
Mahlon C. Snyder, Hamburg, N. Y.
Application July 1, 1947, Serial No. 140,641
Term of patent 14 years
(Cl. D14—3)

150,264—Continued



The ornamental design for a dolly for transporting airplanes or the like, as shown.

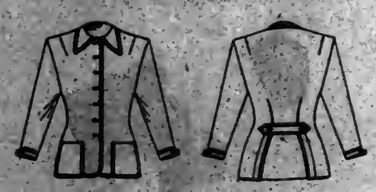
150,265
DESIGN FOR A DISPENSER
William C. Stauffer, Miami, Fla.
Application March 13, 1947, Serial No. 137,699
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a dispenser, as shown.

150,266
DESIGN FOR A CIGARETTE CONTAINER
Joseph B. Stiaz, New York, N. Y.
Application March 15, 1947, Serial No. 137,836
Term of patent 14 years
(Cl. D65—2)

The ornamental design for a cigarette container, substantially as shown.

150,267
DESIGN FOR A DRESS
John Friedrich Strassmer, New York, N. Y.
Application March 17, 1947, Serial No. 137,663
Term of patent 3½ years
(Cl. D2—26)

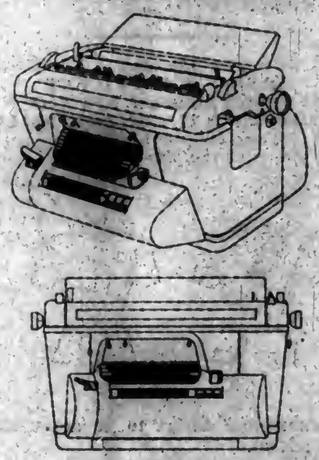


The ornamental design for a dress, substantially as shown.

150,268
DESIGN FOR A JACKET
John Friedrich Strassmer, New York, N. Y.
Application March 17, 1947, Serial No. 137,664
Term of patent 3½ years
(Cl. D2—4)

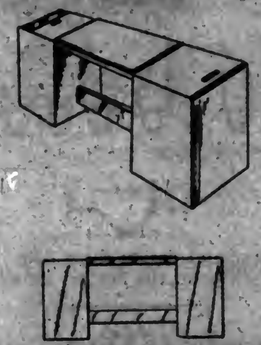
The ornamental design for a jacket, substantially as shown.

150,269
DESIGN FOR A JACKET
John F. Strassmer, New York, N. Y.
Application July 15, 1947, Serial No. 140,284
Term of patent 3½ years
(Cl. D2—4)



The ornamental design for a jacket, substantially as shown.

150,270
DESIGN FOR A JACKET
John F. Strassmer, New York, N. Y.
Application July 15, 1947, Serial No. 140,287
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

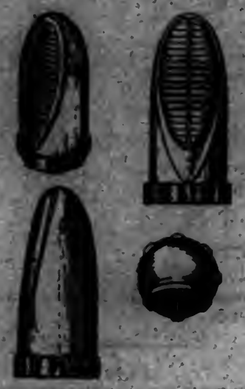
150,271
DESIGN FOR A BOOKKEEPING MACHINE
Jan Streng, Mason, N. H., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application August 19, 1946, Serial No. 132,428
Term of patent 14 years
(Cl. D64—11)

The ornamental design for a bookkeeping machine, substantially as shown and described.

150,272
DESIGN FOR A BENCH
Clytie Ann Thomson, Roanoke, Va.
Application February 10, 1947, Serial No. 136,811
Term of patent 7 years
(Cl. D32—7)

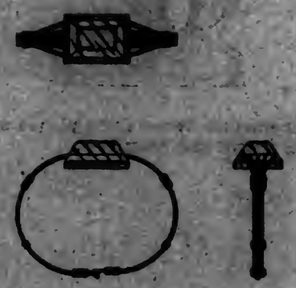
The ornamental design for a bench, as shown.

150,273
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Jeanne Toussaint, Paris, France, assignor to Cartier, Inc., New York, N. Y., a corporation of New York
Application June 13, 1947, Serial No. 139,670
In France February 28, 1947
Term of patent 14 years
(Cl. D45—19)



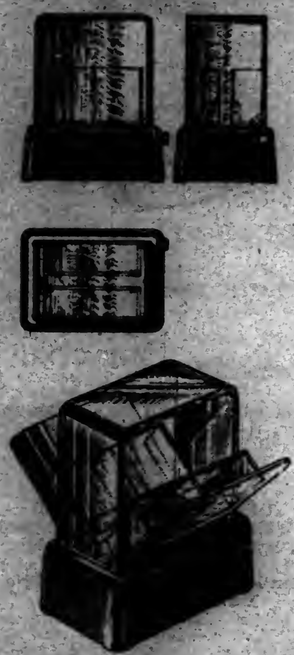
The ornamental design for a brooch or similar article, as shown.

150,274
DESIGN FOR A COMBINATION RADIO AND PHONOGRAPH CABINET
Melsen J. Washburn, Grand Rapids, Mich., assignor to Wilcox-Gay Corporation, Charlotte, Mich., a corporation of Michigan
Application March 31, 1948, Serial No. 127,750
Term of patent 14 years
(Cl. D56—4)



The ornamental design for a combination radio and phonograph cabinet, as shown and described.

150,275
DESIGN FOR A MICROPHONE
Chauncey E. Waldman, Chicago, Ill., assignor to Shure Brothers Inc., Chicago, Ill., a corporation of Illinois
Application June 13, 1947, Serial No. 139,654
Term of patent 14 years
(Cl. D26—14)

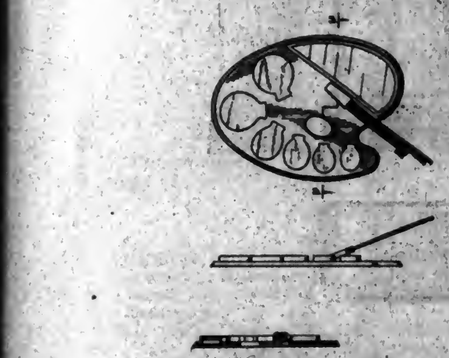


The ornamental design for a microphone, substantially as shown.

150,276
DESIGN FOR A BRACELET
Alvin P. Wand and Homer W. Tennyson, St. Louis, Mo.
Application January 16, 1947, Serial No. 136,182
Term of patent 2½ years
(Cl. D45—4)

The ornamental design for a bracelet, substantially as shown.

150,277
DESIGN FOR A MUSIC BOX
Eric Wedemeyer, Floral Park, N. Y.
Application November 27, 1946, Serial No. 135,136
Term of patent 7 years
(Cl. D56—1)

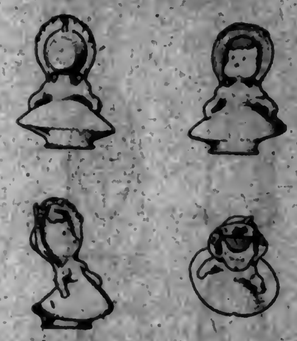


The ornamental design for a music box, substantially as shown and described.

150,278
DESIGN FOR A JACKET OR THE LIKE
Satrauma W. White, Seattle, Wash., now by decree of Marriage Satrauma W. Luckett
Application April 15, 1946, Serial No. 123,621
Term of patent 14 years
(Cl. D3—4)

The ornamental design for a jacket or the like, as shown and described.

150,279
DESIGN FOR A MAKE-UP PALETTE OR SIMILAR ARTICLE
Frances Wiss, Brooklyn, N. Y.
Application February 24, 1947, Serial No. 137,115
Term of patent 3½ years
(Cl. D86—10)



The ornamental design for a make-up palette, or similar article, as shown.

150,280
DESIGN FOR A CANDLE
Paul A. Williams, Ebenezer, N. Y., assignor to The W. & F. Manufacturing Co., Inc., Buffalo, N. Y.
Application February 21, 1947, Serial No. 137,077
Term of patent 7 years
(Cl. D72—1)

The ornamental design for a candle, substantially as shown.

150,281
DESIGN FOR A CANDLE
Paul A. Williams, Ebenezer, N. Y., assignor to The W. & F. Manufacturing Co., Inc., Buffalo, N. Y.
Application February 21, 1947, Serial No. 137,078
Term of patent 7 years
(Cl. D72—1)

The ornamental design for a candle, substantially as shown.

150,282
DESIGN FOR A PLAQUE OR SIMILAR ARTICLE
Donald R. Young, Minneapolis, Minn., assignor to Jiffy Jet, Inc., Minneapolis, Minn., a corporation of Minnesota
Application June 12, 1947, Serial No. 139,601
Term of patent 14 years
(Cl. D29—23)

The ornamental design for a plaque or similar article, as shown and described.

Calfskin. American Hide and Leather Company. 246,655, renewed Sept. 11, 1948. O. G. July 13.
Coal. M. Young. 239,917, renewed Mar. 13, 1948. O. G. July 13.
Leather. A. F. Gallun & Sons. 109,178–9, Mar. 28, 1916. Republished July 13.
Leather. A. F. Gallun & Sons Corporation. 316,558, Aug. 28, 1934. Republished July 13.
Leather. A. F. Gallun & Sons Corporation. 397,821, Sept. 22, 1942. Republished July 13.
Leathers, Tanned and finished. Ziegel, Eisman & Company. 121,842, May 28, 1918. Republished July 13.
Packing, Grape. Union Lumber Company. 127,523, Nov. 11, 1919. Republished July 13.
Seed, Grass. E. W. Conklin & Son. 45,128, Aug. 8, 1905. Republished July 13.
Seed, Grass. I. Ostberg. 127,468, Nov. 11, 1919. Republished July 13.
Seed, Grass. I. Ostberg. 160,263, Oct. 17, 1922. Republished July 13.
Seed, Lawn-grass. I. Ostberg. 274,376, Aug. 26, 1930. Republished July 13.
Seed, Lawn grass. I. Ostberg. 283,578, June 2, 1931. Republished July 13.
Wadding, Cellulose. Veldown Company, Inc. 245,347, renewed Aug. 14, 1948. O. G. July 13.

CLASS 2

Antacid and absorbent. Abbott Laboratories. 366,833, May 2, 1939. Republished July 13.
Bags for shoes, Protective knitted fabric. B. H. Kaminer. 439,723, July 13; Serial No. 523,316, published Apr. 13, 1948.
Boxes, Corrugated paperboard. Inland Container Corporation. 426,614, Jan. 7, 1947. Republished July 13.
Boxes, Paper. Simplex Paper Box Company. 246,123, renewed Sept. 4, 1948. O. G. July 13.
Cases, Vanity. Luce Manufacturing Company. 439,678, July 13; Serial No. 507,202, published Apr. 13, 1948.
Chests and boxes. C. R. Batcheller. 439,721, July 13; Serial No. 523,052, published Apr. 13, 1948.
Compacts. Richards, Boggs & King, Inc. 439,668, July 13; Serial No. 499,281, published Mar. 30, 1948.
Containers, Shipping. Dillman Industries, Inc. 500,962, July 13; Serial No. 527,101, published Mar. 30, 1948.
Cups, Paper drinking. Boston Drinking Cup Co. 162,636, Dec. 26, 1922. Republished July 13.
Cups, Paper drinking. Boston Envelope Company. 305,420–1, Aug. 15, 1933. Republished July 13.
Cups, Paper drinking. Boston Envelope Co. 360,076, Sept. 6, 1938. Republished July 13.
Cups, Paper drinking. Boston Envelope Company. 374,671, Jan. 23, 1940. Republished July 13.
Dispensers and unfilled vanity cases. Unfilled dram-size perfume. Grand Products Co. 439,700, July 13; Serial No. 517,361, published Mar. 30, 1948.
Drums, Wooden. Greif Bros. Cooperage Corporation. 417,008, Oct. 9, 1945. Republished July 13.

CLASS 3

Fabricated covers, Sewed. Alligator Company. 243,480, renewed June 26, 1948. O. G. July 13.

CLASS 4

Abrasive wheels and hones charged with diamond particles. Exolon Company. 418,865, Jan. 15, 1946. Republished July 13.
Chemical compounds, Soluble. Electric Smelting & Aluminum Co. Inc. 151,746, Feb. 14, 1922. Republished July 13.
Chemistry compound for cleaning upholstery and carpets. W. K. Lepper. 222,061, Dec. 21, 1928. Canceled. O. G. July 13.
Cleaner. Dearborn Chemical Company. 186,806, Sept. 2, 1924. Republished July 13.
Cleaning powder. Mirax Chemical Products Corporation. 322,522, Mar. 12, 1935. Republished July 13.
Cleaning compounds, Water soluble detergent. Solventol Chemical Products, Inc. 402,462, July 27, 1943. Republished July 13.
Cleaning preparations, Liquid. L. C. Van Nest. 385,868, Mar. 18, 1941. Republished July 13.
Compound for cleaning closet bowls and urinals, Liquid. L. C. Van Nest. 330,752, Oct. 5, 1937. Republished July 13.
Preparation recommended as a cleansing agent, etc. Lehn & Fink, Inc. 209,103, Jan. 9, 1934. New certificate. O. G. July 13.
Soap. Philippine Manufacturing Company. 193,794, renewed Jan. 6, 1945. O. G. July 13.
Soap compounds. Mistral Company. 313,902, June 12, 1934. New certificate. O. G. July 13.

CLASS 5

Sealing composition. Federal Process Company. 347,966, July 13, 1937. Republished July 13.
Sealing-wax. Dennison Manufacturing Company. 70,257, re-renewed Aug. 13, 1945. O. G. July 13.
Tape, Adhesive. Smooth-On Manufacturing Company. 145,814, Aug. 16, 1921. Republished July 13.

CLASS 6

Accelerators for rubber vulcanization. Grasselli Chemical Company. 249,304, renewed Mar. 20, 1948. O. G. July 13.
Alkanol. Mallinckrodt Chemical Works. 239,593, renewed Mar. 6, 1948. O. G. July 13.
Alkali silicate, Fused. Cowles Detergent Company. 371,223, Sept. 19, 1939. Republished July 13.
Ammonia and bleach. J. H. Onsdorff, 438,732, July 13; Serial No. 525,662, published Apr. 13, 1948.
Anesthetic and analgesic. Abbott Laboratories. 315,723, Aug. 7, 1934. Republished July 13.
Anesthetic compound. Abbott Laboratories. 147,893, Nov. 8, 1921. Republished July 13.
Anodyne and sclerosing solution. Abbott Laboratories. 358,110, June 28, 1938. Republished July 13.
Antacid and digestant for indigestion, acidosis, gastric distress, etc. S. B. Leonardi & Co., Inc. 244,683, renewed July 24, 1948. O. G. July 13.
Antacid preparation. Abbott Laboratories. 430,856-7, June 10, 1947. Republished July 13.
Antibacterial agent for use in body cavities. Abbott Laboratories. 368,840, Nov. 8, 1942. Republished July 13.
Antimycotic powder. Abbott Laboratories. 395,824, May 19, 1942. Republished July 13.
Antirheumatic and antipyretic compound. Abbott Laboratories. 310,999, Mar. 15, 1934. Republished July 13.
Antiseptic. Abbott Laboratories. 368,528, Jan. 3, 1939. Republished July 13.
Antiseptic and germicide. Abbott Laboratories. 281,642, Mar. 24, 1931. Republished July 13.
Antiseptic, Non-toxic and non-caustic. Abbott Laboratories. 119,014, Oct. 23, 1917. Republished July 13.
Antiseptic preparation. Abbott Laboratories. 187,522, Nov. 20, 1920. Republished July 13.
Antiseptic preparation. Abbott Laboratories. 402,289, July 13, 1943. Republished July 13.
Antiseptics. Barnes & Hillo. 69,123, re-renewed June 9, 1948. O. G. July 13.
Antiseptics and deodorants. Hydrosal Laboratories Co. 204,949, Oct. 27, 1925. Republished July 13.
Antispasmodic preparation. Abbott Laboratories. 430,871, May 7, 1946. Republished July 13.
Aromatic chemical. Dow Chemical Company. 501,031, July 13; Serial No. 540,051, published Apr. 20, 1948.
Astringents, astringent cerates, bleach creams, beauty creams, etc. G. Stiasny, 439,663, July 13; Serial No. 492,109; published Sept. 17, 1946.
Bactericides. Abbott Laboratories. 338,986, Sept. 22, 1936. Republished July 13.
Bacteriostatic agent containing a sulfonamide. Abbott Laboratories. 408,427, Sept. 21, 1943. Republished July 13.
Bacteriostatic sulfone compound. Abbott Laboratories. 407,420, June 6, 1944. Republished July 13.
Bicarbonate of soda. Church & Dwight Co., Inc. 500,960, July 13; Serial No. 526,790, published Apr. 13, 1948.
Bismuth arsphenamine sulphonate. Abbott Laboratories. 330,686, Aug. 2, 1927. Republished July 13.
Butyl aminobenzoate (a local anaesthetic). Abbott Laboratories. 175,095, Oct. 30, 1923. Republished July 13.
Capsules, Sealed gelatin. Armour and Company. 500,978, July 13; Serial No. 526,398, published May 25, 1948.
Carbon dioxide and oxygen. Walter Kidde & Company, Inc. 418,976, Jan. 15, 1946. Canceled. O. G. July 13.
Chemical for use in planographic printing. Addressograph-Multigraph Corporation. 343,912, Mar. 9, 1937. Republished July 13.
Chemical preparation used for the removal of gum, varnish, etc. Pennzoil Company. 383,896, Dec. 24, 1940. Republished July 13.
Chemical texicants. Monsanto Chemical Company. 501,027, July 13; Serial No. 539,193, published Apr. 6, 1948.
Chemicals. Heatbath Corporation. 500,996, July 13; Serial No. 529,200, published Apr. 6, 1948.
Coal tar derivatives. Pennsylvania Coal Products Company. 240,202, renewed Mar. 30, 1948. O. G. July 13.
Coloring products for textiles and waxes. Arnold, Hoffman & Co., Incorporated. 500,951, July 13; Serial No. 504,656, published Apr. 13, 1948.
Composition composed of highly concentrated solution of purified enzymes. National Drug Company. 274,679, Sept. 2, 1930. Republished June 13.
Compositions of inert mineral absorbents and hygroscopic salts. Great Lakes Carbon Corporation. 439,676, July 13; Serial No. 504,896, published Apr. 13, 1948.
Compound having heart stimulant and diuretic action. Abbott Laboratories. 334,967, Apr. 28, 1936. Republished July 13.
Container charged with a medicament in dry comminuted form. Abbott Laboratories. 430,962, July 1, 1947. Republished July 13.
Containers carrying desiccating material. Chandler-Evans Corporation. 439,658, July 13; Serial No. 474,992, published Apr. 13, 1948.
Cough drops. J. Frank Shellenberger Co. 193,521, Dec. 30, 1924. Republished July 13.
Cough syrup. Abbott Laboratories. 276,570, Sept. 23, 1930. Republished July 13.
Cough syrup. Abbott Laboratories. 393,197, Jan. 27, 1942. Republished July 13.
Disinfectant, Pine. Trio Chemical Works, Inc. 439,719, July 13; Serial No. 522,084, published Apr. 6, 1948.
Douche powder, Vaginal. National Drug Company. 344,999, Apr. 6, 1937. Republished July 13.
Dressing for the nipples of nursing mothers. Swam-Myers Company. 354,582, Mar. 28, 1939. Republished July 13.
Droppers having in combination therewith a lipstick, Perfume. Coty, Inc. 244,141, renewed July 10, 1948. O. G. July 13.
Drugs indicated for tropical application. Abbott Laboratories. 366,960, Dec. 6, 1942. Republished July 13.
Dusting powder. Holland-Rantos Company, Inc. 500,953, July 13; Serial No. 500,848, published Apr. 13, 1948.
Dyestuffs, certified colorings, solvents, etc., Aniline. Roux Laboratories, Inc. 500,908, July 13; Serial No. 530,337, published Apr. 6, 1948.
Eau de cologne, toilet powder, toilet cream, and shampoo. B. Altman & Co. 501,024, July 13; Serial No. 538,701, published Apr. 6, 1948.
Emulsifier to promote the homogeneous dispersion of fats and/or oils in water and/or aqueous media. Glyco Products Co., Inc. 500,963, July 13; Serial No. 527,108, published Apr. 13.
Face creams, hair lotions, etc. Golden Arrow Toiletries. 420,362, May 7, 1946. Canceled. O. G. July 13.
Face powder. Andrew Jergens Company. 439,702, July 13; Serial No. 518,583, published Apr. 13, 1948.
Face powder, rouge, and lipstick. Richard Hudnut. 439,689, July 13; Serial No. 512,671, published Apr. 13, 1948.
Facial creams. Elmo Sales Corporation. 501,022, July 13; Serial No. 536,623, published Apr. 6, 1948.
Family of coating compositions. Pyroxylin Products, Inc. 439,713, July 13; Serial No. 520,414, published Apr. 6, 1948.
Folic acid derivative. American Cyanamid Company. 500,954-5; July 13; Serial Nos. 529,335-6, published Apr. 6, 1948.
Foot medicine, Athlete's. Lea's Pharmacy. 289,040, Nov. 17, 1931. Republished July 13.
Fuel pellets, Solidified. J. W. Speaker Corporation. 500,947, July 13; Serial No. 468,553, published Apr. 13, 1948.
Gas, Liquefied petroleum. Mayflower Gas Corp. 412,378, Mar. 6, 1945. Republished July 13.
Germicide. F. R. Wallich. 382,795, Nov. 12, 1940. Republished July 13.
Germicide and fungicide containing phenol, Non-poisonous, antiseptic. National Drug Company. 326,018, July 9, 1935. Republished July 13.
Granular material for chemically softening and conditioning water. C. F. Burgess Laboratories, Inc. 358,634, July 19, 1938. Republished July 13.
Hair-color restorer. Odell Company, Inc. 228,112, May 24, 1927. Republished July 13.
Hair tonic. R. Odell & Sons Company. 187,792–3, Aug. 12, 1924. Republished July 13.
Hair tonic. R. Odell & Sons Company. 215,083, July 13, 1926. Republished July 13.
Hair tonic. Odell Company, Inc. 245,569, renewed Aug. 14, 1948. O. G. July 13.
Hair tonic. Odell Company, Inc. 410,677, Dec. 12, 1944. Republished July 13.
Hair tonic and hair dressing. Odell Company, Inc. 229,378, June 28, 1927. Republished July 13.
Hair tonic, hair dressing, shampoo, etc. Odell Company, Inc. 225,500, Mar. 22, 1927. Republished July 13.
Hair tonic, shampoo, toilet water, etc. Odell Company, Inc. 240,361, Mar. 27, 1928. Republished July 13.
Hairwaving lotion. Standard Laboratories Inc. 501,017, July 13; Serial No. 535,192, published Apr. 13, 1948.
Herbicides. Monsanto Chemical Company. 501,028, July 13; Serial No. 539,194, published Apr. 6, 1948.
Hypnotic sedative anesthetic compound. Abbott Laboratories. 285,003, July 14, 1931. Republished July 13.
Incense. Eastern Trading Co. 343,177, Feb. 9, 1937. Republished July 13.
Industrial gases. Puritan Compressed Gas Corporation. 417,144, Oct. 10, 1945. Canceled. O. G. July 13.
Ingestible tablets. F. H. Wescott. 501,010, July 13; Serial No. 534,579, published Apr. 20, 1948.
Insecticides. Goodwin Laboratories, Inc. 439,716, July 13; Serial No. 521,252, published Apr. 6, 1948.
Insecticides. Vermex Company of America. 439,672, July 13; Serial No. 501,699, published Apr. 6, 1948.
Insecticides and fungicides. Woolfolk Chemical Works, Ltd. 501,032, July 13; Serial No. 540,128, published Apr. 13, 1948.
Insecticides, Garden. F. C. Turner. 439,722, July 13; Serial No. 523,295, published Apr. 6, 1948.
Iron compound. C. Cederroth. 67,891, re-renewed Feb. 26, 1948. O. G. July 13.
Isotonic aqueous solution. Abbott Laboratories. 353,676, Jan. 11, 1938. Republished July 13.
Laxative compound. Abbott Laboratories. 318,144, Oct. 16, 1934. Republished July 13.
Liquid and powdered pectins and mucilages. V. B. Strand. 501,020, July 13; Serial No. 530,576, published Apr. 13, 1948.
Liquid preparation. J. T. Milliken. 224,039, Feb. 15, 1927. Republished July 13.

Liquid vitamin preparation. Od Peacock Sultan Company. 501,015, July 13; Serial No. 535,345, published Apr. 20, 1948.

Lotion. After shave. Colgate-Palmolive-Peet Company. 439,682, July 13; Serial No. 509,563, published June 10, 1947.

Lubricant and laxative, Intestinal. Abbott Laboratories. 393,496, Feb. 17, 1942. Republished July 13.

Medical preparations. Pinesle Medicine Co. 42,131, Feb. 23, 1904. Amended. O. G. July 13.

Medicinal compound. Abbott Laboratories. 386,603, Apr. 15, 1941. Republished July 13.

Medicinal preparation. Abbott Laboratories. 408,238, Aug. 1, 1944. Republished July 13.

Medicinal preparation. John T. Milliken & Company. 218,391, Sept. 28, 1926. Republished July 13.

Medicinal preparations. Abbott Laboratories. 117,626, July 24, 1917. Republished July 13.

Medicinal preparations. Swan-Myers Co. 155,540, May 30, 1922. Republished July 13.

Medicinal syrup. Abbott Laboratories. 343,969, Mar. 9, 1937. Republished July 13.

Medicinal wafers. Abbott Laboratories. 390,357, Sept. 23, 1941. Republished July 13.

Micrometers. Remote-reading. F. M. Poole. 426,411, Mar. 25, 1947. Republished July 13.

Mineral oil for medicinal uses. Superior Products Company. 501,024. July 13; Serial No. 541,476, published Apr. 13, 1948.

Nail enamel, nail enamel thinner, cream nail enamel remover, etc. Roux Distributing Co., Inc. 500,999, July 13; Serial No. 530,336, published Apr. 6, 1948.

N-butyl-ethyl-barbituric acid (A hypnotic compound). Abbott Laboratories. 175,580, Nov. 6, 1923. Republished July 13.

Nutrient containing protein hydrolysate. Abbott Laboratories. 414,539, June 12, 1945. Republished July 13.

Nutritional product containing vitamins. Abbott Laboratories. 336,404. July 7, 1936. Republished July 13.

Nutritive preparation. Abbott Laboratories. 424,224, Sept. 24, 1946. Republished July 13.

Ointment base. Abbott Laboratories. 391,315. Oct. 28, 1941. Republished July 13.

Ointment for the treatment of coughs, colds, pneumonia, etc. Musterole Company. 501,019, July 13; Serial No. 535,587, published Apr. 13, 1948.

Ointments for foot powders. Medicated foot. Splendor Ltd. 439,671, July 13; Serial No. 500,910, published Apr. 6, 1948.

Oil, Antiseptic. F. R. Wallich. 341,418, Dec. 8, 1936. Republished July 13.

Oil fortified with vitamin D, Fish liver. Abbott Laboratories. 365,899, Mar. 21, 1939. Republished July 13.

Oils, Fish liver. Abbott Laboratories. 294,692, June 7, 1932. Republished July 13.

Organo-silicon compounds. U. S. Industrial Chemicals, Inc. 439,670, July 13; Serial No. 500,430, published Apr. 6, 1948.

Perfume. D. Gray. 368,118, June 6, 1939. New certificate. O. G. July 13.

Perfume. D. Gray. 378,403, June 11, 1940. New certificate. O. G. July 13.

Perfume, lipstick, hand and face lotion, etc. Societe Mury-Exporation. 439,679, July 13; Serial No. 507,411, published Apr. 13, 1948.

Perfume, toilet water, etc. Parfumerie J. Lesquendieu (Societe Anonyme). 220,323, Nov. 9, 1926. New certificate. O. G. July 13.

Perfume, toilet water, face powder, etc. Hallet Corporation of America. 240,342, renewed Mar. 27, 1948. O. G. July 13.

Perfumes. M. Seis. 439,660, July 13; Serial No. 487,807, published Feb. 26, 1946.

Perfumes, etc. D. Gray. 352,321, Nov. 23, 1937. New certificate. O. G. July 13.

Perfumes, lipsticks, etc. Griet & Cia. 427,611, Feb. 11, 1947. Canceled. O. G. July 13.

Perfumes, perfume extracts, bath salts, etc. D'Orsay Perfumeries Corporation. 244,381, renewed July 17, 1948. O. G. July 13.

Perfumes, toilet water, face powder, etc. Coty, Inc. 242,663, renewed May 29, 1948. O. G. July 13.

Perfumes, toilet waters. Coty, Inc. 241,384, renewed Apr. 24, 1948. O. G. July 13.

Pharmaceutical product having hypnotic, sedative, and anesthetic properties. Abbott Laboratories. 334,240, Apr. 28, 1936. Republished July 13.

Pills for use in connection with diseases of the kidneys, laxatives, etc. Foster-Milburn Company. 245,552, renewed Aug. 14, 1948. O. G. July 13.

Pomade. Chesebrough Manufacturing Company. 243,206, renewed June 12, 1948. O. G. July 13.

Poultices in the form of porous bags containing flaxseed. S. A. Condrey. 439,726, July 13; Serial No. 524,690, published Apr. 6, 1948.

Powder for antiseptic solutions. Swan-Myers Company. 276,644, Oct. 21, 1930. Republished July 13.

Preparation for bathing and massaging the skin. John T. Milliken & Company. 190,300, Oct. 14, 1924. Republished July 13.

Preparation for coloring the hair. Lehn & Fink, Inc. 129,769, Mar. 9, 1920. New certificate. O. G. July 13.

Preparation for treatment of dandruff. H. H. Myers. 273,954, Aug. 19, 1930. Republished July 13.

Preparation of nicotinic acid. Abbott Laboratories. 356,245, Apr. 4, 1939. Republished July 13.

Preparations containing the vitamin B complex. Abbott Laboratories. 384,043, Jan. 7, 1941. Republished July 13.

Preparations for shampooing, etc. Lesquendieu, Incorporated. 303,512, May 30, 1933. New certificate. O. G. July 13.

Product designated as "A preparation for the palliative treatment of asthma." Abbott Laboratories. 412,687, Mar. 20, 1945. Republished July 13.

Product for oral administration in the treatment of anemia. Abbott Laboratories. 353,675, Jan. 11, 1938. Republished July 13.

Product for the treatment of hay fever and asthma. Abbott Laboratories. 383,910, Dec. 24, 1940. Republished July 13.

Product having the properties of vitamin K. Abbott Laboratories. 382,006, Oct. 15, 1940. Republished July 13.

Product, which comprises an ointment. National Drug Company. 402,078, Aug. 24, 1943. Republished July 13.

Product, which comprises the combination of a bacterial vaccine and a toxoid. National Drug Company. 401,385, May 11, 1943. Republished July 13.

Protein hydrolysate preparations. National Drug Company. 424,234-5, Sept. 24, 1946. Republished July 13.

Pyrophyllite or talc used as an ingredient of cosmetics. R. T. Vanderbilt Company, Inc. 439,693, July 13; Serial No. 513,543, published Apr. 6, 1948.

Radium. Radium Emanation Corporation. 242,506, renewed May 29, 1948. O. G. July 13.

Rectal-anesthetic. Abbott Laboratories. 377,523, May 7, 1940. Republished July 13.

Rectal ointment. Abbott Laboratories. 411,242, Jan. 9, 1945. Republished July 13.

Resinous materials. Water soluble. Rohm & Haas Company. 501,025, July 13; Serial No. 538,816, published Apr. 13, 1948.

Salts, Effervescent. Abbott Laboratories. 138,410, Dec. 28, 1920. Republished July 13.

Sedative, analgesic, and antipyretic compound. Abbott Laboratories. 426,351, Dec. 24, 1946. Republished July 13.

Sedative or mild hypnotic vasodilator. Abbott Laboratories. 404,464, Nov. 23, 1943. Republished July 13.

Shampoo and dandruff treatment. Odell Company, Inc. 409,634, Oct. 24, 1944. Republished July 13.

Sizing and finishing agent, Textile. R. F. Houghton & Co. 501,006, July 13; Serial No. 533,571, published Apr. 6, 1948.

Sizing for paper. A. E. Staley Manufacturing Company. 314,664, July 8, 1934. Republished July 13.

Sizing used for paper purposes. A. E. Staley Manufacturing Company. 276,440, Oct. 21, 1930. Republished July 13.

Skin lotion. D. Gray. 274,071, Aug. 19, 1930. New certificate. O. G. July 13.

Skin protective and cleanser and as an aid in the prevention of industrial dermatitis. National Drug Company. 500,956, July 13; Serial No. 515,057, published Apr. 13, 1948.

Solution having medicinal properties. National Drug Company. 348,148, July 20, 1937. Republished July 13.

Solution of vitamin B complex components, Injectable. Abbott Laboratories. 391,316, Oct. 28, 1941. Republished July 13.

Spray, Nose and throat. Abbott Laboratories. 271,166, May 27, 1930. Republished July 13.

Stabilizers for vinyl chloride polymers and copolymers, and for other organic halides. Baker Castor Oil Company. 501,026, July 13; Serial No. 538,851.

Starch. A. E. Staley Manufacturing Company. 219,693, Oct. 19, 1926. Republished July 13.

Starch. Hubinger Company. 289,514, Dec. 1, 1931. Republished July 13.

Starch. Hubinger Company. 299,171, Dec. 22, 1931. Republished July 13.

Starch. Hubinger Company. 290,588, Jan. 12, 1932. Republished July 13.

Starch, Laundry. Celluloid Starch Company. 49,663-9, Feb. 13, 1906. Republished July 13.

Starch, Laundry. J. C. Hubinger Bros. Company. 205,630, Nov. 10, 1925. Republished July 13.

Starch, Laundry. Hubinger Company. 290,203, Dec. 22, 1931. Republished July 13.

Starch, Laundry. National Starch Company. 66,522, re-renewed Apr. 14, 1942. O. G. July 13.

Starches. Hubinger Company. 319,660, Dec. 4, 1934. Republished July 13.

Sulfonamide in oil. Suspension of a. Abbott Laboratories. 400,453, Mar. 9, 1943. Republished July 13.

Sulphur. Stauffer Chemical Company. 501,005. July 13; Serial No. 532,377, published Apr. 20, 1948.

Suntan oil. Shawnee Products Company. 439,705, July 13; Serial No. 516,700, published Apr. 20, 1948.

Synthetic estrogenic preparation, Veterinary. Abbott Laboratories. 406,153, Mar. 14, 1944. Republished July 13.

Syrup for use as a sedative and expectorant. Abbott Laboratories. 344,822, June 8, 1937. Republished July 13.

Tablets. Physicians' Drug & Supply Co. 501,023. July 13; Serial No. 536,000, published Apr. 6, 1948.

Tablets to be taken internally. National Drug Company. 336,058, Mar. 21, 1939. Republished July 13.

Textile finishing, Water repellent. R. F. Houghton & Co. 501,009 July 13; Serial No. 533,573, published Apr. 6, 1948.

Toilet lotions, face and talcum powders, etc. Guy T. Gibson, Incorporated. 189,136, July 1, 1924. Republished July 13.

Toilet powder. Gold Seal Sterilizing Powder Co., Inc. 306,357, Jan. 14, 1930. Republished July 13.

Toilet powders and baby oil. Armour and Company. 501,006, July 13; Serial No. 532,901, published Apr. 20, 1948.

Toilet preparations. Cassebeer Pharmacal Co. 70,836, re-renewed Sept. 22, 1948. O. G. July 13.

Toilet preparations. P. Denney. 332,502, Oct. 29, 1940. Republished July 13.

Toilet preparations. Rexes, Mayo, Inc. 439,674, July 13; Serial No. 508,280, published Apr. 6, 1948.

Tooth-powders and tooth-pastes. L. E. V. Rhein. 89,160, re-renewed May 19, 1942. O. G. July 13.

Treatment for dandruff applied as a hair tonic. Odell Co., Inc. 292,778, Mar. 29, 1932. Republished July 13.

Troches, Medicinal. Abbott Laboratories. 393,202, Jan. 27, 1942. Republished July 13.

Vegetable oil. Bromsated. Abbott Laboratories. 426,543, Mar. 25, 1947. Republished July 13.

Veterinary preparation for treatment of mastitis. Abbott Laboratories. 387,077, Apr. 29, 1941. Republished July 13.

Vitamin C preparation of cevitamic acid. Abbott Laboratories. 361,214, Oct. 11, 1938. Republished July 13.

Vitamin K preparation. Abbott Laboratories. 366,213, Apr. 4, 1939. Republished July 13.

Vitamin preparation. Abbott Laboratories. 386,230, Apr. 1, 1941. Republished July 13.

Vitamin preparation. Abbott Laboratories. 389,109-10, July 22, 1941. Republished July 13.

Vitamin preparation. Abbott Laboratories. 398,554, Nov. 3, 1942. Republished July 13.

Vitamin preparation. Abbott Laboratories. 426,328, Dec. 24, 1946. Republished July 13.

Vitamin preparation containing vitamin C. Abbott Laboratories. 419,537, Feb. 19, 1946. Republished July 13.

Vitamin preparation, Multiple. Abbott Laboratories. 430,983, July 1, 1947. Republished July 13.

CLASS 7

Rope and cable, Manila. Edwin H. Fitler Company. 241,907, renewed May 5, 1948. O. G. July 13.

Rope and cable, Manila. Edwin H. Fitler Company. 242,240, renewed June 19, 1948. O. G. July 13.

Rope and cable, Manila. Edwin H. Fitler Company. 245,991, renewed Aug. 7, 1948. O. G. July 13.

Rope and wire-rope cables, Wire. Union Wire Rope Corporation. 259,738, Aug. 6, 1929. Republished July 13.

Rope and wire rope cables, Wire. Union Wire Rope Corporation. 430,400-1, June 10, 1947. Republished July 13.

Rope, cord, and twine manufactured from vegetable fiber. American Manufacturing Company. 501,037, July 13; Serial No. 531,879.

String or tape, Wrapping. Chicago Printed String Company. 424,720, Apr. 1, 1947. Republished July 13.

String or tape, Wrapping. Chicago Printed String Company. 430,415, June 10, 1947. Republished July 13.

Tape and ribbon. Chicago Printed String Company. 430,098, June 10, 1947. Republished July 13.

Twines and cordage. Yazoo Mills, Incorporated. 260,664, Sept. 14, 1937. Republished July 13.

CLASS 8

Ash stands. Smokador Manufacturing Co., Inc. 313,610, Oct. 30, 1934. Republished July 13.

Ash trays. A. Lagry. 500,996, July 13; Serial No. 529,477, published Apr. 13, 1948.

Cigarette cases and lighters, Combination. Franklin Sales & Manufacturers, Inc. 501,036, July 13; Serial No. 517,632.

Pouches, Tobacco. Alligator Company. 242,167, renewed June 12, 1948. O. G. July 13.

CLASS 9

Detonators. Olin Industries, Inc. 439,691, July 13; Serial No. 513,198, published Mar. 23, 1948.

Fireworks. Brown Manufacturing Company. 439,710, July 13; Serial No. 519,831, published Mar. 23, 1948.

Matches. Norli-T-Company. 439,690, July 13; Serial No. 507,925, published Apr. 6, 1948.

Recoil pads, Shotgun and rifle. Lortam Manufacturing Co. 501,013, July 13; Serial No. 535,946, published Apr. 6, 1948.

Revolvers and shotguns. Iver Johnson's Arms & Cycle Works. 231,366, Aug. 16, 1927. Republished July 13.

Rifles, air-rifles, etc. Birmingham Small Arms Co., Limited. 63,295, re-renewed Mar. 24, 1948. O. G. July 13.

Rifles, shotguns, pistols, and revolvers. Iver Johnson's Arms & Cycle Works. 233,262, Mar. 17, 1936. Republished July 13.

CLASS 10

Fertilizers. R. B. Wilson. 439,708, July 13; Serial No. 510,500, published Apr. 6, 1948.

Lawn and plant food. N. S. Koos & Son Company. 288,386, Oct. 27, 1931. Republished July 13.

Peat moss for fertilizers, combination fertilizer and soil conditioner, soil builder and plant food. Premier Peat Moss Corporation. 439,725, July 13; Serial No. 523,708, published Mar. 23, 1948.

CLASS 11

Carbon paper. American Carbon Paper Mfg. Company. 500,995, July 13; Serial No. 514,163, published Apr. 13, 1948.

Carbon paper. Columbia Ribbon & Carbon Manufacturing Company, Inc. 501,023, July 13; Serial No. 540,173, published Apr. 13, 1948.

Carbon paper. Old Town Ribbon & Carbon Co., Inc. 501,020, July 13; Serial No. 535,738, published Apr. 13, 1948.

Carbon papers bound in time-saving binders. F. S. Webster Company. 246,367, renewed Sept. 4, 1948. O. G. July 13.

Ink and inked ribbons. American Multigraph Company. 57,904, Dec. 4, 1906. Republished July 13.

Ink, opaque, and developing ink. Drawing. Davidson Manufacturing Corporation. 501,007, July 13; Serial No. 532,915, published Apr. 6, 1948.

Ink repellent fluids, lithographic inks, lithographic typewriting ribbons, etc. Columbia Ribbon & Carbon Manufacturing Company, Inc. 501,035, July 13; Serial No. 541,645, published Apr. 13, 1948.

Ink-ribbons and carbon paper. F. S. Webster Company. 58,382, re-renewed Apr. 7, 1948. O. G. July 13.

Inks and inked ribbons. Addressograph-Multigraph Corporation. 350,262, Sept. 28, 1937. Republished July 13.

Typewriter ribbon and carbon paper. Interchemical Corporation. 500,993, July 13; Serial No. 530,062, published Apr. 6, 1948.

Writing fluids. W. A. Sheaffer Pen Company. 142,760, May 17, 1921. Amended. O. G. July 13.

CLASS 12

Cement, Portland. Alpha Portland Cement Company. 70,500, re-renewed Sept. 8, 1948. O. G. July 13.

Comminuted iron in powder and plastic form, Substances consisting chiefly of. Smooth-On Manufacturing Company. 146,977, Sept. 20, 1921. Republished July 13.

Fibre board, thermal insulating board, composite synthetic lumber or artificial lumber, etc. Masonite Corporation. 244,487, renewed July 17, 1948. O. G. July 13.

Iron compound in the form of a dry powder. Smooth-On Manufacturing Company. 34,161, Feb. 6, 1900. Republished July 13.

Iron compound in the form of a dry powder. Smooth-On Manufacturing Company. 299,149, Nov. 22, 1932. Republished July 13.

Iron compound in the form of a dry powder. Smooth-On Manufacturing Company. 299,886, Dec. 27, 1932. Republished July 13.

Lumber and forest products. Union Lumber Company. 133,729, Jan. 4, 1921. Republished July 13.

Mortar, Masonry. M. J. Grove Lime Company. 291,238, Oct. 28, 1941. Republished July 13.

Shingles, Red-cedar. E. J. Jayne. 238,845, renewed Mar. 13, 1948. O. G. July 13.

Tile and flooring tile. Danbury Rubber Company, Inc. 412,838, May 15, 1945. Republished July 13.

Two chemical compounds, one of which is used to repair defects in castings, and the other one of which is incorporated in core-sand to make cores. V. Tompkins. 28,022, Mar. 24, 1896. Republished July 13.

Viscid compounds. Parr Paint & Color Company. 342,980, Feb. 2, 1937. Republished July 13.

Viscid compounds. Parr Paint & Color Company. 344,771, Feb. 14, 1939. Republished July 13.

Web material in tape, sheet or roll form, Felted asbestos. Raybestos-Manhattan, Inc. 418,512, Jan. 1, 1946. Republished July 13.

CLASS 13

Chains for use on motor front ends, motor drives, and power transmissions, etc. Perfection Gear Company. 231,624, Aug. 23, 1927. Republished July 13.

Clamps, Pipe. Smooth-On Manufacturing Company. 201,037, July 14, 1925. Republished July 13.

Couplings, Pipe. Gustin-Bacon Manufacturing Company. 355,960, Apr. 5, 1938. Republished July 13.

Metal hollow ware, flat ware, semi-flat ware, etc., Enameled base. Moore Enameling & Manufacturing Company. 350,744, Oct. 5, 1937. Republished July 13.

Oil field equipment. Gulf Coast Machine & Supply Company. 390,451, Aug. 20, 1940. Republished July 13.

Pipe fittings, Steel. Gustin-Bacon Manufacturing Company. 402,928, Aug. 24, 1943. Republished July 13.

Plumbing and steamfitting supplies. Durirex Company, Inc. 418,706, Jan. 8, 1946. Republished July 13.

Staples. Greif Bros. Cooperage Corporation. 293,223, Jan. 27, 1942. Republished July 13.

Tube fittings, Metallic. Gustin-Bacon Manufacturing Company. 434,976, Jan. 21, 1947. Republished July 13.

Valves. Imperial Brass Manufacturing Company. 347,778, July 6, 1937. Republished July 13.
Valves, etc., High pressure metal control. Puritan Compressed Gas Corporation. 419,788, Mar. 5, 1946. Canceled. O. G. July 13.
Valves for water heaters, furnaces, and gas appliances. General Water Heater Corporation. 312,827, June 12, 1934. Republished July 13.

CLASS 14

Alloy steel. W. J. Holliday & Co. 501,000, July 13; Serial No. 531,036, published Apr. 13, 1948.
Alloys, Aluminum. Temalloy Corporation. 439,089, July 13; Serial No. 499,446, published Apr. 6, 1948.
Alloys in various forms. Eutectic Welding Alloys Corporation. 500,950, July 13; Serial No. 508,716, published Mar. 23, 1948.
Bulk-bronze and castings. American Manganese Bronze Company, Inc. 144,160, June 28, 1921. Republished July 13.
Comminuted iron in powder and plastic form, Substances chiefly composed of. Smooth-On Manufacturing Company. 148,534, Nov. 15, 1921. Republished July 13.
Copper ingots, copper ingot bars, copper wire bars, etc. Nassau Smelting & Refining Company, Incorporated. 439,698, July 13; Serial No. 517,078, published Apr. 6, 1948.
Iron and steel castings. Ross-Meehan Foundries. 356,118, Apr. 12, 1938. Republished July 13.
Iron compound in the form of a dry powder. Smooth-On Manufacturing Company. 44,478, July 4, 1905. Republished July 13.
Metal forgings. Lansdowne Steel & Iron Company. 439,694, July 13; Serial No. 513,748, published Apr. 6, 1948.
Metal, Steel, iron, and alloy. Marsh Steel Corporation. 500,963, July 13; Serial No. 529,072, published Apr. 6, 1948.
Rods for welding and soldering aluminum and its alloys welded and soldered metal pieces. S. A. Artal. 500,973, July 13; Serial No. 528,244, published Mar. 30, 1948.
Steel castings. Farrell-Cheek Steel Company. 500,994, July 13; Serial No. 530,073, published Apr. 6, 1948.
Steel rods, bars, plates, billets, slabs, blocks, and forgings. Crucible Steel Company of America. 439,729, July 13; Serial No. 524,863, published Mar. 23, 1948.
Steel strip. J. B. & S. Lees Ltd. 439,701, July 13; Serial No. 518,406, published Mar. 23, 1948.
Steel strip. J. B. & S. Lees Ltd. 439,715, July 13; Serial No. 521,134, published Mar. 23, 1948.
Thermostatic metal. Metals & Controls Corporation. 500,964, July 13; Serial No. 527,119, published Mar. 23, 1948.
Tin plate, Electrolytic. Inland Steel Company. 403,778, Oct. 19, 1943. Republished July 13.

CLASS 15

Lubricants comprising oils and greases. Keystone Lubricating Company. 191,852, Nov. 18, 1924. Republished July 13.
Oil compound, Solvent. Pennzoil Company. 379,965, Aug. 6, 1940. Republished July 13.
Oils and greases, Lubricating. Otis Elevator Company. 246,499, renewed Sept. 11, 1948. O. G. July 13.
Oils and lubricant oils and greases, Motor fuel. Pennzoil Company. 248,451, Oct. 23, 1928. Republished July 13.
Oils, Lubricating. Mid-West Oil Company. 391,394, Nov. 4, 1941. Republished July 13.

CLASS 16

Enamel and varnish. Quick-drying. Smith-Alsop Paint and Varnish Co. 244,802, renewed July 31, 1948. O. G. July 13.
Enamels, Industrial paint. Morgan Company. 286,562, Sept. 1, 1931. Republished July 13.
Enamels, Paint. W. W. Lawrence & Company. 224,821, Mar. 8, 1927. Republished July 13.
House-paint, mixed paint, flat wall-paint, etc. Indiana Indestructible Paint Co. 138,264, Dec. 21, 1920. Republished July 13.
Lacquers. Cleveland Varnish Company. 238,357, renewed Feb. 7, 1948. O. G. July 13.
Lacquers and paint in paste or semi-paste form. Cook Paint & Varnish Company. 439,675, July 13; Serial No. 504,884, published Apr. 1, 1947.
Liquid containing oil for use in mixing paints. James B. Sipe & Co. 221,440, Nov. 30, 1926. Corrected. O. G. July 13.
Liquid iron compound. Smooth-On Manufacturing Company. 80,191, Jan. 30, 1912. Republished July 13.
Paint, Flat. Indiana Indestructible Paint Co. 148,865, Nov. 29, 1921. Republished July 13.
Paint, Mixed and paste. James B. Sipe & Company. 221,583, renewed Dec. 7, 1948. O. G. July 13.
Paint, Protective ready mixed. Morgan Company. 286,563, Sept. 1, 1931. Republished July 13.
Paints, lacquers, varnish, etc., Dried, paste, and ready-mixed. Andrew Brown Co., Inc. 246,563, renewed Sept. 11, 1948. O. G. July 13.
Paints, paint compounds, and lacquers, Dry, paste, and ready mixed. Detroit White Lead Works. 223,856, Feb. 15, 1927. Republished July 13.
Paints, paint compounds, and varnishes, Ready mixed. Morgan Company. 288,139, Oct. 20, 1931. Republished July 13.
Paints, Ready mixed. Smooth-On Manufacturing Company. 153,001, Mar. 7, 1922. Republished July 13.
Tobacco, Plug-paint. C. A. Nash & Son, Inc. 236,123, renewed Jan. 24, 1948. O. G. July 13.
Varnishes, paint enamels, and varnish stains. Morgan Company. 256,849, Apr. 30, 1929. Republished July 13.

CLASS 17

Cigars. New Illinois Athletic Club. 70,023, re-renewed July 21, 1948. O. G. July 13.
Cigars. E. Regensburg & Sons. 186,632, July 22, 1924. Republished July 13.
Cigars, cigarettes, and smoking tobacco. Cifuentes Pego y Compania. 240,974, renewed Apr. 8, 1948. O. G. July 13.

Tobacco, Smoking and chewing. Brown & Williamson Tobacco Corporation. 247,045, renewed Sept. 18, 1948. O. G. July 13.

CLASS 19

Bicycles, tricycles, etc. Humber Limited. 170,890, July 17, 1923. Amended. O. G. July 13.

CLASS 21

Burglar and fire alarm, Systems of. C. C. Klentz. 245,765, renewed Aug. 21, 1948. O. G. July 13.
Dry cells for electric batteries, portable electric flash lights or electric torches, etc. French Battery Company. 242,264, June 6, 1928. Republished July 13.
Electrical motors. Brown-Brockmeyer Co. 215,250, July 15, 1929. Republished July 13.
Electrical vacuum cleaners. Quadrex Corporation. 280,945, Oct. 27, 1933. Republished July 13.
Fittings, couplings, bushings, etc., Conduit. Conduit Fittings Corporation. 360,386, Mar. 7, 1939. Republished July 13.
Ignition shielding, harnesses and parts. Titeflex, Inc. 410,484, Nov. 28, 1944. Republished July 13.
Lamps, Gaseous discharge tubular. Claude Neon Electrical Products Corporation, Ltd. 301,512, Mar. 7, 1933. Republished July 13.
Heaters, Electric space. W. W. Hicks. 430,267, June 10, 1947. Republished July 13.
Motors, including polyphase induction motors, slip-ring motors, etc., Electric. Lincoln Electric Company. 240,420, renewed Mar. 27, 1948. O. G. July 13.
Outlet-boxes, Electric. Appleton Electric Company. 69,832, re-renewed June 16, 1948. O. G. July 13.
Plastic material to be applied to floors, Wallar G. Legge Company, Inc. 400,105, Sept. 19, 1944. Republished July 13.
Radio receiving sets. V. A. Marco. 423,934, Apr. 8, 1947. Canceled. O. G. July 13.
Sprayers, Electric. Electric Spravit Company. 236,705, renewed Dec. 30, 1947. O. G. July 13.
Water heaters and electric air heaters, etc., Electric. W. W. Hicks. 169,966, July 10, 1923. Republished July 13.

CLASS 22

Card game. Kasco Mills, Inc. 403,080, Aug. 31, 1943. Republished July 13.
Fishhooks. O. Mustad & Son. 231,945, renewed Aug. 30, 1947. O. G. July 13.
Playing cards, chess, checkers, etc. Abercrombie & Fitch Company. 240,423, renewed Mar. 27, 1948. O. G. July 13.
Tennis balls, Table. Halex Limited. 383,451, Dec. 10, 1940. Republished July 13.

CLASS 23

Air compressors. Air-Flo Compressor Company. 439,735, July 13; Serial No. 521,712.
Air compressors, vacuum pumps, etc. Nash Engineering Company. 242,264, renewed May 22, 1948. O. G. July 13.
Apparatus for distributing seed, bait, and fertilizers. J. R. Johnson. 439,690, July 13; Serial No. 512,911, published Apr. 6, 1948.
Bell ringing devices, Mechanical fire alarm. Premier Appliance Co., Inc. 439,709, July 13; Serial No. 519,509, published Apr. 13, 1948.
Blades and hand saw blades, Hack saw. Henry G. Thompson & Son Company. 266,010, Nov. 14, 1932. Republished July 13.
Bones and stuffing box supports, Stuffing. Gustin-Bacon Manufacturing Company. 378,290, July 9, 1940. Republished July 13.
Cane slings. American Hoist & Derrick Co. 214,482, renewed Jan. 5, 1948. O. G. July 13.

Check perforators and check certifiers, Mechanical. Hedman Manufacturing Company. 232,307, renewed Sept. 6, 1947. O. G. July 13.
Compasses, Mechanically operable. Rite-Line Corporation. 317,113, Sept. 11, 1934. Republished July 13.
Cutters and carmel and candy bars and parts thereof, Carmel and candy. Ideal Wrapping Machine Company. 181,275, Mar. 18, 1924. Republished July 13.
Cylinders for drying machines. Overton Machine Company. 439,717, July 13; Serial No. 521,679, published Apr. 13, 1948.
Distributing and cleaning machines. Lummus Cotton Gin Co. 223,126, Apr. 2, 1935. Republished July 13.
Drill chucks, self-opening die heads, solid die heads, etc., Quick-change. Consolidated Machine Tool Corporation of America. 243,566, June 26, 1928. Republished July 13.
Electrically driven positive displacement proportioning pumps of the hydraulically operated diaphragm type. Lapp Insulator Company, Inc. 439,664, July 13; Serial No. 497,897, published Apr. 6, 1948.
Files. W. Bingham Company. 70,497, re-renewed Sept. 8, 1948. O. G. July 13.
Gears. Charles Bond Company. 245,818, renewed Aug. 21, 1948. O. G. July 13.
Internal-combustion engines and automotive accessories and parts. Carter Carburetor Corporation. 439,662, July 13; Serial No. 491,627, published Apr. 13, 1948.
Lathes, Automatic. Jones & Lamson Machine Company. 140,280, renewed Jan. 6, 1948. O. G. July 13.
Lathes, drills, borers, and grinders. Bradford Machine Tool Co. 439,634, July 13; Serial No. 510,932, published Apr. 6, 1948.
Lawn mowers. Great States Corporation. 273,397, Aug. 5, 1930. Republished July 13.
Lawn mowers. Great States Corporation. 275,205, Sept. 16, 1930. Republished July 13.
Lawn mowers. Great States Corporation. 314,840, July 10, 1934. Republished July 13.
Machines for printing addresses or other matter. Addressograph Company. 54,697, June 26, 1906. Republished July 13.
Machines for printing addresses and other matter. Addressograph Company. 147,447, Oct. 18, 1921. Republished July 13.
Metal-cutting machines. Niles Tool Works Company. 240,510, renewed Mar. 27, 1948. O. G. July 13.
Molds for making frozen articles. L. A. Mayer. 439,704, July 13; Serial No. 519,022, published Apr. 13, 1948.
Oil field equipment. Gulf Coast Machine & Supply Company. 290,210, Aug. 13, 1940. Republished July 13.
Planes, hand-operated shapers provided with cutting edges. Stanley Rule & Level Company. 67,119, re-renewed Jan. 14, 1948. O. G. July 13.
Planes, spokeshaves, and scrapers. Stanley Rule & Level Company. 62,867, re-renewed May 5, 1948. O. G. July 13.
Plier wrenches, hand wrenches, and manually used grasping and locking tools. Lynn Products Co. 439,696, July 13; Serial No. 515,575, published Apr. 13, 1948.
Power-driven shears for cutting metal, leather, Celluloid, etc. Unishear Co., Inc. 238,631, renewed Feb. 14, 1948. O. G. July 13.
Printing devices. Addressograph Company. 292,078, Mar. 1, 1932. Republished July 13.
Printing machine and parts thereof, duplicating machines, and parts thereof. Addressograph-Multigraph Corporation. 243,106, Feb. 9, 1937. Republished July 13.
Printing machines. Addressograph Company. 226,560, Apr. 12, 1927. Republished July 13.
Printing machines and parts thereof. Addressograph Company. 316,263, Aug. 21, 1934. Republished July 13.
Printing machines and parts thereof. American Multigraph Sales Company. 146,163, Sept. 6, 1921. Republished July 13.
Pumps. A. S. Marlow, Sr. 439,734, July 13; Serial No. 508,056.
Punches, shears, bending and straightening rolls, etc. Consolidated Machine Tool Corporation of America. 243,567, June 26, 1928. Republished July 13.
Rasps and files. Stokes Bros. Manufacturing Co. 439,692, July 13; Serial No. 512,473, published Apr. 13, 1948.
Razor blades. Great American Tea Company. 500,979, July 13; Serial No. 528,467, published Apr. 6, 1948.
Rolls, crushers, pulverizers, etc. American Car and Foundry Company. 439,727, July 13; Serial No. 524,265, published Apr. 13, 1948.
Saws, Jig. Boone Bros., Inc. 500,977, July 13; Serial No. 523,322, published Apr. 6, 1948.
Scrapers, glass pliers, chisels, etc., Wall and floor. Glaziers' Tool Mfg. Corp. 439,726, July 13; Serial No. 524,127, published Apr. 13, 1948.
Stapling machines. Groff Bros. Cooperage Corporation. 302,227, Dec. 18, 1941. Republished July 13.
Stapling machines, Desk type. American Beauty Florist, Inc. 439,731, July 13; Serial No. 526,173, published Apr. 6, 1948.
Tackle blocks and parts therefor. Western Block Co. 246,219, renewed Sept. 4, 1948. O. G. July 13.
Tire spreading machines. Bowen "Seal Fast" Corporation. 374,008, Dec. 26, 1939. Republished July 13.
Tool-handles, Iron. Stanley Rule & Level Company. 67,226, re-renewed Jan. 21, 1948. O. G. July 13.
Tool holders and parts, Screw machine and turret lathe. M. J. Schlittens. 425,005, Oct. 29, 1946. Republished July 13.
Tools, Bending and straightening. Blackhawk Mfg. Co. 500,943, July 13; Serial No. 483,458, published Apr. 13, 1948.
Weed burners. Woolery Machine Company. 500,967, July 13; Serial No. 527,472, published Apr. 13, 1948.
Wood cutting and treating equipment, paper making and pulp mill equipment, etc. D. J. Murray Manufacturing Co. 396,790, Aug. 4, 1942. Republished July 13.
Wrenches. Plomb Tool Company. 501,020, July 13; Serial No. 540,008, published Apr. 6, 1948.

CLASS 26

Bevels, calipers, dividers. L. S. Starrett Company. 161,430, Mar. 18, 1924. Republished July 13.
Bevels, calipers, dividers, etc. L. S. Starrett Co. 86,215, Sept. 3, 1912. Republished July 13.
Cameras, Photographic. Agfa Ansco Corporation. 283,900, May 5, 1931. Canceled. O. G. July 13.
Charts, Mechanical calculating. G. L. Tilbrook. 406,531, Apr. 11, 1944. Republished July 13.
Electrical instruments. Jabez Burns & Sons, Inc. 439,677, July 13; Serial No. 506,580, published Mar. 30, 1948.
Electrical measuring instruments. Landis & Cyr, A. G. 245,782, renewed Aug. 21, 1948. O. G. July 13.
Frames, Optical. V. Ballerno. 432,723, Sept. 9, 1947. Canceled. O. G. July 13.
Micrometers, Remote-reading. F. M. Poole. 429,782, May 20, 1947. Republished July 13.
Money-changers. Brandt Cashier Company. 93,421, Sept. 16, 1913. Republished July 13.
Rules, Stanley Works. 242,157, renewed May 15, 1948. O. G. July 13.
Rules, Folding. Stanley Rule & Level Company. 69,172, re-renewed May 26, 1948. O. G. July 13.
Rules, Folding. Stanley Rule & Level Company. 69,191, re-renewed May 26, 1948. O. G. July 13.
Water-meters. Builders Iron Foundry. 67,950, re-renewed Feb. 25, 1948. O. G. July 13.

CLASS 27

Time detectors, watch clocks, and watchmen's clocks. Watchmen's. Deter Watchclock Corporation. 246,462, renewed Sept. 11, 1948. O. G. July 13.

Green, Warren, and Schladermundt.
Schladermundt, Peter, and Emalie.

Streng, Jan, Mason, N. H., assignor to Remington Rand Inc., Buffalo, N. Y. Bookkeeping machine. 150,271, July 13.

Sun-Kraft, Inc., assignee: *See*—
Furedy, Frank, and Dynes.

Tennyson, Homer W.: *See*—
Wand, Alvin P., and Tennyson.

Thomson, Clytie A., Roanoke, Va. Bench. 150,272, July 13.

Tilton & Cook Co., assignee: *See*—
Holden, Crofton C.

Toussaint, Jeanne, Paris, France, assignor to Cartier, Inc., New York, N. Y. Brooch or similar article. 150,273, July 13.

Tuynman, Hanton, Company, assignee: *See*—
Denys, Lucian.

United Aircraft Corporation, assignee: *See*—
Sikorsky, Igor I.

Velez, M. J., Rubbey Corporation, assignee: *See*—
Barton, Mell M.

W. & F. Manufacturing Co., Inc., The, assignee: *See*—
Williams, Paul A.

Wachsman, Melson J., Grand Rapids, assignor to Wilcox-Gay Corporation, Charlotte, Mich. Combination radio and phonograph cabinet. 150,274, July 13.

Waltman, Chauncey B., assignor to Shure Brothers Inc., Chicago, Ill. Microphone. 150,275, July 13.

Wand, Alvin P., and H. W. Tennyson, St. Louis, Mo. Bracelet. 150,276, July 13.

War, United States of America as represented by the Secretary of, assignee: *See*—
Jones, Thomas H.

Wedemeyer, Eric, Floral Park, N. Y. Music box. 150,277, July 13.

White, Satrauna W., Seattle, Wash., now by decree of marriage Satrauna W. Luckett. Jacket or the like. 150,278, July 13.

Wies, Frances, Brooklyn, N. Y. Make-up palette, or similar article. 150,279, July 13.

Wilcox-Gay Corporation, assignee: *See*—
Wachsman, Melson J.

Williams, Paul A., Ebenezer, assignor to The W. & F. Manufacturing Co., Inc., Buffalo, N. Y. Candle. 150,280, July 13.

Williams, Paul A., Ebenezer, assignor to The W. & F. Manufacturing Co., Inc., Buffalo, N. Y. Candle. 150,281, July 13.

Wolf, Arthur J.: *See*—
Meiller, William H., and W. D. and A. J. Wolff.

Wolff, Willard D.: *See*—
Meiller, William H., and W. D. and A. J. Wolff.

Young, Donald R., assignor to Jiffy Jet, Inc., Minneapolis, Minn. Plaque or similar article. 150,282, July 13.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 13TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Boggs, Mildred M., and Fevold.
Hanrahan, Francis P.
Jones, Chase B., and Meehan.
Rebberg, Chassie R., Mast, and Fisher.
Tanner, Fred W., Jr., Wichterham, and Van Lanen.

Aircraft Radio Corporation, assignee: *See*—
Drake, Frederick H.

Aktiebolaget Farrosan, assignee: *See*—
Roedahl, Karl-Gustaf.

Alaska Chemical Corporation, assignee: *See*—
Tandleria, Sam.

Allin, George G., assignor to Isaacson Iron Works, Seattle, Wash. Scraper. 2,445,063, July 13.

Amalgamated Wireless (Australasia) Limited, assignee: *See*—
Beadle, Ronald D., and Hood.

American Chain & Cable Company, Inc., assignee: *See*—
Reybern, John E., and Kehal.

American Chemical Paint Company, assignee: *See*—
Raukaitis, Albert J.

American Cyanamid Company, assignee: *See*—
Strauss, Robert P., Mariner, Barnes, and Stryker.

Ammco Tools, Inc., assignee: *See*—
Mitchell, Wallace F.

Anderson, Carl A., assignee, et al.: *See*—
Cruikshank, Hugo F.

Anderson, Charles C., Dayton, Ohio. Cigarette dispenser. 2,445,201, July 13.

Arco Company, The, assignee: *See*—
Foltz, Harold H.

Armour Research Foundation of Illinois Institute of Technology, assignee: *See*—
Tinkham, Russell J.

Aro Equipment Corporation, The, assignee: *See*—
Marette, Ralph T., and Richards.

Ascendrup, Bernard J., Seattle, Wash. Toy merry-go-round. 2,444,908, July 13.

Atlas Powder Company, assignee: *See*—
McFarland, David M.

Atlee, Zed J., Rockhurst, assignor to General Electric X-Ray Corporation, Chicago, Ill. Thermionic emitting device. 2,445,067, July 13.

Attorney General of the United States: *See*—
Feldt, Zoltan, Gereos, Demjén, and Klaig.
Molly, Hans.

Attridge, Richard F., Revere, Mass. Tube-bending mandrel. 2,444,907, July 13.

Automatic Electric Laboratories, Inc., assignee: *See*—
Ostline, John E.

Babcock & Wilcox Company, The, assignee: *See*—
Bailey, Ervin G., Hardgrove, and Stillman.
Miller, Benjamin H.

Babcox Bros. Co., assignee: *See*—
Schilling, Lorell J.

Bailey, Ervin G., Easton, Pa., and R. M. Hardgrove, Westfield, and T. B. Stillman, South Orange, assignors to The Babcock & Wilcox Company, Rockleigh, N. J. Fluid heat exchange installation. 2,444,968, July 13.

Bailey, Theodore, Habana, Cuba. Liquid dispenser handle and valve actuator. 2,445,101, July 13.

Baker, Arvid H., Port Allegany, assignor to Pittsburgh Corning Corporation, Allegheny County, Pa. Preparing cellular glass slabs. 2,445,004, July 13.

Baker, Harold L., Clovis, Calif. Velocanizer. 2,445,054, July 13.

Baker, Hobart, New Hyde Park, N. Y. Film viewer having a magazine for consecutively viewing films. 2,444,971, July 13.

Bamford, William P., Maumee, and J. D. Hemley, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Apparatus for tempering glass sheets or plates. 2,444,972, July 13.

Bangser, William, New York, N. Y., assignor to Maiman Company, Incorporated. Cloth-cutting machine. 2,444,909, July 13.

Barber-Colman Company, assignee: *See*—
Drake, Russell P.

Barker, George A., Rochester, N. Y. Muzzle brake for guns. 2,444,910, July 13.

Barnes, Robert B.: *See*—
Strauss, Robert P., Mariner, Barnes, and Stryker.

Barberville, Ralph J.: *See*—
Spiro, Benjamin R., and Barberville.

Beck, Carl R., San Francisco, Calif. Mowing tool. 2,445,015, July 13.

Beckwith Manufacturing Company, assignee: *See*—
Heaton, Walter H., and Vecsara.

Beech Aircraft Corporation, assignee: *See*—
Kiustas, John.

Beem Foundation, The, assignee: *See*—
Beem, Marvel D.

Beem, Marvel D., West Los Angeles, assignor of one-half to The Beem Foundation, Los Angeles, Calif. Hospital bed. 2,445,258, July 13.

Belanger, Albert P. D., Alton, Ill. Carrier device for bottles and the like. 2,445,202, July 13.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Slater, John C.

Bemis Bros. Bag Company, assignee: *See*—
Hannewald, Burton A., and Reimer.

Bendix Aviation Corporation, assignee: *See*—
Driscoll, Paul A.
Goeprich, Rudolph A.
Wirth, Emil O.

Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Acoustic structure. 2,444,911, July 13.

Bean, Stephen J., Philadelphia, Pa. Humidity modifying and heat conserving means. 2,445,102, July 13.

Bentley, Harold P., Syracuse, N. Y. Work manipulator. 2,445,014, July 13.

Berman, Harry, Cambridge, Mass., assignor to Reeves Ely Laboratories, Inc., New York, N. Y. Apparatus for determining electrical axis of quartz crystals. 2,445,182, July 13.

Best, Albert L., Darien, Conn. Diaper. 2,444,973, July 13.

Bethlehem Steel Company, assignee: *See*—
Poole, William D.

Betts, John T., Los Angeles, Calif. Workholding attachment for drill presses. 2,445,103, July 13.

Bigelow-Sanford Carpet Co., Inc., assignee: *See*—
Dildilian, Asa T.

Binnsweg, Abraham, Jr., Oakland, Calif. Twin-cooled radio tube. 2,445,260, July 13.

Bird, Lee O., assignee: *See*—
Brimhall, Kirk L.

Boodle, Ronald D., and I. A. Hood, assignors to Amalgamated Wireless (Australasia) Limited, Sydney, Australia. Deflecting circuit for cathode-ray tubes. 2,445,017, July 13.

Bodine, Albert G., Jr., Van Nuys, Calif. Method and apparatus for pumping. 2,444,912, July 13.

Boeing Airplane Company, assignee: *See*—
Orlob, Glenn.
Wolfe, Charles M.

Boggs, Mildred M., and H. L. Fevold, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture. Dried egg powder. 2,445,260, July 13.

Bond, George R., Jr., Paulsboro, N. J., assignor to Houdry Process Corporation, Wilmington, Del. Preparation of zirconia containing catalysts. 2,444,913, July 13.

Borg-Warner Corporation, assignee: *See*—
Pakenaid, John B.

Boston, Elmer S., Barlville, Ill. Trip-rope tensioning and releasing device. 2,444,974, July 13.

Boston Wire Stitcher Company, assignee: *See*—
Lindstrom, Charles M.
Maynard, Arthur H.

Bouwers, Albert: *See*—
Mulder, Johannes G. W., and Bouwers.

Bowers, Charles E., assignor to Fibre Metal Products Company, Chester, Pa., a partnership consisting of F. M. Bowers, C. E. Bowers, and J. W. Bowers. Headgear goggles. 2,445,203, July 13.

Bowser, S. F., & Company, Incorporated, assignee: *See*—
Kamm, Edmund W. E., and Delaney.

Boseman, John W., New York, assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Sinusoidal modulator. 2,445,204, July 13.

Brady, Francis E., Jr., Muncie, Ind. Sealing unit. 2,445,018, July 13.

Bramberry, Harry M., Sr., Newcastle, Ind. Piston ring tool. 2,444,975, July 13.

Brennan, Joseph B., Euclid, Ohio, assignor to E. D. McCurdy, trustee. Electrolytic devices and making same. 2,444,914, July 13.

Breslav, Jack, New Haven, Conn. Grapple. 2,445,019, July 13.

Brimhall, Kirk L., San Gabriel, Calif., assignor to L. O. Bird. Hauling scraper. 2,445,260, July 13.

Brinster, John F.: *See*—
Michels, Myron H., and Brinster.

Brofdo, Jacques J., Joinville-le-Pont, and J. Weisenbrodt, Paris, France. Shutter control device for moving picture apparatus. 2,445,288, July 13.

Brown Instrument Company, The, assignee: *See*—
Cherry, Lloyd B.
Keegan, James H.
Smith, Edgar M.
Tegge, Carlton S.
Younkin, Gavin S.

Brown, Wilbur F., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Absorption glasses. 2,444,978, July 13.

Bruestle, Carl O., Rahway, assignor to Syncro Machine Company, Perth Amboy, N. J. Tubular reel strander. 2,445,261, July 13.

Budd Company, The, assignee: *See*—
Pond, Clarke P.

Bujak, Jakub: *See*—
Green, George W. A., Bujak, and Rutherford.

Burn, Lewis, London, England. Pumping device for liquids. 2,445,205, July 13.

Burnside, Don G.: *See*—
Nergaard, Leon S., Burnside, and Penaak.

Butler, Bill E., and E. A. Shaw, Shreveport, La. Metal screen. 2,445,262, July 13.

Bynum, Pink T., Beeville, Tex. Bailer. 2,445,206, July 13.

Cade, Phillip J., assignor to Photoswitch, Incorporated, Cambridge, Mass. Electron discharge device. 2,444,915, July 13.

Capaul, Joseph A., Waunakee, Wis. Animal house. 2,446,055, July 13.

Cape, Arthur T., Columbus, and C. V. Foerster, Canton, Ohio, assignor to Coast Reduction, Inc., Watsonville, Calif. Reduction of iron ores. 2,44,916, July 13.

Cardinal Products Inc., assignee: *See*—
Schmitt, George P.

Cardox Corporation, assignee: *See*—
Williamson, Hilding V.

Carmo, John J., Arlington, Mass. Poultry feeder. 2,445,163, July 13.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Schulze, Arthur R.

Caserta, Michele, Detroit, Mich. Shaft seal. 2,445,207, July 13.

Celanese Corporation of America, assignee: *See*—
Seymour, George W., Salvin, and Hiesserman.

Chamberlain, Edward G.: *See*—
Hargrave, John E., and Chamberlain.

Chambers, Leslie A., Upper Darby, assignor to The Trustees of the University of Pennsylvania, Philadelphia, Pa. Virus vaccines. 2,445,900, July 13.

Chambers, Leslie A., Upper Darby, assignor to The Trustees of the University of Pennsylvania, Philadelphia, Pa. Influenza vaccine. 2,445,901, July 13.

Charles, Howard S., assignor of one-half to H. C. Morris, Toronto, Ontario, Canada. Locking device for interfitting members. 2,445,020, July 13.

Charney, Jesse, New York, N. Y., assignor to Wyeth Incorporated, Philadelphia, Pa. Solutions of ribodavin. 2,445,208, July 13.

Cherry, Lloyd B., Beaumont, Tex., assignor to The Brown Instrument Company, Philadelphia, Pa. Induction motor damping system. 2,445,289, July 13.

Cherniavsky, Alexander J.: *See*—
Souders, Mott, Jr., and Cherniavsky.

Chicago Electric Manufacturing Company, assignee: *See*—
Rodwick, Frank.

Chicago Seal Co., assignee: *See*—
Goldberg, Herman M., and Karlberg.

Christman, John N. H., Jr.: *See*—
Lintern, William A., and Christman.

Clark, Austin B. J., Washington, D. C. Single-electrode high-speed recording device. 2,444,917, July 13.

Clark, Earl K., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Thermostatic switch. 2,445,021, July 13.

Clark, Edward S., Philadelphia, Pa. Absorptive headwear pad. 2,445,209, July 13.

Clark, Marion A., Tulare, assignor to A. G. Gurries, Gilroy, Calif. Land leveler. 2,444,977, July 13.

Clarkson, Alick, Bloomingdale Township, Du Page County, Ill. Apparatus for burning liquid fuels. 2,445,302, July 13.

Cleveland Welding Company, The, assignee: *See*—
Mueller, Homer L.

Coast Reduction, Inc., assignee: *See*—
Cape, Arthur T., and Foerster.

Collins Radio Company, assignee: *See*—
Vogel, Vernon H.

Colman, Bol, Los Angeles, Calif. Computing scale. 2,445,022, July 13.

Colton, Dudley T., Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Manufacture of fibro-cementitious sheets. 2,445,210, July 13.

Columbus McKinnon Chain Corporation, assignee: *See*—
Kieffer, Raymond J.

Colvin, Charles M., deceased, Wilmette, Ill.; J. L. Corliss, executor, assignor to N. M. Satterfield, Lexington, Ohio. Fuel carbureting means. 2,445,104, July 13.

Cone, Charles N., assignor to M and M Woodworking Company, Portland, Oreg. Making laminated structures. 2,444,918, July 13.

Conrad, Delmar R.: *See*—
Reynolds, Frank M., and Conrad.

Conrad, Delmar R., and F. M. Reynolds, San Gabriel, Calif. Telescoping drawbar. 2,444,979, July 13.

Consolidated Engineering Corporation, assignee: *See*—
Washburn, Harold W.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Kittel, Howard S.

Control Instrument Company, Inc., assignee: *See*—
Boseman, John W.

Cooke, Giles G., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Closure. 2,444,978, July 13.

Cordis, Nat, Bassett, Wis. Silo discharger. 2,445,056, July 13.

Corliss, John L., executor: *See*—
Colvin, Charles M.

Cotton, Robert B., Lansdowne, Pa., R. J. Ryan, United States Marines, and J. J. Domoj, United States Navy. Release coupling. 2,444,819, July 13.

Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.

Crown Cork & Seal Company, Inc., assignee: *See*—
Cooke, Giles B.

Crulkshank, Ross T., assignor of forty-five per cent to C. A. Anderson, Minneapolis, Minn., and ten per cent to L. Wigen. Pump jack. 2,445,123, July 13.

Crumrine, Chester W., Irondequoit Township, Monroe County, assignor, by mesne assignments, to L F C Corporation, Rochester, N. Y. Animal trap. 2,445,166, July 13.

Cullen, James G., and H. H. Spear, Baltimore, Md. Toy steam shovel. 2,445,106, July 13.

Cummins, Clyde, Middletown, Ind. Rider propelled vehicle. 2,444,990, July 13.

Curell, Randal B., Jr., Lansdowne, Pa. Tractor-trailer construction. 2,445,134, July 13.

Curtis, John R., Jr., Norwood, assignor to Scott Paper Company, Chester, Pa. Doctor holder. 2,445,135, July 13.

Dahl, Harry, and H. W. Huebner, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Automatic disk cutter. 2,445,167, July 13.

Dailey, James A., Milwaukee, Wis. Doorstop. 2,444,961, July 13.

Dana Corporation, assignee: *See*—
Thelander, W. Vincent.

Davis, George B., Jr., Washington, D. C., and I. F. Rosenkrantz, Greenbelt, Md. Firing mechanism. 2,444,990, July 13.

Davison Chemical Corporation, The, assignee: *See*—
Iannogio, Paul D., and Roplogle.

Dawson, John W., West Newton, and H. Klemperer, Belmont, assignors to Raytheon Manufacturing Company, Newton, Mass. Ignition circuits for vapor discharge devices. 2,444,921, July 13.

Daybrook Hydraulic Corporation, The, assignee: *See*—
Torgerson, Norman B.

Deetman, Cornelia, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Connecting a driven member to a shaft. 2,444,922, July 13.

De Havilland Aircraft Company Limited, The, assignee: *See*—
Halford, Frank B.

Delaney, John J.: *See*—
Kamm, Edmund W. E., and Delaney.

Deming Company, The, assignee: *See*—
Odey, Ralph B.
Shalelnberg, Walter.

Demjen, István: *See*—
Füidi, Zoltán, Gerecs, Demjén, and König.

Dempster, George R., Knoxville, Tenn. Automatic hook. 2,445,108, July 13.

Didillian, Ara T., Suffield, assignor to Bigelow-Sanford Carpet Co., Inc., Thompsonville, Conn. Carpet joined with tape. 2,445,168, July 13.

Distad, Merril F.: *See*—
Page, Robert M., and Distad.

Domoj, John J.: *See*—
Cotton, Robert B., Ryan, and Domoj.

Drake, Frederick H., assignor to Aircraft Radio Corporation, Boonton, N. J. Radio tuning mechanism. 2,445,211, July 13.

Drake, James W., assignor to Woodward Governor Company, Rockford, Ill. Synchronizing control. 2,444,923, July 13.

Drake, Russell P., Caledonia, assignor to Barber-Colman Company, Rockford, Ill. Heddle frame. 2,445,107, July 13.

Drake, Russell P., Caledonia, assignor to Barber-Colman Company, Rockford, Ill. Heddle frame. 2,445,108, July 13.

Dresser Industries, Inc., assignee: *See*—
Newell, Frederick T.

Driscoll, Paul A., assignor to Bendix Aviation Corporation, South Bend, Ind. Sealing arrangement. 2,445,087, July 13.

Duncan, Gordon W.: *See*—
Zimmer, John C., and Duncan.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Grace, Worthington T., and Muller.
Iler, Ralph K.
Silverman, Shirleigh.

Eaby, Grover A., assignee: *See*—
Eaby, Paul M.

Eaby, Paul M., deceased, by A. Y. Urey, Executrix, Lancaster, Pa., assignor to G. A. Eaby. Level winding attachment for reels. 2,445,212, July 13.

Eastman Oil Well Survey Company, assignee: *See*—
Wright, Stanley.

Ebert, Harry F., Brooklyn, N. Y. Extensible connector. 2,445,109, July 13.

Eggert, Rudy, assignee: *See*—
Wilhite, Leo H.

Egnal, Dominic, Los Gatos, Calif. Easel. 2,445,136, July 13.

Engel-Kruse Company, assigned: *See*—
Pence, William A.

Evans, John, Palmyra, N. J., assignor to Radio Corporation of America. Obstacle detector. 2,445,213, July 13.

Everett, Samuel J., Thornton Heath, England. Medical syringe. 2,444,982, July 13.

Ex-Cell-O Corporation, assignee: *See*—
Hick, Carl F.
Hedler, James F.
Mathys, Max A.

Failla, Ignatius G.: *See*—
Gravinese, Frank A. V., and Failla.

Farber, Edward, New Haven, Conn., assignor to Polyxor Chemical Co. Inc. Conversion of furfuryl-alcohol. 2,445,137, July 13.

Farkas, Ladislaus G., and O. Schlichter, Jerusalem, Palestine. Oxidizing primary or secondary alcoholic hydroxyl groups or aldehyde groups. 2,444,924, July 13.

Farmer, Roy E., Detroit, assignor to Ford Motor Company, Dearborn, Mich. Steering gear. 2,445,263, July 13.

Faust, Howard C., assignee: *See*—
Foran, John L., and Houghton.

Ferguson, Andrew W., Great Neck, assignor to Ford Instrument Company, Inc., Long Island City, N. Y. Coil winder. 2,445,109, July 13.

Ferguson, Elmo A., North Sacramento, Calif. Lumber footage calculator. 2,444,963, July 13.

Ferguson, J. L., Company, assignee: *See*—
Ferguson, John L.

Ferguson, John L., assignor to J. L. Ferguson Company, Joliet, Ill. Vertical shrinker apparatus. 2,445,214, July 13.

Fevold, Harry L.: *See*—
Beggs, Mildred M., and Fevold.

Fiber Metal Products Company, assignee: *See*—
Bowers, Charles E.

Fields, George C., Cleveland, Ohio, assignor to Solar Corporation, Milwaukee, Wis. Motor vehicle control mechanism for sequentially controlling wheel braking and motor speed. 2,445,058, July 13.

Florine, Charles, Hawthorne, assignor of 65 per cent to Infold Novelty Company, Paterson, N. J. Weft cutter on multishuttle box looms. 2,445,024, July 13.

Fischer, Waldo F., assignor to C. B. Kimball, Chattanooga, Tenn. Container washing machine. 2,444,925, July 13.

Fisher, Charles H.: *See*—
Rehberg, Chessie H., Mast, and Fisher.

Fisher, Mark, Coventry, assignor to Sir W. G. Armstrong Whitworth Aircraft Limited, Baginton, Coventry, England. Apparatus for providing a ridge on a pipe of ductile material. 2,445,202, July 13.

Fisk, Edwin M., Mission San Jose, Calif. Crank-pin bearing. 2,445,025, July 13.

Fitzpatrick, W. J., Company, The, assignee: *See*—
Fitzpatrick, William J.

Fitzpatrick, William J., assignor to The W. J. Fitzpatrick Company, Chicago, Ill. Stabilized lecithin. 2,444,984, July 13.

Flexitallic Gasket Company, The, assignee: *See*—
Lippincott, Stanley E.

Florence Stove Company, assignee: *See*—
Reeves, Herbert M.

Flory, Leslie E., Princeton, N. J., assignor to Radio Corporation of America. Electronic computer. 2,445,215, July 13.

Flowers, Ralph G.: *See*—
Miller, Harry F., and Flowers.

Foerster, Charles V.: *See*—
Cape, Arthur T., and Foerster.

Füidi, Zoltán, A. Gerecs, I. Demjén, and E. König, Budapest, Hungary, vested in the Attorney General of the United States. Sulphonamide derivatives. 2,444,926, July 13.

Foltz, Harold H., assignor to The Aro Company, Cleveland, Ohio. Material mixing machine. 2,445,216, July 13.

Ford Instrument Company, Inc., assignee: *See*—
Ferguson, Andrew W.

Ford Motor Company, assignee: *See*—
Farmer, Roy E.

Frank, Lewis, Fellows, Calif. Rivet inserting tool. 2,445,026, July 13.

French, Louis O., Milwaukee, Wis. Grinder. 2,445,138, July 13.

Frey, Glenn F., Greenfield, assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electrical transformer and primary winding thereof. 2,445,169, July 13.

Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Treatment of hydrogen fluoride solutions. 2,445,217, July 13.

Fritch, Charles A., Brantford, Ontario, Canada. Grit blending and spreading machine. 2,445,027, July 13.

Fuehrer, George H., Phillipsburg, N. J., and C. W. Hoeking, Easton, Pa., assignors to Ingersoll-Rand Company, New York, N. Y. Drilling machine. 2,445,218, July 13.

Fulkerson, Dorman J.: *See*—
Kovacs, Stalis, and Fulkerson.

Fulton, Weston M., assignor to W. J. Savage Company, Inc., Knoxville, Tenn. Fuel burner. 2,444,985, July 13.

Gallagher, Charles E., Doylestown, Pa. Automatic braking system for aircrafts. 2,444,927, July 13.

Garretson, Owen L., Bartlesville, Okla., assignor to Phillips Petroleum Company. Heater. 2,445,060, July 13.

Gauvreau, Alphonse P., East Cleveland, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Overload relay having an instantaneous primary movement and a delayed secondary movement. 2,445,110, July 13.

Gearhart, Carl E., Wilmington, Del. Micrometer depth gauge. 2,446,060, July 13.

Gebhardt, William C., San Antonio, Tex. Holder for paint buckets and the like. 2,444,986, July 13.

Gellman Manufacturing Company, assignee: *See*—
Petskeyen, Charles H.

General Aniline & Film Corporation, assignee: *See*—
Prentice, Russell H.
Talalay, Vsevolod.

General Electric Company, assignee: *See*—
Graf-Baker, William S.
Miller, Harry F., and Flowers.
Spitz, Benjamin E., and Baskerville.
Tober, John W.
Umbreager, Robert E.

General Electric X-Ray Corporation, assignee: *See*—
Atlee, Zed J.

General Tire & Rubber Company, The, assignee: *See*—
Te Grotenhuis, Theodore A., and Swart.

George, Millard C., El Cerrito, Calif. Calculator. 2,445,264, July 13.

Gerecs, Arpád: *See*—
Füidi, Zoltán, Gerecs, Demjén, and König.

Gleason, Norman D., Lakewood, Ohio. Wedge-shaped dispensing container for powdery substances. 2,444,987, July 13.

Goepfrich, Rudolph A., assignor to Bendix Aviation Corporation, South Bend, Ind. Hydraulic brake actuator. 2,445,061, July 13.

Goldberg, Herman M., and A. E. Karlberg, assignors to Chicago Seal Co., Chicago, Ill. Seal. 2,445,062, July 13.

Gonczi, Sophie, Union City, N. J. Fountain pen cap having a multiple cylinder, single axis calendar. 2,445,170, July 13.

Gonda, Dezird, London, assignor to Holoplast, Limited, New Hythe, near Maidstone, England. Hollow cavitied bodies such as rigid hollow panel structures and making the same. 2,445,290, July 13.

Gouinlock, Edward V., Warsaw, N. Y. Machine for stacking hay or straw. 2,445,111, July 13.

Grace, William J., Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy. Visual vibrating reed stroboscope. 2,445,304, July 27.

Grace, Worthington T., Upper Darby, Pa., and J. C. Muller, Jr., Little Falls, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Forming SO_2 by burning sulfur. 2,445,112, July 13.

Graf-Baker, William S., Rugby, England, assignor to General Electric Company. Regulator. 2,445,171, July 13.

Grand Specialties Company, assignee: *See*—
Sangon, Anthony M.

Gravinese, Frank A. V., Bronx, and I. G. Failla, Elmhurst, Long Island, N. Y. Screw lock for eyeglasses and the like. 2,445,172, July 13.

Greaves, Raymond, Scarborough, England. Vehicle suspension. 2,445,219, July 13.

Green, George W. A., and J. Bujak, Staines, and R. E. Rutherford, Windsor, assignors to Lagonda Limited, Staines, Middlesex, England. Hydraulic governor. 2,445,113, July 13.

Grut, Charles A., Wolverhampton, England. Shock absorbing device for aircraft and other power-driven vehicles. 2,445,139, July 13.

Guarnaschelli, Stephen, Mount Vernon, assignor to Packless Metal Products Corporation, New Rochelle, N. Y. Safety device for flexible tubing. 2,444,988, July 13.

Gurries, Albert G., assignee: *See*—
Clark, Marion A.

Guyer, Edwin M., Corning, N. Y. Electric glass heating. 2,445,063, July 13.

H. & A. Manufacturing Co., Inc., assignee: *See*—

Page, Robert M., Washington, D. C., and M. F. Dietzel, Cheverly, Md. Filament by-pass condenser. 2,445,256, July 13.
Paget, Wm W., Michigan City, Ind., assignor to Joy Manufacturing Company. Cable conditions controlling apparatus. 2,444,951, July 13.
Paget, Wm W., Michigan City, Ind., assignor to Joy Manufacturing Company. Pump control mechanism. 2,444,952, July 13.
Palm, George A. V. and M. A., Pillawa, South Australia, Australia. Measuring pump with adjustable stop. 2,445,279, July 13.
Palm, Milton A.: *See*—
Palm, George A. V. and M. A.
Parker, John J., and L. T. Morawski, Detroit, Mich. Mandrel. 2,445,194, July 13.
"Patelhold" Patentverwertungs- & Elektro-Holding A.-G. of Glarus, assignee: *See*—
Matthias, Bernd.
Pava, Jack B., assignor of one-half to D. F. Pincock, Santa Barbara, Calif. Plaster bandage forming machine. 2,445,073, July 13.
Pearl, Irwin A.: *See*—
Lewis, Henry F., and Pearl.
Pence, William A., Adell, assignor to Eagle-Picher Company, West Bend, Wis. Cigarette case. 2,445,001, July 13.
Pensak, Louis: *See*—
Nergaard, Leon S., Burnside, and Pensak.
Perfect Circle Corporation, assignee: *See*—
Thompson, Joseph C.
Petersdorf, Walter M., Milwaukee, Wis. Lamp. 2,445,079, July 13.
Petheryes, Charles H., Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill. Web roll support. 2,445,080, July 13.
Pfetcher, Theophil J., Norwalk, Wis. Cover and filter for milker pails. 2,445,122, July 13.
Philco Corporation, assignee: *See*—
Montgomery, Andrew P.
Phillips Petroleum Company, assignee: *See*—
Garretson, Owen L.
Frey, Frederick E.
Himel, Chester M.
Photoswitch, Incorporated, assignee: *See*—
Cade, Phillip J.
Pincock, Douglas F., assignee: *See*—
Pava, Jack B.
Pittsburgh Corning Corporation, assignee: *See*—
Baker, Arvid H.
Pokorny, Louis, Rockaskema, and L. Pokorny, Jr., Lake Hopkinhoma, N. Y. Adjustable sofa construction. 2,445,241, July 13.
Pokorny, Louis, Jr.: *See*—
Pokorny, Louis, and L., Jr.
Polewski, John B., Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission control system. 2,444,953, July 13.
Polyzor Chemical Co., Inc., assignee: *See*—
Farber, Edward.
Pond, Clarke P., assignor to The Budd Company, Philadelphia, Pa. Spring suspension. 2,445,296, July 13.
Poole, William D., Baltimore, Md., assignor to Bethlehem Steel Company. Shipping package. 2,445,152, July 13.
Pouille, Robert P., Armentieres, France. Hydraulic device for controlling several members with a predetermined automatic interdependency. 2,445,051, July 13.
Powell, Henry K., assignor to Morris Paper Mills, Chicago, Ill. Shipping and display carton. 2,445,280, July 13.
Pozun, John L., and L. Heroglitou, assignors of one-third to H. C. Faust, Johnstown, Pa. Foldable shelf. 2,445,082, July 13.
Prentice, Russell B., Celina, Ohio, assignor to General Aniline & Film Corporation, New York, N. Y. Bed latch for cameras. 2,445,096, July 13.
Priestman Brothers, Messrs, Limited, assignee: *See*—
Priestman, Sydney H.
Priestman, Sydney H., Hull, assignor to Messrs Priestman Brothers Limited, Hull, York, England. Grab for lifting materials. 2,445,002, July 13.
Radde, George, Crater Line, Mich. Cable grab block. 2,445,123, July 13.
Rademaker, George, Chicago, Ill. Rail joint. 2,444,954, July 13.
Radio Corporation of America, assignee: *See*—
Evans, John.
Flory, Leslie E.
Nergaard, Leon S.
Nergaard, Leon S., Burnside, and Pensak.
Nicoll, Frederick H., and Williams.
Rungo, Frank B.
Schade, Otto H.
Stone, Robert P.
Wolf, Irving.
Ramsdanoff, Dimiter, Cleveland, Ohio, assignor to National Carbon Company, Inc. Electrical brush for high altitude operation. 2,445,003, July 13.

Randolph, Clifford F., Brooklyn, N. Y., assignor to International Cigar Machinery Company. Tuck end support. 2,445,004, July 13.
Ray-O-Vac Company, assignee: *See*—
Schmelzer, Rupert J.
Raytheon Manufacturing Company, assignee: *See*—
Dawson, John W., and Klemperer.
Stutzman, Paul W.
Rearick, Charles B., Flushing, N. Y. Glare reducing device. 2,445,158, July 13.
Reed, Merrill R., Kansas City, Kans. Bubble cap structure for fractionating towers. 2,445,083, July 13.
Reed, Robert M., Stewartsville, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Blade mounting. 2,445,154, July 13.
Reese, Michael, Research Foundation, assignee: *See*—
Levinson, Sidney O., and Oppenheimer.
Reeves, Herbert M., Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass. Cabinet type cooking stove. 2,445,124, July 13.
Reeves Laboratories, Inc., assignee: *See*—
Berman, Harry.
Rehberg, Chessie R., Glenside, W. C. Mast, Philadelphia, and C. H. Fisher, Abington, Pa., assignors to United States of America, as represented by the Secretary of Agriculture. Plasticized ethyl cellulose composition. 2,445,064, July 13.
Rehberg, Chessie R., Glenside, W. C. Mast, Philadelphia, and C. H. Fisher, Abington, Pa., assignors to the United States of America, as represented by the Secretary of Agriculture. Plasticized composition containing a cellulose ether and a polyacrylic acid ester. 2,445,065, July 13.
Reimer, Harold D.: *See*—
Hannewald, Burton A., and Reimer.
Reiser, Alfred A., assignor to H. & A. Manufacturing Co., Inc., Buffalo, N. Y. Electric clamp-on heater. 2,445,185, July 13.
Remington Rand, Inc., assignee: *See*—
Rigge, Robert W.
Replogle, Mahlon H.: *See*—
Iannogia, Paul D., and Replogle.
Research Corporation, assignee: *See*—
Nichols, Myron H., and Brinster.
Reyburn, John E., Fairfield, and L. Kuhal, Stratford, assignors to American Chain & Cable Company, Inc., Bridgeport, Conn. Lock nut. 2,445,128, July 13.
Reynolds, Frank M.: *See*—
Conrad, Delmar E., and Reynolds.
Reynolds, Frank M., and D. E. Conrad, San Gabriel, Calif. Elevating platform truck. 2,445,004, July 13.
Richard, Grant M., assignor to Toledo Scale Company, Toledo, Ohio. Rotary grinder with stationary perforated plate. 2,445,087, July 13.
Richards, Wilbur R.: *See*—
Marette, Ralph T., and Richards.
Riemenschneider, Edmund W., and L. W. Shea, assignors to The Union Metal Manufacturing Company, Canton, Ohio. Bottom dumping material handling box. 2,445,038, July 13.
Riggs, Robert W., Stamford, Conn., assignor to Remington Rand, Inc., Buffalo, N. Y. Rear index card and holder for visible indexes. 2,445,159, July 13.
Ringer, Luther, Harrison Springs, assignor to Nineteen Hundred Corporation, St. Joseph, Mich. Time switch. 2,444,955, July 13.
Robertson, H. W., Company, assignee: *See*—
Wiesmann, Joseph W.
Robinson, William A., assignee: *See*—
Wallace, William M.
Rodwick, Frank, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Ceramic heating plate construction. 2,445,006, July 13.
Roethel, John H., Detroit, Mich. Door lock. 2,445,167, July 13.
Rogers, Earl B., Cleveland, Ohio. Gun sight. 2,445,087, July 13.
Roothal, Karl-Gustaf, assignor to Aktiebolaget Ferrosah, Malmo, Sweden. Producing a 4-amino salicylic acid. 2,445,242, July 13.
Rungo, Frank B., Haddon Heights, N. J., assignor to Radio Corporation of America. Assembly for electron microscopes. 2,445,243, July 13.
Rusnak, John, Chicago, Ill. Tool mounting bracket. 2,445,088, July 13.
Rutherford, Richard B.: *See*—
Green, George W. A., Bujak, and Rutherford.
Ryan, Richard J.: *See*—
Cotton, Robert B., Ryan, and Demoj.
Rystrom, Charles H., Rockford, Ill. Hydraulic pump. 2,445,281, July 13.
Salvia, Victor S.: *See*—
Seymour, George W., Salvia, and Hiesserman.
Sangen, Anthony M., assignor to Grand Specialties Company, Chicago, Ill. Quick-clamping vise. 2,445,188, July 13.
Satterfield, Noble M., assignee: *See*—
Colvin, Charles M.
Saukaitis, Albert J., Wayne, assignor to American Chemical Paint Company, Ambler, Pa. Protection of cupriferous surfaces. 2,445,155, July 13.
Savage, W. J., Company, Inc., assignee: *See*—
Fulton, Weston M.

Schlichter, Onjass: *See*—
Farkas, Ladislaus G., and Schlichter.
Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Dark spot corrector. 2,445,040, July 13.
Schering Corporation, assignee: *See*—
Schwenk, Erwin.
Schilling, Lorell J., Galesville, Wis., assignor to Rebeon Bros. Co. Current limiting transformer. 2,445,088, July 13.
Schmelzer, Rupert J., Madison, Wis., assignor to Ray-O-Vac Company. Leakproof dry cell. 2,445,005, July 13.
Schmitt, George P., assignor to Cardinal Products Inc., New York, N. Y. Lighter. 2,444,956, July 13.
Scholz, Louis A., Dayton, Ohio. Silhouette reproducing machine. 2,445,041, July 13.
Schulze, Arthur R., Johnstown, Pa., assignor to Carnegie-Illinois Steel Corporation. Guard rail. 2,445,089, July 13.
Schwenk, Anthony F., Alden, N. Y. Vibrator for concrete mixers. 2,445,126, July 13.
Schwenk, Earl B., Seattle, Wash. Hot liquid pump. 2,445,127, July 13.
Schwenk, Erwin, Montclair, assignor to Schering Corporation, Bloomfield, N. J. Steroid keto hydroxy acids and their polybasic acid esters and preparing same. 2,445,008, July 13.
Scott Paper Company, assignee: *See*—
Curtis, John R., Jr.
Seaver, Leo M., Kokomo, Ind. Multiple connection. 2,445,944, July 13.
Sexton, Robert L., Flushing, N. Y. Engine ignition and power testing apparatus. 2,445,245, July 13.
Sexton, Wilfred A., Manchester, England, assignor to Imperial Chemical Industries Limited. Prevention and destruction of weeds. 2,444,958, July 13.
Seymour, George W., V. B. Salvia, and C. E. Hiesserman, Cumberland, Md., assignors to Celanese Corporation of America. Dyestuffs of the anthraquinone series. 2,445,007, July 13.
Shallenberg, Walter, assignor to The Deming Company, Salem, Ohio. Jet and valve assembly. 2,445,248, July 13.
Shaw, Emmett A.: *See*—
Butler, Bill E., and Shaw.
Shea, Lindsey W.: *See*—
Riemenschneider, Edmund W., and Shea.
Shell Development Company, assignee: *See*—
Shokal, Edward C.
Souders, Mott, Jr., and Cherniavsky.
Shokal, Edward C., Oakland, assignor to Shell Development Company, San Francisco, Calif. Polymerization of unsaturated compounds in the presence of a peroxide and a hydrogen halide. 2,445,189, July 13.
Silverman, Shirleigh, Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Treating oriented acrylonitrile structures. 2,445,042, July 13.
Simon, Albert: *See*—
Strauss, Harold R., and Simon.
Singer Manufacturing Company, The, assignee: *See*—
Zeier, Frederick P.
Skinner, Leslie A., Berkeley, Calif., assignor to United States of America as represented by the Secretary of War. Flash reducer. 2,444,957, July 13.
Slater, John C., Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Tuning arrangement for cavity resonators. 2,445,282, July 13.
Smidt, Arnold, Elmhurst, N. Y. Calculator. 2,445,008, July 13.
Smith, Edgar M., Trenton, N. J., assignor to The Brown Instrument Company, Philadelphia, Pa. Temperature measuring instrument. 2,445,156, July 13.
Smith, Harry F., Lexington, assignor to Mansfield Sanitary Pottery, Inc., Perrysville, Ohio. Flush tank valve. 2,444,959, July 13.
Smith, Harry F., Lexington, assignor to Mansfield Sanitary Pottery, Inc., Perrysville, Ohio. Flush valve mechanism for tanks. 2,444,960, July 13.
Smith, Henry R.: *See*—
Kester, Robert B., and Smith.
Smith, Lee L., and J. A. Sprung, assignors to Regents of the University of Minnesota, Minneapolis, Minn. Preparing carbinols. 2,444,960, July 13.
Smith, Richard G., Amsterdam, N. Y. Toy railroad accessories. 2,444,961, July 13.
Smith, Thomas R., assignor to The Maytag Company, Newton, Iowa. Shaft seal. 2,445,247, July 13.
Smith, Wilbert B., Ottawa, Ontario, Canada. Interference reduction for radio signal receivers. 2,445,157, July 13.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Hochgesang, Frank P.
Utterback, Ernest.
Solar Corporation, assignee: *See*—
Fields, George C.
Souders, Mott, Jr., Piedmont, and A. J. Cherniavsky, assignors to Shell Development Company, San Francisco, Calif. Method and apparatus for distillation of mixtures forming two liquid phases. 2,445,043, July 13.
Sparhawk, Frank, Akron, Ohio. Hospital bed. 2,445,158, July 13.
Spear, Edwin H.: *See*—
Cullen, James G., and Spear.

Speed Products Company, Inc., assignee: *See*—
Von Cash, Louis.

Sperry Corporation, The, assignee: *See*—
Harrison, Arthur E.

Spiller, William R., Dayton, assignor to Harrie-Seybold Company, Cleveland, Ohio. Cutting machine. 2,445,248, July 13.

Spiro, Benjamin E., Philadelphia, and R. J. Baxterville, Merwood Park, Pa., assignors to General Electric Company. Electric circuit breaker. 2,445,190, July 13.

Sproull, Charles W., deceased, Houston, Tex., E. M. Sproull, executrix. Well tubing. 2,445,149, July 13.

Sproull, Edith M., executrix: *See*—
Sproull, Charles W.

Sprung, Joseph A.: *See*—
Smith, Lee L., and Sprung.

Stamm, Robert F., Stamford, T. Mariner, South Norwalk, R. B. Barnes, Stamford, and C. R. Stryker, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Differential refractometer. 2,445,044, July 13.

Standard Oil Company, The, assignee: *See*—
Musselman, John M., and Lankelma.

Standard Oil Development Company, assignee: *See*—
Hemminger, Charles B.
Morrell, Charles B.
Zimmer, John C., and Duncan.

Steel Heddle Manufacturing Company, assignee: *See*—
Kaufmann, John J.

Steingruber, George, Atlanta, Ga. Air-circulating heater. 2,445,250, July 13.

Sterrett, Robert E., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Curing olefin-diolefin copolymers. 2,445,283, July 13.

Stillman, Thomas B.: *See*—
Bailey, Ervin G., Hardgrove, and Stillman.

Stone, Robert P., Grigmtown, N. J., assignor to Radio Corporation of America. Electron discharge device and associated circuit. 2,445,237, July 13.

Strachan, Christopher, Madison, N. J., Sound-trapping muffler construction. 2,445,045, July 13.

Strauss, Harold E., and A. Stuss, Fall City, Nebr. Electric fence post and insulator. 2,445,009, July 13.

Stryker, Charles R.: *See*—
Stamm, Robert F., Mariner, Barnes, and Stryker.

Stuttsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrode structure for electrical gaseous discharge tubes. 2,444,962, July 13.

Submarine Signal Company, assignee: *See*—
Benioff, Hugo.
Turner, Edwin E., Jr.

Sulphite Products Corporation, assignee: *See*—
Lewis, Harry F., and Pearl.

Super Treat, Inc., assignee: *See*—
Nelson, Arthur L.

Swart, Gilbert H.: *See*—
Te Grotenhuis, Theodore A., and Swart.

Synchro Machine Company, assignee: *See*—
Bruestle, Carl O.

Tandlorio, Sam, Forest Hills, N. Y., assignor to Alaska Chemical Corporation, Paterson, N. J. Fleshing machine. 2,445,284, July 13.

Tanner, Fred W., Jr., L. J. Wickerham, and J. M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Biological production of riboflavin. 2,445,128, July 13.

Taylor Engines, Inc., assignee: *See*—
Taylor, Lloyd M.

Taylor, Lloyd M., San Leandro, assignor to Taylor Engines, Inc., San Francisco, Calif. Cylinder block. 2,444,963, July 13.

Tegge, Carlton S., Haddon Heights, N. J., assignor to The Brown Instrument Company, Philadelphia, Pa. Thermocouple tube with exposed junctions. 2,445,159, July 13.

Te Grotenhuis, Theodore A., Olmsted Falls, Ohio, and G. H. Swart, Wabash, Ind., assignors to The General Tire & Rubber Company, Akron, Ohio. Mixed polysulfide condensation product and making. 2,445,191, July 13.

Teker, John W., Wesleyville, Pa., assignor to General Electric Company. Traction motor blower control. 2,445,192, July 13.

Telephone Manufacturing Company Limited, assignee: *See*—
Lovesey, Horace.

Tessin, Fred F., Santa Rosa, Calif. Mechanical rake classifier. 2,445,251, July 13.

Thelander, W. Vincent, Auburn, Ind., assignor to Dana Corporation, Toledo, Ohio. Automatic clutch. 2,444,964, July 13.

Thomas, Charles L., Riverside, Ill., and J. C. Morrell, Chevy Chase, Md., assignors to Universal Oil Products Company, Chicago, Ill. Catalyst composition. 2,444,965, July 13.

Thompson, Joseph C., Hagerstown, Ind., assignor to Perfect Circle Corporation. Piston ring. 2,445,000, July 13.

Thompson, Lewis H., Anson, Tex. Scarifying and inoculating needle. 2,445,010, July 13.

Tinkham, Russell J., Chicago, Ill., assignor to Armour Research Foundation of Illinois Institute of Technology. Apparatus for showing pressure versus volume diagram. 2,445,046, July 13.

Toledo Scale Company, assignee: *See*—
Richard, Grant M.

Tootal Broadhurst Lee Company Limited, assignee: *See*—
Hall, Archibald J., and Wood.

Torgerson, Norman E., assignor to The Daybrook Hydraulic Corporation, Bowling Green, Ohio. Hydraulic actuating mechanisms for mobile loading apparatus. 2,445,109, July 13.

Triplett, William F., Grand Junction, Colo. Pressure fluid follow-up servomotor. 2,445,091, July 13.

Troller, Theodor H., New Philadelphia, Ohio, assignor, by mesne assignments, to Jay Manufacturing Company, Pan and meter device. 2,444,966, July 13.

Trustees of the University of Pennsylvania, The, assignee: *See*—
Chambers, Leslie A.

Tulagin, Vsevolod, Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y. Photographic elements containing urethanes of N-substituted 3 acids as color formers. 2,445,252, July 13.

Turechek, George F., assignor to Lane-Wells Company, Los Angeles, Calif. Gun perforator. 2,445,047, July 13.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Oscillator. 2,444,967, July 13.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Thread control for weft replenishing looms. 2,445,129, July 13.

Turner, William H., Summerville, Ga. Liquid dispenser. 2,445,130, July 13.

Twichell, Allan A., Bethany, Conn. Apparatus for analyzing data on cards. 2,445,011, July 13.

Umbdenstock, Walter, assignor to Lion Manufacturing Corporation, Chicago, Ill. Grinding machine. 2,445,194, July 13.

Umbreit, Robert R., Pittsfield, Mass., assignor to General Electric Company. Purification of halogenated aromatic hydrocarbons. 2,445,198, July 13.

Union Metal Manufacturing Company, The, assignee: *See*—
Riemenschneider, Edmund W., and Shea.

United Shoe Machinery Corporation, assignee: *See*—
Woodman, Charles K.

United States Rubber Company, assignee: *See*—
Sterrett, Robert E.

Universal Oil Products Company, assignee: *See*—
Thomas, Charles L., and Morrell.

University of Minnesota, Regents of the, assignee: *See*—
Smith, Lee L., and Sprung.

Urey, Alice V., executrix: *See*—
Urey, Paul M.

Utterback, Ernest, New York, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Process and apparatus for heat transfer with granular solid. 2,445,052, July 13.

Vaccaro, William J.: *See*—
Heaton, Walter H., and Vaccaro.

Van Lanen, James M.: *See*—
Tanner, Fred W., Jr., Wickerham, and Van Lanen.

Van Ouden, Clarence H., Newark, N. J. Luminous electrical discharge device. 2,445,013, July 13.

Verhoek, Frank H., Worthington, Ohio, and W. L. Morgan, Haverford, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Producing mirrors by chemical deposition. 2,445,253, July 13.

Voet, Andries, New York, N. Y., assignor to The Neville Company, Pittsburgh, Pa. Desulfonated coumarone-indene resins. 2,445,193, July 13.

Vogel, Vernon H., assignor to Collins Radio Company, Cedar Rapids, Iowa. Frequency subdividing system. 2,445,161, July 13.

Von Cash, Louis, New York, assignor to Speed Products Company, Inc., Long Island City, N. Y. Self centering gauge for perforating devices. 2,445,066, July 13.

Wald, Josephine A., Detroit, Mich. Sanitary napkin holder. 2,445,094, July 13.

Wallace, John G., Toronto, Ontario, Canada. Tilt table. 2,445,048, July 13.

Wallace, William M., assignor to W. A. Robinson, Lubbock, Tex. Comb-type cotton harvester. 2,445,162, July 13.

War, United States of America, represented by the Secretary of, assignee: *See*—
Musser, Clarence W.

Wartian, Avagim, Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Door mounting. 2,445,131, July 13.

Wartian, Avagim, Detroit, Mich. Lock. 2,445,285, July 13.

Washburn, Harold W., assignor to Consolidated Engineering Corporation, Pasadena, Calif. Mass spectrometry. 2,444,968, July 13.

Weislander, Daniel E., Portland, Maine. Portable staging or the like. 2,445,296, July 13.

Weisbrodt, Jean: *See*—
Bridge, Jacques J., and Weisbrodt.

Wejnarth, Axel R., Stockholm, Sweden. Manufacturing resistance elements durable at high temperature and proof against chemical action. 2,445,296, July 13.

Welch, Martin J., Buffalo, N. Y., Stocking. 2,445,049, July 13.

West, Harold E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Sealed vibrator. 2,445,196, July 13.

Westinghouse Electric Corporation, assignee: *See*—
Clark, Earl K.

Weyerhaeuser Timber Company, assignee: *See*—
Hatch, Raymond S.

Whitmant, Phyllis O., New York, N. Y. Garment. 2,445,086, July 13.

Whitworth, W. G. A., Sir, Aircraft Limited, assignee: *See*—
Fisher, Mark.

Wickerham, Lynford J.: *See*—
Tanner, Fred W., Jr., Wickerham, and Van Lanen.

Wiesmann, Joseph W., assignor to H. H. Robertson Company, Pittsburgh, Pa. Wire distributing apparatus. 2,445,197, July 13.

Wiesmann, Joseph W., assignor to H. H. Robertson Company, Pittsburgh, Pa. Wire distributing system. 2,445,198, July 13.

Wigan, Louis, assignee, et al.: *See*—
Cruikshank, Ross T.

Wild-Barfield Electric Furnaces Limited, assignee: *See*—
Haywood, Frederick W., and Laidler.

Wilhite, Don H., Kirksville, assignor to R. Eggert, Adair County, Mo. Climber oven. 2,445,050, July 13.

Williams, Allan E., White Plains, assignor to Niagara Blower Company, Buffalo, N. Y. Apparatus for evaporative cooling of liquids. 2,445,199, July 13.

Williams, Ford E.: *See*—
Nicoll, Frederick H., and Williams.

Williamson, Hilding V., assignor, by mesne assignments, to Cardox Corporation, Chicago, Ill. Fluid pressure operated valve. 2,445,183, July 13.

Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electronic burner control apparatus. 2,445,051, July 13.

Winkler, Christian G., Portland, Oreg. Toolholder. 2,445,013, July 13.

Winterburn, Joseph, Bury, England. Machine for the manufacture of wet paperboard. 2,445,254, July 13.

Winther, Martin P., assignee, trustee: *See*—
Winther, Martin P.

Winther, Martin P., Waukegan, Ill., assignor to Martin P. Winther, trustee. Motoring dynamometer for engine testing. 2,445,095, July 13.

Wirth, Emil O., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,445,097, July 13.

Wirth, Emil O., assignor to Bendix Aviation Corporation, South Bend, Ind. Fuel system. 2,445,098, July 13.

Wirth, Emil O., assignor to Bendix Aviation Corporation, South Bend, Ind. Fuel system. 2,445,099, July 13.

Wolfe, Charles M., Seattle, Wash., to Boeing Airplane Company. Manometer. 2,445,200, July 13.

Wolff, Irving, Princeton, N. J., assignor to Radio Corporation of America. Vibratory mechanical system. 2,445,014, July 13.

Wood, Frederick C.: *See*—
Hall, Archibald J., and Wood.

Woodman, Charles K., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Welt hold-down. 2,444,969, July 13.

Woods, Clayton W., Omaha, Nebr. Liquid filtering mechanism. 2,445,287, July 13.

Woodward Governor Company, assignee: *See*—
Drake, James W.

Worthman, Irving, Brooklyn, N. Y. Screen. 2,445,164, July 13.

Wright, Stanley, Long Beach, Calif., assignor to Eastman Oil Well Survey Company, Dallas, Tex., and Denver, Colo. Anchoring whipstocks. 2,445,100, July 13.

Wyeth Incorporated, assignee: *See*—
Charney, Jesse.

Yale & Towne Manufacturing Company, The, assignee: *See*—
Ledin, Charles.
Wartian, Avagim.

Younkin, Gavin S., Tulsa, Okla., assignor to The Brown Instrument Company, Philadelphia, Pa. Regulating mechanism responsive to variations in density and temperature of liquids, 2,445,255, July 13.

Zeier, Frederick F., Stratfield, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Feeding and presser mechanism for sewing machines. 2,445,297, July 13.

Zimmer, John C., Union, and G. W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company. Grease composition. 2,444,970, July 13.

Zimmerman, Oswald T., Durham, N. H., assignor to Kerr Manufacturing Co. Hydraulic cement. 2,445,052, July 13.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 13TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Azo dye compositions stabilised with unsaturated carboxylic acids or salts. S. S. Rossander, C. E. Sparks, and C. W. Maynard, Jr. Re. 23,016, July 13.

LIST OF DESIGN INVENTIONS

Airplane. F. C. Albright. 150,190, July 13.
Bar, Folding, portable. H. J. Barrett. 150,194, July 13.
Barrel, Fountain pen. W. Green and P. Schladermundt. 150,224, July 13.
Bell, Diving. R. H. Bird. 150,198, July 13.
Bench. C. A. Thomson. 150,272, July 13.
Boiler section. R. C. Cross. 150,212, July 13.
Bookkeeping machine. J. Streng. 150,271, July 13.
Box, Music. E. Wedemeyer. 150,277, July 13.
Box, Switch. A. J. Lippold. 150,240, July 13.
Bracelet. A. P. Wand and H. W. Tennyson. 150,276, July 13.
Brooch or similar article. A. Katz. 150,234-5, July 13.
Brooch or similar article. J. Tonesaint. 150,273, July 13.
Burial-casket. J. M. Beech. 150,197, July 13.
Cabinet, Nursery. W. H. Baker. 150,192, July 13.
Cabinet or similar article, Television. J. W. Pettigrew. 150,251, July 13.
Cabinet or the like, Radio. J. B. Platt. 150,252, July 13.
Camera. J. E. Harvey. 150,228, July 13.
Camera. F. W. Hertzler. 150,230, July 13.
Candle. P. A. Williams. 150,280-1, July 13.
Carriage, Baby. E. Reinhold. 150,256, July 13.
Casing, Vacuum cleaner. A. G. Geistert. 150,220, July 13.
Coat. S. Cohen. 150,209, July 13.
Coat. H. Redman. 150,253, July 13.
Comb. C. C. Holden. 150,231, July 13.
Container, Cigarette. J. B. Stier. 150,266, July 13.
Dispenser. W. C. Staufer. 150,265, July 13.
Doll. A. S. Hammerly. 150,227, July 13.
Dolly for transporting airplanes or the like. M. C. Snyder. 150,264, July 13.
Dress. J. F. Strassner. 150,267, July 13.
Earring or similar article. M. Chernow. 150,204, July 13.
Earring or the like. M. Chernow. 150,203, July 13.
Front for a refrigerated dispensing cabinet. J. Le R. Remco. 150,257, July 13.
Game apparatus. W. H. Meiller and W. D. and A. J. Wolff. 150,243, July 13.
Game board. G. G. Allenbaugh. 150,191, July 13.
Game board, Hockey. A. Parrilla and I. Pinsker. 150,249, July 13.
Game of skill. A. H. Kneser. 150,236, July 13.
Gauge, Inner race. J. J. Neff. 150,246, July 13.
Hair brush or the like, Electrically operated. A. R. Botham. 150,201, July 13.
Handler, Change. N. J. Blum. 150,199, July 13.
Handkerchief, Lady's. M. Morganstein. 150,244, July 13.
Hat and radio or similar article, Combined. O. Mumford. 150,245, July 13.
Heater, Water. L. Guild. 150,225, July 13.
Helicopter. I. I. Sikorsky. 150,263, July 13.
Holder or similar article, Picture. A. G. Giegold, Jr. 150,221, July 13.
Holder, Zone check ticket. A. Main. 150,241, July 13.
Housing, Lawn mower. V. N. Haglund. 150,226, July 13.
Jacket. J. F. Strassner. 150,268-70, July 13.
Jacket or the like. S. W. White. 150,278, July 13.
Jewelry finding. P. Bardach. 150,193, July 13.
Jewelry finding. M. Chernow. 150,202, July 13.
Kicking tee. M. M. Barton. 150,196, July 13.
Lamp, bank, and smoking stand, Combined reading. W. H. Graham. 150,223, July 13.
Lamp, Pin-up. E. T. Paxton. 150,250, July 13.
Light, Traffic signal. H. H. Haugard. 150,229, July 13.
Lighter, tamper, and knife, Combination. I. G. Bauer. 150,196, July 13.
Lounge, Beauty salon drying. S. Nichols. 150,247, July 13.
Microphone. C. E. Waltman. 150,275, July 13.
Necklace, armband, and bracelet, Combined. R. E. Orsatti. 150,248, July 13.
Overshoe, Lined. H. W. Boettge. 150,200, July 13.
Palette, or similar article, Make-up. F. Wies. 150,279, July 13.
Pen or similar article, Fountain. P. Schladermundt and O. Emslie. 150,260, July 13.
Phonograph tone arm or the like. J. B. Federico. 150,216-17, July 13.
Pipe. F. Furedy and M. W. Dynes. 150,219, July 13.
Plaque or similar article. D. R. Young. 150,282, July 13.
Plate, Plug receptacle escutcheon. J. D. McDonald. 150,242, July 13.
Pot, Flower. S. Rosenberg. 150,258, July 13.
Power take-off attachment for sewing machines. V. J. Sigoda. 150,262, July 13.
Radio and phonograph cabinet, Combination. M. J. Wachsman. 150,274, July 13.
Reel, Fishing. L. Denys. 150,213, July 13.
Shoe brush and dirt pick, Combination. W. J. Fournier. 150,218, July 13.
Sign, Highway. W. Rossman. 150,259, July 13.
Stand, Hosiery display. K. B. Lawrence. 150,239, July 13.
Stereoscopic instrument. C. E. Crandall. 150,211, July 13.
Stroller, Baby. E. Reinhold. 150,255, July 13.
Suit. S. Cohen. 150,205-8, July 13.
Suit. H. Redman. 150,254, July 13.
Suit, Two-piece swim. M. F. Lassle. 150,238, July 13.
Table top extension. W. D. Craig. 150,210, July 13.
Tablet, Memorial. D. W. Sheeran and H. P. Mertel. 150,261, July 13.
Tool, Tire chain. E. L. Gile. 150,222, July 13.
Transformer. W. K. Dickinson. 150,214, July 13.
Trunks, Swimming. M. F. Lassle. 150,237, July 13.
Urn or similar article, Funeral. T. H. Jones. 150,232-3, July 13.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 13TH DAY OF JULY, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorptive headwear pad. E. S. Clark. 2,445,209, July 13.
Acoustic structure. H. Benioff. 2,444,911, July 13.
Air-circulating heater. G. Steingruber. 2,445,250, July 13.
Air-conditioning system. K. Nehab. 2,445,121, July 13.
Aircraft with blast or like tube and closure therefor. J. C. Myers. 2,445,236, July 13.
Alkali metal hydroxide liquid reagent. A. J. Hall and F. C. Wood. 2,445,064, July 13.
Anchoring whipstocks. S. Wright. 2,445,100, July 13.
Animal trap. C. W. Crumrine. 2,445,166, July 13.
Antenna connector. R. E. Kester and H. R. Smith. 2,444,934, July 13.
Apparatus employing cavity resonators. L. S. Nergaard. 2,445,236, July 13.
Apparatus for analyzing data on cards. A. A. Twichell. 2,445,011, July 13.
Apparatus for burning liquid fuels. A. Clarkson. 2,445,302, July 13.
Apparatus for determining electrical axis of quartz crystals. H. Berman. 2,445,132, July 13.
Apparatus for evaporative cooling of liquids. A. E. Williams. 2,445,190, July 13.
Apparatus for feeding clay to molds in the manufacture of pottery dinnerware. W. J. Miller. 2,444,943, July 13.
Apparatus for measuring short time intervals. H. J. Kurtz. 2,444,935, July 13.
Apparatus for providing a ridge on a pipe of ductile material. M. Fisher. 2,445,303, July 13.
Apparatus for showing pressure versus volume diagram. R. J. Tinkham. 2,445,046, July 13.
Apparatus for tempering glass sheets or plates. W. P. Bamford and J. D. Hemley. 2,444,972, July 13.
Attachment for barbers' chairs, Stool. C. E. Paden. 2,445,240, July 13.
Automatic clutch. W. V. Thelander. 2,444,964, July 13.
Automatic disk cutter. H. Dahl and E. W. Huebner. 2,445,167, July 13.
Automatic hook. G. R. Dempster. 2,445,106, July 13.
Baller. P. T. Bynum. 2,445,206, July 13.
Barium carbonate-asbestos catalyst and preparation thereof. F. W. Haywood and D. S. Laidler. 2,444,930, July 13.
Bark, Treating. R. S. Hatch. 2,444,929, July 13.
Bearing: *See*—
Crank-pin bearing.
Bed, Hospital. M. D. Beem. 2,445,258, July 13.
Bed, Hospital. F. Sparhawk. 2,445,158, July 13.
Bed latch for cameras. R. E. Prentice. 2,445,036, July 13.
Belt link guide, Cartridge. R. J. MacFarlane and H. E. Kershaw. 2,444,936, July 13.
Biological production of ribodavin. F. W. Tanner, Jr., L. J. Wickerham, and J. M. Van Lanen. 2,445,128, July 13.
Blade mounting. R. H. Reed. 2,445,154, July 13.
Block: *See*—
Cable grab block. Cylinder block.
Blower control, Traction motor. J. W. Teker. 2,445,192, July 13.
Booth, Spray. J. H. McCue. 2,445,074, July 13.
Bottom dumping material handling box. R. W. Riemenschneider and L. W. Shea. 2,445,089, July 13.
Box: *See*—
Bottom dumping material handling box.
Bracket: *See*—
Tool mounting bracket.
Brake for guns, Muzzle. G. A. Barker. 2,444,910, July 13.
Braking system for aircrafts, Automatic. C. E. Gallagher. 2,444,927, July 13.
Bubble cap structure for fractionating towers. M. R. Reed. 2,445,083, July 13.
Burner: *See*—
Fuel burner.
Cabin conditions controlling apparatus. W. W. Paget. 2,444,951, July 13.
Cable control pull. R. G. Le Tourneau. 2,445,228, July 13.
Cable grab block. G. Radde. 2,445,123, July 13.
Calculating machine. H. L. Lambert. 2,445,225, July 13.
Calculator. M. C. George. 2,445,264, July 13.
Calculator. A. Smidt. 2,445,006, July 13.
Calculator, Lumber footage. E. A. Furguson. 2,444,983, July 13.
Caliper, Pivoted. C. D. Jackson. 2,445,062, July 13.
Cam-controlled pressure regulator. G. Orieb. 2,445,183, July 13.
Carbinols, Preparing. L. I. Smith and J. A. Sprung. 2,444,960, July 13.
Carburetor. E. O. Wirth. 2,445,097, July 13.
Card and holder for visible indexes, Rear index. R. W. Riggs. 2,445,186, July 13.
Carpet joined with tape. A. T. Dildilian. 2,445,168, July 13.
Carrier device for bottles and the like. A. P. D. Belanger. 2,445,202, July 13.
Carton, Shipping and display. H. K. Powell. 2,445,280, July 13.
Case: *See*—
Cigarette case.
Castings, Making. P. S. Hardy. 2,445,141, July 13.
Catalyst composition. C. L. Thomas and J. C. Morrell. 2,444,965, July 13.
Cellular glass slabs, Preparing. A. H. Baker. 2,445,298, July 13.
Cement, Hydraulic. O. T. Zimmerman. 2,445,052, July 13.
Ceramic heating plate construction. F. Rodwick. 2,445,066, July 13.
Chlorine and sodium sulfate, Manufacture of. R. K. Iler. 2,445,117, July 13.
Chuck, Stock centering. A. E. Meunier. 2,445,147, July 13.
Cigarette case. W. A. Pence. 2,445,001, July 13.
Cigarette dispenser. C. C. Anderson. 2,445,201, July 13.
Closure. G. G. Cooke. 2,444,976, July 13.
Cloth-cutting machine. W. Bangser. 2,444,909, July 13.
Clutch: *See*—
Automatic clutch.
Condenser: *See*—
Filament by pass condenser.
Connecting a driven member to a shaft. C. Deetman. 2,444,922, July 13.
Connector: *See*—
Antenna connector. Extensible connector.
Container: *See*—
Sealed slide container.
Container for powdery substances, Wedge-shaped dispensing. N. D. Giessen. 2,444,987, July 13.
Conveyer mechanism for propelling timbers. R. D. Moon. 2,445,149, July 13.
Cooling apparatus for treating cutting tools. A. L. Nelson. 2,445,294, July 13.
Corrector, Dark spot. O. H. Schade. 2,445,040, July 13.
Coupling: *See*—
Pipe coupling. Release coupling.
Cover and filter for milker pails. T. J. Ffetcher. 2,445,122, July 13.
Crank-pin bearing. E. M. Fiak. 2,445,025, July 13.
Cupriferous surfaces, Protection of. A. J. Saukaitis. 2,445,155, July 13.
Curler and mascara applier, Eyelash. A. Marcellus. 2,444,937, July 13.
Current limiting transformer. L. J. Schilling. 2,445,088, July 13.
Cutter: *See*—
Automatic disk cutter. Web cutter.
Cutting machine. W. R. Spiller. 2,445,248, July 13.
Cylinder block. L. M. Taylor. 2,444,963, July 13.
Desalting sulfonated coumarone-indene resins. A. Voet. 2,445,193, July 13.
Deflecting circuit for cathode-ray tubes. R. D. Boadle and I. A. Hood. 2,445,017, July 13.
Depositing metallic layers, Method and apparatus for. H. L. Lindblad. 2,445,177, July 13.
Detachable handle. J. E. Hargrave and E. G. Chamberlain. 2,445,295, July 13.
Detector, Obstacle. J. Evans. 2,445,213, July 13.
Detector, Radiation. F. P. Hochgesang. 2,445,305, July 13.
Detector, Vapor. R. T. Marette and W. R. Richards. 2,445,073, July 13.
Device comprising a mercury cathode tube for interrupting electric currents of high voltage. J. G. W. Mulder and A. Bouwers. 2,445,075, July 13.
Diaper. A. L. Best. 2,444,973, July 13.
Diaphragm pump. S. S. Lippincott. 2,445,293, July 13.
Differential refractometer. R. F. Stamm, T. Mariner, R. B. Barnes, and C. R. Stryker. 2,445,044, July 13.
Dioleđin extraction. C. F. Morrell. 2,444,945, July 13.
Discharger, Silo. N. Cordis. 2,445,056, July 13.
Dispenser: *See*—
Cigarette dispenser. Liquid dispenser.
Dispersing keratin proteins with amides and the composition resulting therefrom. C. B. Jones and D. K. Mecham. 2,445,028, July 13.

Distillation of mixtures forming two liquid phases, Method and apparatus for. M. Souders, Jr., and A. J. Cherniavsky. 2,445,043, July 13.
Doctor blade structure. C. A. Hanington. 2,445,140, July 13.
Doctor holder. J. R. Curtis, Jr. 2,445,135, July 13.
Door lock. J. H. Roethel. 2,445,187, July 13.
Door mounting. A. Wartian. 2,445,131, July 13.
Doorstop. J. A. Dailey. 2,444,981, July 13.
Drawbar, Telescoping. D. R. Conrad and F. M. Reynolds. 2,444,970, July 13.
Drilling machine. G. H. Fuehrer and C. W. Hosking. 2,445,218, July 13.
Dry cell, Leak-proof. R. J. Schmelzer. 2,445,005, July 13.
Drying of frozen materials by heat radiation. S. O. Levinson and F. Oppenheimer. 2,445,120, July 13.
Dyestuffs of the anthraquinone series. G. W. Seymour, V. S. Salvin, and C. E. Hiesserman. 2,445,007, July 13.
Easel. D. Egyed. 2,445,136, July 13.
Egg powder, Dried. M. M. Boggs and H. L. Fevold. 2,445,299, July 13.
Electric circuit breaker. B. E. Spiro and R. J. Baskerville. 2,445,190, July 13.
Electric clamp-on heater. A. A. Reiser. 2,445,185, July 13.
Electric contact plugs, Making. H. Lovesey. 2,444,997, July 13.
Electric glass heating. E. M. Guyer. 2,445,063, July 13.
Electrical brush for high-altitude operation. D. Ramadanoff. 2,445,003, July 13.
Electrical discharge device, Luminous. C. H. Van Orden. 2,445,012, July 13.
Electrical transformer and primary winding thereof. C. F. Frey. 2,445,169, July 13.
Electrode structure for electrical gaseous discharge tubes. P. W. Stutsman. 2,444,962, July 13.
Electrodynamic loudspeaker. F. Massa. 2,445,276, July 13.
Electrolyte for primary cells comprising lithium bromide. H. E. Lawson. 2,445,306, July 13.
Electrolytic device and making same. J. B. Brennan. 2,444,914, July 13.
Electron discharge device. P. J. Cade. 2,444,915, July 13.
Electron discharge device and associated circuit. E. P. Stone. 2,445,237, July 13.
Electron discharge device utilising cavity resonators. L. S. Nergaard, D. G. Burnside, and L. Fensak. 2,445,077, July 13.
Electron microscopes, Assembly for. F. E. Runge. 2,445,243, July 13.
Electronic burner control apparatus. J. M. Wilson. 2,445,051, July 13.
Electronic computer. L. E. Flory. 2,445,215, July 13.
Electrostatically separating particles having different electrical properties, Method and apparatus for. T. J. Manse. 2,445,220, July 13.
Elevating platform truck. F. M. Reynolds and D. R. Conrad. 2,445,004, July 13.
Engine: *See*—
Rotary engine.
Engine ignition and power testing apparatus. R. L. Sexton. 2,445,245, July 13.
Extensible connector. H. F. Ebert. 2,445,023, July 13.
Extinguisher, Cigarette. O. Lewetsky. 2,445,274, July 13.
Fan and motor device. T. H. Troller. 2,444,966, July 13.
Feeder: *See*—
Poultry feeder.
Feeding and presser mechanism for sewing machines. F. F. Zeier. 2,445,297, July 13.
Fibro-cementitious sheets, Manufacture of. D. T. Colton. 2,445,210, July 13.
Filament by-pass condenser. R. M. Page and M. F. Distad. 2,445,256, July 13.
Film viewer having a magazine for consecutively viewing films. H. Baker. 2,444,971, July 13.
Filtering mechanism, Liquid. C. W. Woods. 2,445,287, July 13.
Firearm, Recoilless. C. W. Musser. 2,444,949, July 13.
Firing mechanism. G. B. Davis, Jr., and I. F. Roschkrantz. 2,444,920, July 13.
Flash reducer. L. A. Skinner. 2,444,957, July 13.
Fleshing machine. S. Tandioric. 2,445,284, July 13.
Float or the like. S. M. Hodgins. 2,445,268, July 13.
Flow-control device, Liquid fuel. E. W. Johnson. 2,445,069, July 13.
Fluid heat exchange installation. E. G. Bailey, R. M. Hardgrove, and T. B. Stillman. 2,444,998, July 13.
Fluid pressure operated valve. H. V. Williamson. 2,445,163, July 13.
Flush pin indicator. P. Hoffman. 2,445,176, July 13.
Flush tank valve. H. F. Smith. 2,444,958, July 13.
Force gauge. R. D. Mindlin. 2,445,307, July 13.
Fountain pen cap having a multiple-cylinder, single-axis calendar. S. Goncal. 2,445,170, July 13.
4-amino salicylic acid, Producing a. K.-G. Roedahl. 2,445,242, July 13.
Frame: *See*—
Heddle frame.
Frame for caps. J.-E. and S. Mattsson. 2,445,230, July 13.
Frequency control apparatus and method. A. E. Harrison. 2,444,928, July 13.
Frequency subdividing system. V. H. Vogel. 2,445,161, July 13.
Friction shock absorber. S. B. Haseltine. 2,444,999, July 13.
Fuel carbureting means. C. M. Colvin. 2,445,104, July 13.
Fuel burner. W. M. Fulton. 2,444,985, July 13.
Fuel pumping and distributing device. C. F. High. 2,445,206, July 13.
Fuel system. E. O. Wirth. 2,445,098–9, July 13.
Fuel tank and toolbox combination, Safety. W. A. Lintern and J. N. H. Christman, Jr. 2,445,275, July 13.
Furfuryl-alcohol, Conversion of. E. Farber. 2,445,137, July 13.
Furniture. E. H. Hunter. 2,444,991, July 13.
Fuse, Detonating. D. M. McFarland. 2,445,032, July 13.
Garment. P. O'L. Whisman. 2,445,096, July 13.
Gauge: *See*—
Force gauge. Micrometer depth gauge.
Gear: *See*—
Steering gear.
Girth for women, Auxiliary. G. J. Leversee. 2,445,144, July 13.
Glare reducing device. C. B. Rearick. 2,445,153, July 13.
Glasses, Absorption. W. F. Brown. 2,444,976, July 13.
Goggles, Headgear. C. E. Bewers. 2,445,203, July 13.
Grab for lifting materials. S. H. Priestman. 2,445,002, July 13.
Granules of a dry water-soluble salt of carboxymethyl cellulose, Coated. M. Landers. 2,445,226, July 13.
Grapple. J. Breslav. 2,445,019, July 13.
Grease composition. J. C. Zimmer and G. W. Duncan. 2,444,970, July 13.
Grinder. L. O. French. 2,445,138, July 13.
Grinding machine. W. Umbdenstock. 2,445,194, July 13.
Grit blending and spreading machine. C. A. Fritch. 2,445,037, July 13.
Gun sight. E. K. Rogers. 2,445,067, July 13.
Hairdressing ring. S. Kovacs and D. J. Fulkerson. 2,445,071, July 13.
Handle: *See*—
Detachable handle.
Handle and closure means for flexible receptacles, Combined. E. Lebenhart. 2,444,996, July 13.
Handle and valve actuator, Liquid dispenser. T. Bailey. 2,445,101, July 13.
Harness, Loom. J. J. Kaufmann. 2,445,070, July 13.
Harvester, Comb-type cotton. W. M. Wallace. 2,445,162, July 13.
Headlight, Mining machine. A. L. Lee. 2,445,072, July 13.
Heat exchanger. F. P. Hanrahan. 2,445,115, July 13.
Heat transfer with granular solid, Process and apparatus for. E. Utterback. 2,445,092, July 13.
Heat-treating metallic annulus. H. L. Mueller. 2,445,150, July 13.
Heater: *See*—
Air-circulating heater. Electric clamp-on heater.
Heater. O. L. Garretson. 2,445,059, July 13.
Heddle frame. E. P. Drake. 2,445,107–8, July 13.
Hitch, Implement. J. A. Love. 2,445,146, July 13.
Holder: *See*—
Doctor holder. Sanitary napkin holder.
Paintbrush holder.
Holder for paint buckets and the like. W. C. Gebhardt. 2,444,964, July 13.
Hollow cavitied bodies such as rigid hollow panel structures and making the same. D. Gonda. 2,445,290, July 13.
Hone. W. F. Mitchell. 2,445,277–8, July 13.
Honing tool. C. R. Beck. 2,445,018, July 13.
Hook: *See*—
Automatic hook.
Hot liquid pump. E. B. Schwenk. 2,445,127, July 13.
House, Animal. J. A. Capaul. 2,445,055, July 13.
Humidity modifying and heat conserving means. S. J. Benn. 2,445,102, July 13.
Hydraulic actuating mechanism for mobile loading apparatus. N. E. Torgerson. 2,445,160, July 13.
Hydraulic brake actuator. R. A. Geoprich. 2,445,061, July 13.
Hydraulic device for controlling several members with a predetermined automatic interdependency. R. F. Pouille. 2,445,081, July 13.
Hydraulic governor. G. W. A. Green, J. Bujak, and R. E. Rutherford. 2,445,113, July 13.
Hydraulic pump. C. H. Rystrom. 2,445,281, July 13.
Hydraulic removal of gel. P. D. Izanogle and M. H. Beplogle. 2,445,221, July 13.
Hydrogen fluoride solutions, Treatment of. F. B. Frey. 2,445,217, July 13.
Ignition circuits for vapor discharge devices. J. W. Dawson and H. Klemperer. 2,444,921, July 13.
Implement, Fastener-applying. C. M. Lindstrom. 2,445,178, July 13.
Implement, Fastener-applying. A. H. Maynard. 2,445,179, July 13.
Implement for collapsing hollow rivets. E. Hiler. 2,445,067, July 13.
Indicator: *See*—
Flush pin indicator. Velocity indicator.
Induction motor damping system. L. B. Cherry. 2,445,289, July 13.

Influenza vaccine. L. A. Chambers. 2,445,901, July 13.
Insulator. A. D. Martin, Jr. 2,444,933, July 13.
Interference reduction for radio signal receivers. W. B. Smith. 2,445,187, July 13.
Intermittent cam. E. J. Kiefer. 2,445,223, July 13.
Internal grinding machine. M. A. Mathys. 2,445,146, July 13.
Iron ores, Reduction of. A. T. Cape and C. V. Foerster. 2,444,916, July 13.
Jack: *See*—
Pump jack.
Jack strap and stirrup. F. A. Hamilton. 2,445,065, July 13.
Jet and valve assembly. W. Shallenberg. 2,445,246, July 13.
Jet propulsion engine elements, Arrangement of. F. B. Halford. 2,445,114, July 13.
Joint: *See*—
Ball joint.
Joint brace for reducing swellings. E. Halyard. 2,445,173, July 13.
Keratin protein with ammonium thiocyanate and the composition resulting therefrom, Dispersing. C. B. Jones and D. K. Mecham. 2,445,029, July 13.
Laminated structures, Making. C. M. Cone. 2,444,918, July 13.
Lamp. W. M. Petersdorf. 2,445,079, July 13.
Landing gear by force of slipstream, Actuating aircraft. H. C. Higgins. 2,444,932, July 13.
Level winding attachment for reels. P. M. Baby. 2,445,212, July 13.
Leveler, Land. M. A. Clark. 2,444,977, July 13.
Lighter. G. P. Schmitt. 2,444,956, July 13.
Liquid dispenser. W. E. Turner. 2,445,130, July 13.
Load handling equipment. W. M. Huston. 2,445,116, July 13.
Loader, Cane. J. J. Munson. 2,445,076, July 13.
Lock: *See*—
Door lock.
Lock. C. Ledin. 2,445,119, July 13.
Lock. A. Wartian. 2,445,295, July 13.
Locking device for intermitting members. H. S. Charles. 2,445,030, July 13.
Lubricant. J. M. Musselman and H. P. Lankelma. 2,444,947–8, July 13.
Lubrication of high-speed shafts or spindles. C. C. S. Le Clair. 2,445,227, July 13.
Machine for stacking hay or straw. E. V. Gouinlock. 2,445,111, July 13.
Machine for tightening caps on containers. J. Hohl. 2,445,270, July 13.
Magazine and feed means for stapling machines. A. H. Maynard. 2,445,180, July 13.
Mandrel. J. J. Parker and L. T. Morawski. 2,445,184, July 13.
Mandrel, Tube-bending. R. F. Attridge. 2,444,907, July 13.
Manometer. C. M. Wolfe. 2,445,300, July 13.
Measuring instrument, Temperature. E. M. Smith. 2,445,156, July 13.
Metal screen. B. E. Butler and E. A. Shaw. 2,445,262, July 13.
Micrometer depth gauge. C. E. Gearhart. 2,445,060, July 13.
Miniature tennis game. J. Natchuk. 2,444,989, July 13.
Mirrors by chemical deposition, Producing. F. H. Verhoek and W. L. Morgan. 2,445,253, July 13.
Mixing machine, Material. H. E. Foltz. 2,445,216, July 13.
Motor to the shaft of a rotary pump, Connecting a driving. E. B. Odey. 2,445,162, July 13.
Motor vehicle control mechanism for sequentially controlling wheel braking and motor speed. G. C. Fields. 2,445,058, July 13.
Motoring dynamometer for engine testing. M. P. Winther. 2,445,066, July 13.
Mounting: *See*—
Blade mounting, door mounting.
Multiple connection. L. M. Seaver. 2,445,244, July 13.
Multisignal transmission system. M. E. Nichols and J. F. Brinster. 2,444,960, July 13.
Navigational director, Automatic. R. E. Jaspersen. 2,444,923, July 13.
Needle, Scarifying and inoculating. L. H. Thompson. 2,445,010, July 13.
Nozzle and filter, Combined injector. J. F. Hofer. 2,445,299, July 13.
Nut, Lock. J. R. Reyburn and L. Kuhni. 2,445,125, July 13.
Olefin-halogen copolymers, Curing. R. R. Sterrett. 2,445,263, July 13.
Oriented acrylonitrile structures, Treating. S. Silverman. 2,445,042, July 13.
Oscillator. E. E. Turner, Jr. 2,444,967, July 13.
Oven, Climber. D. E. Wilhite. 2,445,080, July 13.
Overload relay having an instantaneous primary movement and a delayed secondary movement. A. P. Gauvreau. 2,445,110, July 13.
Pad: *See*—
Absorptive headwear pad Urinary pad.
Paintbrush holder. S. Kubiak. 2,445,224, July 13.
Paperboard, Machine for the manufacture of wet. J. Winterburn. 2,445,254, July 13.
Paper feed gauge for printing presses. C. Lanzendorfer. 2,445,143, July 13.
Perforator, Gun. G. F. Turechek. 2,445,047, July 13.
Photographic elements containing urethanes of N-substituted J acids as color formers. V. Tulagin. 2,445,252, July 13.
Pipe coupling. F. T. Newell. 2,445,151, July 13.
Piston ring. J. C. Thompson. 2,445,090, July 13.
Piston ring tool. H. M. Bramberry, Sr. 2,444,975, July 13.
Pivoted closure for collapsible tubes. C. Laing. 2,444,995, July 13.
Plaster bandage forming machine. J. R. Pava. 2,445,078, July 13.
Plasticised composition containing a cellulose ether and a polyacrylic acid ester. C. E. Rehberg, W. C. Mast, and C. H. Fisher. 2,445,085, July 13.
Plasticised ethyl cellulose composition. C. E. Rehberg, W. C. Mast, and C. H. Fisher. 2,445,084, July 13.
Polymerization of unsaturated compounds in the presence of a peroxide and a hydrogen halide. E. C. Shokal, 2,445,180, July 13.
Polymers and copolymers of acenaphthylene. H. F. Miller and R. G. Flowers. 2,445,181, July 13.
Polysulfide condensation product and making. Mixed. T. A. Te Grotenhuis and G. H. Swart. 2,445,191, July 13.
Portable device for airplane landing wheels. H. S. Kittel. 2,444,902, July 13.
Post and insulator, Electric fence. H. E. Strauss and A. Simon. 2,445,009, July 13.
Poultry feeder. J. J. Carmo. 2,445,165, July 13.
Powder for spark plugs, Method of and machine for packing. H. B. Munger and H. Y. Lafferty. 2,445,035, July 13.
Primary or secondary alcoholic hydroxyl groups or aldehyde groups, Oxidizing. L. G. Farkas and O. Schächter. 2,444,924, July 13.
Pump: *See*—
Diaphragm pump. Hydraulic pump.
Hot liquid pump.
Pump. H. Molly. 2,445,232, July 13.
Pump and motor cylinder coaxial, Combined. R. E. Minnix. 2,445,148, July 13.
Pump control mechanism. W. W. Paget. 2,444,952, July 13.
Pump jack. R. T. Cruikshank. 2,445,133, July 13.
Pump with adjustable stop, Measuring. G. A. V. and M. A. Palm. 2,445,279, July 13.
Pumping device for liquids. L. Burn. 2,445,205, July 13.
Pumping, Method and apparatus for. A. G. Bodine, Jr. 2,444,912, July 13.
Punch. J. F. Murphy. 2,444,946, July 13.
Purification of halogenated aromatic hydrocarbons. R. R. Umhoefer. 2,445,195, July 13.
Radio antenna mount, Quick change. B. M. Meador. 2,444,941, July 13.
Radio plug adapter. E. L. Metts. 2,445,033, July 13.
Radio tuning mechanism. F. H. Drake. 2,445,211, July 13.
Rail Guard. A. E. Schulze. 2,445,069, July 13.
Rail joint. G. Rademaker. 2,444,954, July 13.
Rake classifier, Mechanical. F. F. Temlin. 2,445,251, July 13.
Rake, Dump. S. E. Hillblom. 2,445,267, July 13.
Recording device, Single-electrode high-speed. A. B. J. Clark. 2,444,917, July 13.
Recording instrument having plural pens and an oscillating actuator. J. H. Keegan. 2,445,272, July 13.
Reed stroboscope, Visual vibrating. W. J. Grace. 2,445,304, July 13.
Reel strander, Tubular. C. O. Bruestle. 2,445,261, July 13.
Regulating mechanism responsive to variations in density and temperature of liquids. G. S. Younkin. 2,445,255, July 13.
Regulator: *See*—
Cam-controlled pressure regulator.
Regulator. W. S. Graff-Baker. 2,445,171, July 13.
Release coupling. R. B. Cotton, R. J. Ryan, and J. J. Demol. 2,444,919, July 13.
Remote inventory control system. E. W. E. Kamm and J. J. Delaney. 2,445,291, July 13.
Remote radio tuning control system. E. F. McDonald, Jr. 2,445,031, July 13.
Resins, Vanillyl alcohol-formaldehyde. H. F. Lewis and I. A. Pearl. 2,445,292, July 13.
Resistance elements durable at high temperature and proof against chemical action, Manufacturing. A. R. Wejnarth. 2,445,296, July 13.
Riboflavin, Solutions of. J. Charney. 2,445,208, July 13.
Rider propelled vehicle. C. Cummins. 2,444,980, July 13.
Ring: *See*—
Hairdressing ring. Piston ring.
Rivet inserting tool. L. Frank. 2,445,026, July 13.
Rochelle salt resonator. B. Matthias. 2,444,998, July 13.
Rotary engine. J. Jolly. 2,445,222, July 13.
Rotary grinder with stationary perforated plate. G. M. Richard. 2,445,037, July 13.
SO_2 by burning sulfur, Forming. W. T. Grace and J. C. Muller, Jr. 2,445,112, July 13.
Safety device for flexible tubing. S. Guarnaschelli. 2,444,988, July 13.
Sanitary napkin holder. J. A. Wald. 2,445,004, July 13.
Scale, Computing. S. Colman. 2,445,022, July 13.

Scraper. G. S. Allin. 2,445,053, July 13.
Scraper, Hauling. K. L. Brimhall. 2,445,260, July 13.
Screen: *See*—
Metal screen.
Screen. I. Worthman. 2,445,164, July 13.
Screw lock for eyeglasses and the like. F. A. V. Gravinese and I. G. Failla. 2,445,172, July 13.
Seal. H. M. Goldberg and A. E. Karlberg. 2,445,062, July 13.
Seal, Shaft. M. Caserta. 2,445,207, July 13.
Seal, Shaft. T. R. Smith. 2,445,247, July 13.
Sealed slide container. G. A. Moore. 2,445,034, July 13.
Sealing arrangement. P. A. Driscoll. 2,445,057, July 13.
Sealing sleeve for tube units. W. M. Kennedy. 2,445,273, July 13.
Sealing unit. F. E. Brady, Jr. 2,445,013, July 13.
Self-centering gauge for perforating devices. L. von Csch. 2,445,093, July 13.
Servomotor, Pressure fluid follow-up. W. F. Triplett. 2,445,091, July 13.
Shear and tension patch. J. Kintas. 2,445,118, July 13.
Shelf, Foldable. J. L. Posun and L. Houghton. 2,445,082, July 13.
Shipping package. W. D. Poole. 2,445,152, July 13.
Shock absorbing device for aircraft and other power-driven vehicles. C. A. Gret. 2,445,139, July 13.
Shrinker apparatus, Vertical. J. L. Ferguson. 2,445,214, July 13.
Shutter control device for moving picture apparatus. J. J. Broido and J. Weissbrodt. 2,445,288, July 13.
Signaling system. A. P. Montgomery. 2,445,233, July 13.
Silhouette reproducing machine. L. A. Scholz. 2,445,041, July 13.
Sinusoidal modulator. J. W. Boseman. 2,445,204, July 13.
Skeletonized low reflectance glass surface with fluosilicic acid vapor, Production of. F. H. Nicoll and F. E. Williams. 2,445,238, July 13.
Sofa construction, Adjustable. L. Pokorny and L. Pokorny, Jr. 2,445,241, July 13.
Solid particles and gaseous fluids, Contacting. C. E. Hemminger. 2,444,990, July 13.
Sound-trapping muffler construction. C. Strachan. 2,445,045, July 13.
Spectrometry, Mass. H. W. Washburn. 2,444,968, July 13.
Spring suspension. C. P. Pond. 2,445,295, July 13.
Stabilized lecithin. W. J. Fitzpatrick. 2,444,984, July 13.
Staging or the like, Portable. D. H. Weinlander. 2,445,286, July 13.
Static eliminating means. W. C. Huebner. 2,445,271, July 13.
Steering gear. R. E. Farmer. 2,445,263, July 13.
Steroid keto hydroxy acids and their polybasic acid esters and preparing same. E. Schwenk. 2,445,006, July 13.
Stiffener, Box toe. W. H. Heaton and W. J. Vaccaro. 2,444,931, July 13.
Stocking. M. J. Welch. 2,445,049, July 13.
Stove, Cabinet type cooking. H. M. Reeves. 2,445,124, July 13.
Sulphonamide derivatives. Z. Földi, Á. Gerecs, I. Demjén, and R. Konig. 2,444,926, July 13.

Welding flux. K. H. Koopman. 2,444,994, July 13.
Welt hold-down. C. K. Woodman. 2,444,960, July 13.
Winder, Coil. A. W. Ferguson. 2,445,100, July 13.
Wire distributing apparatus. J. W. Wiesmann. 2,445,197, July 13.
Wire distributing system. J. W. Wiesmann. 2,445,198, July 13.
Workholding attachment for drill presses. J. T. Betts. 2,445,103, July 13.
Work manipulator. H. P. Bentley. 2,445,016, July 13.
Zirconia containing catalysts, Preparation of. G. R. Bond, Jr. 2,444,913, July 13.

CLASSIFICATION OF PATENTS

ISSUED JULY 13, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,445,179		62— 1: 2,445,089		117— 6: 2,445,268		171— 225: 2,445,008		229— 52: 2,445,202		260—397.1: 2,445,006

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

HENRI GEORGES DOLL

v.

SHELLEY KRASNOW AND LEON F. CURTIS

No. 5107. Decided April 8, 1948

[— F.2d —; 77 USPQ 360]

INTERFERENCE—PRIORITY—PROCESS AND APPARATUS FOR PERFORATING AN OIL WELL.

Where there is no error in the interpretation of the counts and where, as interpreted by the Board, there is no doubt of their disclosure in appellee's earlier application, *Held* that the award of priority was properly made, and the decision of the Board of Interference Examiners is affirmed.

APPEAL from the Patent Office. Interference No. 79,601.

AFFIRMED.

Campbell, Brumbaugh & Free (*Worthington Campbell* of counsel) for Doll.

Shelley Krasnow pro se.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention to appellees in an interference proceeding involving six counts, numbered 1 to 6, inclusive. The subject matter as defined in the decision of the Board is "a process of perforating an oil well casing at the proper point to bring an oil well into production and certain apparatus which is suitable for carrying out this process." The subject matter is described by the Board as follows:

> • • • This process is designed to make unnecessary the determination of the distance between the surface of the ground and the producing stratum in the uncased bore-hole and the use of this measurement (with consequent errors due to cable stretch and flotation) to determine the point of perforation of the well casing at the producing level after the casing is inserted. In the process of the counts a marker is established in known relation to the producing stratum and this marker is located by the proper instrument after the well is cased.

Counts 1, 2, and 3 are for the process; the others for the apparatus.

The broadest of the two classes are counts 3 and 4, which read:

> 3. In a method of producing a fluid from the earth, the steps of: forming in the earth a bore hole which intersects a production stratum; establishing a marker below the surface of the earth and in a known relation to said production stratum; setting a casing in said bore hole so as to intersect said production stratum; locating said marker; and then perforating said casing in a position correlated with said marker and determined in accordance with said known relation of said production stratum and said marker, whereby said perforating will connect the interior of said casing with said production stratum.
>
> 4. In means for perforating a casing in a well, the combination of: a perforator; means for moving said perforator within said casing; marker locating means connected to said perforator so as to move therewith; and means for actuating said perforator.

It appears that the counts originated as claims 1, 2, 3, 12, 13, and 16 of a patent, No. 2,228,623, issued to George H. Ennis January 14, 1941, based upon an application, Serial No. 342,320, filed June 25, 1940. Claim 12 of the Ennis patent, an apparatus claim, was copied into the application of Krasnow et al., Serial No. 392,188, filed May 6, 1941, and the interference as originally declared under date of September 16, 1941, was between Ennis and Krasnow et al.

The application of Doll, Serial No. 330,545, was filed April 19, 1940, and it along with a joint application of two parties named Kaveler and Piety became involved in an interference, No. 79,272, with the Ennis patent. Counts 5 and 6 of that interference were identical with counts 4 and 6 of the instant interference, and in the course of the proceedings counts were added to that interference which corresponded to counts 1, 3, and 5 of the instant interference. Count 4 appears to have been claim 12 of the Ennis patent.

On August 12, 1942, the Doll and Kaveler et al. applications were added to the instant interference which thus became a four-party interference.

It is unnecessary to recite in detail the various proceedings incident to the four-party interference, it being sufficient, so far as the issues before us are concerned, to say that Ennis (in whose patent, as has been stated, the counts originated) and Kaveler et al. were eliminated before the final hearing by the Board of Interference Examiners.

By reason of the respective filing dates of Doll (April 19, 1940) and Krasnow et al. (May 6, 1941), Doll became the senior party of what had become a two-party interference, and it was incumbent upon Krasnow et al. to prove priority by a preponderance of the evidence.

In the preliminary statement of Doll it was alleged that he had filed applications in a number of foreign countries, the earliest of them in point of time being one (Serial No. 445,411) filed in France April 27, 1939. This date was relied upon for constructive reduction to practice and it was so awarded by the Board.

In their preliminary statement Krasnow et al. alleged conception and the beginning of the exercise of "reasonable diligence in adapting and perfecting the invention" in March 1934, with reduction to practice "at least as early as April, 1937." They introduced in evidence an application (Serial No. 137,380) filed April 16, 1937, and also one (No. 301,078) filed on October 24, 1939, as proof of constructive reduction to practice. The Board held

Vol. 612 • No. 3 Tuesday, July 20, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

that both those applications adequately disclosed the invention and awarded Krasnow et al. priority upon the basis of the April 1937 date.

This, it will be observed, was practically two years before the French filing date of Doll—the earliest date upon which Doll can rely for any phase of the invention.

The record in the case is an extensive one, and elaborate briefs were filed before us on behalf of both parties. Numerous questions were raised, first and last, during the prosecution of the controversy in the Patent Office, many of which are not involved here.

As the case comes to us the primary question for consideration is whether the Krasnow et al. application, Serial No. 137,380, filed April 16, 1937, disclosed the subject matter of the counts. If it be found that the Board was correct in holding that it did so, it is unnecessary to a decision of the case to discuss the various allegations of Krasnow et al. in which they charge error in the Board's findings with respect to the Doll disclosure in the French application of April 27, 1939, nor need the Krasnow et al. application, Serial No. 301,078, filed October 24, 1939, be discussed.

In view of the situation thus described we deem it proper to quote the following from the Board's decision (page references being omitted):

> The Krasnow et al. application Serial No. 137,380 describes apparatus and a method for measuring radioactivity in a bore-hole. One form of the apparatus described is a radioactivity detecting device which may be lowered by cable into a bore-hole and which transmits to the surface of the earth electrical impulses which are a measure of the radioactivity at the point where the detecting apparatus is suspended in a bore-hole * * *. Another form of apparatus employs an electroscope which may electrically transmit impulses to the surface of the ground to indicate the presence of radioactive materials * * *. The Krasnow et al. applications describe a procedure in which the detecting apparatus is used to measure the natural radioactivity of the various levels or strata of a bore-hole, whether cased or uncased. It is stated that this radioactivity will vary according to the nature of the material at the various levels and that oil-bearing strata are often markedly radioactive as compared with the surrounding rock material because of the superior absorptive property of petroleum for radium emanation. In application Serial No. 137,380 on page 10, first full paragraph, a method is described for locating petroleum strata in areas of limited radioactivity by pumping radium emanation into a bore-hole to be selectively absorbed by the petroleum. The petroleum strata will, through this absorption, become more strongly radioactive and more readily detectable by the apparatus. Starting at the bottom of page 10, Krasnow et al. state that in the apparatus the member 11, the radioactivity detecting element may be combined with "a perforating tool as ordinarily used for perforating casing" so that the apparatus may be lowered until an indication of radioactivity is received. The apparatus may then be stopped and the usual perforating operation carried out. This application mentions the fact that the customary dual measurements may be dispensed with.
>
> It is believed apparent that the application Serial No. 137,380 adequately discloses the subject matter of the counts in issue. Applying the disclosure to the apparatus counts, counts 4, 5 and 6, it is evident that the Krasnow et al. disclosure of a combination of a perforating tool and radioactivity detecting apparatus suspended in a bore-hole by a cable and electrically transmitting signals to the surface meets the requirements of these counts. The detecting apparatus is a "marker locating means" in that it will indicate a stratum with a distinct degree of radioactivity. Such a stratum exhibiting radioactivity is in itself a marker within the purview of the counts whether that radioactivity was originally present or was created by pumping in radium emanations. The Ennis patent from which the counts were derived indicates, for example, that the active stratum be established as its own marker * * *. The supporting cable is means for moving the apparatus within the casing. The detecting apparatus is an electrometric strata logging device which has a sensitive testing element attached to the perforator and a recording means outside of the well.
>
> Similarly, the Krasnow et al. application Serial No. 137,380 discloses a process meeting counts 1, 2 and 3. In following one embodiment of their invention, Krasnow et al. *form a bore-hole* intersecting a production stratum, *log the formation* by detecting variations in radioactivity, *establish a marker* by determining the petroleum producing level from the variation of radioactivity recorded or by pumping in radium emanation to render the petroleum stratum more radioactive (and, therefore, more readily detectable by the detecting element), locate the marker by the same detecting device, set a casing, and perforate the casing "in a position correlated with said marker" * * * all as required by count 1. The location of the marker is by electrometric means as required by count 2. The preparation of the log of the bore-hole of counts 1 and 2 is not directly required in count 3 so that the Krasnow et al. proofs suffice for this count also. [Italics quoted.]

We find no denial on the part of Doll that the matter stated in the first paragraph of the foregoing quotation is being disclosed in the Krasnow et al. application, Serial No. 137,380, is so disclosed. Indeed, its disclosure seems to us to be practically conceded in the following which we take from the Doll brief:

> * * * The specification and claims [of the April 1937 application, Serial No. 137,380] were addressed to the subject matter indicated by the title: "Method and Apparatus for Measuring Radioactivity." However, it embodied as an aggregative appendage in the last paragraph, an operation which is not related to the subject matter embraced within the title and which was not claimed. As is not infrequent in such situations, Krasnow now brings the case forward because of its early date and asks that because of such appendage, various unrelated portions of the specification be pieced together and imported into such appended suggestion as evidence of conception and reduction to practice of the integrated method here in issue. The method in issue, unlike the said 1937 Krasnow application, has nothing whatever to do with "measuring radioactivity."

The brief on behalf of Doll asserts that a second primary question involved in the appeal is "Does the said Krasnow application [Serial No. 137,380] establish conception of any such method?" This means, as we understand it, the method defined in the appealed method counts.

It is not clear to us in just what sense the word "conception" is used in the question as framed, but, seemingly, from the arguments made, it was intended to urge that even if it be proper to hold that there was a disclosure which supports the counts at issue (which Doll does not concede) Krasnow et al. really had other claims not related to the subject matter of the counts in mind.

One argument presented is based upon the assertion that Krasnow et al. did not present any claims relating to the method of the counts in issue in their application, Serial No. 137,380. It is also pointed out that after Krasnow et al. had seen the Ennis patent they copied into their application here in interference only one of its claims which was an apparatus claim, and certain letters were introduced in evidence from which, taken in connection with their failure to copy more than one claim, it is urged, in effect, that Krasnow et al. virtually conceded that they had not invented the subject matter of the method claims and the other apparatus claims of the Ennis patent, at least at any date prior to Ennis. To what extent the contention was stressed before the Board is not apparent from its decision because it was not therein discussed. In view of the care with which other questions raised by the respective parties were discussed by that tribunal we have wondered if Doll's counsel in fact presented this particular contention there. However that may be, it has been pressed before us, being carried in Doll's reasons of appeal and being referred to again and again in the Doll brief. We have examined carefully the record respecting it.

It is true that Krasnow et al. in the first instance, copied only one claim from the Ennis patent, it being an apparatus claim. Also, it is true that they copied no other claims until such claims were suggested by the Primary Examiner. This seems to be explained, in part at least, in a letter that was introduced in evidence which was written by an associate attorney for Krasnow et al. (Mr. Krasnow himself seems to have represented Krasnow et al. before the tribunals of the Patent Office as he did before us) to a party who had indicated an interest in obtaining exclusive rights in the invention defined in the Krasnow et al. application which finally became involved in the instant interference. It appears from that letter that in the first action by the Primary Examiner on the claim which Krasnow et al. had copied from the Ennis patent (being claim 12 of the patent) it was held that Krasnow et al. had no right to make the claim, but in a subsequent action he reversed his former holding as to that claim, and in the same action suggested that Krasnow et al. could also make claims 1, 2, 3, 13, and 16 of the Ennis patent.

The letter of the associate attorney stated inter alia:

> * * * The right to make those claims [i. e. claims 1, 2, 3, 13 and 16] depends in part on a question of interpretation of them, but in our review of the patent we felt that we could not make those claims. On the other hand, we felt we were very close to the right to make claim 4 of the patent, which however, the Examiner groups with those which cannot be made. The Examiner requires a statement of position as to claims 1 to 3, 13 and 16 before August 6, 1941. We are disinclined as we look at the situation at the moment, to place any statement of record saying that we have no right to make claims. Rather than to place of record any such statement, we are disposed to make the claims 1 to 3, 13 and 16 for purposes of interference without any comment in connection therewith, leaving the question of our right to make for determination inter partes. This has the advantage of forcing Ennis to place his position of record if he contends for some limiting interpretation of the claims on the basis of which interpretation he would urge that Krasnow has no right to make the claims.

The statements in the letter of the associate attorney do not impress us as meaning more than that it was felt that Krasnow et al. could not make the claims under the interpretation which they themselves placed upon them. This, in our opinion, should not be held to prejudice their right to have the question of priority determined under the interpretation given the counts by the tribunals of the Patent Office. As is very well said in the brief before us on behalf of Krasnow et al.:

> The fact that there may have been a doubt concerning them is of no importance if that doubt was finally resolved, as it must have been, for the counts to have been made.

It is urged on behalf of Doll, however, that in concluding that the Krasnow et al. application of April 16, 1937, disclosed the subject matter defined in the counts the Board construed the counts too broadly, and in this connection, it is asserted that if the counts are read on Krasnow et al. they will read upon a patent, No. 2,020,856, issued to one Conrad Schlumberger November 12, 1935. The contention with respect to the Schlumberger patent seemingly was suggested for the first time at the final hearing before the Board which disposed of it as follows:

> Doll intimates that if the counts are interpreted so broadly as to read on Krasnow et al. they will read upon the Schlumberger Patent No. 2,020,856 which shows simultaneous logging and taking off a side wall sample in an open hole. It is not apparent that this is the case. The fact that Krasnow et al. application Serial No. 392,188 refers to the location of a proper point for *logging* or for *core taking* is not a showing of the equivalence of these operations which would render the Schlumberger patent an anticipation of the counts in issue. [Italics quoted.]

It would seem that if the contention respecting the Schlumberger patent was intended to be seriously relied upon the matter should have been made the subject of a motion under Patent Office rule 122, but, however that may be, we find nothing which would justify a reversal of the Board's holding upon this point.

The elaborate brief filed before us on behalf of Doll has been carefully studied in connection with the extensive record in this case. The questions presented are, in the final analysis, questions of fact. We fail to find any error in the interpretation of the counts and, as interpreted by the Board, there is no doubt in our minds of their disclosure by Krasnow et al. in their April 1937 application. We are of opinion that the award of priority was properly made, and the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE DALZELL ET AL.

No. 5418.—Decided February 10, 1948. Petition for rehearing denied April 2, 1948.

[— F.2d —; 77 USPQ 164]

1. INVENTION—CHANGE IN SIZE.

   We are unable to see any invention whatsoever in the limitation with respect to the relative capacities of the various elements of the system.

2. PATENTABILITY — ANTICIPATION — MODIFYING REFERENCE STRUCTURE.

   Where the Examiner and the Board of Appeals suggested certain modifications of the reference structure to meet the limitations of the appealed claims, *Held* that we are not impressed that the suggestions involving the introduction into the reference system of features not found therein constitutes a valid ground of rejection, unless such features are found in related cited art.

3. SAME—SAME—ADVANTAGES NOT DISCLOSED IN APPLICATION.

   Where the limitation of the appealed claim most strongly emphasized is not illustrated and where the specification though seemingly sufficient to support it, does not recite any advantage for it, *Held* that, though appellant's brief asserts some advantages, it is the specification which must be looked to in situations such as this.

4. SAME—HEAT EXCHANGE DEVICE.

   Certain claims to a heat exchange device *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 444,675.

AFFIRMED.

Norman E. H. Deletzke for Dalzell et al.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming the rejection by Primary Examiners of all the claims, numbered 1 to 7, inclusive, of appellants' application for patent relating to alleged improvements in a heat exchange device, such, for example, as a milk cooler. Claim 7 appears to have been inserted for purposes of appeal to the Board after claims 1 to 6 inclusive had been finally rejected by the Examiners.

Broadly, the rejection was based on the ground of lack of invention over prior art. The brief for appellants states:

• • • The claims were rejected for a variety of reasons, such as anticipation by the disclosure of a foreign patent, old combination, and lack of invention over the combination of the disclosure of prior art reference patents.

Under a practice, referred to as "Dual Prosecution," now prevailing in the Patent Office jurisdiction over the claims was divided. Claims 2 and 3 were acted upon in Division 32, and the remaining claims in Division 44. The brief of the Solicitor for the Patent Office states: "The reason for this procedure, apparently, was that claims 2 and 3 are drawn broadly to heat exchange structure, while the other claims recite an 'evaporator cooler'."

It appears that Division 44 had general jurisdiction of the application, but following the appeal to the Board the Examiners in the respective divisions who acted upon the case filed statements giving the reasons for their rejections, and in the case of claims 2 and 3, the Examiner in Division 32 appears to have filed an answer to the brief which appellants presented before the Board. In the brief for appellants before us it is asserted that appellants' attorney was not furnished a copy of the reply of the Examiner before the hearing by the Board, as provided by the rules of the Patent Office (referring, we assume, to the last sentence of Patent Office Rule 137) but no action by us is sought because of that, and it need receive no further attention here.

All the claims are for a structure and claims 1, 3 and 7 seem to cover all the material elements of the alleged invention. At least no feature of any one of the other claims is suggested as rendering it distinguishable in a patentable sense. We reproduce claims 1, 3 and 7:

1. The combination with an evaporator cooler, of a liquid refrigerant storage chamber of larger capacity than said evaporator, a supply connection communicating between said evaporator and said chamber for supplying liquid refrigerant to said evaporator, positive circulating means associated with said supply connection for circulating all of the liquid refrigerant from said chamber into said evaporator and automatically controlling the flow of liquid refrigerant through said supply connection when said circulating action is interrupted, a discharge connection leading from said evaporator to the upper portion of said storage chamber, a connection for supplying liquid refrigerant to said storage chamber, and a refrigerant discharge connection leading therefrom.

3. In a heat exchanger of the type described, a plurality of hinged heat exchange sections, a plurality of heat exchange medium supply and return headers, fluid connections between said heat exchange sections and said supply and return headers, a container shell for the storage of a quantity of heat exchange medium in excess of that required for flooding the interior of said heat exchange sections, fluid supply connections between the container shell and the supply headers, return connections between the container shell and said return headers, a fluid supply connection for said container shell, means within said container shell for separating the various phases of the heat exchange medium returned to the container shell from the return headers, and positive active means associated with said supply connection intermediate the supply headers and the container shell for regulating the flow of and for positively circulating heat exchange medium therethrough.

7. The combination in an evaporator cooler of a refrigerant evaporator, a volatile liquid refrigerant storage chamber of larger capacity than said evaporator, a supply connection communicating with the upper portion of said evaporator and with the lower portion of said storage chamber for supplying liquid refrigerant to the upper portion of said evaporator, circulating means associated with said supply connection for positively circulating liquid refrigerant from said storage chamber into the upper portion of said evaporator and for automatically controlling the flow of refrigerant through said supply connection when said circulating action is interrupted, discharge connection communicating with the lower portion of said evaporator and with the upper portion of said storage chamber, a supply connection for supplying liquid refrigerant to said storage chamber, and a discharge connection for discharging refrigerant from said storage chamber.

The following patents are listed as references in the decision of the Board: Sulzer (British), 200,518, July 6, 1923; Gay, 1,994,087, Mar. 12, 1935; Kitzmiller, 2,032,286, Feb. 25, 1936; Mojonnier et al., 2,040,947, May 19, 1936; Feldmeier et al., 2,190,584, Feb. 13, 1940; Cornell, 2,200,855, May 14, 1940; Thompson, 2,277,999, Mar. 31, 1942.

The decision of the Board of Appeals covers the various elements of the subject matter, except that it does not describe appellants' structure, but accepts that given by the Examiner in Division 44.

The device is somewhat complicated and many numerals and letters are used in identifying the different parts. The drawings embrace thirteen figures and the specification comprehensively describes the structure and its operation. The description given in the brief for appellants while somewhat more elaborate than that given by the Examiner does not differ from it in any essential respect.

The liquid is supplied to a distributing chamber by a pipe which is supported by a fitting that is attached to a standard. That portion of the pipe which is within the distributing chamber is provided with a series of perforations through which the liquid drains from the pipe into a W-shaped horizontal baffle in the chamber and thence through other perforations onto heat exchange sections. When the liquid is discharged from the heat exchange sections it is collected in a chamber below the sections. The latter chamber is provided with a discharge pipe which has elbows and a union. The exchange sections are supplied with a liquid refrigerant from an accumulator which is stated to have a capacity in excess of the total capacity of the heat exchange systems. The accumulator is supplied with refrigerant through a conduit at the end of which, in the accumulator, there is a float valve. Refrigerant is withdrawn from the accumulator through a conduit which supplies a pump that is driven by a motor. In the specification the pump is described as "The positive acting or other satisfactory type of liquid refrigerant circulating pump 79 driven by a motor 80." From the pump the refrigerant is forced through a conduit into an oil separator from whence it passes through another conduit and through the port of a manifold supply header into the supply header. After the refrigerant passes from the supply header through the lower hinge elements and a supply conduit to a refrigerant evaporating space of the heat exchange sections, it is conveyed to a discharge header by way of a hinge arm, and thence through a return port and a conduit into the upper gas chamber portion of the refrigerant accumulator. The portion contains baffles by means of which gaseous refrigerant and liquid refrigerant are separated, the liquid refrigerant falling to the bottom of the accumulator and the gaseous refrigerant being returned through a pipe to a compressor.

In rejecting claims 1, 4, 5, 6 and 7 the Examiner in Division 44 cited only the patents to Sulzer, Mojonnier et al., Feldmeier et al. and Cornell. He did not discuss them in detail pointing out that they were discussed in the statement of the Examiner in Division 32 in connection with the latter's rejection of claims 2 and 3.

The Examiner in Division 32 pointed out that claims 2 and 3 "are directed to a heat exchange system of general utility and are not limited to a refrigerating or cooling system." He further states (we omit letters and numerals as indicated by asterisks):

• • • Claim 2 reads upon applicant's disclosure in the following manner. In a heat exchanger of the type described, a plurality of hinged heat exchange sections • • •, a plurality of heat exchange medium supply and return headers • • •, fluid connections between said heat exchange sections and said supply and return headers • • •, a container shell • • • for the storage of a quantity of heat exchange medium in excess of that required for flooding the interior of said heat exchange sections, fluid supply connections • • • between the container shell and the supply headers, fluid return connections • • • between the container shell and said return headers, a fluid supply connection • • • for said container shell, means within said container shell for separating the various phases of the heat exchange medium returned to the container shell from the return headers (baffles • • • in shell • • • separate the liquid and gaseous refrigerant) and means associated with said supply connection for positively circulating and regulating the flow of heat exchange medium intermediate the supply headers and the container shell • • •.

Claim 3 is substantially similar to claim 2 but recites the pump • • • in slightly different terms.

He cited and described the several reference patents cited by the Examiner in Division 44, and in addition cited the patents to Gay, Kitzmiller and Thompson.

The pertinent disclosures of the references will probably be best understood when applied to the claims.

The elements of claim 1 are (1) an evaporator cooler, combined with (2) a liquid refrigerant storage chamber; (3) a supply connection (in which there is a pump) between the evaporator and the chamber; (4) positive circulating means (the pump) associated with the supply connection; (5) a discharge connection leading from the evaporator to the upper portion of the storage chamber; (6) a connection for supplying liquid refrigerant to the storage chamber, and (7) a connection leading from the storage chamber through which refrigerant may be discharged.

In the Sulzer patent refrigerant is supplied to a vaporizer through a conduit, a throttle valve and a tube. The evaporated refrigerant and entrained unevaporated refrigerant are discharged from the evaporator into the upper portion of an accumulator. The unevaporated refrigerant falls to the lower portion of the accumulator and is recirculated into the evaporator by means of a pump identified in the patent by the small letter "g." (The specification states that the pump may be replaced by an ejector fed from a condenser.) The evaporated refrigerant is conducted from the accumulator through a conduit to a compressor. So, each of the physical elements of appealed claim 1 is found in the Sulzer patent and it may be said that each of them is identified by a letter, except the pipe which constitutes the discharge connection leading from the evaporator to the upper portion of the storage chamber. It seems obvious that there would have to be such a connection and it is shown in the Sulzer drawing. Indeed we do not find that the failure to identify this element is regarded as consequential by appellants.

The features or elements of claim 1 are present in claim 7, with some additional limitations, and the latter was rejected, at least in part, upon the same grounds as the former.

[1] It is contended on behalf of appellants that, independently of the elements which we have pointed out, there are two matters of structure stated in claims 1 and 7 which are not disclosed by the prior art and which render those claims patentable. The first is, in substance, that the chamber in which the refrigerant is stored is of larger capacity than the evaporator cooler. So far as we are able to determine from appellants' specification no new or unobvious result was obtained by adjusting the size of the storage chamber to the necessities of the operation—that is making it large enough to hold at all times a sufficient quantity of liquid refrigerant to operate the device. It is a matter of designing which any one skilled in the art obviously could and would perform. So, like the Board, "We are unable to see any invention whatsoever in the limitation with respect to the relative capacities of the various elements of the system."

The second matter appearing in claim 1 (and seemingly in all the other claims in somewhat different phraseology) which is emphasized in the brief for appellants is the clause reading "positive circulating means associated with said supply connection for circulating all of the liquid refrigerant from said chamber into said evaporator and automatically controlling the flow of liquid refrigerant through said supply connection when said circulating action is interrupted."

The controversy on this phase of the case seems to be about the pump which constitutes the "positive circulating means" referred to at the outset of the clause.

The contention of appellants before us is, as it appears to have been before the several tribunals of the Patent Office, that the type of pump the use of which is taught by the Sulzer patent is not the character of pump required by the count. The brief asserts:

> The primary reference patent, that is, the British patent to Sulzer, * * * contains no suggestion whatsoever with respect to the use of a positive displacement type of pump, also capable of functioning as a valve, for the circulation of the refrigerant to the evaporator. * * *

There was no discussion of this phase of the case by the Examiner in Division 44, nor did he formally rule upon it. He expressed the view that the clause was based upon matter introduced into the specification by amendment, cancellation of which he required, or requested, on the ground that it was new matter. The Board held that it was not new matter and passed upon the question as hereinafter set forth. It is noted that the Examiner in Division 32 declared:

> Claims 2 and 3 as amended include references to the pump 79 as positively circulating and regulating the flow of heat exchange medium. Applicant has shown no details of any special pump design. Accordingly it must be assumed that any conventional pump would be used. Although the British [Sulzer] patent discloses on the drawing a reciprocating pump, the specification does not refer to the pump as such. The disclosure of the patent is therefore clearly diagrammatic in character and the use of any conventional type pump is believed to be indicated. In any event, no invention lies in using such conventional pumps, whether of the reciprocating, rotary, or ejector type. Note the British patent says that the ejector type may be used * * *.

The Board expressed the view that Sulzer's pump is in fact a positive displacement pump, and states its disagreement with appellants' interpretation of the operation of the Sulzer device which is to the effect that the liquid refrigerant flows by gravity through Sulzer's pump into his evaporator when the pump is not working. This contention on behalf of appellants, as we understand it, is based upon the fact that the type of pump disclosed in Sulzer's drawings does not act as a valve, but the Board says in substance that check valves are usually employed to prevent such flow and cites the Kitzmiller patent as an example. That patent, which relates to a refrigerant liquid return system, discloses a pipe line between a pump and an evaporator which line is equipped with a check valve or, alternatively, with an electrically operated valve in parallel with the pump motor. As is pointed out in the brief of the Solicitor for the Patent Office "Kitzmiller's valve is located at the point called for by claim 1, namely, in the supply line leading from a storage vessel to an evaporator in a refrigerating system."

[2] Proceeding further, the Board suggested certain so called modifications of the Sulzer structure by an arrangement of valves by which the flow of liquid refrigerant from the accumulator into the evaporator when the pump is not working would be prevented. Seemingly this would involve the introduction of what the Board refers to as "positive acting valves" not now present in the Sulzer reference. It may be said that the Examiner in Division 32 also outlined so called modifications, such as the elevation of Sulzer's pump and the equipping of the pump with certain valves not now in the system.

We are not impressed that the suggestions involving the introduction into the Sulzer system of features not found therein constitutes a valid ground of rejection, unless such features are found in related cited art. We are impressed, however, with the finding relative to the disclosure of the valve in the Kitzmiller patent. Unless we misinterpret the teaching of that patent it bears out the assertions in the brief of the Solicitor for the Patent Office to the effect that the Kitzmiller valve, if placed in that supply line of Sulzer which leads to the evaporator, would cut off the flow of the liquid refrigerant when the pump stopped.

In the brief of the Solicitor for the Patent Office we find certain observations relative to the functional character of that clause of claim 1 now under discussion which, while possibly inherent in the decisions of the Examiners and the Board does not seem to have been clearly expressed by them.

The use of "positive circulating means," which is the pump that is associated with a supply line, has a two-fold purpose, viz.: (1) for circulating all of the liquid refrigerant from the storage chamber into the evaporator, and (2) for automatically controlling the flow of liquid refrigerant through the supply connection when the circulating action is interrupted. It is the second purpose which is of importance here, because the first—that is the circulation—obviously is carried out by the Sulzer device as it stands without alteration or modification.

The brief of the Solicitor for the Patent Office asserts that "automatically controlling the flow of the liquid refrigerant through said supply connection when said circulating action is interrupted," is a purely functional statement "there being no structure recited which would produce the result called for." The brief further asserts (with a citation of authorities, including *In re Stattman*, 32 CCPA (Patents) 818, 146 F.2d 290, 64 USPQ 245 (571 O. G. 351): that "A statement of function is not sufficient to render an apparatus claim patentable if the structure recited is old."

One of the difficulties which seems to us to have been present in this case throughout its prosecution has been the absence of any definite understanding of the meaning of the phrase, "positive circulating means," as it is used in the claims. The Examiner in Division 44 when discussing the question of new matter said, inter alia

> * * * The specification did not give any information teaching the distinction, if there be any, between various pumps in good operative condition which makes one pump "positive acting" while another effective pump is not positive acting. * * *

While the Board expressed the opinion that the pump of Sulzer is "a positive displacement pump," we do not find where it distinguished between pumps that are positive and pumps that are not positive. It is possible that the Board predicated its conclusion upon a statement which appeared in the brief of the Examiner in Division 32 filed in reply to the brief of appellant before the Board which we here quote:

> Applicant in his brief, for the first time, refers to Kent's Mechanical Engineering Handbook for "a definition of the expression positive pump." The Examiner can find no such definition therein. The statement on page 2-72 is: "A rotary pump is a positive displacement pump driven from an independent prime mover through a rotating shaft."
>
> This is merely a definition of a rotary pump. This does not imply that the reciprocating pump 9 of the reference patent to Sulzer Bros. is not also a positive (displacement) pump. Such pump is a positive displacement pump. Page 1 of Section III entitled Power Pumps of The Worthington Pump Handbook, published by Worthington Pump and Machinery Corp. New York 1927 says: "In pump nomenclature the term "power pump" has but one accepted meaning, and is only applied to positive displacement pumps operated through cranks and connecting rods by the application of power to the crank-shaft. A power pump works just like a reciprocating engine, except that the power action is reversed." From this, it is clear that a reciprocating pump is a positive displacement pump also.

Unhappily, when we turn to the brief of appellants for aid upon this question, we find nothing which is of any particular benefit. It states, without citing any lexicographer or other authority, that, "'Positive pumps' are commonly considered to be such pumps as gear pumps, vane pumps, and the like, as distinguished from centrifugal pumps," and it contains the statement: "A conventional type of reciprocating pump, i. e., the type of plunger pump *disclosed in the Sulzer reference patent, is also a positive pump.*" [Italics ours.] The brief continues, however:

> * * * Conventional types of reciprocating pumps are equipped with gravity-actuated check valves (see [Patent Office] Rules of Practice, page 62, Figures 26, 27 and 28), which will not enable the pump to produce a valving action in the flow line when the flow line is under a pressured head. * * *

We have spent much time studying the question raised by appellants respecting the "positive circulating means" (that is the pump) feature of the appealed claims and have devoted much space to its discussion because that feature seems to constitute the heart of appellants' alleged invention.

It is our conclusion that appellants have failed to substantiate the allegations of error upon this point set forth in the reasons of appeal.

The brief of the Solicitor for the Patent Office succinctly summarizes the matter in the following statement:

> To sum up, the limitation in claim 1 as to the controlling of flow does not distinguish patentability from Sulzer, first, because it is a purely functional limitation in an apparatus claim, secondly, because the function, as broadly recited, is inherent in the normal operation of the Sulzer device and, thirdly, because, if it were not so inherent, no invention would be involved in modifying Sulzer's structure in such a manner as to produce it.

[3] The limitation in claim 7 (not present in any of the other claims) which appellants most strongly emphasize before us is that of the refrigerant supply line running from the upper portion of the evaporator to the lower portion of the storage chamber. This is a reversal of the order described in claim 1, supra. The arrangement does not seem to be illustrated by a drawing, nor does the specification, although seemingly sufficient to support it, recite any advantages for it. The brief for appellants asserts some advantages but it is the specification which must be looked to in situations such as this. *Abbott et al. v. Coe*, 71 App. D. C. 195, 109 F.2d 449, 45 USPQ 267, 512 O. G. 3. The Board did not discuss claim 7 apart from claim 1 but the Examiner in Division 44, said:

> * * * connecting the evaporator supply conduit of Sulzer from his liquid refrigerant accumulator or storage chamber to the upper portion of his evaporator C and connecting his evaporator discharge conduit from the lower portion of his evaporator to the upper part of his accumulator or storage chamber as required by the claim would not involve invention.

We presume the Board agreed with that statement. At any rate, we find nothing wrong with it.

[4] Claims 2 to 6, inclusive, in addition to being rejected as unpatentable over the Sulzer patent (certain of the other references being cited in connection with certain limitations) for the same reasons applied in the rejection of claim 1, were also rejected as being drawn to the old combination of a storage chamber and an evaporator with a pump for circulating refrigerant between them. Sulzer, of course, shows such a combination, and it seems to us that the Kitzmiller patent does also.

"Hinged" or "swingably mounted" heat exchange sections are disclosed by the patents to Mojonnier et al., Cornell and Feldmeier et al. Baffling elements to aid in the separation of liquid and gaseous refrigerant are shown in the patent to Thompson and in that to Gay.

In view of our conclusion based on the grounds hereinbefore stated and discussed, it is deemed unnecessary to consider the other grounds applied by the tribunals of the Patent Office.

For the reasons indicated the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

VIVIANO, INC.
v.
CRESTA BLANCA

No. 5437. Decided April 6, 1948
[— F.2d —; 77 USPQ 384]

1. TRADE-MARKS—OPPOSITION — "CRESTA BLANCA" AND "GOLD CREST"—DOMINANT FEATURES.
   Held that in the mark "Cresta Blanca" there is no separate dominant feature, and that in the mark "Gold Crest," "Crest" is not the dominant feature of the mark.
2. SAME—SAME—SAME—CONFUSING SIMILARITY.
   Comparing the words "Gold Crest" alone with appellant's mark "Cresta Blanca" as applied to identical goods, *Held* that there is nothing in those expressions that can reasonably be held to be likely to cause confusion in trade or to deceive the mind of the public.

APPEAL from the Patent Office. Opposition No. 23,718.

REVERSED.

A. Harry Crowell and *Kimmel & Crowell* for Viviano, Inc.

Mock & Blum (*Asher Blum* and *Charles R. Allen* of counsel) for Cresta Blanca.

JACKSON, *J.*:

This is an appeal in a trade-mark opposition proceeding from a decision of the Commissioner of Pat-

ents, 71 USPQ 149, reversing that of the Examiner of Interferences, dismissing appellee's notice of opposition to the registration of appellant's composite trade-mark consisting of a shield on which appears the letters "G," "V," and "I" on red, blue, and gold background respectively. On either side of the shield are representations of grapes and grape leaves and a ribbon scroll extending across the bottom tip of the shield. Over the shield in prominent letters appears the name "VIVIANO" (disclaimed apart from the mark as shown) and under the shield are the words "GOLD CREST." Appellee's registered trade-mark, upon which the opposition is based, is "CRESTA BLANCA." The goods of both parties, being wines, are identical.

The contention of appellee has been and is that the marks of the parties are dominated by the word "CREST." It is argued that that word is the dominant feature in appellant's mark and has the same meaning as the word "CRESTA" in the mark of appellee.

The Examiner was of opinion that the word "CREST" was not the dominant feature of appellant's mark and that when such mark is considered as a whole together with the whole of appellee's mark that they are not similar in appearance or sound. He held, therefore, that when considered in their entireties the marks of the parties were sufficiently different as to obviate any likelihood of confusion in trade.

The Commissioner in his decision was of opinion that based on the ornate appearance of appellant's mark and the simple mark of appellee, that the difference between the marks in appearance is so great that there would be no confusing similarity in that respect.

The Commissioner was of opinion that appellant's mark would be referred to as "Viviano Gold Crest" but that since "Viviano" was disclaimed the trade-mark significance in sound would be in the expression "Gold Crest." The Commissioner stated that when the words "Crest" and "Cresta" are spoken that they would make more of an impression on the hearer than the accompanying words "Gold" and "Blanca." The Commissioner thought that because the words "Crest" and "Cresta" are somewhat similar in sound that there would be likelihood of persons to mistake one for the other and therefore confusion would ensue. In effect he held that the words "Crest" and "Cresta" were the dominant features of the marks of the parties. He then said that sound of itself is sufficient upon which to base confusing similarity of the marks as applied to goods of the same descriptive properties, citing the case of *Skol Co. Inc.* v. *Olson*, 33 CCPA (Patents) 715, 151 F.2d 200, 67 USPQ 96, 582 O. G. 491.

We can not agree with the decision of the Commissioner.

The sole question here is whether or not the marks of the parties are confusingly similar.

[1] We can not see, in considering a mark so well known as that of appellee, how it can be reasonably concluded that the word "Cresta" is its dominant feature. Neither can we understand how it could be contended that the word "Blanca" would be considered as dominating the mark. In our opinion there is no separate dominant feature to the mark "CRESTA BLANCA." As far as appellee's wines are concerned, the words must be used together or the mark would lose its very nature. It is an old and exceedingly well known mark among those who are accustomed to the use of wines. The name apparently means "white crest," but surely, if it were translated from Spanish into English, no one could reasonably think that "White Crest" wine was the wine with which the mark "CRESTA BLANCA" is used.

We are of opinion that "Crest" is not the dominant feature of appellant's mark. Its dominant feature clearly is "Gold Crest," which neither looks like nor sounds like, nor has any parallel or suggestive meaning as "Cresta Blanca."

We have held many times that in trade-mark cases, precedents are of no great aid to decision. *In re Dutch Maid Ice Cream Company*, 25 CCPA (Patents) 1009, 95 F.2d 262, 37 USPQ 202, 495 O. G. 221. Nevertheless, appellee has cited and earnestly discussed several cases decided by this court as sustaining his contention that the marks are confusingly similar, and we deem it proper to briefly distinguish between those cases and the instant case.

Appellee reasons that if appellant is allowed to register the word "CREST" in the combination mark "VIVIANO GOLD CREST" that many others might follow suit and we would witness such combinations as "Cervantes Purple Crest," "Rossini Cresta di Vini," "Crest of Creation," "Puccini Crest of Happiness," and the like, and thus a condition might arise such as we stated would be likely in the case of *Bielsoff Products Company* v. *White Horse Distillers, Limited*, 27 CCPA (Patents) 722, 107 F.2d 583, 43 USPQ 397, 511 O. G. 801.

In that case appellant sought to register the mark "RED HORSE" as applied to alcoholic beverages. Appellee was the owner of the trade-marks "WHITE HORSE" and "BLACK HORSE" for alcoholic beverages. We stated that if appellant could register "RED HORSE" some third party might be entitled to register "Bay Horse" or other similar mark on such beverages and thus destroy the value of appellee's registered marks. We can see no possible parallel between the facts of the Bielsoff Products Company case, supra, and those before us here. If in that case the name appellant sought to register was "CABALLO COLORADO" or "CABALLO ROJOS," we might have a situation somewhat similar to the one before us. In the instant case if the mark appellant seeks to register were "CARTA DE ORO," the facts might be considered to be somewhat similar to that of the Bielsoff Products Company case, supra.

We find no precedent in the case of *J. S. Ivins' Son, Inc.*, v. *United Biscuit Co. of America*, 34 CCPA (Patents) 789, 158 F.2d 397, 72 USPQ 121, 596 O. G. 141, where the marks "Gate House Cookies by Ivins," the last three words being disclaimed, and the expression "Town House" were held to be confusingly similar as applied to goods identical in part. We there held that in the marks "Gate House" and "Town House" the words "Gate" and "Town" were distinctive and the expression "House" was the part of the mark which was the chief factor in directing the purchaser's attention to the origin of the goods. We quoted with approval the decision of the Commissioner that a town house and a gate house are both houses differing only in style, location, or purpose. In the instant case we have no identity of words in the involved marks.

Similarly in the case of *J. S. Ivins' Son, Inc.* v. *Lamont, Corliss & Company*, 34 CCPA (Patents) 737, 158 F.2d 899, 72 USPQ 120, 596 O. G. 443, appellant sought to have registered its trade-mark "Gate House Cookies by Ivins." It was opposed by appellee, basing its opposition on its registered mark "Toll House" for chocolate and for cookies. We approved the reasoning in the decision of the Commissioner, in which it was stated, as was pointed out by the Examiner of Interferences, that the expression "Gate House" and "Toll House" have precisely the same meaning. Clearly there is nothing in the facts of that case to give it any controlling effect here.

The cases of *Macleay Duff (Distillers), Ltd.* v. *Frankfort Distilleries, Inc.*, 29 CCPA (Patents) 1160, 129 F.2d 695, 54 USPQ 253, 544 O. G. 8, involved the word "Duff's" as applied to Scotch Whiskey. Appellee was the owner of the marks "Duffy," "Duffy's," "Duffy's Malt," "Duffy's Malt Whiskey," and "Duffy's Whiskey." We agreed with the tribunals of the Patent Office in holding that the notation "Duff" is the more prominent spoken symbol and the one by which purchasers would ordinarily buy appellant's goods. We reasoned that the goods of the parties would be sought as "Duff's" or as "Duffy's." Clearly the difference in appearance and sound between those two words is so very slight that we held their concurrent use was likely to confuse the mind of the public or deceive purchasers as to origin. It is obvious that there is nothing in that case that can apply to the facts here.

Appellee has also cited the case of *American Brewing Company, Inc.* v. *Delatour Beverage Corporation*, 25 CCPA (Patents) 778, 100 F.2d 253, 40 USPQ 178, 501 O. G. 293. That was a cancellation proceeding in which it appeared that appellants had used a trade-mark upon beer and ale, which consisted of a reproduction of the Statue of Liberty and the word "Liberty." Appellee was the owner of the mark "AMERICA DRY GINGER ALE." In reversing the decision of the Commissioner, we held that the representation of the Statue of Liberty was the dominant portion of the mark sought to be canceled and that when considering the mark as a whole it was confusingly similar to that of appellant which consisted of the Statue of Liberty and the word "Liberty," as aforesaid. Clearly there is nothing in that case which would even "squint" toward the facts here.

In the case of *Jacob Ries Bottling Works, Inc.* v. *Coca-Cola Co.*, 31 CCPA (Patents) 706, 138 F.2d 56, 59 USPQ 138, 557 O. G. 228, the issue was stated to be between the word "Kola" which appeared in appellant's mark "ROCK SPRING KOLA" sought to be registered and "Cola" appearing in the "COCA-COLA" mark of appellee. The goods of the parties were of the same descriptive properties and the marks considered as a whole were held to be confusingly similar. In the instant case no word of the mark of appellee is idem sonans with any word in the mark of appellant.

The Commissioner in his decision cited the case of *Skol Co. Inc.*, v. *Olson*, supra. It was also cited here by appellee. We there held by a divided court that the goods of the appellee, a charged mineral water which had been advertised as having a therapeutic effect, possessed the same descriptive properties as appellant's goods, which were lotions for preventing sunburn, for use after shaving, and for relief of such complaints as cold sore, ringworm, athlete's foot, hives, burns, abrasions, scalds, and other skin irritations, and for eye glasses, to all of which was applied the trade name "SKOL." The term sought to be registered was "SKOAL." There the names were the same in sound, and might be considered by some the same in meaning. For the reason that a majority of the court held that the goods of the parties were of the same descriptive properties, the decision of the Commissioner was reversed. It is clear that that case has no pertinence here.

In our opinion appellant does not seek to take anything from the value of appellee's trade-mark. Therefore, the case of *Bon Ami Co.* v. *McKesson & Robbins, Inc.*, 25 CCPA (Patents) 826, 93 F.2d 915, 36 USPQ 260, 490 O. G. 729, is not at all in point as contended by appellee.

In the case of *Ex parte Crest Laboratories, Inc.*, 55 USPQ 238, the Commissioner of Patents refused to register the word "Crest" as applied to a shampoo preparation in view of three prior registrations, "Alice Dale's Crest," "Gold Crest," and "Vel Crest," as applied to goods of the same descriptive properties. The Commissioner properly stated that, "All of the marks cited carry conspicuously or dominantly the word 'Crest,' which is the sole feature of the applicant's mark." It can not, in our opinion, be reasonably held that the word "Crest" in appellant's mark is a conspicuous or dominant feature, any more than we could hold that "Cresta" is the dominant feature of the mark of appellee.

In the case of *McKesson & Robbins, Incorporated*, v. *California Growers Wineries*, 60 USPQ 147, the mark "GOLDEN BEAR" was held to be confusingly similar to the mark "Bear Club." Both marks were applied to liquor and both appeared in association with a shield design. The word "Bear" was admittedly the dominant part of the words "Golden Bear," and the Commissioner held that for the same reason the word "Bear" dominates the mark "Bear Club."

We have no such situation before us in this case. No word of the mark sought to be registered is the same as any word in appellee's mark.

Viewing the issue as narrowly as it reasonably can be considered, i. e. that the words "Gold Crest" alone should be considered with appellant's mark "Cresta Blanca," we find nothing in those expressions as applied to the goods of the parties that can reasonably be held to be likely to cause confusion in trade or to deceive the mind of the public. Therefore, the decision of the Commissioner of Patents is reversed.

REVERSED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

NOTICES

Official Gazette

Notice is hereby given that on August 15, 1948, copies of the OFFICIAL GAZETTE published prior to August 15, 1938, will be withdrawn from sale by the Superintendent of Documents and that thereafter, until further notice, sale copies while in print will be retained for a maximum period of ten years in lieu of twenty years. Persons desiring to purchase copies of the OFFICIAL GAZETTE in the issues scheduled to be withdrawn from sale should place orders immediately with the Superintendent of Documents, Government Printing Office, Washington 25, D. C. Complete sets of the issues published in the last twenty years are not available.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,389,161, H. M. McCoy, Controllable pitch change mechanism for dual rotation propellers, decided June 10, 1948, claim 13.

Pat. 2,383,636, W. A. Wurth, Temperature control of catalytic reactions, decided June 21, 1948, claim 4.

Pat. 2,432,277, J. M. Brackenbury, Catalytic cracking of hydrocarbon oils, decided June 23, 1948, claims 1, 2, and 3.

Pat. 2,414,197, R. E. Gignoux, Hydraulic drive for hoists or the like, decided June 23, 1948, claims 2, 8, 9, 10, and 11.

Cancellation Notice

Ralph Galowin, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Stauffer Chemical Company, 636 California St., San Francisco, Calif., to effect the cancellation of trade-mark registration of Ralph Galowin, 2815 West 2d Street, Brooklyn, N. Y., No. 280,147, dated February 10, 1931, and the notice of such proceeding sent by registered mail to the said Galowin at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Galowin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
July 6, 1948. *Assistant Commissioner of Patents.*

Adjudicated Patent

(C. A. Ill.) Farmer patent, No. 2,410,409, for construction toy elements, *Held* invalid. *Farmer* v. *Beaver Tool & Mfg. Co.*, 167 F.2d 879; 77 USPQ 446.

Interference Notices

Kaw Products Co. Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John Bird Company, Bird Block, Sea St., Rockland, Maine, for registration of a trade-mark and registration No. 257,508, issued June 11, 1929, to Kaw Products Co. Inc., 19 North 4th St., Philadelphia, Pa., and the notice of such declaration sent by registered mail to the said Kaw Products Co. Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless Kaw Products Co. Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
June 15, 1948. *Assistant Commissioner of Patents.*

Du Barry Sportwear Manufacturing Corp., its assigns or legal representatives, takes notice:

An interference having been declared by this Office between the application of Desmond's (Desmond's, Inc., assignee, substituted), 616 Broadway, Los Angeles, Calif., for registration of a trade-mark and registration No. 279,069 issued January 6, 1931, to Du Barry Sportwear Manufacturing Corp., 40 West 22nd St., New York, N. Y., and the notice of such declaration sent by registered mail to the said Du Barry Sportwear Manufacturing Corp. at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Du Barry Sportwear Manufacturing Corp., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
June 15, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,083,603. COLLAPSIBLE TUBE EXPELLER. Patented June 15, 1937. A rigid, narrow strip of plastic material has a slot long enough and wide enough to receive the flattened end of a collapsible tube (of toothpaste, etc.). Expeller is placed on lower end prior to sealing of tube and is pushed along with one hand by user to force contents through nozzle at top, leaving other hand free to hold toothbrush or receive contents. Upper edge of slot is rounded to ensure smooth sliding without puncturing walls of tube. (Owner) Paul M. Harwick, 153 Clarence Road, Scarsdale, N. Y. Groups 34—92; 39—81; 40. Reg. No. 9,764.

Pat. 2,413,541. PLASTIC BRACELET. Patented Dec. 31, 1946. A bracelet made of resilient transparent plastic material has ornamental semi-spherical bosses on the outer surface, which act as lenses to magnify miniature photographs or the like placed in recesses beneath the bosses. The pictures are held in position by a removable backing bar which rests in a groove on inner side of bracelet. (Owner) H. D. Brady, 2321 North 10th St., Phoenix, Ariz. Groups 39—71—81; 40. Reg. No. 9,765.

Pat. 2,429,763. COLLAPSIBLE STROLLER. Patented Oct. 28, 1947. A stroller for children which may be folded into a compact unit. The seat, back, handle, and supporting uprights are all pivotally connected for folding. During collapsing, the wheeled units are brought into the general plane of the folded members, so the finished unit will be of less thickness than the normal diameter of the wheels. (Owner) T. S. Lindabury, 3520 Wismer Road, St. Louis 14, Mo. Group 39—43. Reg. No. 9,766.

Pat. 2,428,168. CHILD'S SLEEPING GARMENT. Patented Oct. 14, 1947. Upper portion of child's sleeping garment, having closable neck and shoulder opening, is shaped generally to body of child. Lower portion, which is cut integral with body part, is wider and has a gusset, extending down each side and across bottom, stitched to back. Front is detachably fastened to gusset by cooperating fastening strips, allowing front to be folded back to waistline. Tapes fastened at upper points of lower portion may be tied to sides of crib. (Owner) Emily D. Padgett. Address correspondence to Frank H. Kennedy, 323-327 Law Bldg., Charlotte 2, N. C. Groups 22—45; 23—41. Reg. No. 9,767.

Pat. 2,436,935. FASTENER FOR TYING ELEMENTS. Patented Mar. 2, 1948. Fastener is an elongated plate provided with a pair of openings spaced from the center. One end of the plate is curved and has a pointed offset portion, the other end being notched and forming a hooked portion, the free end of which is bent upwardly. The fastener permits one end of the cord to be gripped while the other part of the cord is being wound around a package. The fastener may be easily manipulated with one hand while a package is held with the other, eliminating the necessity of placing the package on a support while being tied. The fastener is removed after the tying operation is completed. (Owner) Albert A. Ohler, 5979 Northfield, Detroit 10, Mich. Group 33—73. Reg. No. 9,768.

Pat. 2,439,712. PLUMBING FITTING. Patented Apr. 13, 1948. This plumbing fitting is especially adapted for common supply lines in washrooms or lavatories of office buildings where plumbing fixtures in adjoining rooms are placed back to back. The fitting is an elongated body having discharge openings at opposite ends, between which spaced parallel inlet openings are located. Crossed-over passages establish communication between the outlets so that fluid entering either inlet is discharged at opposite ends of the body. The fitting avoids the use of complicated piping arrangements. (Owner) Clyde H. Brady, 184 South Main St., Danville, Va. Group 33—61. Reg. No. 9,769.

Pat. 2,395,486. MEANS FOR ADJUSTING BROILERS AND LIKE FOOD SUPPORTS. Patented Feb. 26, 1946. Broiling pan is supported on the door of the broiling compartment of a range so that food on the pan may be adjusted toward or from heat without opening the door of the range. The pan is supported by a carriage which slides within a pair of vertical channel guides fixed to the inner lining of the range. A pinion and rack are centered between the two guide channels and controlled by a hand wheel so that the carriage which supports the pan may be lifted or lowered when necessary. (Owner) W. R. Jones, 2805 Archwood Ave., Cleveland 9, Ohio. Group 33—62. Reg. No. 9,770.

Pat. 2,413,237. MASTER SAFETY VALVE WITH OVEN VALVE LOCK ATTACHMENT. Patented Dec. 24, 1946. A safety control valve is interposed in the supply line of a gas range in advance of the manifold through which gas is supplied to the individual service burners and the oven burner. The valve is opened only by the insertion of a key so that gas may be supplied to the manifold and then to the burners. (Owner) W. R. Jones, 2805 Archwood Ave., Cleveland 9, Ohio. Group 33—62. Reg. No. 9,771.

Pat. 2,436,996. SEALED DRIVING BUSHING. Patented Mar. 2, 1948. A sealed driving bushing, easily assembled and operated, for use in connection with the impeller shaft of a fluid pump, refrigeration compressor, or the like. A cupped bearing is keyed for rotation to bore in hub at end of an impeller shaft, whereby the impeller is allowed to thrust against a back plate which comprises part of a fluid pump housing or the like. As the back plate is drawn into place, a spring between the hub and bearing is put under tension and holds the impeller in position but leaves the bearing cup free of the thrust on the impeller. (Owner) Walter M. Howser, 820 North Jefferson St., Indianapolis 1, Ind. Group 35—61—84. Reg. No. 9,772.

Pat. 2,439,717. ROTARY GAS ENGINE OF THE REACTION TYPE. Patented Apr. 13, 1948. Rotor and stator blades are arranged to operate as compressors to force the fuel into a rotatable compression chamber. The gases are intermittently delivered from the compression chamber into the rotor, which has outlet nozzles that deliver jets of exhaust gases against the stationary blades of the stator to drive the rotor. An automatic valve mechanism and ignition mechanism are controlled by the operation of the

rotor whereby the supply of fuel to the combustion chamber within the rotor is cut off immediately prior to each explosion. (Owner) G. C. Cooke, 222–6 Nissen Bldg., Winston-Salem, N. C. Groups 35—12; 37—22; 38—31. Reg. No. 9,773.

Pat. 2,417,114. MECHANICAL MOVEMENT FOR INDICATORS. Patented Mar. 11, 1947. A mechanical movement for indicators of the screw and nut type in which the pitch of the screw may be changed at will to vary the speed ratio between the driving and driven parts. For use with an indicating apparatus where a pointer is moved along a graduated scale by a motor device which is sensitively responsive to two different varying conditions (speedometer, etc.). Also useful as a correction-applying means in a speed indicator for aeronautical use to correct the device for barometric changes. (Owner) American Reenforced Paper Co., Attleboro, Mass. Group 39—11. Reg. No. 9,774.

Pat. 2,437,588. CASTER. Patented Mar. 9, 1948. A dirt-proof caster for trucks, furniture, or heavy equipment. Caster swivels on a large, flat bearing disc without jamming or locking. The swiveling parts rotate in sliding contact, the contacting surfaces being formed on both the base plate and the caster to reduce wear, eliminate unnecessary friction, and permit the device to function under heavy loads. (Owner) Charles A. Baum, 612 Rentschler Bldg., Hamilton, Ohio. Groups 25—99; 33—59; 35—31. Reg. No. 9,775.

Pat. 2,433,095. RAILROAD RAIL JOINT. Patented Dec. 23, 1947. A detachable joint for easily and quickly supporting the connecting ends of railroad rails. Comprises an upstanding side plate joined to a base plate, and a second upstanding side plate the base portion of which overlies the base part of the rail and the base plate of the other upstanding side plate. Registering slots in the adjacent base portions are provided with locking plug and bolt to prevent removal. (Owner) Joseph L. Cuperka, 8541 South Major Ave., Oaklawn, Ill. Group 38—12. Reg. No. 9,776.

Pat. 2,338,836. GROOMING KIT. Patented Jan. 11, 1944. A transparent dust-proof case for carrying a small brush and comb on the person. Brush pivoted to end of housing telescopes within it. Comb, pivoted to same end of housing but on opposite side, telescopes into housing, teeth being received through a slot in the back of brush in the bristle face. Brush and comb are adapted to be extended and fastened in back-to-back relationship so that either one, enclosed in housing, may be used as a handle for the other. (Owner) Rockwell Manufacturing Company. Address correspondence to Strauch and Hoffman, 1001 15th St., N. W., Washington, D. C. Groups 39—22—31; 40. Reg. No. 9,777.

Pat. 2,083,622. HEAT INSULATING MECHANISM. Patented June 15, 1937. This patent provides a means whereby a room may be adapted to barometer and temperature changes and the entry of dust, moisture, etc., into the room may be prevented. The insulating mechanism covered by the patent has many variations. Generally, however, it consists of an air-tight housing connected to a bellows having a drying agent and an air filter. The housing may extend across a window or other opening in a wall of a dwelling, railroad car, etc., being formed of metal, glass, or the like, depending upon the use to which it is to be put. (Owner) Caleb E. Summers, Orchard Lake, Mich. Group 35—84. Reg. No. 9,778.

Pat. 2,439,071. DETACHABLE HANDLE FOR KNIVES, HATCHETS, ETC. Patented Apr. 6, 1948. Handle is adapted to alternately receive and retain different attachments such as a knife blade, screwdriver, or hatchet. The handle consists of a pair of opposed side plates separated at the top by an elongated pivoted spring and at the bottom by a fixed bar. The forward end of the spring and bar are made to grip a specially designed blade portion. Manipulating a lever housed at the lower rear end of the handle pivots the spring, causing the handle to either firmly grip the blade in a vise-like manner or release it. (Owner) Lawrence H. Basham, Box 9, Alderson, W. Va. Groups 33—51—52; 40. Reg. No. 9,779.

Pat. 2,428,477. CONCEALED POCKET FOR GARMENTS. Patented Oct. 7, 1947. An upper and a lower pocket extend across the inside of the back of a vest-like garment intended to be worn under the clothing for carrying valuables. Each pocket is provided with a zipper closure. A lining across the inside of the back of the vest covers the pockets, concealing them further. Separate access may be had to either pocket by flaps near the upper and lower edge of lining. (Owner) James H. Thompson, 1302 Liberty Hill Ave., Columbia 54, S. C. Group 23—29. Reg. No. 9,780.

Pat. 2,439,524. TUBULAR HAND GARDEN WEEDER. Patented Apr. 13, 1948. Tool enables user while standing to make hole for transplanting or for removing weeds and to refill hole. Comprises a metal shank with ends bent in opposite directions to form hand-gripping or step-on bars, either end of which may be used. A bored, thin-walled inserter tube is welded at side of each end, opposite hand- or step-bar and extending beyond bar, for insertion into ground. Inserter tube at one end is larger than other. A plunger inside inserter tube is operated by a foot treadle to expel soil. Modifications shown. (Owner) Earl M. Moore, 501 Lillian Way, Los Angeles 4, Calif. Groups 33—52; 35—60. Reg. No. 9,781.

United States Government Owned Application

The following application has been assigned to the United States Government as represented by the Navy Department. Terms and conditions of licenses may be obtained from Assistant Chief of Naval Research for Patents, Navy Department, Washington 25, D. C.

Application Serial No. 668,850. SELECTIVE GAS ANALYSIS INSTRUMENT. The device comprises a selective gas analysis instrument of the infra-red type for detecting and measuring concentrations of carbon dioxide or carbon monoxide in the presence of other absorbing gases. Radiation from a source of infra-red is passed through two adjacent filters, one containing a non-absorbing gas, the other a gas of the type sought to be detected, the radiation passing through one filter falling upon a thermopile connected in opposition to another thermopile receiving radiation passing through the other filter. The amount of radiation falling upon the two thermopiles is adjusted so that the currents generated are equal and opposite. Gases to be analyzed are passed between the source of radiation and the filters and if the gas to be detected is present, absorption of the radiation of the particular wave length will reduce the radiation passing through the non-absorbing gas filter and cause an unbalance in the thermopile circuit which is indicated by a suitable meter. Group 36—13. Reg. No. 9,782.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 20, 1948

[VOL. 612. NO. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 522,011. DOW CORNING CORPORATION, Midland, Mich. Filed May 7, 1947.

SIGHT SAVERS

FOR SILICONE TREATED POLISHING TISSUES TO BE USED IN THE POLISHING OF GLASS AND OTHER VITREOUS SURFACES.

Claims use since Jan. 23, 1947.

CLASS 5

ADHESIVES

Ser. No. 506,473. ROBERT E. PORTER, doing business as Porter Gasket & Distributing Co., Los Angeles, Calif. Filed July 29, 1946.

GASOACINCH

FOR CEMENTS FOR APPLYING NON-METALLIC MATERIALS TO METALLIC PARTS.

Claims use since Apr. 24, 1946.

Ser. No. 510,457. UNITED STATES PLYWOOD CORPORATION, New York, N. Y. Filed Oct. 8, 1946.

Plycozite

FOR HEAT ACTIVATED, THERMOSETTING RESINOUS ADHESIVES FOR GENERAL PURPOSES, BUT PARTICULARLY FOR METAL TO METAL, METAL TO PLASTIC, AND PLASTIC TO PLASTIC CONSTRUCTIONS.

Claims use since Aug. 20, 1946.

Ser. No. 521,192. H. B. FRED. KUHLS, Brooklyn, N. Y. Filed Apr. 23, 1947.

LINOLAST

FOR CEMENT USED ESPECIALLY FOR THE CEMENTING OF LINOLEUM, RUBBER TILE, CORK, OR ANY OTHER TYPE OF COMPOSITION FLOOR COVERING, TO IRON, WOOD, OR STEEL.

Claims use since Oct. 1, 1944.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 501,620. FRED ALPER INDUSTRIES, INC., Philadelphia, Pa. Filed May 8, 1946.

MIL-KILL

Applicant disclaims the word "Kill" apart from the mark.

FOR CHEMICAL PREPARATIONS FOR INHIBITING THE GROWTH OF MILDEW.

Claims use since Apr. 1, 1946.

Ser. No. 503,901. GORDON GORDON, LTD., Chicago, Ill. Filed June 14, 1946.

Luvli-Lash

Applicant makes no claim to the word "Lash" alone.

FOR EYELASH AND EYEBROW GROOMER AND BEAUTIFIER IN MASCARA FORM.

Claims use since July 10, 1917.

Ser. No. 505,688. J. C. ENO, INC., Bloomfield, N. J. Filed July 16, 1946. Under 10-year proviso.

SAL
ENO

Applicant is the owner of registration No. 148,010, renewed. The word "Sal" is disclaimed.

FOR MEDICINAL SALINE PREPARATION FOR INTERNAL HUMAN USE AS A LAXATIVE OR FOR A SIMILAR PURPOSE.

Claims use since 1874 on the word "Eno"; and since June 19, 1946, on the mark as shown.

FOR FUNGICIDES—NAMELY, DUSTING SULPHUR.
Claims use since Feb. 13, 1941.

Ser. No. 507,551. WILLIAM L. THREADGILL, Rockford, Ill. Filed Aug. 16, 1946.

ZIPPY

FOR MEDICINAL PREPARATIONS—NAMELY, FOR TABLETS FOR THE RELIEF OF STOMACH DISORDERS.
Claims use since Mar. 20, 1946.

Ser. No. 510,372. AMERICAN CHEMICAL COMPANY, Birmingham, Ala. Filed Oct. 7, 1946.

FIRE
FLUID

The drawing is lined for the color red. The word "Fluid" and the representation of the burning lighter are disclaimed.

FOR CIGARETTE LIGHTER FUEL.
Claims use since Sept. 6, 1946.

Ser. No. 512,245. DE RIAZ, Neuilly sur Seine, France. Filed Nov. 8, 1946.

DE RIAZ
Paris

FOR PERFUMES.
Claims use since Apr. 22, 1936.

Ser. No. 513,612. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y. Filed Dec. 3, 1946.

FOR RADIATOR STOP LEAK, COOLING SYSTEM CLEANER, RUBBER SOLVENT, AND HYDRAULIC BRAKE FLUID.
Claims use since Oct. 8, 1946.

Ser. No. 514,620. THE OLD FASHIONED HERB COMPANY, Pasadena, Calif. Filed Dec. 20, 1946.

O. F. H.

FOR VITAMINS; HERB CONCENTRATES—NAMELY, HERBAL LAXATIVES, CONCENTRATED VEGETABLE TABLETS; AND MEDICINES—NAMELY, LINAMENTS, HYGIENIC POWDERS, AND BALMS.
Claims use since Oct. 24, 1946.

Ser. No. 515,487. LEO A. DENTONE, doing business as Dentone's Pharmaceuticals, Stockton, Calif. Filed Jan. 9, 1947.

COCOMINE

FOR DIETARY SUPPLEMENT CONSISTING OF PROTEIN HYDROLYSATE.
Claims use since Aug. 5, 1946.

Ser. No. 518,259. SOCIETE A RESPONSABILITE LIMITEE FORLANE, Paris, France. Filed Feb. 27, 1947.

FORLANE

FOR PERFUMES.
Claims use since Nov. 11, 1938.

Ser. No. 519,628. CHESEBROUGH MANUFACTURING COMPANY, CONSOLIDATED, New York, N. Y. Filed Mar. 27, 1947. Under section 5b of the act of 1905 as amended in 1920.

FOR PETROLEUM JELLY, PERFUMED PETROLEUM JELLY, MEDICATED PETROLEUM JELLIES, HAIR TONIC, HAIR DRESSING, POMADE, SHAMPOO, LIP STICKS, LIP POMADE, CAMPHOR ICE, COLD CREAM AND BABY POWDER.
Claims use since 1912 on petroleum jelly, perfumed petroleum jelly and medicated petroleum jellies; and since Mar. 12, 1947, on hair tonic, hair dressing, pomade, shampoo, lip sticks, lip pomade, camphor ice, cold cream and baby powder.

Ser. No. 521,013. HENRIETTE LOUISE BONTEN, Neuilly S/Seine, Seine, France. Filed Apr. 19, 1947.

LA CROISETTE

FOR PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAMS.
Claims use since Oct. 13, 1927.

Ser. No. 521,615. WRIGHT G. SCHOXTON, doing business as New Method Mfg. Co., Bradford, Pa. Filed Apr. 30, 1947.

Minute Man

FOR GUN BLUING SOLUTION WHICH IS A CHEMICAL COMPOSITION, APPLIED AS A FILM TO AN OBJECTIVE SURFACE.
Claims use since June 1, 1946.

Ser. No. 522,164. SERVICE INDUSTRIES, Philadelphia, Pa. Filed May 9, 1947.

STIK-GUM

FOR WETTING AGENT CONSISTING OF A NON-ADHESIVE, DRY POWDERED MATERIAL WHICH MAY BE DISSOLVED IN WATER AND USED FOR WETTING WATER-SOLUBLE ADHESIVE SURFACES.
Claims use since Oct. 1, 1942.

Ser. No. 523,239. JOHN I. CALICCHIO, Jersey City, N. J. Filed May 29, 1947.

HAPPENTUMEHAIR ⁘ I.

FOR SALVE TYPE PREPARATION FOR APPLICATION TO THE HAIR.
Claims use since Oct. 15, 1911.

Ser. No. 524,826. ALFRED SMITH, London, England. Filed June 25, 1947.

STARGLYNT

FOR SOLUTIONS AND OTHER PREPARATIONS FOR USE IN WAVING THE HAIR, LOTIONS FOR SETTING HAIR, AND HAIR CREAM.
Claims use since Aug. 20, 1945.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 482,792. EVANS CHEMICAL CORPORATION, Detroit, Mich., assignor to Econite, Incorporated, Detroit, Mich. Filed Apr. 30, 1945.

Econite

FOR PLASTIC FILLER FOR CRACKS, DENTS, SEAMS AND SCRATCHES IN WOOD, METAL, BRICK, OR TILE.
Claims use since September 1941.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 507,808. DIVISION LEAD CO., Chicago, Ill. Filed Aug. 22, 1946.

DIVCO

FOR LEAD, TIN, AND ANTIMONY PRODUCTS—NAMELY, SOLDER, SOLDER IN THE SHAPE OF WASHERS HAVING CENTRAL APERTURES, FOIL, FUSIBLE ALLOYS, BABBIT METAL, ANODES USED IN PLATING METAL.
Claims use since Aug. 30, 1926.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 474,561. VITA-VAR CORPORATION, Newark, N. J. Filed Sept. 23, 1944.

VITA-CLOR

FOR LIQUID WATERPROOFING COATING IN THE NATURE OF A PAINT PRODUCT, SUITABLE FOR BRUSHING OR SPRAYING OR DIPPING ON THE EXPOSED SURFACES OF BRICK, CONCRETE, OR SIMILAR CONSTRUCTION SURFACES.
Claims use since Aug. 10, 1944.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 514,445. R. L. SWAIN TOBACCO COMPANY, INC., Danville, Va. Filed Dec. 17, 1946.

CAVALIER

The drawing is lined for the colors red, yellow and blue. The words "Swain" and "Patented Panax Process" are disclaimed.

SKYPOWER

FOR AIRPLANE PROPELLERS AND PROPELLER HUBS AND PARTS THEREOF.
Claims use since Jan. 17, 1946.

Ser. No. 500,150. VICKERS-ARMSTRONGS LIMITED, London, England. Filed Apr. 12, 1946.

VIKING

FOR AIRPLANES AND STRUCTURAL PARTS THEREOF.
Claims use since May 1945.

Ser. No. 520,156. ARTHUR J. FELTAULT, doing business as Visor-Ads, West Hartford, Conn. Filed Apr. 4, 1947.

AD VISOR

No claim is made for the word "Visor."
FOR HOLDERS FOR MAPS AND THE LIKE ADAPTED FOR DETACHABLE APPLICATION TO SUN VISORS FOR AUTOMOBILES.
Claims use since Dec. 20, 1946.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 512,972. INTERCHEMICAL CORPORATION, New York, N. Y. Filed Nov. 21, 1946.

VERITAS

FOR TABLE AND WALL OILCLOTH.
Claims use since Sept. 16, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 495,825. RAYBESTOS-MANHATTAN, INC., Passaic, N. J. Filed Feb. 1, 1946.

PYROTEX

FOR FELTED ASBESTOS WEB MATERIAL IN TAPE, SHEET OR ROLL FORM FOR ELECTRICAL INSULATION.
Claims use since Apr. 9, 1943.

Ser. No. 524,734. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed June 24, 1947. Under section 5b of the act of 1905 as amended in 1920.

SHERWIN-WILLIAMS

FOR ELECTRICAL INSULATING VARNISH.
Claims use since 1901.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 502,180. THE EXTRABELL CO., Chicago, Ill. Filed May 15, 1946.

Extrabell
QUALITY DESIGN

The outline of the label and all wording except "Extrabell" are disclaimed apart from the mark.
FOR CASINGS FOR COIN OPERATED AMUSEMENT GAMES AND MECHANISMS WHEREIN THE INSERTION OF A COIN PERMITS THE OPERATION OF A LEVER TO ACTUATE INDEPENDENTLY MOVABLE INDICIA THAT REPRESENT VARIOUS VALUES IN COMBINED RELATIONSHIP WHEN AT REST, AND PARTS THEREFOR.

ADHESIVES

Ser. No. 534,007. MCLAURIN-JONES CO., Brookfield, Mass. Filed Sept. 18, 1947.

EDGEWELD

FOR GUMMED TAPE.
Claims use since July 25, 1947.

Ser. No. 536,464. TIP-TOP PRODUCTS COMPANY, Omaha, Nebr. Filed Oct. 1, 1947.

OK

Applicant claims ownership of registration No. 335,485.
FOR ADHESIVE CEMENT.
Claims use since May 9, 1933.

Ser. No. 539,934. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Nov. 3, 1947. Under section 2f of the act of 1946.

Old English

FOR CEMENTS FOR USE IN JOINING AND THE REPAIR OF CHINA, GLASS, WOOD, CELLULOID, METAL, TILE, AND RUBBER.
Claims use since Dec. 13, 1935.

Ser. No. 540,199. PERKINS GLUE COMPANY, Lansdale, Pa. Filed Nov. 5, 1947.

COROX

FOR GLUE.
Claims use since July 2, 1947.

Ser. No. 540,484. JOHN C. TRUEMPER, doing business as American Tent & Awning Co., Indianapolis, Ind. Filed Nov. 7, 1947.

GRIPS-IT

Applicant disclaims the wordings "Fabric Cement" and "Three Minute Patch."
FOR FABRIC CEMENT.
Claims use since 1932.

Ser. No. 540,868. PLYMOUTH RUBBER COMPANY, INC., Canton, Mass. Filed Nov. 12, 1947. Under section 2f of the act of 1946.

SLIPKNOT

Applicant claims ownership of registration No. 218,822.
FOR FRICTION TAPE, A FABRIC IMPREGNATED WITH AN ADHESIVE RUBBER COMPOUND.
Claims use since Jan. 15, 1923.

Ser. No. 540,869. PLYMOUTH RUBBER COMPANY, INC., Canton, Mass. Filed Nov. 12, 1947. Under section 2f of the act of 1946.

Canton

Applicant claims ownership of registration No. 218,836.
FOR FRICTION TAPE, A FABRIC IMPREGNATED WITH AN ADHESIVE RUBBER COMPOUND.
Claims use since July 1, 1922.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,920. PATEK AND CO., San Francisco, Calif. Filed Nov. 24, 1947. Under section 2f of the act of 1946.

TAHOE

FOR LIQUID LAUNDRY BLUE.
Claims use since Feb. 1, 1935.

Ser. No. 514,496. JOHN E. REARDEN, doing business as Romo Drug Co., Detroit, Mich. Filed Nov. 12, 1947.

ROMO-RUB

Applicant disclaims the syllable "Rub." Applicant claims ownership of registration Nos. 414,403 and 417,399.
FOR VAPORIZING AND RUBBING SALVE OR OINTMENT FOR THE TREATMENT OF COLDS AND MINOR CHEST ACHES AND PAINS.
Claims use since Nov. 15, 1946.

Ser. No. 517,076. MEAD JOHNSON & COMPANY, Evansville, Ind. Filed July 5, 1947.

PROTENUM

FOR PHARMACEUTICAL PREPARATION SPECIALLY DESIGNED FOR USE IN HIGH-PROTEIN LOW-FAT DIETS.
Claims use since Jan. 13, 1947.

Ser. No. 522,421. CHEBRA, INC., New York, N. Y. Filed July 5, 1947.

Chébra

FOR LIP STICKS.
Claims use since July 25, 1946.

Ser. No. 525,495. POLK MILLER PRODUCTS CORPORATION, Richmond, Va. Filed Oct. 28, 1947.

Sergeant's

Applicant claims ownership of registrations Nos. 223,439, 388,109, and 300,694.

FOR TICK KILLER IN POWDER FORM AND SKIN BALM FOR USE ON DOGS.

Claims use on skin balm since Apr. 29, 1947, and on tick killer since May 23, 1947.

Ser. No. 526,922. CHAS. PFIZER & CO., INC., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

The drawing is lined for blue. Applicant claims ownership of registration No. 142,090.

FOR ACETYL TRIBUTYL CITRATE, ACETYL TRIETHYL CITRATE, ACETYL TRIPROPYL CITRATE, ACID ACONITIC, ACID ASCORBIC, ACID CITRIC, ACID CITRIC ANHYDROUS, ACID FUMARIC, ACID GLUCONIC, ACID ITACONIC, ACID OXALIC, ACID TARTARIC, ALUMINUM CITRATE, AMMONIUM BROMIDE, AMMONIUM CITRATE, AMMONIUM CITRATE DIBASIC, AMMONIUM GLUCONATE, AMMONIUM IODIDE, AMMONIUM OXALATE, BIOTIN ADSORBATE, BISMUTH NITRATE, BISMUTH OXYCHLORIDE, BISMUTH OXIDE ANHYDROUS, BISMUTH SALICYLATE, BISMUTH SUBCARBONATE, BISMUTH SUBGALLATE, BISMUTH SUBIODIDE, BISMUTH SUBNITRATE, BISMUTH SUBSALICYLATE, CALCIUM BORO D-GLUCONATE, CALCIUM CITRATE, CALCIUM D-SACCHARATE, CALCIUM FUMARATE, CALCIUM GLUCONATE, CALCIUM PANTOTHENATE DEXTROROTATORY, CALCIUM SULFOCARBOLATE, CALOMEL, COPPER GLUCONATE, COPPER SODIUM TARTRATE, CORROSIVE SUBLIMATE, CREAM TARTAR, DIBUTYL FUMARATE, DIBUTYL ITACONATE, DIETHYL FUMARATE, DIETHYL ITACONATE, DIMETHYL CITRATE MONO, DIMETHYL ITACONATE, D-ISO-ASCORBIC ACID, DISODIUM FUMARATE, ETHYL FUMARATE, FERRIC SODIUM OXALATE, FERROUS GLUCONATE, FLOUR ENRICHMENT VITAMIN MIXTURES, GLUCONO-DELTA-LACTONE, GLUCONIC ADSORBATE, IODINE CRUDE, IODINE RESUBLIMED, IODOFORM, IRON CITRATE, IRON GLUCONATE, IRON OXALATE, IRON PHOSPHATE, IRON PYROPHOSPHATE, IRON AMMONIUM CITRATE, BROWN; IRON AMMONIUM CITRATE, GREEN; IRON AMMONIUM OXALATE, IRON SODIUM OXALATE, IRON POTASSIUM OXALATE, LITHIUM BROMIDE, LITHIUM CHLORIDE, LITHIUM CITRATE, MAGNESIUM ACID CITRATE, MAGNESIUM FUMARATE, MAGNESIUM GLUCONATE, MANGANESE GLUCONATE, MANGANOUS GLUCONATE, MERCURIAL MIXTURE, MERCURIAL OINTMENT, STRONG; MERCURIAL OINTMENT, MILD; MERCURIC IODIDE, RED; MERCURIC OXIDE, YELLOW; MERCURIC OXIDE, RED; MERCUROUS IODIDE, YELLOW; ASCORBIC-CITRIC MIXTURES, NIACIN, NIACINAMIDE, PENICILLIN, PENICILLIN-CONTAINING PRODUCTS, PHENOLPHTHALEIN, POTASSIUM BROMIDE, POTASSIUM CITRATE, POTASSIUM GLUCONATE, POTASSIUM IODIDE, POTASH OXALATE NEUTR., POTASSIUM BI-OXALATE, POTASSIUM OXALATE, PYRIDOXINE HYDROCHLORIDE, POTASSIUM ACETATE-POTASSIUM CARBONATE, RED PRECIPITATE N. F. VI, RIBOFLAVIN, RIBOFLAVIN-CONTAINING MATERIALS, RIBOFLAVIN MIXTURES, ROCHELLE SALT, SEIDLITZ MIXTURE, SODIUM BENZOATE, SODIUM BROMIDE, SODIUM CITRATE, SODIUM ACID FUMARATE, MONO SODIUM ACID CITRATE, SODIUM GLUCONATE, SODIUM OXALATE, SODIUM IODIDE, SODIUM SALICYLATE, SODIUM SULFOCARBOLATE, SORBOSE, DI-ACETONE SORBOSE, STREPTOMYCIN AND STREPTOMYCIN-CONTAINING PRODUCTS, STRYCHNINE ACETATE, STRYCHNINE ALKALOID, STRYCHNINE ARSENATE, STRYCHNINE ARSENITE, STRYCHNINE HYDROCHLORIDE, STRYCHNINE HYPOPHOSPHATE, STRYCHNINE NITRATE, STRYCHNINE PHOSPHATE, STRYCHNINE SULPHATE, TANNIN U. S. P. FLUFFY, TARTAR EMETIC, THIAMIN, HYDROCHLORIDE, THYMOL IODIDE, TRIBUTYL ACONITATE, TRIBUTYL CITRATE, TRIBUTYL TRICARBALLYLATE, TRICARBITOL CITRATE, TRIETHYL CITRATE, TRIPROPYL ACONITATE, TRIPROPYL CITRATE, VITAMIN ENRICHMENT WAFERS, WHITE PRECIPITATE, AND ZINC SULFOCARBOLATE.

Claims use since 1932.

Ser. No. 528,424. BOB MARTIN (EXPORT) LIMITED, Lancashire, England. Filed July 12, 1947.

STOCKSENSE

Applicant claims ownership of Great Britain registration 613,645 on Dec. 19, 1940.

FOR POULTRY AND PIG CONDITIONERS AND MEDICINAL PREPARATIONS FOR POULTRY AND PIGS.

Claims use since December 1940.

Ser. No. 528,652. SOCIETE CALIXTE, Paris, France. Filed July 15, 1947.

ULYSSE

Applicant claims ownership of French registration 374,536 dated Feb. 4, 1947.

FOR PERFUMES.

Ser. No. 529,077. HOWARD D. MEINCKE, Chicago, Ill. Filed July 21, 1947. Under section 2f of the act of 1946.

STIFF-JEL

Applicant claims ownership of registration No. 376,246.

FOR CHEMICALLY TREATED STARCH, PRINCIPALLY IN POWDERED FORM, FOR USE IN THE PAPER INDUSTRY AND ALSO FOR STIFFENING OF CARPETS.

Claims use since Sept. 7, 1938.

Ser. No. 529,137. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed July 22, 1947.

'NIZIN'

FOR PREPARATION OF ASTRINGENT SOLUTIONS FOR USE IN THE TREATMENT OF EYE CONDITIONS AND OF CERTAIN GENITO-URINARY INFECTIONS.

Claims use since March 1906.

Ser. No. 529,142. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed July 22, 1947.

'Empirin' Compound

The term "Compound" is disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 120,921.

FOR ORAL PREPARATION USEFUL AS AN ANALGESIC AND ANTIPYRETIC IN THE TREATMENT OF BODILY PAINS, COLDS AND SIMILAR AILMENTS.

Claims use since 1918.

Ser. No. 529,333. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed July 24, 1947.

GAMOPTERIN

FOR PTEROYL GAMMA GLUTAMIC ACID, WHICH IS A SYNTHETIC ORGANIC ACID FOR THE TREATMENT OF ANEMIAS AND METABOLIC DISEASES.

Claims use since July 15, 1947.

Ser. No. 529,651. A. C. HYND CORP., Tipp City, Ohio. Filed July 26, 1947.

"Ku-Rill"

FOR MEDICINAL LOTION FOR THE SKIN.

Claims use since 1922.

Ser. No. 529,849. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed July 29, 1947.

WEEDAR

FOR CHEMICAL PREPARATIONS FOR EXTERMINATING WEEDS.

Claims use since Dec. 28, 1946.

Ser. No. 530,550. MYLES SALT COMPANY, INC., New Orleans, La. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

MYLES E-Z CURE

Applicant claims ownership of registrations Nos. 155,902, 323,080, 215,460, 215,434, 323,987, 163,134, 340,908, 380,621, and 207,425.

FOR SALT FOR MEAT CURING.

Claims use since July 1939.

Ser. No. 531,214. S. C. JOHNSON & SON, INC., Racine, Wis. Filed Aug. 13, 1947.

drax

Applicant claims ownership of registrations Nos. 402,064, 402,601, and 416,291.

FOR AQUEOUS AND NONAQUEOUS WAX EMULSIONS WHICH MAKE ABSORBATIVE FIBROUS AND NONFIBROUS MATERIALS WATERPROOF AND WATER REPELLENT—NAMELY, FABRICS AND PAPER.

Claims use since June 13, 1947.

Ser. No. 531,941. PARK & TILFORD, New York, N. Y. Filed Aug. 20, 1947.

VAIN

FOR LIPSTICKS.

Claims use since July 10, 1947.

Ser. No. 532,125. DESTRUXOL CORPORATION, LTD., Pasadena, Calif. Filed Aug. 22, 1947.

SLUG-EM

The word "Slug" is disclaimed apart from the mark. Applicant claims ownership of registration No. 430,961.

FOR CHEMICAL COMPOSITION IN POWDERED FORM FOR KILLING SNAILS AND CUTWORMS.

Claims use since Sept. 24, 1945.

Ser. No. 532,313. COUNTESS MARA INCORPORATED, New York, N. Y., assignor to Countess Mara Cosmetics, Inc., New York, N. Y., a corporation of New York. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

Countess Mara
COPPER

Applicant claims ownership of registration No. 409,287.
FOR EAU DE COLOGNE.
Claims use since Apr. 8, 1940.

Ser. No. 532,991. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Sept. 2, 1947.

RED CACTUS

Applicant disclaims the word "Red" insofar as it is descriptive of any color.
FOR LIPSTICK, ROUGE, AND NAIL POLISH.
Claims use since July 22, 1947.

Ser. No. 533,265. ERNST BISCHOFF COMPANY, INCORPORATED, Ivoryton, Conn. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

Bischoff

Applicant claims ownership of registration No. 420,783.
FOR VITAMIN PREPARATIONS; SPECIFIC STIMULANT TO THE RESPIRATORY CENTER, VACCINES FOR INTRADERMAL INJECTION AND INTRAMUSCULAR OR SUBCUTANEOUS USE FOR THE TREATMENT OF RINGWORM OF THE SKIN, SCALP, HAIR NAILS; THERAPEUTIC AGENTS FOR HYPODERMIS INJECTIONS FOR THE TREATMENT OF ARTHRITIS, EPIDIDYMITIS, PYELITIS, AND MANY INFLAMMATORY CONDITIONS; TREATMENT FOR AMOEBIC DYSENTERY; PREPARATIONS FOR THE TREATMENT AND RELIEF OF RHEUMATIC AND NEURALGIC PAINS, AND THOSE ACCOMPANYING INFLUENZA AND LUMBAGO; PREPARATIONS FOR THE TREATMENT AND RELIEF OF COUGHS AND BRONCHIAL IRRITATIONS; PREPARATION FOR THE TREATMENT OF ANGINA PECTORIS AND OTHER HEART DISEASES, CIRCULATORY AILMENTS AND DISTURBANCES, AND SIMILAR DISEASES AND AILMENTS; ANTISEPTIC PREPARATION FOR GENITO-URINARY INFECTIONS AND INFECTIONS OF THE EYE, EAR, NOSE AND THROAT; OINTMENTS USED FOR INFECTIONS AND ERUPTIONS OF THE SKIN; PREPARATIONS FOR THE TREATMENT OF PSORIASIS AND ECZEMA; DIURETICS; SUPPOSITORIES; SULFANILAMIDE PREPARATIONS FOR THE TREATMENT OF STREPTOCOCCAL, GONOCOCCAL AND PNEUMOCOCCIC INFECTIONS; PREPARATIONS FOR THE TREATMENT OF BURNS; PREPARATIONS FOR THE TREATMENT OF ATHLETES FOOT; ANTACID PREPARATION VASODILATORS.
Claims use since 1924 as to "Bischoff"; and since Feb. 15, 1945, as to "Bischoff" and design.

Ser. No. 534,192. JOHN E. RESPONDEK, Detroit, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

ROMO-KOLD

Applicant claims ownership of registration No. 417,399.
FOR PREPARATION, IN CAPSULE FORM, FOR THE TREATMENT OF COUGHS AND COLDS.
Claims use since June 1931.

Ser. No. 534,193. JOHN E. RESPONDEK, doing business as Health Research Laboratories, Detroit, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

ROMO KOFF

Applicant claims ownership of registration No. 414,403.
FOR PREPARATION FOR THE TREATMENT OF COUGHS AND COLDS.
Claims use since June 1931.

Ser. No. 534,457. D. C. NALE, doing business as Rheuma-Non Co., Detroit, Mich. Filed Sept. 13, 1947.

Rheumanon

FOR PREPARATION FOR USE IN THE TREATMENT OF MUSCULAR ACHES AND PAINS.
Claims use since 1900.

Ser. No. 534,567. DAVID HENRY ALLEN, doing business as National Hog Medicine Company, Raleigh, N. C. Filed Sept. 16, 1947.

NATIONAL

Applicant claims ownership of registration No. 126,229.
FOR GENERAL TONIC AND CONDITIONER FOR HOGS, HORSES, COWS, MULES, DOGS, AND POULTRY.
Claims use since Feb. 15, 1919.

Ser. No. 535,131. THE CAREY SALT COMPANY, Hutchinson, Kans. Filed Sept. 20, 1947.

Applicant claims ownership of registration No. 167,399.
FOR MEAT SALT.
Claims use since Aug. 8, 1934.

Ser. No. 535,154. THE A. F. HOLDEN COMPANY, West Haven, Conn. Filed Sept. 20, 1947. Under section 2f of the act of 1946.

HOLDEN

FOR MATERIALS FOR HEATING AND HEAT TREATING METALS—NAMELY, SALTS FOR CARBURIZING, SALTS FOR BLACKING STEEL, SALTS FOR TEMPERING STEEL, SALTS FOR HEAT TREATING AND ANNEALING NON-FERROUS METALS, SALTS FOR HEAT TREATING CARBON STEELS, SALTS FOR HEAT TREATING ALLOY STEELS, MIXTURES OF SILICON CARBIDE WITH GRAPHITE USED AS TOP LAYER MATERIALS FOR MOLTEN HEAT TREATING SALT BATHS, SALTS FOR BRIGHT TEMPERING STEEL, SALTS FOR QUENCHING AND DESCALING FERROUS METALS, SALTS FOR ISOTHERMAL HEAT TREATING OF FERROUS METALS, SALTS FOR ANNEALING FERROUS METALS, SALTS FOR HARDENING HIGH-SPEED STEELS, SALTS FOR SECONDARY HARDENING OF HIGH-SPEED STEELS, CHEMICALS FOR ADDITION TO SALT BATHS FOR HEAT TREATING METAL TO RESTORE THE SALT BATHS TO ORIGINAL OPERATING CONDITION AND/OR TO CLEAN THE SAME.
Claims use since January 1933.

Ser. No. 535,422. MACANDREWS & FORBES COMPANY, Camden, N. J. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

BEL-CLARO

FOR LICORICE MASS FOR THE PHARMACEUTICAL TRADE.
Claims use since August 1930.

Ser. No. 535,428. JOHN E. RESPONDEK, doing business as St. Lawrence Company, Detroit, Mich. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

St. Lawrence

Applicant claims ownership of registration No. 412,072.
FOR COMPOUND TO BE USED AS A COUGH SYRUP AND AN HERB AND VITAMIN COMPOUND FOR USE AS A TONIC.
Claims use since Dec. 25, 1939.

Ser. No. 535,436. TEXAS PHARMACAL COMPANY, San Antonio, Tex. Filed Sept. 23, 1947.

LUBRIDERM

FOR MEDICINAL SKIN LOTION.
Claims use since Mar. 1, 1946.

Ser. No. 536,263. PENNSYLVANIA REFINING COMPANY, Butler, Pa. Filed Sept. 30, 1947.

DRAKEOL

FOR WHITE MINERAL OILS.
Claims use since February 1938.

Ser. No. 536,565. UNIQUE COSMETICS, INC., Binghamton, N. Y. Filed Oct. 2, 1947.

creme unique

The word "Creme" is disclaimed. Applicant claims ownership of registration No. 215,112.
FOR TOILET CREAM.
Claims use since May 1, 1915.

Ser. No. 536,573. WYETH INCORPORATED, Philadelphia, Pa. Filed Oct. 2, 1947.

Vipeptolac

Applicant claims ownership of registration No. 310,135.
FOR PROTEIN HYDROLYSATE COMPOUND FOR THERAPEUTIC USE.
Claims use since June 9, 1947.

Ser. No. 537,289. BURROUGHS WELLCOME & Co. (U. S. A.) INC., New York, N. Y. Filed Oct. 9, 1947.

'FERAD-B'

The letter "B" is disclaimed except in the combination indicated without waiver of any common-law right. Applicant claims ownership of registration No. 346,786.

FOR MEDICINAL PREPARATION TO BE USED IN THE TREATMENT OF ANEMIC CONDITIONS.

Claims use since Sept. 18, 1947.

Ser. No. 537,363. RENUZIT HOME PRODUCTS CO., also doing business as Renuzit Home Products Company, Philadelphia, Pa. Filed Oct. 9, 1947.

RENUZIT

Applicant claims ownership of registration No. 298,956.

FOR MOTH-PROOFER AND AN INSECTICIDE.

Claims use since Jan. 2, 1947.

Ser. No. 538,402. BROWN OIL & CHEMICAL CORP., New York and Staten Island, N. Y. Filed Oct. 21, 1947.

METROLIN

FOR DRYING OIL USED IN THE MANUFACTURE OF PAINT, VARNISHES AND PRINTING INKS.

Claims use since January 1943.

Ser. No. 539,304. GENERAL CHEMICAL COMPANY, New York, N. Y., now by merger Allied Chemical & Dye Corporation, a corporation of New York. Filed Oct. 28, 1947.

BA

Applicant claims ownership of registrations Nos. 184,350, 204,750, 215,759, 354,572, 368,646, and 368,647.

FOR REAGENT CHEMICALS.

Claims use since Feb. 1, 1945.

Ser. No. 539,355. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Oct. 28, 1947.

PROESDA

FOR PROTEINIC PREPARATION USEFUL IN THE TREATMENT AND PREVENTION OF METABOLIC AND NUTRITIONAL DEFICIENCIES AND RUN-DOWN CONDITIONS.

Claims use since Oct. 13, 1947.

Ser. No. 539,445. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Oct. 29, 1947.

GRANTEIN

FOR PREPARATION USEFUL IN THE TREATMENT AND PREVENTION OF METABOLIC AND NUTRITIONAL DEFICIENCIES AND RUN-DOWN CONDITIONS.

Claims use since Oct. 13, 1947.

Ser. No. 539,432. JOHN C. BOSS, Jr., doing business as Manson Distributors, Aurora, Ill. Filed Oct. 30, 1947.

"Y-B-F"

The letter "B" is disclaimed apart from the mark.

FOR VITAMIN BEARING DIETARY FOOD SUPPLEMENT TABLETS FOR USE WITH REDUCING DIETS.

Claims use since Sept. 1, 1947.

Ser. No. 539,719. LANMAN & KEMP-BARCLAY & Co., INCORPORATED, New York, N. Y. Filed Oct. 31, 1947. Under section 2f of the act of 1946.

AGUA DE FLORIDA

Applicant claims ownership of registrations Nos. 47,457 and 261,559.

FOR TOILET WATER RECOMMENDED FOR REFRESHING AND SCENTING THE SKIN; FOR MASSAGING THE BODY; FOR USE AS A PERSONAL DEODORANT AND FOR DEODORIZING PREMISES; AS A BEFORE- AND AFTER-SHAVE LOTION; FOR INSECT BITES; AND AS A HAIR LOTION.

Claims use since 1830.

Ser. No. 540,073. INTERNATIONAL RUSTPROOF CORPORATION, Cleveland, Ohio. Filed Nov. 4, 1947.

IRCO

FOR CHEMICAL COMPOUNDS IN LIQUID FORM FOR USE AS RUST PREVENTIVES, CORROSION SOLVENTS, AND PROTECTIVE FINISH COATINGS FOR METAL.

Claims use since October 1932.

Ser. No. 540,407. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Nov. 7, 1947.

EY 4

No claim is made to the letters "EY" apart from the mark.

FOR EYE WASH.

Claims use since Jan. 10, 1936.

Ser. No. 540,458. HELENA RUBINSTEIN, INC., New York, N. Y. Filed Nov. 7, 1947.

DISTINCTION

FOR PERFUMES.

Claims use since Aug. 4, 1947.

Ser. No. 540,820. J. STANLEY JOHNSON, Hagerstown, Md., assignor to Didex Corporation, New York, N. Y., a corporation of New York. Filed Nov. 12, 1947.

Didex

CREAM FOR TREATMENT, OR RELIEF, OF DIAPER RASH.

Claims use since Oct. 30, 1946.

Ser. No. 540,964. ARMOUR AND COMPANY, Chicago, Ill. Filed Nov. 13, 1947.

Estide

FOR FATTY ACID ESTER-AMIDES.

Claims use since June 1945.

Ser. No. 540,981. CHESEBROUGH MANUFACTURING COMPANY CONSOLIDATED, New York, N. Y. Filed Nov. 13, 1947. Under section 2f of the act of 1946.

CHESEBROUGH

Applicant claims ownership of registration No. 211,183.

FOR PLAIN PETROLEUM JELLY, PERFUMED PETROLEUM JELLIES AND MEDICATED PETROLEUM JELLIES, HAIR TONIC, POMADE, LIPSTICK, LIP POMADE, CAMPHOR ICE, COLD CREAM, SOAPLESS SHAMPOOS, BABY POWDER, BABY OIL, SKIN CREAMS, BRILLIANTINE, EYEBROW-EYELASH CREAM, AND CUTICLE AND NAIL CREAM.

Claims use since 1870.

Ser. No. 541,434. MAPRIL, INC., New York, N. Y. Filed Nov. 17, 1947.

MAPRIL

Applicant claims ownership of registration No. 428,731.

FOR OIL SHAMPOO TINT FOR THE HAIR.

Claims use since Aug. 13, 1946.

Ser. No. 541,590. SHEBEKA CHEMICAL COMPANY, INC., Bloomfield, N. J. Filed Nov. 18, 1947. Under section 2f of the act of 1946.

Kahlbaum

Applicant claims ownership of registration No. 233,126.

FOR CAMPHOR USED FOR MEDICINAL PURPOSES.

Claims use since September 1920.

Ser. No. 541,756. MEAD JOHNSON & COMPANY, Evansville, Ind. Filed July 22, 1947. Under section 2f of the act of 1946.

MEAD'S

Applicant claims ownership of registrations Nos. 297,187 and 370,380.

FOR FISH LIVER OILS CONTAINING VITAMINS A AND D; HYPO-ALLERGENIC PRODUCTS; ENZYMIC HYDROLYSATES OF CASEIN, POWDERED AND IN SOLUTION, WITH AND WITHOUT DEXTROSE OR OTHER CARBOHYDRATE; ENZYMIC DIGEST OF PROTEIN; SPECIAL CEREAL PRODUCTS WITH ADDED MINERALS AND VITAMINS; MILK MODIFIERS COMPRISING DEXTRINS AND MALTOSE, WITH AND WITHOUT ADDED MINERALS AND VITAMINS; MILK MODIFIERS FOR USE IN DIARRHEA IN INFANTS AND CHILDREN; POWDERED LACTIC ACID MILK; BREWERS' YEAST IN TABLET AND POWDER FORM, AND OTHER VITAMIN B COMPLEX AND VITAMIN C PREPARATIONS; AND OTHER PHARMACEUTICAL PREPARATIONS WHICH SUPPLY NUTRITIONAL NEEDS.

Claims use since Oct. 1, 1923.

Ser. No. 541,910. THE BAKER CASTOR OIL COMPANY, Bayonne, N. J., and elsewhere in the United States. Filed Nov. 21, 1947.

VS

FOR STABILIZERS FOR VINYL CHLORIDE POLYMERS AND COPOLYMERS AND OTHER ORGANIC HALIDES.

Claims use since Oct. 23, 1947.

Ser. No. 542,074. DANIEL W. BROWN, doing business as Besar Products Company, Los Angeles, Calif. Filed Nov. 24, 1947.

BESAR

FOR FACE POWDERS, HAIR OIL, HAIR TONIC, HAIR POMADE, TAR AND SULPHUR OINTMENT, SHAMPOO, FACIAL CREAMS, MEDICATED SKIN CREAM, LIQUID AND CREAM DEODORANT, LIQUID SHAVING PREPARATION, SACHET POWDER, PERFUME, COLOGNE, AFTER SHAVE LOTION, HAND AND FACE LOTION, TALCUM POWDER, DEODORIZING SPRAY.
Claims use since Aug. 9, 1947.

Ser. No. 542,172. BENJAMIN ROBINSON, doing business as A. Robinson & Son, New York, N. Y. Filed Nov. 24, 1947.

SPX

FOR GOLD PLATING SOLUTIONS.
Claims use since Nov. 11, 1937.

Ser. No. 542,960. DAVID A. MOLINARI, doing business as The Gasnil Co., San Francisco, Calif. Filed Dec. 2, 1947.

GAS NIL

FOR STOMACH POWDERS.
Claims use since 1923.

Ser. No. 543,039. GIVAUDAN-DELAWANNA, INC., New York, N. Y. Filed Sept. 30, 1947.

HYLANOL

Applicant claims ownership of registration No. 430,889.
FOR HYDROGENATED LANOLIN USED FOR COSMETICS.
Claims use since Feb. 24, 1945.

Ser. No. 543,248. WYETH INCORPORATED, Philadelphia, Pa. Filed Dec. 3, 1947.

LENTOPEN

FOR ANTIBIOTIC IN INJECTIBLE DOSAGE FORM.
Claims use since Nov. 7, 1947.

Ser. No. 543,533. E. B. SEMLER, INC., New Canaan, Conn. Filed Dec. 5, 1947.

KREML

Applicant claims ownership of registrations Nos. 249,390 and 335,793.
FOR HAIR TONIC AND SHAMPOO.
Claims use since 1911.

Ser. No. 543,577. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Dec. 6, 1947.

LUDOX

FOR COLLOIDAL SOLUTION COMPRISING AN OXIDE OF SILICON IN WATER, USED IN THE MODIFICATION OF LATEX PRODUCTS, AS AN AGENT FOR INCREASING INTER FIBER FRICTION IN TEXTILES, AS AN AGENT FOR REDUCING TACK OR STICKINESS OF FILMS AND COATINGS, AND FOR GENERALIZED USE IN THE INDUSTRIAL ARTS.
Claims use since Oct. 31, 1947.

Ser. No. 543,649. NION CORPORATION, Los Angeles, Calif. Filed Dec. 6, 1947.

NIONATE

Applicant claims ownership of registration No. 366,190.
FOR FERROUS GLUCONATE PRODUCT FOR THE TREATMENT OF IRON DEFICIENCY ANEMIAS.
Claims use since Nov. 21, 1947.

Ser. No. 543,849. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Dec. 9, 1947.

Orthoxamine

FOR MEDICINAL PREPARATION FOR USE AS A VASOCONSTRICTOR.
Claims use since Aug. 4, 1947.

Ser. No. 543,850. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Dec. 9, 1947.

Orthoxine

FOR MEDICINAL PREPARATION FOR USE AS A VASOCONSTRICTOR.
Claims use since Aug. 4, 1947.

Ser. No. 543,851. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Dec. 9, 1947.

Pyrrolazote

FOR MEDICINAL PREPARATION FOR USE AS AN ANTIHISTAMINIC.
Claims use since Sept. 18, 1947.

Ser. No. 543,852. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Dec. 9, 1947.

Unifolic

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF VITAMIN AND NUTRITIONAL DEFICIENCIES.
Claims use since Sept. 5, 1947.

Ser. No. 543,920. HARF, INC., Hilltown, Pa. Filed Dec. 10, 1947.

HARF

FOR HAIR TONIC, HAIR SHAMPOO, HAIR LACQUER, HAIR RINSE, FACIAL CLEANSING CREAM, FACIAL TEXTURE CREAM, HAND LOTION, OIL POLISH REMOVER, ORAL ANTISEPTIC, FORMALDEHYDE.
Claims use since Sept. 15, 1939.

Ser. No. 543,956. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Dec. 10, 1947.

BIOFOS

FOR CHEMICAL TOXICANTS HAVING INSECTICIDAL, FUNGICIDAL, AND RODENTICIDAL UTILITY.
Claims use since Nov. 13, 1947.

Ser. No. 544,097. MCNEIL LABORATORIES, INCORPORATED, Philadelphia, Pa. Filed Dec. 11, 1947.

SUBCUSOL

FOR VEHICLE CONSISTING OF PROPYLENE GLYCOL, SORBITAN MONOLAURATE POLYOXYETHYLENE DERIVATIVE AND INJECTION WATER, AND FORMING PART OF INJECTION SOLUTIONS PRODUCED AND SOLD BY APPLICANT.
Claims use since Mar. 17, 1947.

Ser. No. 544,228. UNITED STATES RUBBER COMPANY, New York, N. Y. Filed Dec. 12, 1947.

SYNKLOR

FOR INSECTICIDES.
Claims use since July 3, 1947.

Ser. No. 544,691. HARRY D. BAKER, doing business as Four Daisies, Lewistown, Mont. Filed Dec. 15, 1947.

FOUR DAISIES

FOR PREPARATION FOR THE TREATMENT OF HAIR AND SCALP DISORDERS.
Claims use since Oct. 27, 1947.

Ser. No. 544,766. REED & CARNRICK, Jersey City, N. J. Filed Dec. 18, 1947.

Aminozyme

FOR PALATABLE, BALANCED COMBINATION OF PROTEIN HYDROLYSATES WITH ADDED VITAMIN B1, VITAMIN C AND CHOLINE, FOR USE AS A DIETARY SUPPLEMENT IN ALL CONDITIONS REQUIRING A HIGH PROTEIN DIET OR INCREASED PROTEIN INTAKE.
Claims use since Aug. 6, 1947.

Ser. No. 544,868. IRWIN-WILLERT COMPANY, East St. Louis, Ill. Filed Dec. 19, 1947.

CLOSETMASTER

FOR VOLATILE MOTHPROOFING CHEMICAL IN CAKELIKE FORM.
Claims use since Oct. 25, 1947.

Ser. No. 547,078. WILLIAM R. WARNER & CO., INC., New York, N. Y. Filed Jan. 14, 1948.

PROCACILLIN

FOR PENICILLIN PREPARATION FOR USE AS ANTI-BIOTIC.
Claims use since Jan. 9, 1948.

Ser. No. 547,139. THE MEDIPHAR LABORATORIES, INC., Baltimore, Md. Filed Jan. 15, 1948.

DIGIVELLE

FOR DIGITOXIN IN TABLET FORM.
Claims use since Apr. 25, 1946.

Ser. No. 547,268. M. F. C. CORPORATION, New York, N. Y. Filed Jan. 16, 1948.

AMPHAMINE

FOR MEDICINAL PREPARATION PARTICULARLY FOR USE AS A CENTRAL NERVOUS STIMULATE.
Claims use since December 1939.

Ser. No. 548,108. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Jan. 27, 1948.

UTIFAUN

FOR PREPARATION USEFUL IN THE TREATMENT OF VETERINARY UTERINE AND VAGINAL AILMENTS.
Claims use since Jan. 21, 1948.

Ser. No. 548,182. PURE CARBONIC, INCORPORATED, New York, N. Y. Filed Jan. 28, 1948. Under section 2f of the act of 1946.

DRY ICE

Applicant claims ownership of registration No. 200,934.
FOR CARBON DIOXIDE (CO_2) IN SOLIDIFIED FORMS, MIXTURES, AND COMPOUNDS.
Claims use since Mar. 3, 1925.

Ser. No. 549,167. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Feb. 9, 1948.

CHLOROMYCETIN

FOR ANTI-BIOTIC PREPARATION.
Claims use since Dec. 19, 1947.

Ser. No. 551,176. WOLFF FRERES, INC., New York, N. Y. Filed Mar. 4, 1948.

My French Cousin

FOR PERFUMES, EAU DE COLOGNE, BATH SALTS, BATH ESSENCES AND BATH OILS, FACE POWDERS, FACE CREAMS, BODY CREAMS, DEODORANT CREAMS AND LOTIONS, ROUGE, LIPSTICK, BRILLIANTINE, HAIR LOTIONS, MASCARA, AND TOOTHPASTE.
Claims use since Mar. 3, 1948.

CLASS 10

FERTILIZERS

Ser. No. 535,382. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Sept. 23, 1947.

ORTHO

Applicant disclaims the words "Scientific Pest Control" apart from the mark. Applicant claims ownership of registration No. 431,438.
FOR FERTILIZERS.
Claims use since June 3, 1946.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 529,263. INDIANA CHEMICAL AND MANUFACTURING COMPANY, Indianapolis, Ind. Filed July 23, 1947. Under section 2f of of the act of 1946.

Applicant claims ownership of registration No. 300,329.
FOR PREPARATIONS FOR ANTI-OFFSET INK, INK SOFTENER, AND INK DRYER.
Claims use since Aug. 1, 1927.

Ser. No. 533,298. FULTON SPECIALTY CO., Elizabeth, N. J. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

DRI-KWIK

Applicant claims ownership of registrations Nos. 331,443 and 333,333.
FOR STAMP PADS AND RUBBER STAMP INK.
Claims use since Nov. 12, 1930.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 538,014. THE LEHON COMPANY, Chicago, Ill. Filed Oct. 16, 1947.

TOWN AND COUNTRY

FOR ASPHALT ROOFING SHINGLES.
Claims use since Sept. 20, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 528,525. SPEED PRODUCTS CO., INC., Long Island City, N. Y. Filed July 12, 1947.

The representation of the staple is disclaimed apart from the mark.
FOR MACHINE STAPLES FOR STAPLING MACHINES, TACKERS, AND/OR PLIERS.
Claims use since June 6, 1946.

Ser. No. 529,122. WOODMARK INDUSTRIES INCORPORATED, Minneapolis, Minn. Filed July 21, 1947.

ROCKET ROLLERS

The word "Rollers" is disclaimed apart from the mark.
FOR ROLLER WHEEL ASSEMBLIES COMPRISING SMALL METAL WHEELS WITH APPROPRIATE HOUSING, ADAPTED FOR USE ON SHOPPING BASKETS, PULL CARTS, SCOOTERS AND LIKE ARTICLES.
Claims use since May 20, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 527,286. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

KLONDYKE

Applicant claims ownership of registration No. 252,547.
FOR LUBRICATING OILS AND HYDRAULIC OIL FOR RAMS, LIFTS, HYDRAULIC ACTUATING MECHANISMS, AND HYDRAULIC MACHINE TOOLS.
Claims use since Sept. 10, 1924.

Ser. No. 541,751. SINCLAIR REFINING COMPANY, New York, N. Y. Filed Dec. 31, 1947. Under section 2f of the act of 1946.

SINCLAIR PRODUCT

No claim is made to the word "Product" apart from the mark. Applicant claims ownership of registrations Nos. 146,362, 173,469, 264,594, 264,843, 291,312, and 254,040.
FOR REFINED, SEMI-REFINED AND UNREFINED OILS AND GREASES MADE FROM PETROLEUM, BOTH WITH AND WITHOUT ADMIXTURE OF ANIMAL, VEGETABLE OR MINERAL OILS, FOR ILLUMINATING, BURNING, POWER, FUEL, LUBRICATING AND COOLING PURPOSES; ALSO PETROLEUM WAXES, GASOLINE AND KEROSENE.
Claims use since November 1940.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 531,027. GREAT STUFF PRODUCTS, INC., Minneapolis, Minn. Filed Aug. 11, 1947.

Great Stuff

The drawing is lined for the color blue, but no claim is made to coloring as an essential characteristic of the mark. Applicant claims ownership of registrations Nos. 254,788 and 250,969.
FOR AUTOMOBILE CLEANER AND POLISH AND FURNITURE AND BAR POLISH.
Claims use since Jan. 1, 1922.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 514,424. LARUS & BROTHER COMPANY, INC., Richmond, Va. Filed Nov. 12, 1947.

FOR TOBACCO AND TOBACCO PRODUCTS—NAMELY, SMOKING TOBACCO, CHEWING TOBACCO, CIGARS, CIGARETTES, AND SNUFF.
Claims use since Nov. 12, 1946.

Ser. No. 519,569. CONSOLIDATED CIGAR CORPORATION, New York, N. Y. Filed Nov. 15, 1947.

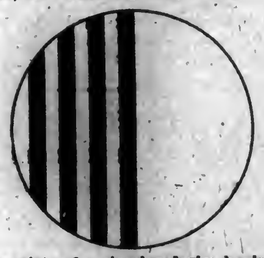
DUTCH MASTERS

Applicant claims ownership of registration No. 232,114.
FOR CIGARS.
Claims use since Apr. 10, 1911.

CLASS 19

VEHICLES

Ser. No. 513,220. SOUTHWEST MANUFACTURING COMPANY, assignee of Southwest Manufacturing Company, Little Rock, Ark. Filed Aug. 1, 1947.



Arkansas Traveler

FOR SMALL BOATS ADAPTED FOR USE WITH OUTBOARD MOTORS.
Claims use since October 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 501,044. BURGESS BATTERY COMPANY, Chicago and Freeport, Ill. Filed Sept. 18, 1947.

The mark consists of a circular device having alternating dark and light stripes parallel to a diametral line and covering the area on one side of said line.
FOR PORTABLE ELECTRIC ENGRAVING AND CUTTING IMPLEMENT.
Claims use since July 1941.

Ser. No. 532,944. LOUISVILLE ELECTRIC MANUFACTURING COMPANY, Louisville, Ky. Filed Aug. 30, 1947.

PIONEER

Applicant claims ownership of registration No. 151,533.
FOR ELECTRIC MOTORS, AND VARIOUS TYPES OF PORTABLE ELECTRICALLY-DRIVEN TOOLS—NAMELY, DRILLS, GRINDERS, HACK SAWS, AND SCREW DRIVERS.
Claims use since July 7, 1921.

Ser. No. 534,330. THE OHIO BRASS COMPANY, Mansfield, Ohio. Filed Sept. 12, 1947.

SÉLECTRIC-FROG

The exclusive right to the use of the word "Frog" is disclaimed.
FOR TROLLEY FROGS.
Claims use since Aug. 22, 1947.

Ser. No. 542,672. SONOTONE CORPORATION, Elmsford, N. Y. Filed Nov. 28, 1947.

TITAN

FOR MECHANO-ELECTRIC ENERGY TRANSDUCERS—NAMELY, PHONOGRAPH PICK-UPS AND PARTS AND ACCESSORIES THEREFOR.
Claims use since Nov. 21, 1947.

Ser. No. 543,368. AEROVOX CORPORATION, New Bedford, Mass. Filed Oct. 11, 1947.

AEROVOX

Applicant claims ownership of registrations Nos. 162,345 and 384,466.
FOR ELECTROLYTIC CONDENSERS, MICA CONDENSERS, TUBULAR CONDENSERS, OIL CONDENSERS, WAX CONDENSERS AND RESISTORS.
Claims use since May 14, 1922.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 532,970. THERMOCOR PRODUCTS, INC., Cincinnati, Ohio. Filed Aug. 30, 1947.

BLIMP

FOR KITS FOR BLOWING PLASTIC BUBBLES INCLUDING A TUBE OF PLASTIC MATERIAL AND A BLOWING TUBE.
Claims use since Aug. 14, 1947.

Ser. No. 533,405. SELCHOW & RIGHTER COMPANY, New York, N. Y. Filed Sept. 4, 1947.

MR. DOODLE'S DOG

FOR BOARD GAME PLAYED WITH PIECES AND SPINNER.
Claims use since Sept. 24, 1940.

Ser. No. 533,406. SELCHOW & RIGHTER COMPANY, New York, N. Y. Filed Sept. 4, 1947.

Snake Eyes

FOR CARD GAME PLAYED WITH SPECIAL CARDS, CHIPS, AND DICE.
Claims use since Mar. 3, 1941.

Ser. No. 533,407. SELCHOW & RIGHTER COMPANY, New York, N. Y. Filed Sept. 4, 1947.

CAVALCADE

FOR BOARD GAME PLAYED WITH PIECES AND DICE.
Claims use since Apr. 30, 1936.

Ser. No. 533,408. SELCHOW & RIGHTER COMPANY, New York, N. Y. Filed Sept. 4, 1947.

CABBY!

FOR BOARD GAME PLAYED WITH PIECES AND DICE.
Claims use since Feb. 3, 1938.

Ser. No. 534,126. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

GO-DEEPER

Applicant claims ownership of registration No. 387,464.
FOR FISH LURES.
Claims use since Aug. 1, 1939.

Ser. No. 534,139. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947.

ACE

Applicant claims ownership of registration No. 233,769.
FOR FISH LURES.
Claims use since March 1926.

Ser. No. 534,140. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

Dowagiac

Applicant claims ownership of registration No. 175,713.
FOR FISH LURES, FISHING RODS, AND FISHING REELS.
Claims use since Apr. 2, 1902.

Ser. No. 534,142. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947.

RIVER-RUNT

Applicant claims ownership of registration No. 300,799.
FOR FISH LURES.
Claims use since June 21, 1928.

Ser. No. 535,104. TWINZY TOY COMPANY, Battle Creek, Mich. Filed Sept. 19, 1947.

TWINZY

FOR TOY DOLLS AND FIGURES.
Claims use since Aug. 22, 1922.

Ser. No. 535,263. YUKICHI SAKAI, doing business as the Pacific Dry Goods Co., San Francisco, Calif. Filed Sept. 22, 1947.

CHI CHI

FOR FORTUNE TELLING GAME CONSISTING OF A BOX OF STICKS WITH NUMBERS THEREON WHICH CORRESPOND WITH LIKE NUMBERS IN A BOOK.
Claims use since Apr. 1, 1937.

Ser. No. 536,216. ARPIN PRODUCTS, INC., Orange, N. J. Filed Sept. 30, 1947.

LEGIONNAIRE

FOR WATER PISTOLS.
Claims use since Sept. 17, 1947.

Ser. No. 536,556. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 2, 1947.

J5V

FOR FOOTBALLS.
Claims use since 1926.

Ser. No. 536,558. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 2, 1947.

Exploder

Applicant claims ownership of registration No. 286,292.
FOR GOLF CLUBS.
Claims use since March 1931.

Ser. No. 536,648. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 3, 1947.

CASH-IN

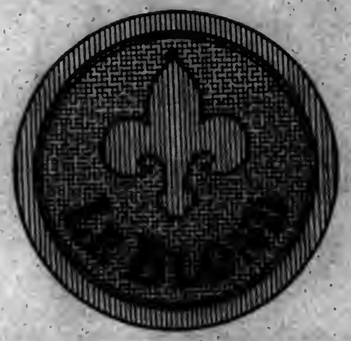
FOR GOLF CLUBS.
Claims use since 1931.

Ser. No. 540,997. THE HETTRICK MANUFACTURING COMPANY, Toledo, Ohio. Filed Nov. 13, 1947.

Pedal Wagon

FOR PLAY VEHICLE COMPRISING A TRICYCLE HAVING A WAGON BOX SUPPORTED BY THE BACKBONE AND REAR WHEELS.
Claims use since Feb. 28, 1947.

CLASS 23



CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 517,917. MEILI-BLUMBERG CORPORATION, New Holstein, Wis. Filed Nov. 24, 1947.

MB

FOR INTERNAL COMBUSTION ENGINE DRIVEN EARTH SCRAPERS, ELECTRIC MOTOR AND/OR INTERNAL COMBUSTION ENGINE DRIVEN ENDLESS BELT TYPE CONVEYORS, MANUALLY PROPELLED AND SELF-PROPELLED TRAFFIC AND SAFETY LINE MARKERS ON WHEELED MOUNTINGS AND PROVIDED WITH AIR NOZZLES FOR SPRAYING A FLUID MARKING MEDIUM, CENTRIFUGAL WATER PUMPS DIRECTLY DRIVEN BY ELECTRIC MOTORS AND ALSO V-BELT DRIVEN, INTERNAL COMBUSTION ENGINE DRIVEN ROTARY PAVEMENT SWEEPERS, AND HAND OPERATED WINCHES.
Claims use since Mar. 10, 1928.

Ser. No. 526,504. THE R. K. LEBLOND MACHINE TOOL CO., Cincinnati, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

The vertical lines in the outer ring and fleur-de-lis indicate the color red while the cross lining in the central part designate the color gold.
FOR METAL WORKING LATHES.
Claims use since 1887.

Ser. No. 526,699. NILES-BEMENT-POND COMPANY, West Hartford, Conn. Filed July 5, 1947.

P&W

Applicant claims ownership of registrations Nos. 118,695, 364,488, and 119,915.
FOR TAPS, TAP CHASERS, COMBINED TAPS AND DRILLS, HOBS, MILLING CUTTERS, ARBORS, COLLETS, REAMERS, TAPER PINS, DRILLS, THREADING TOOLS, KNURLING TOOLS, CUTTING-OFF TOOLS, CIRCULAR FORMING TOOLS, LATHE TOOLS AND PLANER TOOLS.
Claims use since 1931.

Ser. No. 527,322. GLOBE TOOL & GAGE WORKS, Boston, Mass. Filed July 5, 1947.

BRAD KING

Applicant disclaims the words "Boston" and "Brad," and the representation of continent of North America.
FOR PEDAL-OPERATED MACHINES FOR SETTING HOLLOW, PRONGED, ORNAMENTAL METAL BRADS.
Claims use since May 9, 1947.

Ser. No. 531,256. NA-MAC PRODUCTS CORP., Hollywood, Calif. Filed Aug. 14, 1947.

WORLCUTTER

FOR CAN OPENER.
Claims use since July 23, 1947.

CLASS 25

LOCKS AND SAFES

Ser. No. 504,873. ADAMS RITE MANUFACTURING COMPANY, assignee of Arthur R. Adams, Glendale, Calif. Filed July 5, 1947.

FOR DOOR BOLTS, LOCKS, DOOR FASTENERS AND CATCHES.
Claims use since Mar. 21, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 534,069. VICTORY OPTICAL MANUFACTURING COMPANY, Newark, N. J. Filed Sept. 10, 1947.

ROSALIE

FOR SPECTACLE FRAMES MADE OF PLASTIC MATERIAL.
Claims use since June 24, 1947.

Ser. No. 534,753. CONTINENTAL OPTICAL COMPANY, INC., Indianapolis, Ind. Filed Sept. 17, 1947. Under section 2f of the act of 1946.

EZY REDE

Applicant claims ownership of registration No. 423,176.
FOR READING GLASSES.
Claims use since Jan. 15, 1921.

Ser. No. 535,201. UNITED WORLD FILMS, INC., New York, N. Y. Filed Sept. 20, 1947.

CASTLE

Applicant claims ownership of registrations Nos. 188,963, 312,652, 322,756 and 396,909.
FOR MOTION PICTURE FILMS.
Claims use since 1923.

Ser. No. 535,468. BOULIN INSTRUMENT CORPORATION, New York, N. Y. Filed Sept. 24, 1947.

VISUTAC

FOR STROBOSCOPIC TACHOMETERS.
Claims use since Apr. 25, 1947.

Ser. No. 535,519. COSMET COMPANY, Minneapolis, Minn. Filed Sept. 26, 1947.

Julette

FOR SPECTACLES AND EYEGLASSES AND LENSES FOR THE SAME.
Claims use since June 1, 1947.

Ser. No. 550,978. WOLLENSAK OPTICAL COMPANY, Rochester, N. Y. Filed Mar. 1, 1948.

SYNCHROMATIC

FOR PHOTOGRAPHIC SHUTTERS.
Claims use since April 1946.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 522,016. MARVEL JEWELRY MFG. COMPANY, Providence, R. I. Filed May 7, 1947.

Wristeen

FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES) MADE WHOLLY OR PARTLY OF PRECIOUS METAL—NAMELY, ALL TYPES OF BRACELETS.
Claims use since January 1947.

Ser. No. 536,296. S. AND N. KATZ, INC., Baltimore, Md. Filed Sept. 30, 1947.

Miss Simplicity

FOR FINGER RINGS—NAMELY, DIAMOND ENGAGEMENT RINGS AND WEDDING BANDS.
Claims use since Jan. 16, 1944.

FILTERS AND REFRIGERATORS

Ser. No. 542,753. FILTER FABRICS INCORPORATED, Cleveland, Ohio. Filed Nov. 29, 1947.

FILTERFAB

FOR FILTER MEDIUMS MADE OF TEXTILES.
Claims use since Nov. 19, 1943.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 523,234. BABY HAVEN MANUFACTURING COMPANY, assignee of Athey & Athey, Brackenridge, Pa. Filed Nov. 13, 1947.

Baby Haven

No claim is made to the word "Baby."
FOR COMBINATION CHAIR AND TABLE SETS FOR INFANTS.
Claims use since Apr. 15, 1947.

Ser. No. 527,016. BECHIK PRODUCTS INC., doing business as Bechik Products, St. Paul, Minn. Filed July 5, 1947.

Velv-o-Grip

The word "Grip" is disclaimed apart from the mark. Applicant claims ownership of registration No. 337,233.
FOR MATTRESSES, CUSHIONS, AND BOXSPRINGS AND HANDLES THEREFOR.
Claims use since Aug. 15, 1932.

Ser. No. 533,602. THE NURRE COMPANIES, INC., Bloomington, Ind. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

Applicant disclaims the words "Genuine Mirrors" apart from the mark. Applicant claims ownership of registration No. 403,104.
FOR GLASS MIRRORS.
Claims use since October 1939.

Ser. No. 534,840. TRIMBLE NURSERYLAND FURNITURE, INC., Rochester, N. Y. Filed Sept. 17, 1947.

KIDDIE-YARD

FOR CHILDREN'S PLAY PENS.
Claims use since Apr. 1, 1937.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 538,308. MAJESTIC MANUFACTURING COMPANY, St. Louis, Mo. Filed Oct. 18, 1947.

DURAMIC

FOR FIREBOX LININGS FOR STOVES.
Claims use since Oct. 8, 1947.

Ser. No. 539,906. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Nov. 1, 1947.

KENMORE

FOR HEATING AND COOKING STOVES, WHICH OPERATE WITH EITHER GAS, GASOLINE, WOOD, COAL, KEROSENE, OR FUEL OIL, STOVE PARTS, INCLUDING GRATES, FIRE-POTS, LIGHTING RINGS, AND STOVE PIPES.
Claims use since Dec. 1, 1945.

Ser. No. 521,959. CONSOLIDATED INDUSTRIES, INC., Lafayette, Ind. Filed Nov. 7, 1947.

Jetronic

FOR OIL BURNING FURNACES.
Claims use since Apr. 28, 1947.

Ser. No. 532,345. SHAPLEIGH HARDWARE COMPANY, St. Louis, Mo. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

SIMMONS

FOR ELBOWS, STOVEPIPE; GAS, COAL, WOOD, AND OIL STOVES; PORTABLE OVENS.
Claims use since Dec. 2, 1910.

Ser. No. 532,936. KEWANEE BOILER CORPORATION, Kewanee, Ill. Filed Aug. 30, 1947.

TABASCO

Applicant claims ownership of registration No. 45,253.
FOR WATER OR STEAM HEATERS.
Claims use since September 1894.

Ser. No. 540,488. TROOP WATER HEATER COMPANY, Pittsburgh, Pa. Filed Nov. 7, 1947.

DURA-LECTRIC

FOR WATER HEATERS.
Claims use since 1946.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 502,589. MINNESOTA MINING AND MANUFACTURING COMPANY, St. Paul, Minn. Filed Aug. 13, 1947.

3M

Applicant claims ownership of registrations Nos. 221,043, 221,014, 347,416, 405,173, 405,413, and 409,726.
FOR GASKET MATERIAL AND MECHANICAL PACKING CONSISTING OR COMPOSED OF VEGETABLE FIBRE SHEET MATERIAL.
Claims use since Apr. 23, 1946.

Ser. No. 530,968. CHAS. A. SCHIEREN COMPANY, New York, N. Y. Filed Aug. 9, 1947. Under section 2f of the act of 1946.

WHITE
OAK

Applicant claims ownership of registration No. 159,218.
FOR LEATHER BELTING.
Claims use since January 1900.

337,521. MARTINI AND DESIGN. Registered Aug. 11, 1936. Mouakad Bros. SILK CREPE DE CHINE. Class 42. New certificate under section 7(c) issued July 20, 1948, to Mouakad Bros., Inc., New York, N. Y., a firm of New York.

346,841. ELATION. Registered June 8, 1937. Dorothy Gray Salons. PERFUME AND FACE POWDER. Class 6. New certificate under section 7(c) issued July 20, 1948, to Lehn & Fink Products Corporation, Bloomfield, N. J., a corporation of Delaware.

351,038. DOROTHY GRAY. Registered Oct. 12, 1937. Dorothy Gray Salons. SOAP. Class 4. New certificate under section 7(c) issued July 20, 1948, to Lehn & Fink Products Corporation, Bloomfield, N. J., a corporation of Delaware.

379,381. DAREDEVIL. Registered July 9, 1940. Dorothy Gray Salons. LIPSTICK AND ROUGE. Class 6. New certificate under section 7(c) issued July 20, 1948, to Lehn & Fink Products Corporation, Bloomfield, N. J., a corporation of Delaware.

TRADE-MARK REGISTRATIONS REPUBLISHED

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 46,089. Registered Sept. 5, 1905. E. W. CONKLIN & SON, Binghamton, N. Y. Republished by Philadelphia Seed Co., Philadelphia, Pa., a corporation of Pennsylvania.

REX

FOR GRASS SEED.
Claims use since Aug. 26, 1899.

Reg. No. 46,180. Registered Sept. 12, 1905. E. W. CONKLIN & SON, Binghamton, N. Y. Republished by Philadelphia Seed Co., Philadelphia, Pa., a corporation of Pennsylvania.

ETNA

FOR GRASS SEED.
Claims use since Oct. 20, 1899.

Reg. No. 248,166. Registered Oct. 16, 1928. NATIONAL STONE COMPANY, Kansas City, Mo., a corporation of Nebraska. Republished by registrant.

All the wording, with the exception of applicant's name, is disclaimed.
FOR SAND, CLAY, AND VARIOUS GRADES OF STONE—NAMELY, RUBBLE, RIPRAP, CHIPPINGS, AND BROKEN OR CRUSHED STONE FOR CONCRETE WORK.
Claims use since September 1904.

Reg. No. 257,060. Registered May 28, 1929. R. NEUMANN & COMPANY, Hoboken, N. J., a corporation of New Jersey. Republished by registrant.

NEUMANN

FOR ANIMAL, REPTILE, FISH, AND BIRD LEATHERS.
Claims use since 1880.

Reg. No. 297,483. Registered Sept. 13, 1932. PHILADELPHIA SEED CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STRATFORD GREEN

FOR GRASS SEED.
Claims use since Feb. 27, 1932.

Reg. No. 374,010. Registered Dec. 26, 1939. THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, Cincinnati, Ohio, a voluntary association. Republished by registrant.

FOR HOPS.
Claims use since October 1896.

Reg. No. 397,535. Registered Sept. 8, 1942. HYBRADE SEED COMPANY, INC., Fredonia, N. Y., a corporation of New York. Republished by registrant.

"Make every plot a garden spot"

The word "Garden" is disclaimed.
FOR VEGETABLE AND FLOWER SEEDS.
Claims use since Jan. 8, 1942.

Reg. No. 414,603. Registered June 19, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RCI

FOR RESINS—NAMELY, SYNTHETIC RESINS AND PROCESSED NATURAL RESINS; RESIN SOLUTIONS, PARTICULARLY PLASTIC RESIN SOLUTIONS.
Claims use since May 1944.

Reg. No. 417,068. Registered Oct. 16, 1945. REDWOOD FIBRE PRODUCTS COMPANY, INC., Santa Cruz, Calif., a corporation of California. Republished by registrant.

BARKWOOL

FOR REDWOOD FIBRE SOLD IN SHEETS, ROLLS AND BALES AND USED FOR VARIOUS PURPOSES IN THE INDUSTRIAL ARTS.
Claims use since May 21, 1943.

Reg. No. 428,859. Registered Apr. 8, 1947. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

DUNLOP
Pillo-Foam

The words "Foam" and "Pillo" are disclaimed.
FOR CELLULAR RUBBER.
Claims use since Sept. 27, 1945.

CLASS 2

RECEPTACLES

Reg. No. 325,465. Registered June 25, 1935. MIRAX CHEMICAL PRODUCTS CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

UNISTREAM

FOR DISPENSING CONTAINERS OF METAL FOR FLUIDS.
Claims use since on or about Jan. 1, 1932.

Reg. No. 390,680. Registered Sept. 30, 1941. INLAND CONTAINER CORPORATION, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

CYCLETAINER

FOR COMPARATIVELY RIGID SHIPPING CONTAINERS FOR BICYCLES SOLD IN TRADE EMPTY.
Claims use since Mar. 8, 1930.

Reg. No. 413,088. Registered Apr. 10, 1945. WALTER KIDDE & COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant, present location Belleville, N. J.

K

FOR CYLINDERS MADE OF METAL AND EMPLOYED AS CONTAINERS FOR COMPRESSED OR LIQUEFIED GAS FOR USE WITH BREATHING DEVICES, INFLATABLE RAFTS, LIFE BELTS, FIRE EXTINGUISHING DEVICES, AND EMERGENCY PRESSURE OPERATED DEVICES FOR OPENING DOORS AND FOR LOWERING AND RAISING LANDING GEAR OF AIRPLANES.
Claims use since Sept. 24, 1941.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 481,764. Registered Aug. 5, 1947. NASH, INC., Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

PLASTONE

FOR WALLETS AND BILL FOLDS.
Claims use since Oct. 31, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 73,504. Registered Apr. 27, 1909. ABERCROMBIE & FITCH COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

B-VER

FOR WATERPROOF DRESSING AND PRESERVATIVE FOR SHOES, SADDLERY, HARNESS AND ALL LEATHER GOODS.
Claims use since Oct. 1, 1908.

Reg. No. 245,760. Registered Aug. 21, 1928. PRECISION GRINDING WHEEL COMPANY, INCORPORATED, Philadelphia, Pa., a corporation of Maryland. Republished by registrant.

HY-TENS

FOR ABRASIVE GRINDING WHEELS.
Claims use since Oct. 26, 1920.

Reg. No. 266,606. Registered Jan. 28, 1930. WM. FILENE'S SONS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Filene's

FOR SOAPS AND SHOE POLISH.
Claims use since prior to Jan. 1, 1928.

Reg. No. 298,377. Registered Oct. 25, 1932. H. S. BENEDICT COMPANY, INC., New York, N. Y. Republished by The Read Drug and Chemical Company of Baltimore City, Baltimore, Md., a corporation of Maryland.

GOLDEN DOME

FOR DRY CLEANING FLUID FOR CLOTHES, UPHOLSTERY, AND GENERAL HOUSEHOLD USE.
Claims use since June 1, 1932.

Reg. No. 336,027. Registered June 23, 1936. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The word "Klean" is disclaimed.
FOR PREPARATION TO BE USED AS A FABRIC CLEANER AND FOR WASHING AND CLEANING SURFACES AND MATERIALS GENERALLY IN INDUSTRIAL AND HOUSEHOLD USE.
Claims use since 1930.

Reg. No. 337,612. Registered Aug. 11, 1936. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SOL KLEAN

The word "Klean" is disclaimed.
FOR PREPARATION TO BE USED AS A FABRIC CLEANER AND FOR WASHING AND CLEANING SURFACES AND MATERIALS GENERALLY IN INDUSTRIAL AND HOUSEHOLD USE.
Claims use since 1930.

Reg. No. 362,979. Registered Dec. 6, 1938. LESLIE C. VAN NEST, doing business as National Laboratories, Toledo, Ohio. Republished by National Laboratories, Inc., Toledo, Ohio, a corporation of Ohio.

LIM-RUS

FOR PREPARATION FOR REMOVAL OF RUST AND STAIN FROM PORCELAIN, ENAMEL OR VITREOUS CHINA SURFACES.
Claims use since Aug. 1, 1937.

Reg. No. 386,572. Registered Apr. 15, 1941. THE COWLES DETERGENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DRYORTH

FOR DETERGENT COMPOUND USEFUL IN DEGREASING AND DESOILING OF METALS AND TEXTILES.
Claims use since Oct. 29, 1940.

CLASS 5

ADHESIVES

Reg. No. 264,342. Registered Nov. 26, 1929. THE PEP BOYS—MANNY, MOE & JACK, doing business as Varsity Products Co., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR GASKET CEMENT.
Claims use since May 1, 1929.

Reg. No. 339,256. Registered Sept. 29, 1936. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

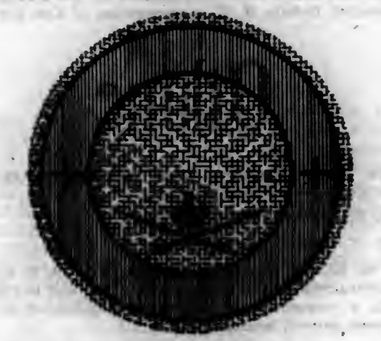
SMOOTH-ON

FOR ADHESIVE TAPE FOR REPAIR PURPOSES AND THE LIKE, AND IRON CEMENTS IN POWDER, PUTTY AND PASTE FORMS USED AS ADHESIVES.
Claims use since 1894.

Reg. No. 429,471. Registered April 29, 1947. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

FOR GASKET AND RIM CEMENT.
Claims use since Oct. 8, 1946.

CLASS 6



CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 84,788. Registered June 5, 1900. HENRY S. WELLCOME, London, England. Republished by Burroughs, Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

SAXIN

FOR A SUBSTANCE USED IN MEDICINE AS A SWEETENING AGENT.
Claims use since Nov. 9, 1896.

Reg. No. 38,546. Registered July 1, 1902. EDWARD E. DICKINSON & Co., Essex, Conn. Republished by The E. E. Dickinson Company, Essex, Conn., a corporation of Connecticut.

The drawing is lined for the colors yellow and red.
FOR EXTRACT OF WITCH-HAZEL.
Claims use since about July 1, 1902.

Reg. No. 43,567. Registered Oct. 18, 1904. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

SOLOID

FOR PREPARATIONS OF DRUGS AND CHEMICALS FOR HUMAN AND VETERINARY USE.
Claims use since June 18, 1892.

Reg. No. 43,569. Registered Oct. 18, 1904. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

TABLOID

FOR DRUGS AND CHEMICALS, PARTICULARLY FOR HUMAN AND VETERINARY USE.
Claims use since January 1884.

Reg. No. 44,219. Registered Feb. 21, 1905. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

TABLOID

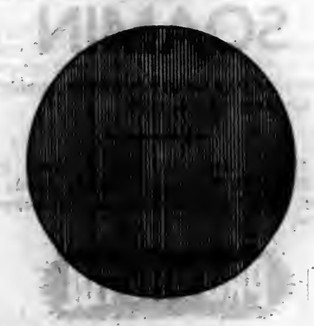
FOR CHEMICALS USED IN PHOTOGRAPHIC PROCESSES.
Claims use since January 1884.

Reg. No. 47,813. Registered Nov. 21, 1905. THE MURINE EYE REMEDY COMPANY, Chicago, Ill. Republished by The Murine Company, Inc., Chicago, Ill., a corporation of Illinois.

MURINE

FOR EYE REMEDIES.
Claims use since about October 1894.

Reg. No. 49,888. Registered Feb. 20, 1906. THE MURINE EYE REMEDY COMPANY, Chicago, Ill. Republished by The Murine Company, Inc., Chicago, Ill., a corporation of Illinois.



FOR EYE REMEDIES.
Claims use since about October 1894.

Reg. No. 60,447. Registered Feb. 5, 1907. HENRY SOLOMON WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

ERNUTIN

FOR PREPARATIONS OF ERGOT FOR HUMAN AND VETERINARY USE.
Claims use since Apr. 4, 1904.

Reg. No. 68,224. Registered Mar. 17, 1908. THE SAWYER CRYSTAL BLUE COMPANY, Boston, Mass. Republished by Sawyer Crystal Blue Company, Boston, Mass., a corporation of Massachusetts.

The lining indicates the color red.
FOR WASHING-BLUE.
Claims use since on or about Jan. 1, 1864.

Reg. No. 69,268. Registered June 2, 1908. THE SAWYER CRYSTAL BLUE COMPANY, Boston, Mass. Republished by Sawyer Crystal Blue Company, Boston, Mass., a corporation of Massachusetts.

FOR WASHING-BLUE.
Claims use since on or about Jan. 1, 1864.

Reg. No. 69,737. Registered June 30, 1908. THE SAWYER CRYSTAL BLUE COMPANY, Boston, Mass. Republished by Sawyer Crystal Blue Company, Boston, Mass., a corporation of Massachusetts.

CRYSTAL

FOR AMMONIA.
Claims use since on or about Jan. 1, 1886.

Reg. No. 71,460. Registered Nov. 24, 1908. HENRY SOLOMON WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

RYTOL

FOR PHOTOGRAPHIC DEVELOPERS AND PHOTOGRAPHIC ACCELERATORS.
Claims use since July 6, 1907.

Reg. No. 73,155. Registered Mar. 23, 1909. HENRY SOLOMON WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

SOAMIN

FOR SODIUM PARA-AMINOPHENYLARSONATES.
Claims use since Apr. 9, 1908.

Reg. No. 73,653. Registered May 4, 1909. FRANK R. TYLER, Richmond, Va. Republished by Altone Chemical Company, Inc., New Orleans, La., a corporation of Louisiana.

PRO-PHY-TOL

FOR TOOTH PASTE AND POWDER.
Claims use since Apr. 1, 1905.

Reg. No. 73,880. Registered May 25, 1909. THE CORKINS CHEMICAL COMPANY, Cincinnati, Ohio. Republished by Roscoe E. Corkins, Cincinnati, Ohio.

The star is lined for the color red.
FOR DISINFECTANTS.
Claims use since Sept. 1, 1905.

Reg. No. 79,801. Registered Oct. 4, 1910. OTHO H. WHITE, Buffalo, N. Y. Republished by The Othine Corporation, Buffalo, N. Y., a corporation of New York.

Othine

FOR PREPARATIONS FOR THE REMOVAL OF FRECKLES.
Claims use since Feb. 1, 1908.

Reg. No. 82,269. Registered June 13, 1911. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., and Baltimore, Md., a corporation of Delaware. Republished by registrant, present location Decatur, Ill.

NE-TO

FOR LAUNDRY STARCH.
Claims use since Feb. 11, 1911.

Reg. No. 83,698. Registered Oct. 3, 1911. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., and Baltimore, Md., a corporation of Delaware. Republished by registrant, present location Decatur, Ill.

The symbol "5¢" is disclaimed.
FOR LAUNDRY STARCH.
Claims use since Feb. 11, 1911.

Reg. No. 90,861. Registered Mar. 25, 1913. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

VAPOROLE

FOR MEDICINAL SUBSTANCES IN HERMETICALLY SEALED CONTAINERS FOR HYPODERMIC AND INTRAMUSCULAR INJECTIONS AND FOR INHALATION.
Claims use since Jan. 10, 1889.

Reg. No. 91,280. Registered Apr. 22, 1913. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

KEPLER

FOR MALT EXTRACT WITH BEEF AND IRON, WITH CASCARA SEGRADA, WITH CHEMICAL FOOD, WITH HEMOGLOBIN, WITH HYPOPHOSPHITES, WITH IRON, WITH IRON AND QUININ CITRATE, WITH IRON IODID, WITH IRON, QUININ, AND STRYCHNIN, WITH PEPSIN, WITH PEPSIN AND PANCREATIN, WITH PHOSPHORUS; EMULSIONS OF COD-LIVER OIL WITH MALT EXTRACT, WITH CHEMICAL FOOD, WITH HYPOPHOSPHITES, WITH IRON IODID, AND WITH PHOSPHORUS.
Claims use since Feb. 1, 1879.

Reg. No. 94,563. Registered Dec. 16, 1913. RED ROBIN PRODUCTS CO., Montgomery, Ala. Republished by Altone Chemical Company, Inc., New Orleans, La., a corporation of Louisiana.

SWEET DREAMS

FOR A PREPARATION FOR BANISHING MOSQUITOES AND OTHER INSECTS.
Claims use since Apr. 1, 1913.

Reg. No. 95,857. Registered Mar. 17, 1914. HENRY SOLOMON WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

INFUNDIN

FOR PRESSOR SUBSTANCES POSSESSING THE PROPERTIES OF AN EXTRACT OF THE POSTERIOR LOBE OF THE PITUITARY GLAND.
Claims use since Feb. 3, 1913.

Reg. No. 96,070. Registered Mar. 31, 1914. HENRY S. WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

HAZELINE

FOR TOILET CREAMS, MEDICATED SUPPOSITORIES AND EXTRACT OF WITCH HAZEL.
Claims use since Apr. 2, 1880.

Reg. No. 97,530. Registered June 9, 1914. E. E. DICKINSON, Essex, Conn. Republished by The E. E. Dickinson Company, Essex, Conn., a corporation of Connecticut.

WITCHAL

FOR WITCH-HAZEL.
Claims use since Aug. 1, 1913.

Reg. No. 120,921. Registered Mar. 12, 1918. HENRY SOLOMON WELLCOME, London, England. Republished by Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York.

'Empirin'

FOR THERAPEUTIC AGENTS CONSISTING OF SALICYLATES FOR INTERNAL USE.
Claims use since Oct. 26, 1914.

Reg. No. 140,494. Registered Mar. 15, 1921. THE MURINE EYE REMEDY COMPANY, Chicago, Ill. Republished by The Murine Company, Inc., Chicago, Ill., a corporation of Illinois.

BANENE

FOR EYE REMEDIES.
Claims use since October 1894.

Reg. No. 140,495. Registered Mar. 15, 1921. THE MURINE EYE REMEDY COMPANY, Chicago, Ill. Republished by The Murine Company, Inc., Chicago, Ill., a corporation of Illinois.

GRANULINE

FOR EYE REMEDIES.
Claims use since October 1894.

Reg. No. 140,655. Registered Mar. 22, 1921. THE MURINE EYE REMEDY COMPANY, Chicago, Ill. Republished by The Murine Company, Inc., Chicago, Ill., a corporation of Illinois.

FOR EYE REMEDIES.
Claims use since October 1894.

Reg. No. 147,957. Registered Nov. 8, 1921. CINCINNATI CHEMICAL WORKS, INC., Cincinnati, Ohio, a corporation of Delaware. Republished by registrant.

FOR DYESTUFFS.
Claims use since September 1920.

Reg. No. 164,476. Registered Feb. 20, 1923. ERNEST DALTROFF, Paris, France, assignor to E. Daltroff & Cie., Paris, France, a firm trading as Parfumerie Caron. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

CARON

FOR PERFUME, TOILET WATER, ROUGES, FACE POWDER, TALCUM POWDER.
Claims use since 1905.

Reg. No. 166,266. Registered Mar. 27, 1923. HUNTINGTON CHEMICAL COMPANY, Huntington, Ind. Republished by Huntington Laboratories, Inc., Huntington, Ind., a corporation of Indiana.

ZEF-IR

FOR DISINFECTANT AND AIR PURIFIER.
Claims use since May 1, 1921.

Reg. No. 172,532. Registered Sept. 4, 1923. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France, assignor to Caron Corporation, a corporation of New York. Republished by Caron Corporation, New York, N. Y., a corporation of New York.

LE TABAC BLOND

FOR PERFUME, TOILET WATER.
Claims use since June 1, 1919.

Reg. No. 202,335. Registered Aug. 18, 1925. PARAGON DISTRIBUTING CORPORATION, New York, N. Y. Republished by Eterne Manufacturing Corp., New York, N. Y., a corporation of New Jersey.

PARAGON

FOR FACE POWDER, TALCUM POWDER, COLD CREAM, ROUGE, LIP STICKS, FACE LOTION, SCALP TONIC, AND BRILLIANTINE.
Claims use since Apr. 11, 1925.

Reg. No. 206,654. Registered Dec. 8, 1925. CHEMICAL PRODUCTS CORPORATION, Detroit, Mich. Republished by Industrial Chemical Products Co., Detroit, Mich., a corporation of Michigan.

CHROMOLENE

FOR CHEMICAL PREPARATION ADAPTED TO BE APPLIED TO STEEL TO CLEAN THE SAME AND TO ACT THEREON TO IMPART RUST-INHIBITIVE PROPERTIES THERETO.
Claims use since Mar. 1, 1925.

Reg. No. 209,862. Registered Feb. 23, 1926. THE E. B. DICKINSON COMPANY, Essex, Conn., a corporation of Connecticut. Republished by registrant.

"YELLOW LABEL"

The label colored yellow is disclaimed.
FOR EXTRACT OF WITCH-HAZEL.
Claims use since 1902.

Reg. No. 213,695. Registered June 1, 1926. PARAGON LABORATORIES, INC., Newark, N. J. Republished by Eterne Manufacturing Corp., New York, N. Y., a corporation of New Jersey.

Paragon

FOR HAIR COLORINGS, HAIR TINTS, AND HAIR DYES.
Claims use since 1920.

Reg. No. 228,117. Registered May 24, 1927. GUY T. GIBSON, INCORPORATED, New York, N. Y. Republished by Parfums Ciro, Inc., New York, N. Y., a corporation of Delaware.

Ciro

FOR TOILET LOTIONS; FACE, TALCUM, AND SACHET POWDERS; FACE CREAMS, TOILET WATERS, SACHETS, ROUGES, EYEBROW PENCILS, FACE ROUGE AND LIP ROUGE, PERFUMES, DEPILATORIES, AROMATIC VINAIGRES, AND LIQUID FACE POWDERS.
Claims use since on or about July 1, 1923.

Reg. No. 229,940. Registered July 12, 1927. THE MURINE COMPANY, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR EYE REMEDIES.
Claims use since November 1926.

Reg. No. 246,412. Registered Sept. 4, 1928. VANADIUM CORPORATION OF AMERICA, Bridgeville, Pa., a corporation of Delaware. Republished by registrant, present location New York, N. Y.

The word "Brand" is disclaimed.
FOR METALLIC OXIDES AND SALTS, AND ESPECIALLY OXIDES AND SALTS OF VANADIUM, MOLYBDENUM, TUNGSTEN, CHROMIUM, TITANIUM, ZIRCONIUM, CADMIUM, URANIUM, COBALT, NICKEL AND MANGANESE.
Claims use since Jan. 30, 1928.

Reg. No. 246,712. Registered Sept. 11, 1928. OSCAR L. GABRIEL, doing business as Happie-Easter Dye Company, New York, N. Y. Republished by Fred Fear & Co., Brooklyn, N. Y., a corporation of New York.

"Happie-Easter"

FOR DYES.
Claims use since Oct. 15, 1927.

Reg. No. 250,030. Registered Nov. 27, 1928. PURITAN PHARMACEUTICAL COMPANY, St. Louis, Mo. Republished by Puritan Drug Company, St. Louis, Mo., a corporation of Missouri.

A'Lure

FOR COMPLEXION POWDER, CLEANSING CREME, TISSUE CREME, ASTRINGENT LOTION, SKIN TONIC, FOUNDATION CREME, PORE PASTE, ROUGE, LIP STICK, DEPILATORY, BLEACHING CREME, ACNE CREME, ACNE LOTION, MUSCLE OIL, EYE-WRINKLE LOTION, BRILLIANTINE, LIQUID POWDER, FACE AND COMPLEXION CREAM, PERFUME EXTRACT, TOILET WATER, TALCUM POWDER, SACHET POWDER, BATH SALT, FACE AND COMPLEXION LOTION, PERMANENT-WAVE OIL, COMPACTS, BATH DUSTING, NAIL POLISH, SHAMPOO, HAND LOTION, SHAVING LOTION, LILAC VEGETAL, BANDOLINE, DEODORANT, HAIR TONIC, WHITE LIP POMADE, EYEBROW PENCIL, DENTAL CREAM, SHAVING CREAM.
Claims use since Mar. 31, 1927.

Reg. No. 251,808. Registered Jan. 15, 1929. HEALTH PRODUCTS CORPORATION, Newark, N. J. Republished by White Laboratories, Inc., Newark, N. J., a corporation of New Jersey.

FOR MEDICATED CHEWING TABLETS FOR USE AS A LAXATIVE AND AS AN ANALGESIC.
Claims use since December 1922.

Reg. No. 281,025. Registered Mar. 10, 1931. HEALTH PRODUCTS CORPORATION, Newark, N. J. Republished by White Laboratories, Inc., Newark, N. J., a corporation of New Jersey.

FOR COD-LIVER-OIL CONCENTRATE.
Claims use since Oct. 2, 1930.

Reg. No. 283,778. Registered June 9, 1931. BURROUGHS WELLCOME & CO. (U. S. A.), INC., New York, N. Y., a corporation of New York. Republished by registrant.

ALVESEN

FOR PREPARATION FOR REDUCING ACIDITY.
Claims use since Jan. 7, 1931.

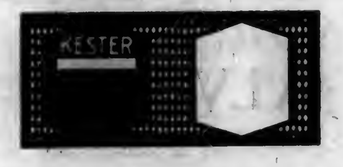
Reg. No. 283,781. Registered June 9, 1931. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR SOLDERING PASTE.
Claims use since Dec. 18, 1930.

Reg. No. 289,072. Registered Nov. 17, 1931. HEALTH PRODUCTS CORPORATION, Newark, N. J. Republished by White Laboratories, Inc., Newark, N. J., a corporation of New Jersey.

CLO-TRATE



FOR COD LIVER OIL CONCENTRATE.
Claims use since June 15, 1931.

Reg. No. 302,757. Registered Apr. 26, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representation of the label is disclaimed.
FOR SOLDERING FLUXES.
Claims use since Nov. 26, 1932.

Reg. No. 302,846. Registered May 2, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representation of the label is disclaimed.
FOR SOLDERING FLUXES.
Claims use since Nov. 14, 1932.

Reg. No. 304,081. Registered June 20, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR SOLDERING FLUXES.
Claims use since Jan. 16, 1933.

Reg. No. 307,408. Registered Oct. 24, 1933. MULTIGRAPH COMPANY, Wilmington, Del., and Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Multilith

FOR CHEMICALS FOR USE IN PLANOGRAPHIC PRINTING.
Claims use since June 3, 1933.

Reg. No. 328,798. Registered Oct. 8, 1935. HEALTH PRODUCTS CORPORATION, Newark, N. J. Republished by White Laboratories Inc., Newark, N. J., a corporation of New Jersey.

Juaits

FOR CONCENTRATE OF COD LIVER OIL.
Claims use since Feb. 14, 1935.

Reg. No. 330,352. Registered Nov. 26, 1935. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SOL KLEAN

The word "Klean" is disclaimed.
FOR CHEMICAL PREPARATION ADAPTED TO BE APPLIED TO STEEL TO CLEAN THE SAME AND TO ACT THEREON TO IMPART RUST-INHIBITIVE PROPERTIES THERETO.
Claims use since 1930.

Reg. No. 331,461. Registered Jan. 7, 1936. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

ANCHOR

FOR STARCH PRODUCTS ORDINARILY USED FOR INDUSTRIAL PURPOSES.
Claims use since May 8, 1923.

Reg. No. 331,462. Registered Jan. 7, 1936. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STADEX

FOR INEDIBLE STARCH PRODUCTS FOR INDUSTRIAL PURPOSES.
Claims use since November 1923.

Reg. No. 331,463. Registered Jan. 7, 1936. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

ECLIPSE

FOR INEDIBLE STARCH PRODUCTS FOR INDUSTRIAL PURPOSES.
Claims use since January 1920.

Reg. No. 331,558. Registered Jan. 14, 1936. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The word "Klean" is disclaimed.
FOR CHEMICAL PREPARATION ADAPTED TO BE APPLIED TO STEEL TO CLEAN THE SAME AND TO ACT THEREON TO IMPART RUST-INHIBITIVE PROPERTIES THERETO AND FOR SOLDERING FLUX.
Claims use since 1930.

Reg. No. 332,107. Registered Feb. 4, 1936. JOSEPH BERTHE, doing business as Ostrex Company, New York, N. Y. Republished by Lillian Steuerman, doing business as Ostrex Company, New York, N. Y., a co-partnership.

OSTREX TONIC

The word "Tonic" is disclaimed.
FOR GENERAL HEALTH TONIC, IN TABLET FORM.
Claims use since Jan. 14, 1934.

Reg. No. 337,166. Registered July 28, 1936. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STAPEX

FOR INEDIBLE STARCH PRODUCTS FOR INDUSTRIAL PURPOSES.
Claims use since Feb. 20, 1936.

Reg. No. 337,733. Registered Aug. 18, 1936. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

CALADEX

FOR CALENDER STARCH.
Claims use since Jan. 4, 1936.

Reg. No. 342,528. Registered Jan. 19, 1937. BURROUGHS WELLCOME & Co. (U. S. A.), INC., New York, N. Y., a corporation of New York. Republished by registrant.

'RYZAMIN-B'

The letter "B" is disclaimed.
FOR MEDICINAL PREPARATION FOR THE TREATMENT OF CONDITIONS DUE TO VITAMIN B_1 DEFICIENCY.
Claims use since June 1935.

Reg. No. 345,191. Registered Apr. 20, 1937. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STA-FLO

FOR LAUNDRY STARCH.
Claims use since July 30, 1936.

Reg. No. 345,724. Registered May 4, 1937. ENDO PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ESTROMONE

FOR VARIOUS PHARMACEUTICALS AND DRUG MEDICATION, TO BE USED IN THE TREATMENT OF GONORRHEAL VAGINITIS IN CHILDREN, SENILE VAGINITIS, FUNCTIONAL DYSMENORRHEA DUE TO DEFICIENCY OF ESTRINE.
Claims use since Nov. 24, 1936.

Reg. No. 345,725. Registered May 4, 1937. ENDO PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VIROSTERONE

FOR VARIOUS PHARMACEUTICALS AND DRUG MEDICATION, TO BE USED IN THE TREATMENT OF IMPOTENCE, SEXUAL NERVOUS DEBILITY, EJACULACTIO PRAECOX, DELAYED PUBERITY, AND ENLARGEMENT OF THE PROSTATE.
Claims use since Nov. 15, 1935.

Reg. No. 350,034. Registered Sept. 14, 1937. BURROUGHS WELLCOME & Co. (U. S. A.), INC., New York, N. Y., a corporation of New York. Republished by registrant.

'EMOCIN'

FOR MEDICAL LOZENGE INTENDED FOR USE IN THE TREATMENT OF IRRITATIVE CONDITIONS OF THE THROAT.
Claims use since Mar. 1, 1937.

Reg. No. 354,443. Registered Feb. 15, 1938. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STAYSIZE

FOR INEDIBLE STARCH PRODUCTS FOR INDUSTRIAL PURPOSES.
Claims use since Jan. 6, 1937.

Reg. No. 358,336. Registered July 5, 1938. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

CAMEO

FOR LAUNDRY STARCH.
Claims use since July 28, 1932.

Reg. No. 359,864. Registered Aug. 30, 1938. THE E. E. DICKINSON COMPANY, Essex, Conn., a corporation of Connecticut. Republished by registrant.

DIXATONE

FOR PREPARATION FOR SOFTENING THE SKIN, TREATMENT OF SUNBURN, ROUGH CHAPPED SKIN, TIRED BURNING FEET, AND POISON IVY, AND FOR USE AFTER SHAVING.
Claims use since Apr. 20, 1938.

Reg. No. 361,266. Registered Oct. 11, 1938. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STAYCAL

FOR THIN BOILING STARCH.
Claims use since July 29, 1931.

Reg. No. 365,850. Registered Mar. 21, 1939. FRANCES DENNEY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

You and I

FOR TOILET PREPARATIONS—NAMELY EAU DE COLOGNE.
Claims use since Sept. 15, 1938.

Reg. No. 366,206. Registered Apr. 4, 1939. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

BEL-JO

FOR LAUNDRY STARCH.
Claims use since Sept. 16, 1938.

Reg. No. 368,104. Registered June 6, 1939. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Illinois. Republished by registrant.

PENEGLO

FOR LAUNDRY STARCH.
Claims use since Dec. 23, 1938.

Reg. No. 368,727. Registered June 27, 1939. FRANCES DENNEY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

UNDER-TONE

FOR TOILET PREPARATIONS—NAMELY, LOTIONS, CREAMS, FACE POWDER, LIPSTICK, AND ROUGE.
Claims use since Jan. 17, 1939.

Reg. No. 372,150. Registered Oct. 24, 1939. KENTUCKY COLOR AND CHEMICAL COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

Reth

FOR INSECTICIDES.
Claims use since Mar. 22, 1939.

Reg. No. 376,030. Registered Mar. 12, 1940. FRANCES DENNEY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

NIGHT LIFE

FOR TOILET PREPARATIONS—NAMELY, COLOGNE, LOTIONS, AND CREAMS.
Claims use since June 7, 1939.

Reg. No. 378,512. Registered June 11, 1940. ALROSE CHEMICAL CO. INC., Cranston, R. I., a corporation of Rhode Island. Republished by registrant.

ALROMINE

FOR COMPOSITIONS USED AS FINISHING AGENTS, PARTICULARLY FOR IMPARTING PERMANENT SOFTNESS, FOR THE CHEMICAL TREATMENT OF BOTH NATURAL AND ARTIFICIAL TEXTILE FIBRES AND THE TEXTILE MATERIALS MADE THEREFROM.
Claims use since on or about May 1, 1939.

Reg. No. 378,513. Registered June 11, 1940. ALROSE CHEMICAL CO. INC., Cranston, R. I., a corporation of Rhode Island. Republished by registrant.

ALRONOL

FOR COMPOSITIONS USED AS DETERGENTS FOR THE CHEMICAL TREATMENT OF BOTH NATURAL AND ARTIFICIAL TEXTILE FIBRES AND THE TEXTILE MATERIALS MADE THEREFROM.
Claims use since on or about Apr. 1, 1937.

Reg. No. 378,514. Registered June 11, 1940. ALROSE CHEMICAL CO. INC., Cranston, R. I., a corporation of Rhode Island. Republished by registrant.

ALROSENE

FOR COMPOSITIONS USED AS WETTING AGENTS FOR THE CHEMICAL TREATMENT OF BOTH NATURAL AND ARTIFICIAL TEXTILE FIBRES AND THE TEXTILE MATERIALS MADE THEREFROM.
Claims use since on or about Jan. 1, 1935.

Reg. No. 381,002. Registered Sept. 10, 1940. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

STAZYME

FOR INDUSTRIAL STARCH USED AS A SIZE IN PAPER MANUFACTURE.
Claims use since Dec. 28, 1939.

Reg. No. 382,501. Registered Oct. 29, 1940. FRANCES DENNEY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

"Do-Re-Mi"

FOR TOILET PREPARATIONS — NAMELY, COLOGNE, BATH, MAKE-UP AND LIPSTICK SETS.
Claims use since Apr. 19, 1940.

Reg. No. 386,167. Registered Mar. 25, 1941. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

PREZAINT

FOR COMPOUND TO BE APPLIED TO THE SURFACE OF NONFERROUS METAL TO PREPARE THE SAME FOR PAINTING.
Claims use since 1937.

Reg. No. 386,168. Registered Mar. 25, 1941. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SODOL

FOR SOLDERING FLUX.
Claims use since the latter part of 1932.

Reg. No. 386,600. Registered Apr. 15, 1941. BURROUGHS WELLCOME & CO. (U. S. A.), INC., New York, N. Y., a corporation of New York. Republished by registrant.

'AVIMAL'

FOR POLYVITAMIN PREPARATION FOR USE AS A DIETARY SUPPLEMENT IN THE TREATMENT OF CONDITIONS INVOLVING VITAMIN DEFICIENCY.
Claims use since Dec. 12, 1940.

Reg. No. 388,273. Registered June 17, 1941. THE COWLES DETERGENT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CRYSTAMET

FOR CRYSTALLINE ALKALI SILICATE USEFUL IN NEUTRALIZING ACIDS, CLEANING, OR THE MANUFACTURE OF SILICATED SOAPS OR DETERGENT COMPOUNDS.
Claims use since Nov. 23, 1940.

Reg. No. 391,199. Registered Oct. 28, 1941. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

ETCHENE

FOR MIXTURE WITH AN ACID, SUCH AS A PHOSPHORIC ACID, BASE TO BE APPLIED TO THE SURFACES OF FERROUS AND NON-FERROUS METALS TO PREPARE THE SAME FOR PAINTING.
Claims use since August 1940.

Reg. No. 391,582. Registered Nov. 18, 1941. PURITAN COSMETICS, INCORPORATED, St. Louis, Mo. Republished by Puritan Drug Company, St. Louis, Mo., a corporation of Missouri.

The word "Beauty" is disclaimed.
FOR FACE CREAMS, FACE POWDERS, TALCUM POWDERS, LIQUID AND COMPACT ROUGES, A LOTION FOR HANDS AND FACE, EYE BROW PENCILS, LIP STICK, NAIL POLISH, DEPILATORY, DEODORANT FOR THE RELIEF OF PERSPIRATION ODOR, TOILET WATER, AND PERFUMES.
Claims use since 1890.

Reg. No. 391,702. Registered Nov. 18, 1941. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

EMULTEX

FOR CONCENTRATED VEGETABLE PROTEIN FOR STABILIZING ASPHALT OR PETROLEUM EMULSIONS.
Claims use since May 20, 1941.

Reg. No. 393,055. Registered Jan. 27, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

DAYAMIN

FOR VITAMIN PREPARATION.
Claims use since Mar. 14, 1941.

Reg. No. 393,194. Registered Jan. 27, 1942. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

Bib'n Tucker

FOR LAUNDRY STARCH.
Claims use since Apr. 21, 1941.

Reg. No. 395,054. Registered May 12, 1942. ABBOTT LABORATORIES, North Chicago, Ill., a corporation of Illinois. Republished by registrant.

STERLAC

FOR DEODORIZER AND DISINFECTANT.
Claims use since December 1939.

Reg. No. 398,432. Registered Oct. 27, 1942. ENDO PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

LAURON

FOR A PREPARATION OF GOLD COMPOUND FOR USE IN ARTHRITIS.
Claims use since Mar. 20, 1942.

Reg. No. 399,421. Registered Jan. 5, 1943. ENDO PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

HYCODAN

FOR NARCOTIC PREPARATION USED AS AN ANALGESIC AND ANTITUSSIVE.
Claims use since Aug. 1, 1942.

Reg. No. 399,609. Registered Jan. 19, 1943. BURROUGHS WELLCOME & Co. (U. S. A.) INC., New York, N. Y., a corporation of New York. Republished by registrant.

STIPOLAC

FOR DYE ESPECIALLY DESIGNED FOR USE IN X-RAY EXAMINATION OF THE GALLBLADDER.
Claims use since Feb. 1, 1935.

Reg. No. 399,610. Registered Jan. 19, 1943. BURROUGHS WELLCOME & Co. (U. S. A.) INC., New York, N. Y., a corporation of New York. Republished by registrant.

TANNAFAX

FOR PRODUCT PRESENTING 5% TANNIC ACID AND 0.5% PHENOL IN A WATER-SOLUBLE, JELLY-LIKE BASE, USED FOR THE TREATMENT OF BURNS AND SCALDS.
Claims use since June 1, 1934.

Reg. No. 402,629. Registered Aug. 3, 1943. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

Staleymone

FOR PLANT GROWTH PROMOTING SUBSTANCES HAVING CHARACTERISTICS OF WHAT ARE COMMONLY KNOWN AS CHEMICAL HORMONES.
Claims use since Jan. 27, 1943.

Reg. No. 406,046. Registered Mar. 7, 1944. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

The drawing is lined for yellow. The word "Quick" is disclaimed.
FOR LAUNDRY STARCH.
Claims use since 1931.

Reg. No. 406,047. Registered Mar. 7, 1944. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

The drawing is lined for the color yellow. The word "Quick" is disclaimed.
FOR LAUNDRY STARCH.
Claims use since 1931.

Reg. No. 406,048. Registered Mar. 7, 1944. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

The drawing is lined for red and yellow. The words "Quick Hot Starch in 30 Seconds, Starching and Ironing Powder Makes Ironing Easy" are disclaimed.
FOR LAUNDRY STARCH.
Claims use since 1931.

Reg. No. 406,152. Registered Mar. 14, 1944. KENTUCKY COLOR & CHEMICAL Co., Louisville, Ky., a corporation of Kentucky. Republished by registrant.

SHAWNEE

FOR INSECTICIDES.
Claims use since Jan. 1, 1940.

Reg. No. 406,542. Registered Apr. 11, 1944. BURROUGHS WELLCOME & Co. (U. S. A.), INC., New York, N. Y., a corporation of New York. Republished by registrant.

Methedrine

FOR DRUG KNOWN CHEMICALLY AS d-N-METHYLAMPHETAMINE OR d-DESOXYEPHEDRINE, WHICH IS USED FOR ITS STIMULATING EFFECT ON THE CENTRAL NERVOUS SYSTEM AND TO COMBAT LOW BLOOD PRESSURE DURING OPERATIONS.
Claims use since June 1943.

Reg. No. 407,431. Registered June 6, 1944. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

The drawing is lined for yellow.
FOR LAUNDRY STARCH.
Claims use since 1931.

Reg. No. 410,679. Registered Dec. 12, 1944. LEO CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

"PD"

FOR ADDITIVE FOR MOTOR FUELS AND OILS CONSISTING OF A CONCENTRATED SOLUTION OF A BETA-DIKETONE OR KETONATE FOR IMPROVING THE COMBUSTION PROPERTIES OF THE FUEL.
Claims use since July 31, 1936.

Reg. No. 418,534. Registered Jan. 1, 1946. PHYSICAL AND CHEMICAL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ROCKET

FOR CATALYTIC ADDITION AGENTS FOR VOLATILE COMBUSTIBLE LIQUID FUELS, SAID ADDITION AGENTS FUNCTIONING TO ACCELERATE COMBUSTION AND REDUCE KNOCKING.
Claims use since on or about Mar. 19, 1945.

Reg. No. 421,334. Registered May 28, 1946. INDUSTRIAL CHEMICAL PRODUCTS Co., Detroit, Mich., a corporation of Michigan. Republished by registrant.

-INDUSTROSOLV-

FOR MIXTURE INCLUDING AN ACID, A NON-AQUEOUS SOLVENT, AND OTHER INGREDIENTS, ADAPTED TO BE APPLIED TO THE SURFACE OF METAL TO CLEAN AND PREPARE THE SAME FOR PAINTING.
Claims use since the fall of 1944.

Reg. No. 421,335. Registered May 28, 1946. INDUSTRIAL CHEMICAL PRODUCTS Co., Detroit, Mich., a corporation of Michigan. Republished by registrant.

-PHOSMUL-

FOR MIXTURE OF NON-AQUEOUS SOLVENTS, WATER, AND OTHER CLEANING INGREDIENTS, ADAPTED TO BE APPLIED TO THE SURFACE OF METAL TO CLEAN THE SAME AND TO PREPARE THE SAME FOR PAINTING.
Claims use since the fall of 1944.

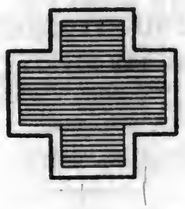
Reg. No. 422,913. Registered Aug. 20, 1946. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RCI

FOR OILS, PROCESSED OILS AND SYNTHETIC OILS USED IN PLASTICIZERS IN PRINTING INKS, MOLDINGS, AND CASTINGS, COMPOSITION MASSES, FLOOR COVERINGS, ADHESIVES, WATER-PROOFING MATERIALS, CORE OIL, BRAKE LINING, AND BINDERS, GLYCERINE AND PHENOL.
Claims use since early in May 1944.

Reg. No. 423,760. Registered Sept. 10, 1946. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

SIMFLEX



FOR LAUNDRY STARCH.
Claims use since Sept. 20, 1945.

Reg. No. 434,731. Registered Oct. 22, 1946. J. B. ROBBIG AND COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DARTHRONOL

FOR VITAMIN PREPARATION.
Claims use since Jan. 24, 1945.

Reg. No. 426,397. Registered Dec. 24, 1946. THE FARM MINERALS COMPANY, INC., Fishers, Ind., a corporation of Indiana. Republished by registrant.

The drawing is lined to represent the color blue.
FOR SUPPLEMENT FOR FEED FOR POULTRY, LIVE STOCK, OR OTHER ANIMALS WHEREIN THE SUPPLEMENT IS PREDOMINATELY OF MINERAL OR CHEMICAL CHARACTER.
Claims use since Sept. 1, 1940.

Reg. No. 430,350. Registered June 10, 1947. THE HUBINGER COMPANY, Keokuk, Iowa, a corporation of Iowa. Republished by registrant.

ELECTRIC

FOR LIQUID STARCH FOR LAUNDERING.
Claims use since Sept. 4, 1886.

CLASS 7

CORDAGE

Reg. No. 288,003. Registered Oct. 20, 1931. PAGE STEEL AND WIRE COMPANY, Adrian, Mich., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

PAGE

FOR STEEL AND IRON STRANDS FOR CABLE AND ROPE.
Claims use since July 1, 1883.

Reg. No. 389,397. Registered Aug. 5, 1941. UNION WIRE ROPE CORPORATION, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

The words "Mining Machine Ropes" are disclaimed.
FOR WIRE ROPE AND WIRE ROPE CABLES.
Claims use since Jan. 1, 1941.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 165,697. Registered Mar. 20, 1923. THE SMOKADOR CO., San Francisco, Calif. Republished by Smokador Manufacturing Co., Inc., Bloomfield, N. J., a corporation of Delaware.

Smokador

FOR ASH RECEIVERS MADE OF NONPRECIOUS METALS.
Claims use since June 15, 1922.

Reg. No. 363,280. Registered Dec. 20, 1938. SYDNEY BERTRAM GOLDMAN, Washington, D. C. Republished by registrant.

Bertram

FOR SMOKERS' PIPES.
Claims use since Dec. 15, 1927.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 406,325. Registered Mar. 28, 1944. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J., a corporation of New York. Republished by registrant, present location Belleville, N. J.

FOR MACHINE GUN CHARGERS.
Claims use since October 1942.

CLASS 10

FERTILIZERS

Reg. No. 383,976. Registered Dec. 31, 1940. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

SOY-AL-KING

The word "Soy" is disclaimed.
FOR SOY BEAN OIL MEAL USABLE AS A FERTILIZER.
Claims use since Mar. 28, 1940.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 305,209. Registered Aug. 8, 1933. MULTIGRAPH COMPANY, Wilmington, Del., and Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Multilith

FOR PRINTING INK.
Claims use since Jan. 10, 1933.

Reg. No. 354,844. Registered Feb. 22, 1938. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Euclid Village, Ohio, a corporation of Delaware. Republished by registrant, present location Cleveland, Ohio.

DupliMAT

FOR WRITING FLUID.
Claims use since October 1937.

Reg. No. 378,807. Registered June 18, 1940. REICHHOLD CHEMICALS INC., Detroit and Fernsdale Station, Detroit, Mich., a corporation of Delaware. Republished by registrant.

Phthalocine

FOR TONERS AND LAKES FOR USE IN INK PIGMENTS.
Claims use since April 1939.

Reg. No. 407,820. Registered June 27, 1944. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

DupliMAT

FOR TYPEWRITER RIBBON.
Claims use since October 1937.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 265,549. Registered Dec. 31, 1929. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ACOUSTONE

FOR SOUND ABSORBING MATERIAL FOR APPLICATION TO THE WALLS OF BUILDINGS.
Claims use since June 10, 1929.

Reg. No. 283,628. Registered June 2, 1931. THE CANADIAN WESTERN LUMBER COMPANY, LTD., Fraser Mills, British Columbia, Canada, a corporation of Canada. Republished by registrant, present location Vancouver, British Columbia, Canada.

The drawing is lined for the color red.
FOR LUMBER AND LUMBER PRODUCTS OF DOUGLAS FIR, HEMLOCK, SPRUCE, AND CEDAR—NAMELY, MILLWORK, RED CEDAR SHINGLES, DOUGLAS FIR DOORS, DOUGLAS FIR PLY-WOOD, MOULDINGS, FLOORING, SHEATHING AND WINDOW FRAMES.
Claims use since June 18, 1909.

Reg. No. 299,585. Registered Dec. 13, 1932. LONG-BELL LUMBER SALES CORPORATION, Kansas City, Mo., and Longview, Wash. Republished by The Long-Bell Lumber Company, Longview, Wash., a corporation of Missouri.

FOR LUMBER PRODUCTS—THAT IS, DRESSED AND UNDRESSED LUMBER, FLOORING, SIDING, SHIP-LAP, JOISTS, CEILING, SHELVING, AND FINISHED LUMBER.
Claims use since Nov. 15, 1931.

Reg. No. 337,072. Registered July 28, 1936. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DUPLEX

FOR FIBER BUILDING BOARD.
Claims use since October 1930.

Reg. No. 340,167. Registered Nov. 3, 1936. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR IRON COMPOUND IN THE FORM OF POWDER AND PASTE USED AS A CEMENT IN PIPE-JOINTS AND FOR STOPPING LEAKS IN STEAM, HYDRAULIC, AND OTHER FLUID AND VAPOR CONDUCTORS AND CONTAINERS, AND FOR WATERPROOFING AND OIL-PROOFING FOUNDATIONS, FLOORS, WALKS, WALLS, AND LIKE SURFACES, AND FOR MAKING HARD CONCRETE SURFACES.
Claims use since Oct. 30, 1911.

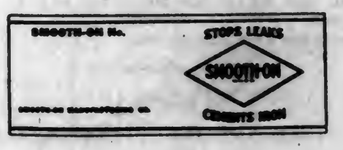
Reg. No. 349,727. Registered Aug. 31, 1937. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

No.3

FOR IRON CEMENT IN PASTE FORM FOR MAKING SCREW-THREAD JOINTS AND FLANGE JOINTS, COATING GASKETS, AND SEALING RIVETS, SEAMS, AND JOINTS IN BOILERS AND OTHER PLATE METAL CONSTRUCTION.
Claims use since 1908.

Reg. No. 349,728. Registered Aug. 31, 1937. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

No.7



FOR HYDRAULIC IRON CEMENT IN POWDER FORM USED FOR WATERPROOFING CONCRETE, BRICK, STONE, OR OTHER POROUS SURFACES.
Claims use since 1912.

Reg. No. 351,082. Registered Oct. 19, 1937. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PERF-A-TAPE

The word "Tape" is disclaimed.
FOR PAPER TAPE FOR SEALING COMPOSITION BOARD JOINTS.
Claims use since May 1936.

Reg. No. 358,734. Registered June 26, 1938. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

All wording with the exception of "Smooth-On" and applicant's name is disclaimed. The representation of the can per se is also disclaimed. The mark is colored yellow, blue, black and white.
FOR AN IRON COMPOUND IN THE FORM OF A DRY POWDER USED TO REPAIR DEFECTS AND BREAKS IN AND MAKE PATCHES ON IRON AND OTHER METALLIC SUBSTANCES, TO MAKE METALLIC JOINTS, AND TO COVER METALLIC SURFACES.
Claims use since Oct. 1, 1929.

Reg. No. 365,026. Registered Feb. 21, 1939. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR HYDRAULIC IRON CEMENT IN POWDER OR PASTE FORM, USED FOR WATERPROOFING CONCRETE, BRICK, STONE, OR OTHER POROUS SURFACES.
Claims use since 1912.

Reg. No. 377,960. Registered May 21, 1940. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR (1) SUBSTANCES CONSISTING CHIEFLY OF COMMINUTED IRON IN POWDER AND PLASTIC FORM USED AS A CEMENT IN PIPE-JOINTS AND FOR STOPPING LEAKS IN STEAM, HYDRAULIC, AND OTHER FLUID CONDUCTORS AND CONTAINERS; (2) HYDRAULIC IRON CEMENT IN POWDER OR PASTE FORM, USED FOR WATERPROOFING CONCRETE, BRICK, STONE, OR OTHER POROUS SURFACES; (3) HYDRAULIC IRON CEMENT IN POWDER OR PASTE FORM, USED TO POINT, EVEN, LEVEL, OR SURFACE CONCRETE, BRICK OR STONE WORK AND FOR METAL AND OTHER SURFACES.
Claims use since 1894.

Reg. No. 402,428. Registered July 20, 1943. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BLENDTEX

FOR INSULATION BOARD.
Claims use since January 1937.

Reg. No. 428,835. Registered Apr. 8, 1947. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

AUDITONE

FOR FIBROUS SOUND ABSORBING UNITS IN THE FORM OF TILES AND SHEETS.
Claims use since May 1943.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 82,374. Registered June 20, 1931. STANDARD CHAIN CO., York, Pa. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

ELWELTRA

FOR IRON AND STEEL CHAINS.
Claims use since Dec. 13, 1910.

Reg. No. 107,461. Registered Nov. 30, 1915. THE YOUNGSTOWN SHEET & TUBE COMPANY, Youngstown, Ohio, a corporation of Ohio. Republished by registrant.

COPPEROID

FOR STEEL PIPE, STEEL TUBING, AND STEEL PIPE-COUPLINGS.
Claims use since Feb. 15, 1915.

Reg. No. 201,617. Registered Aug. 4, 1925. THE ENAMEL PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

FOR ENAMELED METAL WARE—NAMELY, WASH-TUB COVERS, DRAIN BOARDS, DIRT TRAYS, MEAT TRAYS, TABLE TOPS AND SIGNS.
Claims use since August 1915.

Reg. No. 217,847. Registered Aug. 31, 1926. THE CHAIN PRODUCTS COMPANY, Cleveland, Ohio. Republished by The Hodell Chain Company, Cleveland, Ohio, a corporation of Ohio.

Hodell

FOR CHAINS AND CHAIN PRODUCTS AND HOOKS, RINGS, BOLTS, SWIVELS, SNAPS, TOGGLES, SCREW EYES, LINKS AND FASTENERS FOR TIRE CHAINS, ALL OF BASE METAL.
Claims use since April 1915.

Reg. No. 274,272. Registered Aug. 26, 1930. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR METAL FLUID CONDUITS AND FITTINGS THEREFOR.
Claims use since Feb. 14, 1930.

Reg. No. 309,442. Registered Jan. 16, 1934. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR PLUMBING, STEAM FITTING AND GAS FITTING VALVES, PIPE HANGERS.
Claims use since Nov. 20, 1930.

Reg. No. 314,190. Registered June 19, 1934. A. L. HANSEN MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Staples," "Tackers," "Staples," are disclaimed.
FOR MACHINE STAPLES.
Claims use since July 17, 1931.

Reg. No. 323,971. Registered May 7, 1935. CONTINENTAL SCREW COMPANY, New Bedford, Mass., a corporation of Massachusetts. Republished by registrant.

Lubricized

FOR WOOD SCREWS, SHEET METAL SCREWS, LAG SCREWS, AND HANGER BOLTS.
Claims use since September 1934.

Reg. No. 334,342. Registered Apr. 28, 1936. A. L. HANSEN MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The drawing is lined for the color blue. The representation of the strip of staples is disclaimed.
FOR MACHINE STAPLES.
Claims use since July 26, 1935.

Reg. No. 388,364. Registered June 24, 1941. BORG-WARNER CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Ingersoll" and "Screen" are disclaimed. Also the representation of a piece of screen.
FOR WIRE CLOTH MATERIALS.
Claims use since Aug. 8, 1939.

Reg. No. 418,130. Registered Dec. 4, 1945. RITE-WAY PRODUCTS COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

SANI-MATIC

FOR STALL COCKS.
Claims use since May 21, 1945.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 78,347. Registered June 7, 1930. PAGE WOVEN WIRE FENCE CO., Monessen, Pa. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

IXL

FOR SPRING WIRE.
Claims use since October 1905.

Reg. No. 84,262. Registered Nov. 21, 1911. SMOOTH-ON MANUFACTURING COMPANY, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

SMOOTH-ON

FOR IRON COMPOUND IN PLASTIC FORM.
Claims use since 1894.

Reg. No. 162,560. Registered Dec. 19, 1922. MUELLER METALS COMPANY, Port Huron, Mich. Republished by Mueller Brass Co., Port Huron, Mich., a corporation of Michigan.

NIAG

FOR METAL FORGINGS, PARTICULARLY NONFERROUS METAL ROD.
Claims use since Jan. 13, 1922.

Reg. No. 243,380. Registered June 19, 1928. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

M.B.

FOR FORGINGS, AND CASTINGS OF NONFERROUS METAL.
Claims use since on or about July 12, 1927.

Reg. No. 283,119. Registered May 19, 1931. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR RODS, SAND CASTINGS AND FORGINGS, WHICH ARE NONFERROUS METAL IN THE ROUGH AND SEMI-FINISHED.
Claims use since on or about Aug. 26, 1930.

Reg. No. 287,255. Registered Sept. 15, 1931. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR SOLDER.
Claims use since Dec. 18, 1930.

Reg. No. 302,848. Registered May 2, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representation of the label is disclaimed.
FOR SOLDER.
Claims use since Nov. 15, 1932.

Reg. No. 303,268. Registered May 16, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR SOLDER.
Claims use since Jan. 20, 1933.

Reg. No. 303,279. Registered May 16, 1933. KESTER SOLDER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR SOLDER.
Claims use since Nov. 15, 1932.

Reg. No. 317,766. Registered Oct. 2, 1934. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

The words "Bearing Metal" are disclaimed.
FOR ALLOY METAL MIXTURE OF HIGH WEARING QUALITIES FOR USE ON CONNECTING RODS, BUSHINGS, GEARS AND OTHER MECHANICAL PARTS.
Claims use since May 28, 1928.

Reg. No. 320,339. Registered Dec. 25, 1934. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the color red.
FOR METAL (COMMERCIAL) ROD NOT FABRICATED INTO FINISHED ARTICLES.
Claims use since May 31, 1919.

Reg. No. 320,340. Registered Dec. 25, 1934. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the color blue.
FOR METAL (COMMERCIAL) ROD NOT FABRICATED INTO FINISHED ARTICLES.
Claims use since Oct. 20, 1920.

Reg. No. 381,589. Registered Oct. 1, 1940. THE MAYTAG COMPANY, Newton, Iowa, a corporation of Delaware. Republished by registrant.

DURACITE

FOR METAL ALLOYS OF NONFERROUS METALS USED IN CASTINGS OR THE LIKE.
Claims use since Dec. 4, 1939.

Reg. No. 383,484. Registered Dec. 10, 1940. BELLE CITY MALLEABLE IRON COMPANY, Racine, Wis., a corporation of Wisconsin. Republished by registrant.

Belectromal

FOR IRON AND IRON ALLOYS AND CASTINGS MADE THEREFROM.
Claims use since on or about June 1, 1940.

Reg. No. 411,057. Registered Jan. 2, 1945. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

MBCo

FOR SAND CASTINGS AND FORGINGS OF NON-FERROUS METAL.
Claims use since Oct. 15, 1930.

CLASS 15

OILS AND GREASES

Reg. No. 332,442. Registered Feb. 11, 1936. LEO CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PALLADIZED

FOR MOTOR FUEL OILS, GASOLINE, BURNING OILS, AND LUBRICATING OILS AND GREASES.
Claims use since Sept. 24, 1935.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 254,627. Registered Mar. 26, 1929. HOCKADAY INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Under-Any-Kote" are disclaimed.
FOR READY-MIXED PAINT.
Claims use since Nov. 15, 1927.

Reg. No. 270,833. Registered May 13, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR WALL COATING IN THE NATURE OF PAINT.
Claims use since 1900.

Reg. No. 272,804. Registered July 15, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR PAINT COLORS AND PLASTIC PAINT.
Claims use since Mar. 5, 1924.

Reg. No. 276,997. Registered Nov. 4, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

USG

FOR LIMEPROOF COLORS AND WALL COATINGS IN THE NATURE OF PAINT.
Claims use since 1902.

Reg. No. 337,315. Registered Aug. 4, 1936. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SOL KLEAN

The word "Klean" is disclaimed.
FOR PREPARATION TO BE USED AS A PAINT, VARNISH AND ENAMEL REMOVER.
Claims use since 1930.

Reg. No. 337,316. Registered Aug. 4, 1936. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The word "Klean" is disclaimed.
FOR PREPARATION TO BE USED AS A PAINT, VARNISH AND ENAMEL REMOVER.
Claims use since 1930.

Reg. No. 384,798. Registered Feb. 4, 1941. FRANK W. PANNEPINTO, Philadelphia, Pa. Republished by registrant.

FOR ARTISTS' WATER COLOR PAINTS AND FIXATIF (IN THE NATURE OF A VARNISH).
Claims use since October 1936.

Reg. No. 392,345. Registered Dec. 23, 1941. INDUSTRIAL CHEMICAL PRODUCTS CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SEPCOTE

FOR PASTE-LIKE MIXTURE OR COATING TO BE APPLIED TO THE EXPOSED SURFACES OF PAINT SPRAY ROOMS TO PREVENT THE EXCESS SPRAY OF PAINT FROM ADHERING DIRECTLY TO SAID SURFACES.
Claims use since January 1940.

Reg. No. 409,656. Registered Oct. 17, 1944. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DURABOND

FOR PASTE PAINT.
Claims use since May 2, 1940.

Reg. No. 414,732. Registered June 26, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

FOR RESINS, INCLUDING SYNTHETIC RESINS AND PROCESSED NATURAL RESINS; RESIN SOLUTIONS, INCLUDING PLASTIC RESIN SOLUTIONS; AND OILS, INCLUDING PROCESSED OILS AND SYNTHETIC OILS, ALL FOR THE USE IN PAINT, LACQUERS, VARNISHES, ENAMELS, AND THE LIKE.
Claims use since May 1944.

Reg. No. 425,315. Registered Nov. 12, 1946. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PAC-TEX

FOR PLASTIC WALL COVERINGS IN THE NATURE OF PAINT.
Claims use since Oct. 3, 1945.

CLASS 19

VEHICLES

Reg. No. 288,067. Registered Oct. 20, 1931. AMERICAN CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

TRU-LAY

FOR DEVICES OF FLEXIBLE RECIPROCATING SHAFT TYPE FOR TRANSMITTING POWER FOR OPERATING BRAKES.
Claims use since Apr. 27, 1931.

Reg. No. 293,680. Registered May 3, 1932. A. L. HANSEN MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR HARDWARE FOR VEHICLE BODIES, DOOR HANDLES, AND WINDOW REGULATORS.
Claims use since Jan. 27, 1926.

Reg. No. 386,124. Registered Mar. 25, 1941. HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

BUDDY SEAT

The word "Seat" is disclaimed.
FOR TWO-PASSENGER MOTORCYCLE SEATS.
Claims use since Aug. 7, 1934.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 106,170. Registered Oct. 12, 1915. THE MICHIGAN STOVE COMPANY, Detroit, Mich. Republished by Detroit-Michigan Stove Company, Detroit, Mich., a corporation of Michigan.

GARLAND

FOR ELECTRIC STOVES, RANGES, HEATERS, IRONS, HOT-PLATES, TOASTERS, AND BROILERS.
Claims use since 1912.

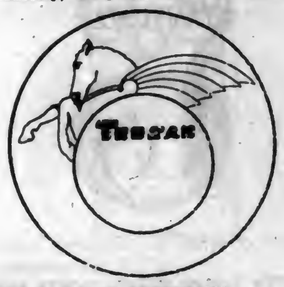
Reg. No. 254,782. Registered Apr. 2, 1929. W. WESLEY HICKS, doing business as Wesix Heater Factory, San Francisco, Calif. Republished by Wesix Electric Heater Co., San Francisco, Calif., a corporation of California.

H-K

FOR ELECTRIC WATER HEATERS COMPRISING CIRCULATION, IMMERSION, AND SPECIAL TYPES; ELECTRIC AIR HEATERS COMPRISING RADIANT, RADIANT CONVECTION, FLOOR, AND WALL TYPE HEATERS; ELECTRIC HEATING UNITS FOR GRILLS, ELECTRIC HOT PLATES, ELECTRIC STEAM BOILERS.
Claims use since Oct. 20, 1927.

Reg. No. 254,783. Registered Apr. 2, 1929. W. WESLEY HICKS, doing business as Wesix Heater Factory, San Francisco, Calif. Republished by Wesix Electric Heater Co., San Francisco, Calif., a corporation of California.

CALECTRIX



FOR ELECTRIC WATER HEATERS COMPRISING CIRCULATION, IMMERSION, AND SPECIAL TYPES; ELECTRIC AIR HEATERS COMPRISING RADIANT, RADIANT CONVECTION, FLOOR, AND WALL TYPE HEATERS; ELECTRIC HEATING UNITS FOR GRILLS, ELECTRIC HOT PLATES, ELECTRIC STEAM BOILERS.
Claims use since Oct. 20, 1927.

Reg. No. 273,684. Registered Aug. 5, 1930. WILLIAM WESLEY HICKS, San Francisco, Calif., assignor to Wesix National Company, a corporation of Delaware. Republished by Wesix Electric Heater Co., San Francisco, Calif., a corporation of California.

CENTAWATT

FOR ELECTRIC HEATERS—NAMELY, INDIVIDUAL ROOM HEATERS.
Claims use since May 1, 1928.

Reg. No. 281,689. Registered Mar. 24, 1931. O'NEIL TIRE AND BATTERY COMPANY, New Britain, Conn., assignor to Trojan Battery Company, Los Angeles, Calif., a firm composed of George R. Godber and Carl A. Speer. Republished by George R. Godber, doing business as Trojan Battery, Company, Los Angeles, Calif.

FOR WET STORAGE BATTERIES.
Claims use since July 1929.

Reg. No. 284,175. Registered June 16, 1931. TROJAN BATTERY COMPANY, Los Angeles, Calif., also doing business as "Trojan." Republished by George R. Godber, doing business as Trojan Battery Company, Los Angeles, Calif.

TROJAN

FOR WET STORAGE BATTERIES AND STRUCTURAL PARTS THEREOF.
Claims use since on or about Jan. 1, 1925.

Reg. No. 288,101. Registered Oct. 20, 1931. PAGE STEEL AND WIRE COMPANY, Adrian, Mich., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York

PAGE

FOR STEEL AND IRON MAGNET CORE WIRE.
Claims use since July 1, 1883.

Reg. No. 356,607. Republished May 3, 1938. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

MERCOLUX

FOR ELECTRIC LIGHTING FIXTURES FOR HOUSEHOLD AND COMMERCIAL INSTALLATIONS.
Claims use since about Nov. 16, 1935.

Reg. No. 384,852. Registered Feb. 4, 1941. BRADLEY LABORATORIES, INC., New Haven, Conn., a corporation of of Connecticut. Republished by registrant.

Luxtron

FOR BARRIER LAYER TYPE PHOTO-ELECTRIC CELLS.
Claims use since Sept. 1, 1940.

Reg. No. 400,508. Registered Oct. 10, 1944. EDGAR M. BUTLER, New Orleans, La. Republished by registrant.

ELECTRONOLYTIC

FOR SELF-ENERGIZING AND/OR POWER INDUCED ENERGIZING ELECTROLYTIC WATER CORRECTION DEVICES USED PRIMARILY FOR THE PREVENTION OF RUST AND SCALE.
Claims use since Feb. 15, 1944.

Reg. No. 415,180. Registered July 31, 1945. EDGAR M. BUTLER, New Orleans, La. Republished by registrant.

The words "Butler Engineering Co." and the representation of the goods are disclaimed.
FOR ELECTRONIC APPARATUS FOR PREVENTING PRECIPITATION OF MINERAL PARTICLES IN WATER BOILERS AND FOR DE-SCALING THE SAME.
Claims use since Mar. 21, 1943.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 82,637. Registered July 11, 1911. PARKER BROTHERS, INC., Salem, Mass., a corporation of Maine. Republished by registrant.

FOR GAMES PLAYED WITH CARDS.
Claims use since Apr. 1, 1907.

Reg. No. 99,354. Registered Aug. 25, 1914. PARKER BROTHERS, INC., Portland, Maine, and Salem, Mass., a corporation of Maine. Republished by registrant, present location Salem, Mass.

FOR GAME PLAYED WITH CARDS.
Claims use since Sept. 1, 1913.

Reg. No. 109,479. Registered Apr. 11, 1916. PARKER BROTHERS, INC., Portland, Maine, and Salem, Mass., a corporation of Maine. Republished by registrant, present location Salem, Mass.

POLLYANNA

FOR BOARD GAME PLAYED WITH MOVABLE PIECES.
Claims use since Apr. 22, 1915.

Reg. No. 117,537. Registered July 17, 1917. WM. FILENE'S SONS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

SCOTTIE

FOR GOLF BALLS, GOLF CLUBS, GOLF BAGS.
Claims use since Mar. 6, 1917.

Reg. No. 135,363. Registered Sept. 28, 1920. WOLVERINE SUPPLY & MANUFACTURING COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

"Sandy Andy"

FOR AUTOMATIC SAND-OPERATED MECHANICAL TOYS AND TOY DISHES.
Claims use since Nov. 6, 1909.

Reg. No. 160,752. Registered Oct. 24, 1922. WOLVERINE SUPPLY & MANUFACTURING COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

"BIZZY ANDY"

FOR SAND AND MARBLE OPERATED MECHANICAL TOYS.
Claims use since Feb. 17, 1917.

Reg. No. 160,753. Registered Oct. 24, 1922. WOLVERINE SUPPLY & MANUFACTURING COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

BOWLER ANDY

FOR SAND AND MARBLE OPERATED MECHANICAL TOYS.
Claims use since June 28, 1917.

Reg. No. 164,526. Registered Feb. 20, 1923. THE DUNLOP RUBBER COMPANY LIMITED, London, England. Republished by Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York.

MAXFLI

FOR GOLF BALLS.
Claims use since May 1922.

Reg. No. 240,424. Registered Mar. 27, 1928. ABERCROMBIE & FITCH COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

Sportsmark A&F of the Nation

FOR PLAYING CARDS, CHESS, CHECKERS AND ALL OTHER GOODS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since July 1, 1927.

Reg. No. 285,595. Registered July 28, 1931. WOLVERINE SUPPLY & MANUFACTURING COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

The Little Gardener

FOR TOY SETS COMPRISING GARDENING TOOLS, GARDENING IMPLEMENTS, FLOWERPOTS, AND SEEDS.
Claims use since Feb. 20, 1931.

Reg. No. 291,671. Registered Feb. 23, 1932. THE CREEK CHUB BAIT COMPANY, Garrett, Ind., a corporation of Indiana. Republished by registrant.

DARTER

FOR ARTIFICIAL BAIT.
Claims use since July 1926.

Reg. No. 291,675. Registered Feb. 23, 1932. THE CREEK CHUB BAIT CO., Garrett, Ind., a corporation of Indiana. Republished by registrant.

"TWO THOUSAND"

FOR ARTIFICIAL BAITS.
Claims use since July 1928.

Reg. No. 322,964. Registered Mar. 26, 1935. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Wilmington, Del., and Chicago, Ill., a corporation of Delaware. Republished by registrant, present location, Chicago, Ill.

The mark consists of a crown device in red, painted or otherwise impressed around the neck of the pin. The representation of the goods is disclaimed.
FOR BOWLING PINS.
Claims use since June 1, 1933.

Reg. No. 325,659. Registered July 2, 1935. THE CREEK CHUB BAIT CO., Garrett, Ind., a corporation of Indiana. Republished by registrant.

"PLUNKER"

FOR ARTIFICIAL FISHING LURE.
Claims use since 1924.

Reg. No. 326,723. Registered July 30, 1935. PARKER BROTHERS, INC., Portland, Me., and Salem, Mass., a corporation of Maine. Republished by registrant, present location Salem, Mass.

MONOPOLY

FOR BOARD GAME PLAYED WITH MOVABLE PIECES.
Claims use since Mar. 20, 1935.

Reg. No. 334,315. Registered Apr. 28, 1936. KELLEY-HOW-THOMSON CO., Duluth, Minn., a corporation of Maine. Republished by registrant.

SPORTLAND

FOR BASEBALLS, SOFT BALLS AND PLAYGROUND BALLS, FIELDERS' GLOVES, BASEMAN'S MITS, CATCHER'S MITS, TENNIS BALLS, TENNIS RACKETS, GOLF BALLS, GOLF TEE HOLDERS, FOOT BALLS, BASKET BALLS, COASTER WAGONS, HOCKEY STICKS, STEERING SLEDS, BAMBOO FLY RODS, FISH LINES, TROUT FLIES, GOLF CLUBS, BOXING GLOVES, PUNCHING BAGS, ROLLER SKATES, ICE SKATES, SKIS, CHILDREN'S BICYCLES, STEEL CASTING RODS, FISH REELS, RUBBER BALLS, BASE BALL BATS, SOFT BALL BATS, CATCHER'S MASKS, TENNIS RACKET PRESSES, TENNIS NETS, VOLLEY BALLS, VOLLEY BALL NETS, TENNIS MARKING TAPES, GOLF BAGS, CROQUET SETS, SCOOTERS, SKI BINDINGS, SNOW SHOES, LIFE PRESERVER VESTS, FISHING TACKLE BOXES, CLAY TARGETS.
Claims use since Feb. 1, 1931.

Reg. No. 346,982. Registered June 15, 1937. ABERCROMBIE & FITCH COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

A&F

FOR GOLF BAGS, FISHING-ROD CASES, TENNIS RACKET CASES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since January 1900.

Reg. No. 430,116. Registered June 10, 1947. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

DUNLOP Pillo-Foam

The words "Foam" and "Pillo" are disclaimed.
FOR GYMNASIUM PADS.
Claims use since Sept. 27, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 37,119. Registered Sept. 24, 1901. ADDRESSOGRAPH CO., Chicago, Ill. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

GRAPHOTYPE.

FOR MACHINES FOR MAKING PRINTING PLATES NOT INCLUDING STEREOTYPE MAKING MACHINES.
Claims use since Mar. 1, 1897.

Reg. No. 49,710. Registered Feb. 13, 1906. G. W. GRIFFIN & CO., Franklin Falls, N. H. Republished by G. W. Griffin Co., Franklin, N. H., a corporation of New Hampshire.

GRIFFIN

FOR HACK SAWS AND HACK SAW BLADES.
Claims use since about April 1887.

Reg. No. 60,109. Registered Jan. 29, 1907. F. E. MYERS & BROTHER, Ashland, Ohio. Republished by The F. E. Myers & Bro. Company, Ashland, Ohio, a corporation of Ohio.

GLASS VALVE

FOR WATER PUMPS.
Claims use since 1887.

Reg. No. 76,145. Registered Dec. 21, 1909. FELLOWS & HOPKINS, Middletown, N. Y. Republished by Ideal Wrapping Machine Company, Middletown, N. Y., a corporation of New York.

IDEAL

FOR WRAPPING MACHINES.
Claims use since Mar. 24, 1909.

Reg. No. 85,923. Registered Mar. 26, 1912. THE L. S. STARRETT CO., Athol, Mass. Republished by The L. S. Starrett Company (1929), Athol, Mass., a corporation of Massachusetts.

STARRETT

FOR BALL POINTS, BRAD SETS, TOOL MAKERS' BUTTONS, CENTER PUNCHES, CLAMPS, COUNTERSINKS, CUT-NIPPERS, DRILL BLOCKS, HACK SAWS AND FRAMES, NAIL SETS, PIN VISES, ATTACHMENTS FOR WRENCH JAWS FOR HOLDING PIPES, PLUMB BOMBS, PLIERS, SAWS, SCRAPERS, SCREW DRIVERS, SCRIBERS, STRAIGHT EDGES, TAP WRENCHES, TRAMMELS, VISES AND WRENCHES.
Claims use since about 1867.

Reg. No. 104,244. Registered May 11, 1915. THE ACME SHEAR COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

Americut

FOR SCISSORS AND SHEARS.
Claims use since Dec. 8, 1914.

Reg. No. 104,534. Registered June 1, 1915. THE FAFNIR BEARING COMPANY, New Britain, Conn., a corporation of Connecticut. Republished by registrant.

FOR ANTIFRICTION-BEARINGS, ANTIFRICTION-BEARING HANGER-BOXES, ANTIFRICTION BALLS, ROLLERS, CAGES, SEPARATORS, AND RETAINERS FOR ANTIFRICTION DEVICES.
Claims use since April 1911.

Reg. No. 122,136. Registered July 2, 1918. THE FAFNIR BEARING COMPANY, New Britain, Conn., a corporation of Connecticut. Republished by registrant.

FAFNIR

FOR ANTIFRICTION-BEARINGS, ANTIFRICTION-BEARING HANGER BOXES, ANTIFRICTION-BALLS, ROLLERS, CAGES, SEPARATORS AND RETAINERS FOR ANTIFRICTION DEVICES.
Claims use since April 1911.

Reg. No. 156,990. Registered July 25, 1922. THE ARMSTRONG MANUFACTURING CO., Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

ARMSTRONG

FOR PIPE VISES AND STOCKS AND DIES FOR PIPE THREADING.
Claims use since JAN. 1, 1875.

Reg. No. 174,723. Registered Oct. 23, 1923. THE ATLAS SHEAR CO., Bridgeport, Conn. Republished by The Acme Shear Company, Bridgeport, Conn., a corporation of Connecticut.

RED CROSS

The drawing is lined for red.
FOR SCISSORS AND SHEARS.
Claims use since Jan. 1, 1900.

Reg. No. 181,429. Registered Mar. 18, 1924. THE L. S. STARRETT COMPANY, Athol, Mass. Republished by The L. S. Starrett Company (1929), Athol, Mass., a corporation of Massachusetts.

FOR BRAD SETS, CENTER PUNCHES, CLAMPS, COUNTERSINKS, CUT NIPPERS, DRILL BLOCKS, HACK SAWS AND FRAMES, NAIL SETS, PIN VISES, ATTACHMENTS FOR WRENCH JAWS FOR HOLDING PIPES, PLIERS, SAWS, SCRAPERS, SCREW DRIVERS, SCRIBERS, TAP WRENCHES, VISES, AND WRENCHES.
Claims use since about the middle of April 1897.

Reg. No. 182,385. Registered Apr. 8, 1924. THE CLEVELAND WORM & GEAR COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Cleveland
CW&GC
WORM GEAR
REDUCTION UNITS

The words "Cleveland" and "Worm Gear Reduction Units" are disclaimed.
FOR WORM GEARING.
Claims use since Jan. 1, 1923.

Reg. No. 238,880. Registered Feb. 14, 1928. PENNSYLVANIA LAWN MOWER WORKS, Philadelphia, Pa. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

WILLIAM PENN

FOR LAWN MOWERS.
Claims use since April 1925.

Reg. No. 239,231. Registered Feb. 28, 1928. GRUENDLER PATENT CRUSHER AND PULVERISER COMPANY, St. Louis, Mo. Republished by Gruendler Crusher and Pulverizer Co., St. Louis, Mo., a corporation of Missouri.

The words "Swing Hammer Crushers," "Trade Mark," and "St. Louis, Mo., U. S. A." are disclaimed.
FOR CRUSHERS, SHREDDERS, BREAKERS, PULVERIZERS, AND GRINDERS.
Claims use since some time in May 1927.

Reg. No. 239,233. Registered Feb. 28, 1928. GRUENDLER PATENT CRUSHER AND PULVERISER COMPANY, St. Louis, Mo. Republished by Gruendler Crusher and Pulverizer Co., St. Louis, Mo., a corporation of Missouri, by change of name.

All the words except "Gruendler" and "Hercules" are disclaimed.
FOR CRUSHERS, SHREDDERS, BREAKERS, PULVERIZERS, AND GRINDERS.
Claims use since some time in February 1922.

Reg. No. 256,649. Registered May 21, 1929. LUBRICATION DEVICES INCORPORATED, Battle Creek, Mich. Republished by The Farval Corporation, Cleveland, Ohio, a corporation of Ohio.

FARVAL

FOR CENTRALIZED LUBRICATING SYSTEMS FOR USE ON INDUSTRIAL MACHINERY AND FOR AUTOMOBILE CHASSIS AND THEIR PARTS.
Claims use since Aug. 7, 1928.

Reg. No. 266,913. Registered Feb. 11, 1930. VICTOR RING TRAVELER COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

VICTOR

FOR RING TRAVELERS.
Claims use since April 1899.

Reg. No. 266,914. Registered Feb. 11, 1930. VICTOR RING TRAVELER COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

VICTOR

FOR RING TRAVELERS.
Claims use since April 1899.

Reg. No. 289,612. Registered Dec. 1, 1931. MUELLER BRASS CO., Port Huron, Mich., a corporation of Michigan. Republished by registrant.

STREAMLINE

FOR TOOLS FOR SIZING AND FLARING PIPING AND FITTINGS TO FACILITATE JOINTURE.
Claims use since Nov. 26, 1930.

Reg. No. 292,494. Registered Mar. 15, 1932. PAGE STEEL AND WIRE COMPANY, Adrian, Mich., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

PAGE

FOR FENCE ERECTING TOOLS—NAMELY, FENCE STRETCHERS.
Claims use since July 1, 1883.

Reg. No. 306,791. Registered Sept. 26, 1933. MULTIGRAPH COMPANY, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Multilith

FOR PRINTING MACHINES.
Claims use since May 23, 1933.

Reg. No. 314,315. Registered June 26, 1934. A. L. HANSEN MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Kling-Tite

The words "Kling-Tite," "Staples," Tackers," and "Staplers" are disclaimed.
FOR STAPLING MACHINES.
Claims use since July 17, 1931.

Reg. No. 318,711. Registered Oct. 30, 1934. THE OHLEN-BISHOP COMPANY, Columbus, Ohio. Republished by The Ohlen-Bishop Manufacturing Company, Columbus, Ohio, a corporation of Ohio.

HOME MECHANIC

FOR HAND SAWS AND CIRCULAR SAWS.
Claims use since Aug. 29, 1925.

Reg. No. 320,822. Registered Jan. 8, 1935. VICTOR RING TRAVELER COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

Victor Ⓓ Brand

The word "Brand" is disclaimed.
FOR RING TRAVELERS.
Claims use since Aug. 1, 1934.

Reg. No. 327,944. Registered Sept. 10, 1935. BORG-WARNER CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TEM-CROSS

FOR FRICTION CLUTCH DISCS, SAWS, SHOVELS, AXES, AND PLOW DISCS.
Claims use since Mar. 2, 1935.

Reg. No. 328,118. Registered Sept. 17, 1935. THE ACME SHEAR COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

"GARDEN PRIDE"

FOR SCISSORS AND SHEARS.
Claims use since May 1, 1935.

Reg. No. 329,767. Registered Nov. 12, 1935. THE OHLEN-BISHOP COMPANY, Columbus, Ohio. Republished by Ohlen-Bishop Manufacturing Company, Columbus, Ohio, a corporation of Ohio.

AMERICAN EAGLE
MADE IN U.S.A.
THE OHLEN-BISHOP CO.
COLUMBUS, OHIO

The words "Made in U. S. A." and "Columbus, Ohio" are disclaimed.
FOR SAWS.
Claims use since Jan. 29, 1895.

Reg. No. 332,016. Registered Jan. 28, 1936. THE OHLEN-BISHOP COMPANY, Columbus, Ohio. Republished by Ohlen-Bishop Manufacturing Company, Columbus, Ohio, a corporation of Ohio.

MASTER SAW
THE OHLEN-BISHOP CO.
COLUMBUS, OHIO, MADE IN U.S.A.

The words "Saw" and "Columbus, Ohio, Made in U. S. A." are disclaimed.
FOR SAWS.
Claims use since Mar. 6, 1933.

Reg. No. 334,754. Registered May 12, 1936. A. L. HANSEN MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

HANSCO

FOR STAPLE DRIVING MACHINES.
Claims use since Nov. 6, 1935.

Reg. No. 343,392. Registered Feb. 16, 1937. THE OHLEN-BISHOP COMPANY, Columbus, Ohio. Republished by Ohlen-Bishop Manufacturing Company, Columbus, Ohio, a corporation of Ohio.

OHLEN-BISHOP
STREAMLINED
ZEPHYR

The word "Streamlined" is disclaimed.
FOR SAWS.
Claims use since Sept. 21, 1936.

Reg. No. 349,865. Registered Sept. 7, 1937. K. I. WILLIS CORPORATION, Moline, Ill., a corporation of Illinois. Republished by registrant.

FOR ELEVATOR CUPS.
Claims use since Dec. 1, 1923.

Reg. No. 351,365. Registered Oct. 26, 1937. K. I. WILLIS CORPORATION, Moline, Ill., a corporation of Illinois. Republished by registrant.

FOR ELEVATOR CUPS.
Claims use since May 18, 1937.

Reg. No. 358,265. Registered July 5, 1938. LA PLANT-CHOATE MANUFACTURING CO., INC., Cedar Rapids, Iowa, a corporation of Delaware. Republished by registrant.

CARRIMOR

FOR SCRAPER-CARRIERS AND SCRAPERS.
Claims use since June 7, 1937.

Reg. No. 361,439. Registered Oct. 18, 1938. NATIONAL TWIST DRILL & TOOL CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

NATIONAL

FOR TWIST DRILLS, TWIST DRILL BITS, REAMERS, MILLING CUTTERS, COUNTERBORES, AND HOBS.
Claims use since Nov. 3, 1903.

Reg. No. 366,018. Registered Mar. 28, 1939. STOP MOTION DEVICES CORPORATION, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

WESCO

FOR KNITTING MACHINES AND STOP MOTION MECHANISMS THEREFOR.
Claims use since Oct. 1, 1937.

Reg. No. 400,374. Registered Mar. 2, 1943. THE HENRY G. THOMPSON & SON COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant.

REZISTOR

FOR TOOL BITS.
Claims use since about January 1938.

Reg. No. 403,874. Registered Oct. 19, 1943. THE FARVAL CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

MULTIVAL

FOR LUBRICATING SYSTEMS AND PARTS THEREOF.
Claims use since Apr. 17, 1943.

Reg. No. 407,580. Registered June 13, 1944. NATIONAL TWIST DRILL & TOOL CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

SUPER-TEM

FOR TWIST DRILLS, REAMERS, END MILLS, MILLING CUTTERS, HOBS AND COUNTERBORES.
Claims use since about July 1937.

Reg. No. 407,600. Registered June 13, 1944. VICTOR RING TRAVELER COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

CIRCLE "D"

FOR RING TRAVELERS.
Claims use since 1931.

Reg. No. 407,687. Registered June 20, 1944. THE OHIO KNIFE CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

O.K.O

FOR POWER CUTTING KNIVES INSTALLED ON WOODWORKING, PAPER CUTTING, VENEER CUTTING AND SHEET METAL SHEARING MACHINES.
Claims use since June 9, 1915.

Reg. No. 407,688. Registered June 20, 1944. THE OHIO KNIFE CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

O-KNI-CO

FOR MACHINE CUTTING TOOLS, USED ON SHAPERS, PLANERS, LATHES AND OTHER METAL CUTTING MACHINES.
Claims use since May 25, 1943.

Reg. No. 408,001. Registered July 11, 1944. RITE-WAY PRODUCTS CO., Chicago, Ill. Republished by Rite-Way Products Company (1945), Chicago, Ill., a corporation of Delaware.

RITE WAY

FOR MILKER OUTFITS CONSISTING OF MILKING UNITS, VACUUM PUMP WITH TANK AND STERILIZING RACK.
Claims use since on or about January 1926.

Reg. No. 412,291. Registered Feb. 27, 1945. THE CLEVELAND WORM & GEAR COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SPEEDAIRE

FOR WORM GEAR REDUCTION UNITS.
Claims use since Sept. 1, 1944.

Reg. No. 415,492. Registered Aug. 7, 1945. GREAT STATES CORPORATION, Shelbyville, Ind., a corporation of Indiana. Republished by registrant.

GREAT STATES

FOR LAWN MOWERS.
Claims use since Nov. 1, 1925.

Reg. No. 416,000. Registered Aug. 21, 1945. BLACKWELDER IRON WORKS, Rio Vista, Calif., a co-partnership. Republished by registrant.

MARBEET

FOR BEET HARVESTERS.
Claims use since on or about Feb. 1, 1945.

Reg. No. 420,105. Registered Mar. 26, 1946. BALCRANK, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

LUBETTE

FOR LUBRICATION EQUIPMENT—NAMELY, PUMPS AND DISPENSERS FOR HIGH PRESSURE CHASSIS LUBRICATION OF MOTOR VEHICLES AND OF GEAR OILS FOR TRANSMISSIONS AND OF MOTOR OILS FOR CRANKCASES.
Claims use since Feb. 1, 1944.

Reg. No. 422,693. Registered Aug. 6, 1946. R. R. HOWELL COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

JUMBO

FOR OVERHEAD ELECTRIC TRAVELING-TRUCK HOISTS.
Claims use since July 1945.

Reg. No. 426,786. Registered Jan. 14, 1947. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J., a corporation of New York. Republished by registrant, present location Belleville, N. J.

K

FOR PORTABLE HAND FIRE EXTINGUISHERS; WHEELED PORTABLE HAND OPERATED FIRE EX-

TINGUISHING UNITS; FIRE EXTINGUISHING APPARATUS—NAMELY, INSTALLATIONS OF ONE OR MORE CONTAINERS FOR FIRE EXTINGUISHING MEDIUM, ONE OR MORE CONDUITS FOR CONVEYING THE MEDIUM FROM THE CONTAINER OR CONTAINERS TO THE PLACE OR PLACES TO BE PROTECTED, THE TERMINAL OF THE CONDUIT IN EACH OF SAID PLACES HAVING A DISCHARGE OUTLET FOR THE DISCHARGE OF THE MEDIUM INTO THE PROTECTED PLACE UPON OPENING OF A VALVE OR VALVES ASSOCIATED WITH THE CONTAINER OR CONTAINERS, AND PUMPS FOR RECHARGING CONTAINERS WITH FIRE EXTINGUISHING MEDIUM SUCH AS CARBON DIOXIDE.
Claims use since on or about Dec. 1, 1940.

Reg. No. 428,899. Registered Apr. 8, 1947. THE ACME SHEAR COMPANY, Bridgeport, Conn., a corporation of Connecticut. Republished by registrant.

WHEEL BRAND

The word "Brand" is disclaimed.
FOR SCISSORS AND SHEARS.
Claims use since Jan. 15, 1913.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 341,756. Registered Dec. 22, 1936. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Alnor

FOR PYROMETERS, THERMO-COUPLES, THERMOMETERS, RESISTANCE TEMPERATURE MEASURING UNITS, VELOCITY METERS, OHM METERS, AND PARTS FOR EACH THEREOF; AND ELECTRIC METERS, SWITCHES AND CONNECTORS FOR USE WITH TEMPERATURE, RESISTANCE AND VELOCITY MEASURING DEVICES.
Claims use since on or about Mar. 1, 1921.

Reg. No. 346,718. Registered June 8, 1937. THE A. LIETZ CO., San Francisco, Calif., a corporation of California. Republished by registrant.

FOR ENGINEERING AND DRAFTING INSTRUMENTS, AND MORE PARTICULARLY FOR SURVEYORS' COMPASSES, POCKET COMPASSES, HAND LEVELS, PLUMB BOBS, FIELD BOOKS, DRAFTING MACHINES, CELLULOID TRIANGLES AND CURVES, T-SQUARES, STRAIGHT EDGES, LETTERING GUIDES, PROTRACTORS, ENGINEERS' AND ARCHITECTS' SCALES.
Claims use since Apr. 15, 1936.

Reg. No. 418,880. Registered Jan. 15, 1946. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THERMOLANCE

FOR ELECTRICAL TEMPERATURE MEASURING INSTRUMENTS AND PARTS THEREOF.
Claims use since about May 1929.

Reg. No. 419,722. Registered Mar. 5, 1946. ILLINOIS TESTING LABORATORIES, Inc., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THERMOPOINT

FOR ELECTRICAL TEMPERATURE MEASURING INSTRUMENTS AND PARTS THEREOF.
Claims use since on or about Feb. 2, 1934.

Reg. No. 419,828. Registered Mar. 5, 1946. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THERMOCON

FOR ELECTRICAL TEMPERATURE MEASURING INSTRUMENTS AND PARTS THEREOF.
Claims use since on or about July 20, 1945.

Reg. No. 419,829. Registered Mar. 5, 1946. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THERMOTAC

FOR ELECTRICAL TEMPERATURE MEASURING INSTRUMENTS AND PARTS THEREOF.
Claims use since on or about July 20, 1945.

Reg. No. 422,201. Registered July 9, 1946. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

PYROTAC

FOR ELECTRICAL TEMPERATURE MEASURING INSTRUMENTS AND PARTS THEREOF.
Claims use since on or about July 20, 1945.

Reg. No. 424,451. Registered Oct. 8, 1946. BALCRANK, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

OILETTE

FOR LUBRICATION EQUIPMENT—NAMELY, PUMPS AND DISPENSERS FOR INJECTING MOTOR OIL INTO THE CRANKCASES OF MOTOR VEHICLES.
Claims use since Nov. 1, 1944.

Reg. No. 426,896. Registered Jan. 21, 1947. ILLINOIS TESTING LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

PYROCON

FOR MILLIVOLTMETER TYPE OF PYROMETER FOR MEASURING SURFACE TEMPERATURES AND PARTS THEREOF.
Claims use since on or about March 1934.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 59,485. Registered Jan. 8, 1907. LARTER & SONS, Newark, N. J. Republished by Larter & Sons, Newark, N. J., a corporation of New Jersey.

FOR RINGS, BUTTONS, STUDS, TIE-CLASPS, LOCKETS, SEALS, AND SIMILAR ARTICLES OF PERSONAL ADORNMENT MADE IN WHOLE OR IN PART OF PRECIOUS METAL OR SUBSTITUTES THEREFOR.
Claims use since February 1895.

Reg. No. 118,965. Registered Oct. 16, 1917. J. M. FISHER COMPANY, Attleboro, Mass., a corporation of Rhode Island. Republished by registrant.

FOR METAL CHAINS FOR PERSONAL WEAR, SWIVELS, FOBS, CLASPS, PENDANTS; PRECIOUS-METAL PLATED SHELLS FOR POCKET-KNIVES; BRACELETS, CUFF-LINKS, LOCKETS, CHARMS, ORNAMENTAL PINS FOR PERSONAL WEAR.
Claims use since July 1914.

Reg. No. 196,507. Registered Mar. 17, 1925. OLSEN & EBANN, Chicago, Ill. Republished by Olsen and Ebann Jewelry Company, Chicago, Ill., a corporation of Illinois.

Olsen Ebann

FOR JEWELRY FOR PERSONAL WEAR—NAMELY, FINGER RINGS, BRACELETS, BAR PINS, SCARF PINS, CUFF LINKS, WATCH CHAINS, NECK CHAINS, LAVALLIERES, NECKLACES, AND FRATERNAL JEWELRY ALL MADE OF GOLD AND EITHER PLAIN OR CARRYING DIAMONDS OR OTHER JEWELS.
Claims use since June 1913.

Reg. No. 232,743. Registered Sept. 13, 1927. STEIN AND ELLBOGEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Cecile

FOR JEWELRY AND NOVELTIES—NAMELY, GOLD, SILVER AND NOVELTY JEWELRY FOR PERSONAL WEAR, NOT INCLUDING WATCHES; NECKLACES AND BEADS; BEADED SILK AND LEATHER BAGS; FANS, JEWEL CASES, VANITY CASES, TOILET AND MANICURE SETS AND ARTICLES, CIGARETTE CASES AND HOLDERS, PHOTOGRAPH FRAMES, LEATHER NOVELTIES, CANES, PENCILS, POCKET KNIVES, POWDER BOXES, JEWEL CASES, PERFUME ATOMIZERS AND BOTTLES, SHOE BUCKLES AND COMBS, ALL MADE WHOLLY OR IN PART OF PRECIOUS METAL OR PLATED THEREWITH.
Claims use since July 1, 1925.

Reg. No. 294,484. Registered May 31, 1932. BLUE BIRD DIAMOND SYNDICATE, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BLUEBIRD

FOR DIAMONDS AND DIAMOND RINGS.
Claims use since Apr. 2, 1924.

Reg. No. 322,236. Registered Feb. 26, 1935. ASSOCIATED ATTLEBORO MANUFACTURERS, INC., Attleboro, Mass. Republished by Briggs, Bates & Bacon Company, Attleboro, Mass., a corporation of Massachusetts.

CARMEN

FOR BRACELETS.
Claims use since Dec. 15, 1900.

Reg. No. 358,792. Registered July 26, 1938. W. E. RICHARDS CO., Attleboro, Mass., a corporation of Massachusetts. Republished by registrant.

SYMMETALIC

FOR PRECIOUS METAL JEWELRY FOR PERSONAL WEAR AND ADORNMENT, NOT INCLUDING WATCHES.
Claims use since Dec. 1, 1936.

Reg. No. 415,665. Registered Aug. 14, 1945. W. E. RICHARDS CO., Attleboro, Mass., a corporation of Massachusetts. Republished by registrant.

WRE

FOR JEWELRY FOR PERSONAL WEAR AND ADORNMENT, NOT INCLUDING WATCHES.
Claims use since Jan. 1, 1944.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 283,332. Registered May 26, 1931. DARCO SALES CORPORATION, New York, N. Y. Republished by Darco Corporation, Wilmington, Del., a corporation of Delaware.

HYDRODARCO

FOR ADSORPTIVE CARBONS AND CARBONACEOUS MATERIALS USED FOR WATER PURIFICATION.
Claims use since Nov. 12, 1930.

Reg. No. 347,565. Registered June 29, 1937. GIBSON ELECTRIC REFRIGERATOR CORPORATION, Greenville, Mich. Republished by Gibson Refrigerator Company, Greenville, Mich., a corporation of Michigan.

GIBSON GUARDIAN

FOR REFRIGERATORS.
Claims use since on or about Jan. 19, 1936.

Reg. No. 397,844. Registered Sept. 22, 1942. GIBSON ELECTRIC REFRIGERATOR CORPORATION, Greenville, Mich. Republished by Gibson Refrigerator Company, Greenville, Mich., a corporation of Michigan.

STRATAZONE

FOR REFRIGERATORS.
Claims use since on or about Apr. 29, 1942.

Reg. No. 413,727. Registered May 8, 1945. RESEARCH PRODUCTS CORPORATION, Madison, Wis., a corporation of Wisconsin. Republished by registrant.

FILTER-AG

The word "Filter" is disclaimed.
FOR GRANULAR INERT MINERAL MATERIAL FOR THE FILTRATION OF WATER.
Claims use since September 1937.

Reg. No. 431,694. Registered July 29, 1947. PRENTISS WABERS PRODUCTS CO., Wisconsin Rapids, Wis., a corporation of Wisconsin. Republished by registrant.

PREWAY

FOR PORTABLE PICNIC ICE BOXES.
Claims use since Dec. 1, 1930.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 116,830. Registered May 29, 1917. THE ENAMEL PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Tepco

FOR TABLE-TOPS.
Claims use since August 1915.

Reg. No. 415,375. Registered Aug. 7, 1945. THE ENAMEL PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Tepco PLASTEEL

FOR TABLE TOPS.
Claims use since Dec. 15, 1944.

Reg. No. 430,037. Registered June 3, 1947. SLUMBER PRODUCTS CORPORATION, Memphis, Tenn., a corporation of Tennessee. Registered by registrant.

The drawing is lined for blue. The words "A Slumber Product" and "Beauty" are disclaimed. The outline of the label is disclaimed.
FOR MATTRESSES FOR BEDS, BOX SPRINGS FOR BEDS, COIL AND FABRIC SPRINGS FOR BEDS, AND BED PILLOWS.
Claims use since June 15, 1944.

Reg. No. 430,909. Registered July 1, 1947. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

DUNLOP *Pillo-Foam*

The words "Foam" and "Pillo" are disclaimed.
FOR CUSHIONS, MATTRESSES AND MATTRESS PADS, MATTRESSES AND MATTRESS PADS FOR AMBULANCE COTS, AND OFFICE CHAIR CUSHIONS.
Claims use since Sept. 27, 1945.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 45,252. Registered Aug. 8, 1905. MAJESTIC MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

MAJESTIC

FOR RANGES, STOVES, AND HEATERS.
Claims use since Feb. 15, 1891.

Reg. No. 45,638. Registered Aug. 22, 1905. MAJESTIC MANUFACTURING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR RANGES, STOVES AND HEATERS.
Claims use since latter part of July 1892.

Reg. No. 135,971. Registered Oct. 26, 1920. DETROIT STOVE WORKS, Detroit, Mich., Republished by Detroit-Michigan Stove Company, Detroit, Mich., a corporation of Michigan.

DETROIT JEWEL

FOR HEATING AND COOKING STOVES, FURNACES, AND RANGES USING COMBUSTIBLE MATERIAL, INCLUDING PARTS OF SAID STOVES, FURNACES, AND RANGES.
Claims use since 1895.

Reg. No. 209,352. Registered Feb. 23, 1926. THE J. H. GRAYSON MANUFACTURING COMPANY, Athens, Ohio. Republished by Ray-Glo Inc., Shelbyville, Ind., a corporation of Indiana.

RAY GLO

FOR GAS HEATERS AND PARTS THEREOF—NAMELY, MANTLES AND CASTINGS.
Claims use since Sept. 1, 1924.

Reg. No. 214,379. Registered June 22, 1926. ARCTIC NU-AIR COOLING & VENTILATING COMPANY, Chicago, Ill. Republished by United States Air Conditioning Corporation, Minneapolis, Minn., a corporation of Delaware.

ARCTIC NU-AIR

FOR AIR CONDITIONING APPARATUS AND COOLING AND VENTILATING SYSTEMS.
Claims use on or about Aug. 24, 1925.

Reg. No. 222,885. Registered Jan. 11, 1927. THE LENNOX FURNACE COMPANY, Marshalltown, Iowa, and Syracuse, N. Y., a corporation of Iowa. Republished by registrant, present location Marshalltown, Iowa.

EQUATOR

FOR STEEL WARM AIR FURNACES USING COAL, COKE, OIL, GAS OR WOOD AS FUEL.
Claims use since July 1, 1905.

Reg. No. 268,379. Registered Mar. 11, 1930. WM. FILENE'S SONS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Filene's

FOR FRICTION CIGARETTE LIGHTERS, FRICTION TABLE LIGHTERS, FILLERS FOR LIGHTERS, WOODEN, PEWTER AND BRASS CANDLESTICKS AND STATUARY CANDLESTICKS.
Claims use since on or about Jan. 1, 1928.

Reg. No. 288,058. Registered Oct. 20, 1931. LENNOX FURNACE COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

Aire-Flo

FOR FURNACES USING FUELS SUCH AS COAL, OIL, GAS, WOOD, COKE AND SUCH MANUFACTURED FUELS AS MAY BE BURNED IN ORDINARY COAL GRATES.
Claims use since May 7, 1931.

Reg. No. 341,238. Registered Dec. 1, 1936. RAY OIL BURNER CO., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

QUAD-NAUGHT

FOR OIL BURNERS.
Claims use since February 1936.

Reg. No. 351,482. Registered Nov. 2, 1937. LENNOX FURNACE COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

Aire-Flo

FOR BLOWERS, BLOWER CABINETS, FILTERS, AIR WASHERS, COOLING COILS, COOLING COIL CABINETS, COMPLETE COOLING UNITS, AND WARM AND COLD AIR PIPING USED FOR DISTRIBUTING THE CONDITIONED AIR FROM AN AIR CONDITIONING UNIT, AND FOR AIR CONDITIONING SYSTEMS.
Claims use since May 7, 1931.

Reg. No. 383,382. Registered Dec. 3, 1940. THE LENNOX FURNACE COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

STOWAWAY

FOR GAS BURNING AND OIL BURNING FURNACES.
Claims use since July 8, 1940.

Reg. No. 406,873. Registered May 2, 1944. AMERICAN CHEWING PRODUCTS CORP., Newark, N. J., a corporation of New Jersey. Republished by registrant.

GOLD $DOLLAR

FOR CHEWING GUM.
Claims use since April 1936.

Reg. No. 406,067. Registered May 9, 1944. AMERICAN CHEWING PRODUCTS CORP., Newark, N. J., a corporation of New Jersey. Republished by registrant.

EVERMORE

FOR CHEWING GUM.
Claims use since February 1934.

Reg. No. 407,252. Registered May 23, 1944. KANNENGIESSER & COMPANY, New York, N. Y., a co-partnership. Republished by registrant.

Kanana

FOR FLAKED DRIED BANANAS.
Claims use since Sept. 21, 1942.

Reg. No. 407,626. Registered June 13, 1944. LAKE HAMILTON COOPERATIVE, INC., Lake Hamilton, Fla., a corporation of Florida. Republished by registrant.

GULL WING

FOR FRESH CITRUS FRUITS.
Claims use since Nov. 1, 1943.

Reg. No. 407,627. Registered June 13, 1944. LAKE HAMILTON COOPERATIVE, INC., Lake Hamilton, Fla., a corporation of Florida. Republished by registrant.

MID WING

FOR FRESH CITRUS FRUITS.
Claims use since Nov. 1, 1943.

Reg. No. 408,557. Registered Aug. 15, 1944. BOWERS BROTHERS, INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

LUXELLO

FOR COFFEE.
Claims use since 1915.

Reg. No. 411,003. Registered Jan. 2, 1945. R. C. WILLIAMS & COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

The words "Fine Foods" are disclaimed.
FOR CANNED VEGETABLES, FRUITS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Apr. 1, 1942.

Reg. No. 417,340. Registered Oct. 23, 1945. CITRUS FOODS CO., INC., Los Angeles, Calif. Republished by California Consumers Corporation, Los Angeles, Calif., a corporation of California.

Citri-Juis

The word "Juis" is disclaimed.
FOR FRESH FROZEN ORANGE JUICE FOR FOOD PURPOSES.
Claims use since Apr. 19, 1945.

Reg. No. 417,426. Registered Oct. 30, 1945. A. E. STALEY MANUFACTURING COMPANY, Decatur, Ill., a corporation of Delaware. Republished by registrant.

ECLIPSE

FOR EDIBLE STARCH, AND PARTICULARLY THIN BOILING STARCH SOLD TO CONFECTIONERS.
Claims use since 1928.

Reg. No. 418,525. Registered Jan. 1, 1946. THE SHOTWELL MFG. CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BIG YANK

FOR CANDY BARS.
Claims use since Aug. 14, 1935.

Reg. No. 421,227. Registered May 21, 1946. CARDINET CANDY COMPANY, INC., Oakland, Calif., a corporation of California. Republished by registrant.

Swap

FOR CANDY BARS.
Claims use since Feb. 9, 1934.

Reg. No. 422,651. Registered Aug. 6, 1946. LAKE HAMILTON COOPERATIVE, INC., Lake Hamilton, Fla., a corporation of Florida. Republished by registrant.

EARTHGOLD

FOR FRESH CITRUS FRUITS.
Claims use since Apr. 2, 1945.

Reg. No. 428,472. Registered Mar. 25, 1947. H. E. KENNERLY & SON, doing business as Rearing Point Oyster Co., Nanticoke, Md., a partnership. Republished by registrant.

Sea Crest

The word "Sea" is disclaimed.
FOR FRESH CANNED OYSTERS.
Claims use since 1937.

Reg. No. 429,605. Registered May 6, 1947. THE KNOUSE CORPORATION, Peach Glen, Pa., assignor to National Fruit Product Company, Inc., Winchester, Va., a corporation of Virginia. Republished by National Fruit Product Company, Inc., Winchester, Va., a corporation of Virginia.

LUCKY LEAF

FOR CANNED APPLESAUCE.
Claims use since January 1934.

CLASS 47

WINES

Reg. No. 177,419. Registered Dec. 18, 1923. SOCIETE VINICOLE DE CHAMPAGNE, Paris, France. Republished by G. H. Mumm & Co., Societe Vinicole de Champagne Successeurs, Paris, France, a corporation of the Republic of France.

The drawing is lined for the color red.
FOR CHAMPAGNE WINE.
Claims use since Mar. 23, 1868.

Reg. No. 240,714. Registered Apr. 3, 1928. SOCIETE VINICOLE DE CHAMPAGNE, Paris, France. Republished by G. H. Mumm & Co., Societe Vinicole de Champagne Successeurs, Paris, France, a corporation organized under the laws of the Republic of France.

The border as shown in the drawing is disclaimed.
FOR CHAMPAGNE WINE.
Claims use since Oct. 27, 1866.

Reg. No. 326,066. Registered Aug. 25, 1936. GUSTAVE NIEBAUM COMPANY, doing business as Inglenook Vineyard Company, Rutherford, Calif. Republished by Inglenook Vineyard Co., Rutherford, Calif., a firm.

FOR WINES.
Claims use since Oct. 5, 1935.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 135,289. Registered Sept. 28, 1920. THE NATIONAL BREWERS' ACADEMY AND CONSULTING BUREAU, New York, N. Y., a corporation of New York. Republished by registrant.

ONYX

FOR COMPOUND CONSISTING OF PHOSPHOSAL, NECTAROL, PORTERINE, COLLUPULIN, PONAX, LACTART, MALTO-DEXTRIN, BURTONIZING SALTS, AND THE LIKE, USED AS AN ADDITIONAL MATERIAL DURING VARIOUS STAGES OF MANUFACTURE OF BEER OR NEAR BEER IN ORDER TO IMPROVE THEIR CHARACTER OR QUALITY.
Claims use since Jan. 1, 1919.

Reg. No. 314,835. Registered July 10, 1934. ESSLINGER'S, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The name "Esslinger's" is disclaimed. The color of the waiter's suit and hat is red.
FOR MALT BEVERAGES OF LEGAL ALCOHOLIC CONTENT.
Claims use since 1926.

Reg. No. 337,643. Registered Aug. 18, 1936. ESSLINGER'S, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR ALE.
Claims use since February 1935.

Reg. No. 357,603. Registered June 7, 1938. WAUSAU BREWING COMPANY, Wausau, Wis., a corporation of Wisconsin. Republished by registrant.

RIB MOUNTAIN LAGER

The word "Lager" is disclaimed.
FOR BEER.
Claims use since Jan. 18, 1938.

Reg. No. 359,062. Registered Aug. 2, 1938. WAUSAU BREWING COMPANY, Wausau, Wis., a corporation of Wisconsin. Republished by registrant.

Rib Mountain Lager

The word "Lager" is disclaimed.
FOR BEER.
Claims use since Feb. 2, 1938.

Reg. No. 417,412. Registered Oct. 30, 1945. WAUSAU BREWING COMPANY, Wausau, Wis., a corporation of Wisconsin. Republished by registrant.

LOUIS SCHOEN'S Old Lager

The words "Old Lager" are disclaimed.
FOR BEER.
Claims use since Dec. 1, 1943.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 280,199. Registered Feb. 10, 1931. TAYLOR & WILLIAMS, INCORPORATED, Louisville, Ky. Republished by Yellowstone, Inc., Louisville, Ky., a corporation of Delaware.

YELLOWSTONE

FOR WHISKEY.
Claims use since November 1878.

Reg. No. 320,391. Registered Dec. 25, 1934. TAYLOR AND WILLIAMS DISTILLERIES, INC., Louisville, Ky. Republished by Yellowstone, Inc., Louisville, Ky., a corporation of Delaware.

Coon Range

The drawing is lined for the color red.
FOR WHISKEY.
Claims use since Sept. 5, 1934.

Reg. No. 353,378. Registered Jan. 4, 1938. THE READ DRUG AND CHEMICAL CO. OF BALTIMORE CITY, Baltimore, Md., a corporation of Maryland.. Republished by registrant.

Wynbrook

FOR WHISKEY AND GIN.
Claims use since Aug. 3, 1937.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 321,757. Registered Feb. 12, 1935. MULTIGRAPH COMPANY, Wilmington, Del., and Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Multilith

FOR PLANOGRAPHIC PLATES.
Claims use since on or about April 1934.

Reg. No. 355,277. Registered Mar. 8, 1938. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Euclid, Ohio, a corporation of Delaware. Republished by registrant, present location Cleveland 17, Ohio.

DupliMAT

FOR PLANOGRAPHIC PLATES.
Claims use since October 1937.

Reg. No. 416,417. Registered Sept. 11, 1945. RUBICON doing business as The Antique Shoppe, New York, N. Y. Republished by Rubicon, Inc., New York, N. Y., a corporation of New York.

Love-Lite

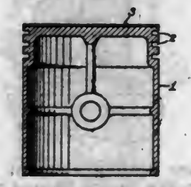
The word "Lite" is disclaimed.
FOR LAMPS CONTAINING LIQUID WHICH WHEN BURNED CREATES A DEODORIZING EFFECT.
Claims use since Mar. 10, 1941.

Reg. No. 421,328. Registered May 28, 1946. RUBICON, doing business as The Antique Shoppe, New York, N. Y. Republished by Rubicon, Inc., New York, N. Y., a corporation of New York.

Joy-Lite

The word "Lite" is disclaimed.
FOR LAMPS CONTAINING LIQUID WHICH WHEN BURNED CREATES A DEODORIZING EFFECT.
Claims use since July 1, 1945.

Reg. No. 430,577. Registered June 17, 1947. DUNLOP TIRE AND RUBBER CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.



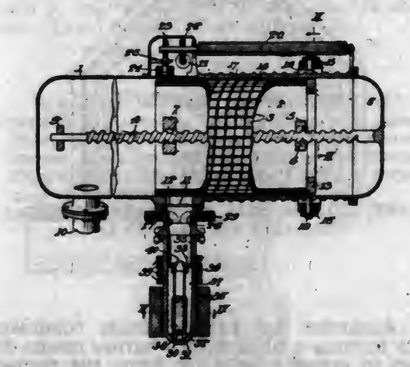
DUNLOP Pillo-Foam

The words "Foam" and "Pillo" are disclaimed.
FOR RUG PADS OF FOAMED LATEX RUBBER.
Claims use since Sept. 27, 1945.

PATENTS

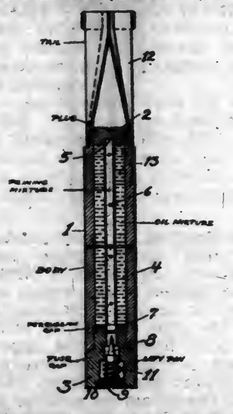
GRANTED JULY 20, 1948

2,445,209
COPPER TOPPED PISTON
Landon B. Bord, La Porte, Ind.
Application September 22, 1944, Serial No. 555,293
9 Claims. (Cl. 309—9)



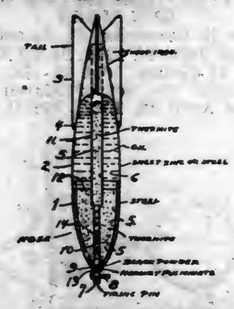
4. A copper topped piston comprising a main ferrous piston body and a thin deck of copper bonded to the upper surface of said piston, the thickness of said copper deck being calculated according to the following formula:

$$X = \frac{B^3 \cdot D^3}{Y}$$



X equalling the means thickness of the copper deck, D the diameter of the piston, B the heat transmission coefficient multiple of the copper, and Y equalling a factor of the order of 4360 for a piston having a diameter between 2 inches and 3¼ inches.

2,445,216
MANUFACTURE OF PIEZOELECTRIC ELEMENTS
Constantin Chilowsky, New York, N. Y.
Application January 29, 1944, Serial No. 520,275
1 Claim. (Cl. 171—327)

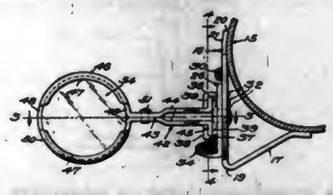


The method of forming a piezo-electric element having a desired thickness and natural frequency of resonance which includes, providing a plate of piezo-electric quartz having less than the desired thickness, gradually depositing by vaporization in vacuum an adherent layer of quartz on a surface of said plate, and stopping said deposit when the thickness and natural frequency of the combined plate and deposited quartz have reached the desired value.

2,445,311
INCENDIARY BOMB MIXTURE
Henry H. Cooke, Elizabeth, and John B. Holtzclaw, Roselle, N. J., assignors to Stanco Incorporated, a corporation of Delaware
Application March 28, 1942, Serial No. 436,594
6 Claims. (Cl. 44—7)

1. An incendiary liquid for an incendiary oil bomb which comprises a thick semi-liquid, readily ignitable material compounded of naphtha with from about 10% to 25% by weight of iso-olefin polymers having molecular weights above 30,000.

2,445,312
INCENDIARY BOMB MIXTURE
Henry H. Cooke, Elizabeth, and John B. Holtzclaw, Roselle, N. J., assignors to Stanco Incorporated, a corporation of Delaware
Application July 16, 1942, Serial No. 451,119
8 Claims. (Cl. 102—6)

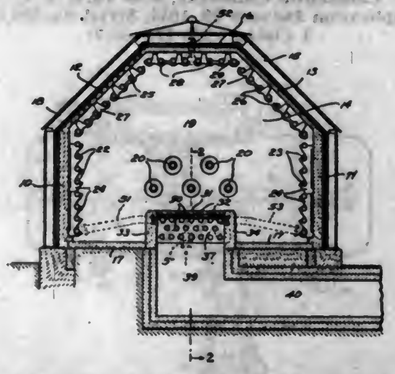


1. An almost semi-solid oil incendiary composition comprising a volatile combustible hydrocarbon liquid thickened to a consistency within the range of a viscous liquid to a gummy mass, with 1 to 25% by weight of a high molecular weight polymer of a mono-olefinic polymerizable monomeric organic compound, said polymer having an average molecular weight between about 100,000 and 3,000, and the arithmetic product of the percent of polymer times the mol. wt. of the polymer being at least 75,000.

2,445,313
MERCURY VAPOR LAMP
Aristodeme J. Cosmetto, New York, N. Y.
Application July 17, 1946, Serial No. 684,199
5 Claims. (Cl. 240—11.4)

1. In combination, a lamp holder having an enlarged recess, cooling pipes communicating respectively with the recess, a lamp support secured in the bottom of the recess and providing for passages for cooling fluid entering the recess by way of the pipe connected with the bottom thereof, a lamp fitted in the upper end of the lamp support, a transparent sleeve surrounding the lamp support and the lamp having its inner wall spaced therefrom to provide a passage for the cooling fluid moving through the support, a connecting member surrounding the transparent sleeve for securing the same to the bottom of the recess, an outer casing surrounding the lamp and the inner sleeve and having its wall spaced therefrom to provide a return passage for the cooling fluid, said connecting member having passages for conducting the fluid from the inner end of the casing to an outlet cooling pipe in the holder, and clamping means for securing the outer casing to the connecting member and to the holder.

2,445,314
GUN SIGHT
Stephen H. Crossman, St. Joseph, Mich.
Application June 26, 1944, Serial No. 542,216
12 Claims. (Cl. 33—58)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

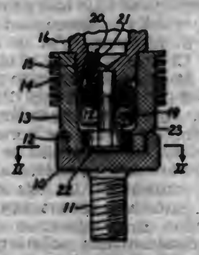


7. A sight comprising a body plate constructed for rigid attachment to the side of a weapon and having a pivot part and a distant slot transverse to a medial radius from the pivot part, a dial plate having a pivot part concentric with that of the body plate and having a radial tongue of a width to fit snugly in said slot when the dial plate is flat on the body plate, a pivot means extending through said pivot parts, a scale on the dial plate concentric with its pivot part, an arm pivoted on said pivot means and movable over the first two plates, and means to yieldingly hold the arm at stages of movement adjacent said scale.

2,445,315
DOOR SEAL ASSEMBLY
Clarke C. Curley, Lorain, Ohio
Application November 30, 1945, Serial No. 632,006
4 Claims. (Cl. 20—68)

1. A weather sealing element comprising an elongated box-like casing having a longitudinally extending slot in the lower surface, a U-shaped tongue positioned in said slot and projecting therethrough with arms thereof bulging outwardly to form shoulders and extending upwardly and inwardly in said casing, inwardly inclined side plates mounted in the lower corners of the casing and positioned against the inwardly extending ends of the arms of the tongue, and means resiliently urging said side plates against the arms of the tongue whereby the tongue is resiliently held outward.

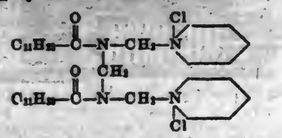
2,445,316
HEATER
Bartholomeo De Lorenzo, Elyria, Ohio, assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application April 17, 1943, Serial No. 483,535
12 Claims. (Cl. 122—356)



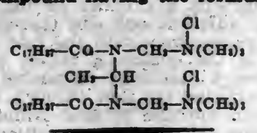
1. Apparatus for heating fluids comprising walls forming a furnace, fuel burner means disposed in opposite walls for firing the furnace, fluid conducting tubular members adjacent other oppositely disposed walls adjoining said opposite walls, a bank of tubular members at the bottom of the furnace extending toward said opposite walls, a wall at each side of said banks of tubular members, a baffle above said bank and said walls, said baffle and walls forming a passage for gas, said passage having terminal portions spaced from opposite walls to provide gas openings into said passage, the said bank of tubular members projecting from each end of said gas passage, longitudinally extending fins on those portions only of the tubular members of said bank which lie below said baffle, and means forming a flue to receive the gases flowing from said bank.

2,445,317
MATCH PACK HOLDER
Montague H. Duval, Great Neck, N. Y.
Application June 15, 1944, Serial No. 540,390
3 Claims. (Cl. 206—33)

3. A match pack holder comprising a housing having an open side; a pack holding clip pivotally mounted in said housing and having a bottom, pack-embracing side walls, and open ends to permit a pack to be slid longitudinally into place between said side walls, said pack including a stub and splints removably connected thereto at points defining a tearing line; a short stub-retaining wall projecting upwardly from the clip bottom at one of the open ends of said clip to engage a pack stub and prevent reverse sliding movement and removal of a pack from the clip; a splint-engaging bridge at the opposite open end of the clip extending between said side walls to engage and prevent removal of the pack from the clip until the splints have been removed, said opposite open end of the clip being otherwise unobstructed, said bridge being disposed entirely above the tearing line of the splints of said pack; manually operable means to project said clip through the open side of said housing, and a spring automatically to return said clip to said housing on release of said manual projecting means.

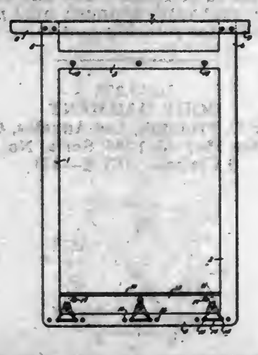


2,445,318
MAGNETOSTRICTIVE PICKUP UNIT
Kenneth R. Eldredge, Alf Humdere, and John H. Macpherson, Jr., Berkeley, Calif., assignors, by mesne assignments, to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application October 23, 1943, Serial No. 507,466
12 Claims. (Cl. 171—209)



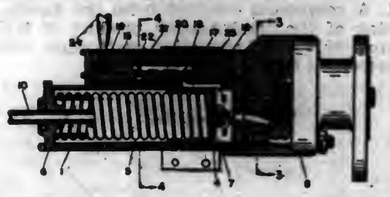
1. Apparatus for detecting detonation in a cylinder of an internal combustion engine, comprising a rigid housing of paramagnetic material adapted to be directly and rigidly attached to the outer wall of said cylinder, a rod of magnetostrictive material secured in said housing, a weight member supported by said rod, a magnetic circuit including flux producing means and said rod, a winding enclosing a portion of said magnetic circuit, the flux in said circuit varying with stresses due to forced vibrations in said rod caused by detonation in said engine cylinder to induce correspondingly varying electromotive forces in said winding.

2,445,319
METHOD FOR THE MANUFACTURE OF QUATERNARY NITROGEN COMPOUNDS
Heinz-Joachim Engelbrecht, Dessau, Germany, assignor, by mesne assignments, to American Hyalsol Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 18, 1940, Serial No. 330,256. In Germany April 22, 1939
3 Claims. (Cl. 260—295)



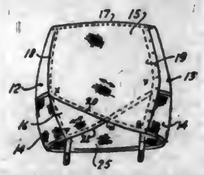
1. A compound selected from the group consisting of the condensation product of N,N'-dilauroyl-N,N'-dichloromethyl-methylene diamine represented by the formula

and the compound having the formula



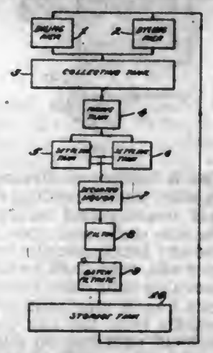
2,445,320
PHOTOGRAPHIC FILM PROCESSING FRAME
William R. Fischer and Clarence W. Kendall, Dayton, Ohio
Application August 29, 1946, Serial No. 693,607
3 Claims. (Cl. 95—100)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A rectangular sheet processing frame comprising, two side frame members connected by an upper frame member and a lower frame member, said frame members being of the same uniform thickness, said lower frame member having an upward extension about half the thickness of said frame members and having one face coplanar with respect to one side of said frame, a slide mem-



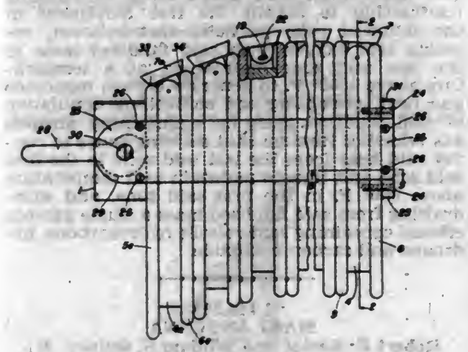
ber about the same thickness as said upward extension and being movably mounted thereon in face to face contacting relation therewith, the opposite non-contacting face of said slide member being coplanar with respect to the other side of said frame, means retaining said slide member in movable relation with respect to said upward extension, sheet securing studs on said slide member and on said upper frame member and adapted to be received in openings in opposite edge margins of a rectangular sheet, and sheet tensioning means extending between said slide member and said lower frame member.

2,445,321
GOVERNOR
William T. Fox, Jr., United States Navy
Application November 29, 1945, Serial No. 631,764
1 Claim. (Cl. 123—103)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



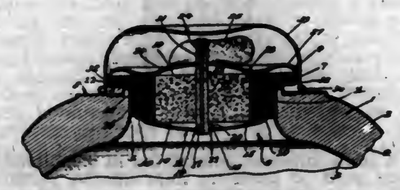
A speed-governor for an internal-combustion engine comprising a cylinder having inlet and outlet ports adjacent one end thereof for flow connection respectively with the fuel pump and fuel valve of the engine, a piston movable in said cylinder, a manually adjustable valve for variably restricting the flow through said outlet port, a piston movable in said cylinder, spring means biasing said piston to position adjacent said one end of the cylinder, and structure for transmission of movement of said piston to said fuel valve said manually adjustable valve including a cylindrical valve chamber in the discharge line, a valve sleeve within said cylindrical valve chamber, an inlet port in the valve chamber, said cylinder outlet port being connected to said valve chamber inlet port, a V-shaped port in said valve sleeve adapted to be rotated into and out of coincidence with said valve chamber inlet port, and a throttle handle for rotating said valve sleeve.

2,445,322
BODY GARMENT
Maude C. Fridolph, Los Angeles, Calif.
Application May 26, 1945, Serial No. 595,895
9 Claims. (Cl. 2—43)



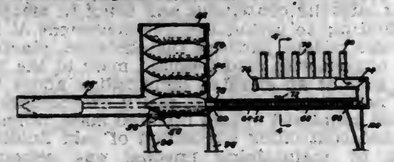
1. A girdle comprising a multiple-panel body encircling construction, having side panels formed at least in part of elastic material, and front and back panels each comprising two non-elastic fabric pieces narrowed progressively from one side to the other and arranged each with one free edge and weave lines disposed in unconnected relation at an angle to the other, the angled free edges of the front fabric pieces being at the lower portion of the garment at the pubic region of the body and the angled free edges of the back panel being at the top of the garment at the sacro-ilium region of the body, the side edges being connected together and to the side panels.

2,445,323
METHOD OF RECOVERING SPENT DYE LIQUORS BY TREATMENT WITH ACTIVATED CARBON AND PRODUCT THEREOF
Luigi C. Galatioto, Providence, R. I., assignor to Textron, Incorporated, New York, N. Y., a corporation of Rhode Island
Application July 21, 1947, Serial No. 762,482
25 Claims. (Cl. 210—42.5)



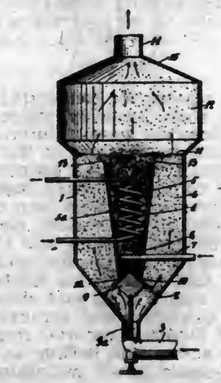
1. Method of recovering solvent and solute values from dye liquors, consisting of the steps of treating spent dye liquor with activated adsorbent carbon selected from the class consisting of lignite which has been heated to 700 to 900° C., then ground to a size that 70 to 90% will pass a 300 mesh screen, and then washed with acid and water; carbonized lignin residues obtained by carbonizing the cooking liquors derived from the treatment of wood by the alkali process to obtain wood pulp and which have been heated to expel volatile substances and to fuse the mineral substances present therein, and the fused mineral substances then removed; charcoal which has been passed between electrodes of an electric furnace, and subjected to a temperature of 3000 to 3300° F. while moving past the electrodes at a speed from ½ inch to 12 inches per hour in the presence of 1 pound to 5 pounds of steam; and carbon derived from a material selected from the group consisting of peat moss, cellulose and lignite which have been charred in the presence of zinc chloride to a temperature of 500–850° C., leached with water, and ground to 325 mesh, as well as said carbons of this last group which have been also subjected to subsequent activation by both heating, at temperatures of approximately 950° C., 1000° C. and 1000° C., respectively, and cooling in an atmosphere of carbon dioxide gas, in finely divided form and freely dispersed in and throughout the dye liquor, agitating the mixture actively and for a period of time sufficient to effect intimate contact between the activated carbon and dye liquor and complete combination of the entire dye content of the liquor with the dispersed carbon, and then separating the combined adsorbent carbon and adsorbed dye substance from the residual solvent solution of reagents, thereby leaving the latter free from all dye substance and in condition suitable for reuse as a solvent for the preparation of fresh dye liquor of any color.

2,445,324
CONTOUR TRANSFER DEVICE
Earl E. Greenwell, Vallejo, Calif.
Application June 24, 1946, Serial No. 678,760
3 Claims. (Cl. 33—175)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. A contour transfer device comprising a base, a plurality of beams adjustably mounted relative to the base, contour shoes carried by the beams and adjustable relative thereto, means to hold said contour shoes in adjusted position relative to said beams, and means for simultaneously locking said beams and said holding means to render said contour shoes immovable relative to said base.

2,445,325
INSULATED CONTAINER CLOSURE
Joseph L. Hemp, Macomb, Ill.
Application March 29, 1945, Serial No. 583,627
5 Claims. (Cl. 215—54)



4. A closure for containers having a neck and comprising a circular rubber ring having a peripheral outer wall and a central opening therethrough, a plug of insulating material in said opening, a top plate above said ring and having a downwardly projecting annular bulge engaging the ring, a peripheral wall on said plate encompassing a portion of said plug, a bottom plate engaging the bottom of said ring, below and within the plane of said wall a stem passing through said plates and plug, a tightener threaded on said stem whereby the tightener when tightened will draw the plates together and force the portion of the ring below said wall to bulge outwardly to make a tight seal with the container neck, said stem having a longitudinal bore therethrough, protuberances projecting from the peripheral edge of said top plate, and a metal cup over said top plate and engageable with the protuberances.

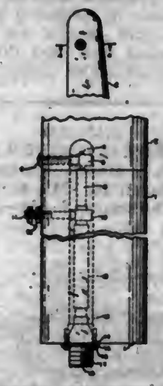
2,445,326
DEVICE FOR LAUNCHING PROJECTILES
Herman Jesse Janney, Opportunity, Wash.
Application October 21, 1944, Serial No. 559,719
3 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device for launching projectiles, comprising a magazine adapted to support a plurality of projectiles in superposed relation with their axes parallel to each other, a stationary launching tube axially parallel to said projectiles opening at its inner end into the magazine in position to receive the lowermost projectile in the magazine in coaxial relation, said magazine having an opening in its side opposite the launching tube and in line therewith, a barrel secured to the magazine in gas-tight relation thereto, a reciprocable plunger in said barrel with one end passing through said opening in the magazine with a gas-tight fit and in position to engage the lowermost projectile in the magazine, a piston on the plunger to receive the thrust of combustion gases of a propellent charge, a closed end gas conduit communicating with the barrel and having a charge chamber opening into said conduit, a propellent charge in said chamber, means for detonating said charge to operate the plunger, means for returning said plunger to normal position, and means for exhausting the products of combustion of the charge from the barrel.

2,445,327
FLUIDIZING PROCESS FOR GASIFYING CARBONACEOUS SOLIDS
Percival C. Keith, Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y.
Application August 2, 1944, Serial No. 547,722
3 Claims. (Cl. 196—56)

1. A process for the simultaneous pyrolytic distillation and exothermic gasification of a solid material having volatilizable components and a solid, carbon-containing residue, which comprises injecting said solid material in discrete particle form into one zone of a single fluidized mass of solid residue particles deriving from said solid material, maintaining said zone at an elevated

temperature to effect pyrolytic distillation of volatilizable components from said solid material, pyrolytically distilling said volatilizable components from said solid material by contact with said fluidized mass, introducing oxygen of not less than about 95% by volume purity into another zone of said fluidized mass, both said zones being laterally contiguous and being in merging relationship to permit the free movement of the fluidized residue particles therebetween, reacting said oxygen with said fluidized mass in the last said zone at an elevated temperature above the first said temperature to gasify exothermically carbon contained in said fluidized mass, promoting and controlling circulation of said fluidized mass by maintaining unequal gas velocities through said merging zones to convey heat from the last said zone to the first said zone and thus to maintain the first said temperature in the first said zone, withdrawing from said fluidized mass a single gaseous effluent containing the pyrolytically distilled volatilizable components and the products of the exothermic gasification, and withdrawing from said fluidized mass excess residue particles.



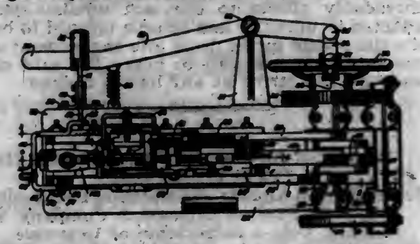
2,445,328
CONVERSION PROCESS FOR HEAVY HYDROCARBONS
Percival C. Keith, Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y.
Application March 9, 1945, Serial No. 581,921
5 Claims. (Cl. 196—55)

1. A unitary reactor for conducting two fluidizing reactions simultaneously, which comprises a vertically elongate vessel, internal baffling which forms contiguous zones in the lower portion of said vessel, a U-tube connected to the bottom of said contiguous zones, means for introducing a fluidizing medium into one of said zones in the vicinity of its bottom, means for introducing a fluidizing medium into the other of said zones through said U-tube, and an outlet at the top of said reactor for discharging the mixed fluiding media from said zones, said reactor being constructed and arranged for promoting flow of fluidized material from one zone into the other across said baffling as a result of different fluid-static heads maintained in said respective zones.

3. A noncatalytic process for the simultaneous conversion of heavy hydrocarbons of the type of topped petroleum crude oil to more volatile hydrocarbons, hydrogen and carbon monoxide, which comprises injecting said heavy hydrocarbons having a temperature not exceeding about 600° F. in discrete form into one zone of a single fluidized mass of coke particles deriving from said heavy hydrocarbons, maintaining said zone at a temperature above 800° F. to effect cracking of said hydrocarbons, cracking said heavy hydrocarbons to more volatile hydrocarbons, hydrogen and coke in particle form solely by contact with said fluidized mass, introducing oxygen of at least 80% by volume purity into another zone of said fluidized mass, both said zones being in merging relationship to permit the free movement of the fluidized coke particles therebetween, reacting said oxygen with said fluidized mass in the last said zone maintained at a temperature above 1600° F. to generate carbon monoxide and heat, promoting and controlling circulation of said fluidized mass by maintaining unequal gas velocities through said merging zones to convey said heat from the last said zone to the first said zone and thus to maintain said temperature above 800° F. in the first said zone, and withdrawing from said fluidized mass a single gaseous effluent containing said volatile hydrocarbons, hydrogen and carbon monoxide.

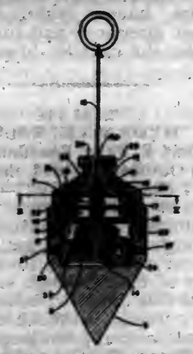
2,445,329
MAST ANTENNA
Robert E. Kester and William S. Quincy, Jr., Dayton, Ohio
Application March 25, 1944, Serial No. 528,056
2 Claims. (Cl. 250—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A mast antenna, comprising in combination a mast staff of phenolic impregnated plywood compressed to a maximum density at substantially the zone of greatest stress thereof, an electrically conducting sheath overlying and supported by a portion of the outer surface of said mast staff, a cable assembly disposed within an aperture extending longitudinally of said mast staff and opening outwardly through the base portion thereof, an inner cable part of said cable assembly extending substantially longitudinally thereof, a tapped and threaded first slug soldered to said inner cable at substantially an inner end thereof, a central contact accessible from outwardly of said mast antenna and disposed at an outer end of said inner cable, a first screw in electrical connection with said sheath and threaded into said first slug, a woven hollow cable insulated from and substantially coaxial with said inner cable and extending longitudinally thereof, a cylindrical insulating tube extending longitudinally of both said inner cable and said woven hollow cable and interposed therebetween, a second tapped and threaded slug soldered to said woven hollow cable at substantially an inner end thereof, a second screw having one end threaded into said second slug and having an opposite end extending to the outside of said mast staff, a ground connection at an outer end of said woven hollow cable and accessible from outwardly of said mast antenna, and means insulating said central contact from said ground connection.



2,445,330
WHEEL STRUCTURE
George Albert Lyon, Allenhurst, N. J.
Application September 27, 1945, Serial No. 618,825
3 Claims. (Cl. 301—37)

1. In a wheel structure of the type including a wheel comprising a tire rim and a central body part having circumferentially spaced cover retaining integral bumps and a detachable circular cover with a springy continuous turned edge having portions springy radially outwardly over the bumps and intermediate portions springy inwardly against the wheel body, characterized by the bumps each having an axially inward undercut outer shoulder and the body having a generally axial annular shoulder radially inward of the bases of said bump shoulders at the junction of said bump shoulders with the body part and of a diameter substantially less than that of the circle common to the bases of the shoulders of the bumps to provide clearance for the intermediate portions of said cover edge to spring radially inward of the bump shoulders and tightly against the wheel body.



2,445,331
CARTRIDGE CASE VENTING MACHINE
Edward Meyer, Trenton, N. J.
Application July 10, 1946, Serial No. 682,524
16 Claims. (Cl. 164—87)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

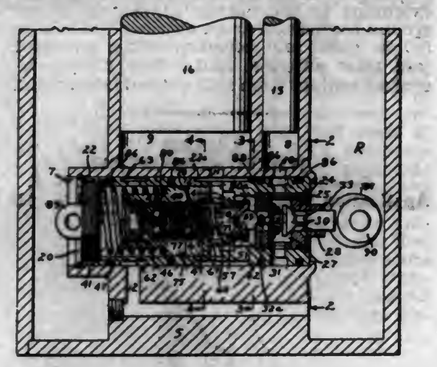
1. A machine for punching a vent in a cartridge case or the like, including, a drive shaft, a crank shaft, a clutch connecting or disconnecting said drive shaft and said crank shaft, a relatively stationary hollow magazine into which the cartridge cases to be punched are fed and in which the cartridge cases are held during the operation of the machine, a feed mechanism furnishing a supply of cartridge cases to said magazine, a cam and a cooperating cam-follower forming part of the operating connection between said feed mechanism and said drive shaft, a spring-pressed latch customarily holding said cam in its normal operating position and yielding to permit said cam to move to inoperative position upon an obstruction of the feed to said magazine, a stop in the path of travel of said cam which resets said cam to its normal operating position, a plurality of spring-pressed balls mounted in the wall of said magazine so as to engage each of said cartridge cases in succession to hold it in position while it is worked on by the machine, a plunger driven by said crank shaft into and out of said magazine so as normally to enter the open end of a cartridge case or to engage the head end of a cartridge case and push a portion of the cartridge case out of the machine if the cartridge

case has entered the magazine in reversed position, a clutch-operating linkage having a part positioned so as to be engaged by the protruding portion of the cartridge case and to be operated thereby to release said clutch, a punch connected to said crank shaft and mounted for sliding movement relative to said magazine, a punch centering device slidably mounted and movable into the primer-cavity in a cartridge case so as to guide the punch while punching a vent in the cartridge case, a die connected to said crank shaft and mounted for sliding movement relative to said magazine so as to enter the open end of a cartridge case and to receive the end of the punch in the die.

2,445,332
PLUMB BOB REEL
Homer B. Nelson, United States Navy
Application August 2, 1945, Serial No. 608,547
1 Claim. (Cl. 33—217)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

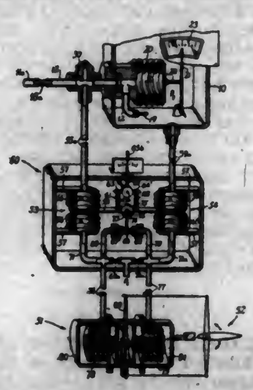
In a plumb-bob having a chamber therein symmetrically disposed about the vertical axis of said plumb-bob, a string winding mechanism within said chamber comprising a tubular spindle slidably mounted vertically in the said chamber, a spool rotatably mounted on the said spindle carrying a string winding means on one end and

a spring carrying drum on the other end having a rim cooperating with the inner walls of said chamber, a string wound on the said drum, a pair of torsion springs balancing each other in weight distribution in all positions of tension and actuating the rotational movement of said spool and symmetrically mounted about the said vertical axis of said plumb-bob within the said drum, each spring being connected at one end to the said spool and at the other end to the said spindle, the spool connections being diametrically disposed with respect to each other and the spindle connections being diametrically disposed with respect to each other, and a thumb screw threadably affixed to the said tubular spindle adapted to urge the said spindle upward to bring the rim of said spring drum into engagement with the said chamber wall to brake the said spool and hold the string at any length desired.



2,445,323
PROCESS OF MAKING REGENERATED CELLULOSE FILMS
James Burton Nichols, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application November 23, 1944, Serial No. 564,893
6 Claims. (Cl. 18—57)

1. A process for preparing films of regenerated cellulose from viscose which comprises extruding viscose on a support to form a viscose film, drying the film to a water content of less than 45% by weight before the film has lost its solubility in water, said drying being accomplished by subjecting the film to the action of a stream of inert gas moving at a speed of at least 400 ft./min. relative to the film, said inert gas being at a temperature between ordinary room temperature and 130° C., and regenerating the cellulose by heating the dried film in an inert atmosphere until regeneration is substantially complete, said extruding, drying, and regeneration being accomplished under substantially tensionless conditions whereby to form a tough, tear-resistant regenerated cellulose film having substantially uniform strength in all directions and further characterized by having the micelles in random distribution.



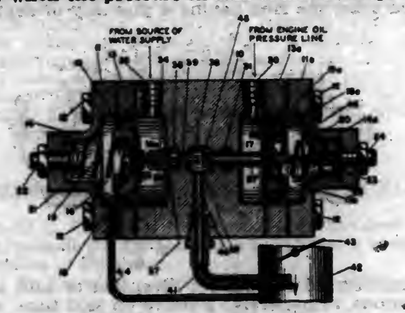
2,445,334
HYDRAULIC VALVE
Herbert E. Page, Pasadena, Calif.
Application October 30, 1943, Serial No. 508,444
7 Claims. (Cl. 277—60)

1. A hydraulic valve comprising a body having walls defining a pressure chamber, a fluid inlet port through one of the walls, a check valve in the chamber and seating towards the inlet to control entry of fluid through said port, a main plunger resiliently mounted in the chamber, said main plunger having a cylindric reduced diameter inner end portion providing a shoulder facing towards the check valve, an auxiliary plunger mounted in said cylindric inner end portion and having its outer end exposed to fluid pressure in the chamber, spring means urging the outer end of the auxiliary plunger against the check valve, and an opening in the main plunger exposing the inner end of the auxiliary plunger to fluid pressure in the chamber, whereby to substantially equalize the fluid pressure on the respective ends of the auxiliary plunger, said shoulder being exposed to fluid pressure in the chamber and being

of sufficient area that the main plunger is moved away from the check valve in response to fluid pressure in the chamber.

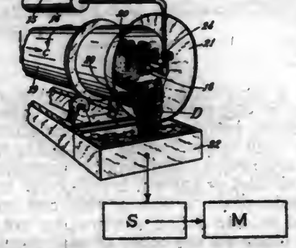
2,445,335
ALTITUDE AND RATE OF CHANGE MEASURING DEVICE AND CONTROL FOR AIRCRAFT
George A. Philbrick, Sharon, and Allan R. Catheron, Needham, Mass., assignors to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application May 3, 1941, Serial No. 391,678
15 Claims. (Cl. 244—78)

11. In apparatus for controlling rate of change of altitude of aircraft in response to barometric pressure, in combination, a pressure chamber, a source of auxiliary fluid pressure, means for controlling the flow of said auxiliary pressure to and from said pressure chamber to maintain the instantaneous value of the pressure therein at a fixed value with respect to the instantaneous value of the barometric pressure, means responsive to the potential of the auxiliary pressure required to maintain such relationship for regulating the rate of change of altitude of the aircraft, said last-named means being manually adjustable to set the desired rate of change of altitude.



2,445,336
ANTENNA MOUNTING
Alexander Rasch, Eatontown, N. J., assignor to the United States of America as represented by the Secretary of War
Application June 5, 1946, Serial No. 674,409
3 Claims. (Cl. 250—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An axially symmetrical biconical assembly comprising a metallic head having at least three upwardly and outwardly extending sockets formed therein, a metallic, annular base plate bearing at least three downwardly and outwardly extending radiator sockets, said head sockets and said plate sockets forming the same angle with the axis of said assembly; a first, annular, dielectric spacer positioned between said head and said plate, a rubber washer positioned between said base plate and said first spacer, a second rubber washer and a metallic washer positioned between said spacer and said head; a resilient, metallic coupler, metallic legs to connect said coupler and said plate; a coaxial cable connector comprising an outer conductor and an elongated, externally threaded, inner conductor coaxial therewith, means to connect electrically said outer conductor to said base plate, and means to insulate said inner conductor from said base plate, said inner conductor extending upwardly through said washers, plate and spacers to engage mechanically and electrically said head.

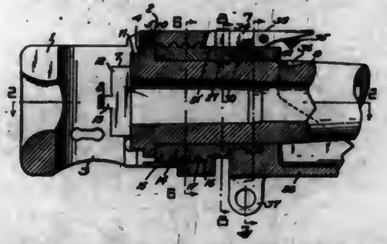


2,445,337
INJECTION CONTROL SYSTEM
Hugh S. Robinson, United States Navy
Application August 9, 1945, Serial No. 609,903
5 Claims. (Cl. 123—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a fluid injection system for internal combustion engines having a throttle tube subject to manifold pressure, the provision of a housing having fluid conduit means therethrough connected to the throttle tube, a metering valve in said conduit means for controlling the passage of the fluid to the throttle tube in amounts inversely proportional to the manifold pressure, means providing a chamber in said housing subject to pressure created by revolution of the engine, a valve closing member normally held in inoperative position by the pressure within said chamber, and spring means for shifting said closing member when the pressure in said chamber drops be-

low a predetermined point whereby to positively close said valve.

2,445,338
TOBACCO AND METHOD OF TREATING THE SAME
Frank J. Sowa, Cranford, N. J., assignor to American Machine and Foundry Company, a corporation of New Jersey
Application June 11, 1942, Serial No. 446,550
12 Claims. (Cl. 131—17)



1. The method of processing tobacco which comprises reducing a selected quantity of tobacco to a substantially colloidal state in a fluid medium to form a sol, subjecting said sol to heat for a period of time sufficient to accelerate the hydration of substantially all of said tobacco dispersed in said fluid medium, and then applying said heat treated sol to the surface of tobacco to be treated.

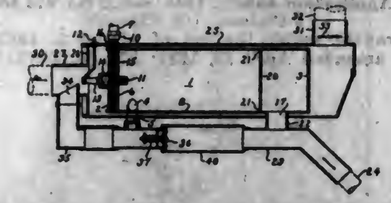
7. Shredded cigarette tobacco comprising tobacco wherein substantially all the individual shreds are treated with a stiffening agent consisting of a tobacco sol containing substantially all original soluble and insoluble tobacco constituents applied to said tobacco to increase the stiffness of the shreds thereof.

2,445,339
GUN TUBE, BREECH RING, AND COUPLING MEANS THEREFOR
William Summerbell, Washington, D. C.
Application September 11, 1946, Serial No. 696,329
10 Claims. (Cl. 89—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a gun, the combination of a breech ring having an axial bore, and provided with an inner peripheral shoulder at the rear end of said bore; a tube received in said bore and having an

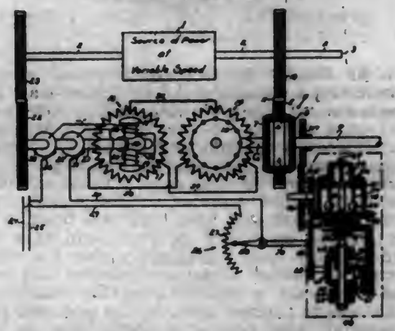
outer peripheral flange and a plurality of projections extending axially from the rear end of said tube, the ring having a plurality of depres-

sions formed therein for reception of said projections, respectively; a sleeve on said tube; and means on said ring and said sleeve for confining said flange between said shoulder and said sleeve.



2,445,340
LONG-BASE STRAIN OR DISTANCE GAUGE
Howard R. Thomas, Kensington, Md.
Application July 30, 1946, Serial No. 687,052
8 Claims. (Cl. 33—125)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

6. In a long-base strain gage for measuring changes in distance between two spaced zones, two support members to be permanently fashioned in said spaced zones, two posts for removable attachment to said support members in horizontal parallel positions, a collar for rotation on one of said posts, a line having one end portion attached to said collar, a wheel for rotation in a vertical plane on the other of said posts, said line at its opposite end portion being attached to the wheel and extending along a portion of the wheel rim, means urging the wheel to rotate in a direction to tension the line, the vertical angular position of the wheel when said line is tensioned varying with the distance between said posts, a spirit level mounted for vertical swinging adjustment parallel to the wheel, and means for indicating the adjusted angular relation of the level and wheel.

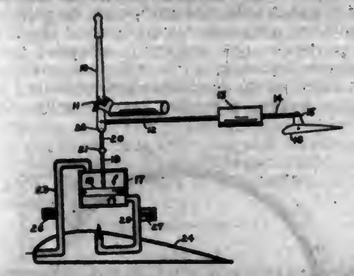


2,445,341
AIRCRAFT HEATER WITH WICK BURNER
John I. Trimble and William M. Myler, Jr., Columbus, Ohio, assignors, by mesne assignments, to Surface Combustion Corporation, Toledo, Ohio, a corporation of Ohio
Original application March 2, 1943, Serial No. 477,746. Divided and this application March 21, 1946, Serial No. 655,933
3 Claims. (Cl. 158—28)

1. A heater comprising a heating unit for heating a medium adapted to flow in heat exchange relation therewith, said unit comprising a cylindrical shell defining an elongated cylindrical combustion zone, an end wall closing the front end of said shell, a porous body disposed across said zone in front of said end wall for feeding liquid fuel to said body, means for heating said body to vaporize the liquid fuel, means for igniting the vaporized fuel, said cylindrical shell having an aperture in its side for the entry of combustion supporting air into said zone near the

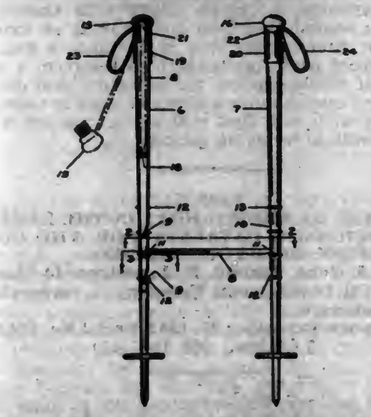
fuel entering end thereof, and means for conducting said air to said aperture comprising a conduit which is tangent to the cylindrical shell at said aperture so that the air enters said zone tangentially for initial whirling therein, whereby the flame of combustion of said fuel will be whirled in said zone.

2,445,342
CONSTANT SPEED POWER SUPPLYING APPARATUS
Lev A. Trofimov, Willoughby, Ohio
Application October 2, 1942, Serial No. 460,511
23 Claims. (Cl. 318—8)



1. In a transmission for transmitting power at constant speed from a variable speed power source; a power input element to be driven by the variable speed source; a power output element; power transmission means between the two elements, comprising an electric generator having an electric load circuit and mechanism differentially dividing the power from the input element between the generator and the output element; and control means controlling the electrical load of the generator to control the speed of the output element and being operable responsive to an increase or decrease of the speed of the output element to change the generator load to respectively effect decrease or increase of the output element speed to maintain the speed of the output element substantially constant.

2,445,343
CONTROL SYSTEM FOR AIRPLANES
Thomas D. Tyra, United States Navy
Application April 16, 1943, Serial No. 483,245
8 Claims. (Cl. 244—78)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an aircraft including a control surface therefor and a control member adapted to be moved from a neutral position by the pilot for

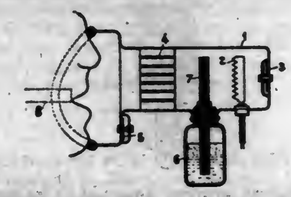
deflecting said control surface, a piston, pneumatic means for transmitting a force proportional to the negative pressure which exists over

a surface of said aircraft to said piston, and means for operatively connecting said piston to said control member to bias it to its neutral position.

2,445,344
SKIER'S RESTING DEVICE
James Wachtel, San Francisco, Calif.
Application February 11, 1946, Serial No. 646,860
1 Claim. (Cl. 280—11.37)

A skier's resting device comprising a pair of hollow ski poles, a cap detachably secured onto the upper extremity of each of said ski poles, a plurality of indentations formed into each ski pole and vertically spaced therein, a plurality of circular ridges formed onto the outer surface of each pole and positioned in proximity to the lower outer opening of each indentation, a bar capable of being received into and removed from one of the ski poles and forming a seat in between said pair of poles, the outer extremities being capable of being received into said indentations, whereby said bar is detachably retained onto said pair of ski poles.

2,445,345
PROCESS FOR THE CATALYTIC REFORMING OF HYDROCARBON MIXTURES
Alva C. Byrns, Oakland, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application February 20, 1943, Serial No. 476,617
10 Claims. (Cl. 196—24)



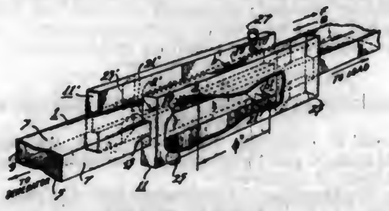
2. A process for the catalytic reforming of hydrocarbon mixtures which comprises subject-

ing said mixtures to an elevated reforming temperature in the presence of a catalyst prepared by suspending in water a hydrous gelatinous alkaline magnesium precipitate selected from the class consisting of magnesium hydroxide and magnesium silicate, adding thereto less than an equivalent amount of a water soluble salt of a metal of the class consisting of metals of atomic number 22 to 30 inclusive, and separating, washing, and drying the resulting solid product.

2,445,346
PREPARATION OF A TITANIA GEL-BORIA CATALYST
Gerald C. Connolly, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware.
No Drawing. Application July 27, 1946, Serial No. 686,729
4 Claims. (Cl. 252—250)

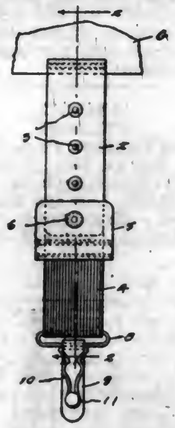
1. In the method of preparing catalysts containing titania, the improvement which comprises mixing titanyl sulfate solution with ammonium hydroxide solution to form a voluminous titania jelly, the relative proportions of titanyl sulfate and ammonium hydroxide solutions being such as to impart to the supernatant liquid an excess acidity of about 0.001 to about 0.1 normal, washing the jelly until incipient peptization begins, drying the washed jelly, further washing the dried jelly to remove reaction impurities, heating the dried jelly to obtain a gel having an apparent density of between 1.00 and 1.30 grams per cubic centimeter, impregnating the gel with sufficient boric acid solution to incorporate therein 5 to 20% of boric oxide and activating the gel at a temperature of about 800° F.

2,445,347
INHALER
Marcel Ehlinger, Paris, France
Application July 18, 1945, Serial No. 605,820
In France March 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 16, 1964
3 Claims. (Cl. 128—192)



1. An inhaler including a fluid-tight chamber, a mask mounted on an open side of said chamber, an expiration valve on said mask, electric air-heating means arranged in said chamber, air-humidifying means consisting in a wick having its upper portion located within the chamber in the path of the heated air and its lower portion dipping in a reservoir connected with the inhaler and an inlet valve provided in a wall of said chamber.

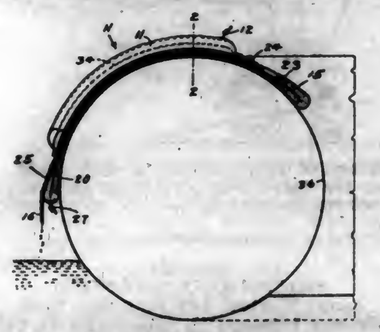
2,445,348
REFLECTOMETER FOR WAVE GUIDE SYSTEMS
John R. Ford, Narberth, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application December 21, 1945, Serial No. 636,532
6 Claims. (Cl. 171—95)



1. A reflectometer for measuring travelling waves over a wide frequency range on a wave-

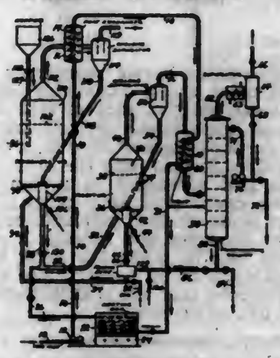
guide transmission line including a main waveguide having apertures therein at points of opposite potential longitudinally spaced along said waveguide, a second waveguide telescoped transversely with an opening into said first waveguide through said apertures, a substantially reflection-

less matched termination coupled to one end of said second waveguide, a wave detector coupled into the remaining end of said second waveguide, and means responsive to said detector for indicating the magnitude of waves travelling in a predetermined direction along said main waveguide.



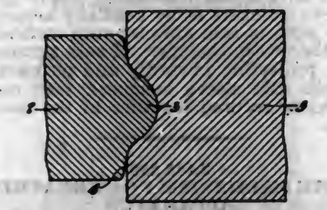
2,445,349
GARMENT SUPPORTER
Rose M. Garbutt, San Diego, Calif.
Application March 14, 1945, Serial No. 582,683
2 Claims. (Cl. 2—325)

1. A garment support adapted to be supported by an undergarment, comprising a front and a rear strap attached in superimposed relationship at their upper ends only to one another and to the bottom edge of the undergarment and depending therefrom, a plurality of longitudinally spaced male fasteners on the front non-elastic strap, a female fastener on the free end of the rear elastic strap for engaging anyone of the male fasteners to form a loop of variable length, and a clasp carried by the loop of the rear strap.



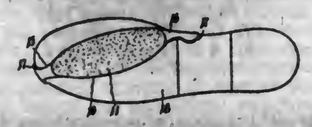
2,445,350
MULTIPLE-EFFECT SOLAR STILL
Defee C. Ginnings, Macomb, Ill.
Application December 23, 1943, Serial No. 515,352
6 Claims. (Cl. 202—172)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A multiple stage solar still comprising one or more aligned windows of flexible transparent material, a light converting flexible waterproof partition in alignment with said windows and marginally sealed thereto, a liquid absorbent wick in contact with the underside of said partition provided with extensions beyond the margin of the partition, one extension adapted to draw non-potable liquid into the still, and another extension adapted to discharge concentrated liquid by syphon action, a pocket for a supply of non-



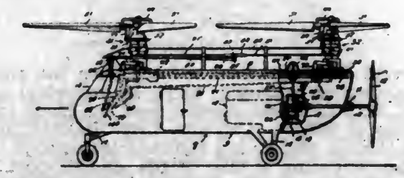
potable liquid into which a portion of said wick layer extends, a screen under said absorbent layer, a second absorbent layer having an extension for directing the flow of distillate, a flexible waterproof partition beneath said screen, a waterproof flexible pocket for collecting said distillate, and one or more additional stills in thermal contact with said first still and connected with said distillate receiving pocket.

2,445,351
PROCESS OF ADDING HEAT IN THE REGENERATION OF CATALYST FOR THE CONVERSION OF HYDROCARBONS
Edwin J. Gohr, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 27, 1941, Serial No. 424,603
3 Claims. (Cl. 196—52)



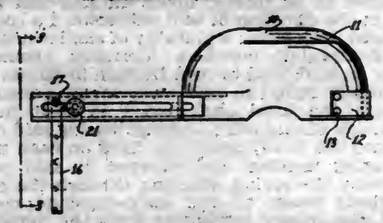
1. A process of converting higher boiling hydrocarbons to lower boiling hydrocarbons which comprises vaporizing the higher boiling hydrocarbons and mixing them with catalyst particles, passing the mixture to a reaction zone wherein the higher boiling hydrocarbons are converted to lower boiling hydrocarbons and carbonaceous material is deposited on the catalyst particles, passing vaporous products of reaction containing entrained catalyst particles overhead from said reaction zone to a fractionating zone wherein higher boiling hydrocarbons are condensed and entrained catalyst particles are scrubbed out of the vapors by condensate oil and lower boiling hydrocarbons pass overhead from said fractionating zone, withdrawing contaminated catalyst particles from the bottom portion of said reaction zone as a dense fluidized mixture, mixing at least a portion of the condensate oil with the withdrawn contaminated catalyst particles, passing the mixture to a regeneration zone wherein deposited carbonaceous material and condensate oil are burned, and mixing hot regenerated catalyst with said higher boiling hydrocarbons to supply heat of conversion.

2,445,352
METHOD OF MANUFACTURING PIPES AND TUBES
Keith C. Hamilton, McKeesport, Pa., assignor to National Tube Company, a corporation of New Jersey
Original application January 14, 1941, Serial No. 374,378. Divided and this application July 9, 1943, Serial No. 494,088
2 Claims. (Cl. 80—62)



1. In the manufacture of seamless tubes and the like by the rotary piercing method wherein the billet to be pierced is first center punched and then pierced by helically advancing it over a mandrel plug, the steps of forming a cavity in the end of a billet centrally thereof, said cavity having a contour substantially the same as that of the nose of the piercing point to be used in the piercing process with a circumferential convex shoulder arranged around the edge of the cavity between the end wall of the billet and the side walls of the cavity so as to prevent lapping of the surface of the inside wall of the cavity in the billet during the piercing thereof and then rotary rolling said center-punched billet to pierce the same.

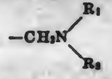
2,445,353
NONSLIP DEVICE FOR FOOTWEAR
Clarence T. Harvey, Fayetteville, N. Y.
Application August 26, 1946, Serial No. 693,009
2 Claims. (Cl. 36—61)



1. A non-slip attachment for a shoe provided with an upper having a side wall, said attachment comprising an elongated pad having an anti-slip face, and elastic connecting members at the ends of said pad, said pad being disposed obliquely across the bottom of the shoe adjacent to an end thereof, the connecting member which is thus located at this end of the shoe being positioned to one side of the longitudinal centre of the shoe with its extremity secured to said side wall, the connecting member at the other end of said pad being positioned at the other side of the longitudinal centre of the shoe and having its extremity secured to the adjacent portion of said side wall, whereby said pad may be shifted to an ineffective position against said adjacent portion of said side wall.

2,445,354
HELICOPTER
Robert G. Hoppes, Washington C. H., Ohio
Application November 6, 1944, Serial No. 562,085
7 Claims. (Cl. 244—17)

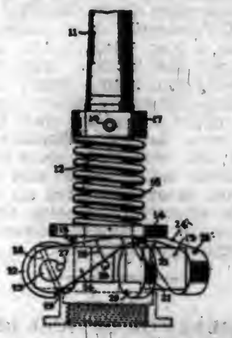
1. An aircraft comprising an elongated body containing motor means, forward and rearward vertical axis lifting rotor units on the body, means connecting the rotor units for similar rotation, and driven by said motor means, said rotor units having changeable pitch blades and pitch changing means individual to each unit, each of said rotor units comprising a base supported at the top of the body, a cylinder rising from and fixed to the base, a lower antifriction bearing at the lower end of the cylinder and an upper antifriction thrust bearing at the upper end of the cylinder, a tube rotatably mounted in the bearings, a rotor shaft rotatably mounted in the tube and connected at its lower end to said motor means, a hub fixed on the upper end of the tube above the cylinder with blade shafts radiating therefrom, lifting blades having tubular roots journalled on the blade shafts, a spider fixed on the upper end of the rotor shaft including torque arms laterally displaced from the blade shafts and, said blade roots having radial arms operatively connected to said torque arms, and feathering means mounted on said cylinder and base for selectively rotating the blades on their blade shafts in opposite directions from a position of intermediate pitch.



2,445,355
HEADGEAR FOR OPTICAL DEVICES
Hansford D. Hurt, Los Angeles, Calif.
Application January 28, 1946, Serial No. 643,928
2 Claims. (Cl. 2—10)

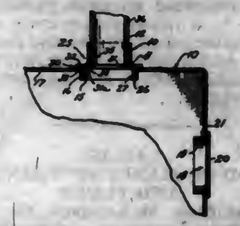
1. A head gear for optical devices comprising a cap section, a forwardly extending visor section integral therewith and formed with downwardly extending parallel side sections, said side sections having elongated slots therein, and a transverse optical device extending downwardly from said visor section and supported in said slots to be adjusted longitudinally.

2,445,356
THIOL DERIVATIVES
Morris S. Kharasch, Chicago, Ill., and Sidney Weinhouse, Chester, Pa., assignors to the United States of America as represented by the Secretary of War
No Drawing. Application January 17, 1944, Serial No. 518,582
4 Claims. (Cl. 260—534)



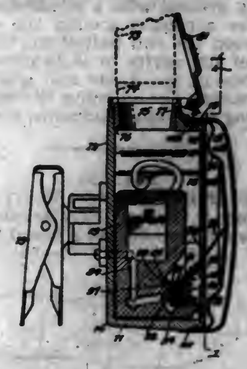
1. A compound selected from the group consisting of 2,3-dithioglycerol, 1,3-dithioglycerol, and 1,3-dithiopropane, in which a mercapto hydrogen atom is replaced by the group

wherein R_1 is a radical selected from the group consisting of hydrogen, alkyl, hydroxyalkyl and acyl, R_2 is a radical selected from the group consisting of CH_2R_3, $(CH_2)_2R_3$, $CH_2(CHOH)_4CH_2R_3$ and $C_6H_4R_3$, and R_3 is a radical selected from the group consisting of OH, COOH, and COONa.



3. An N-methylglycinomethyl thio ether of 2,3-dithioglycerol.

2,445,357
ROTARY TOOL FOR BEADING-OVER CYLINDRICAL FLANGES
Torbjorn C. Korsmo, Madison, Wis., assignor to Madison-Kipp Corporation, Madison, Wis., a corporation of Wisconsin
Application May 12, 1947, Serial No. 747,413
1 Claim. (Cl. 153—80)

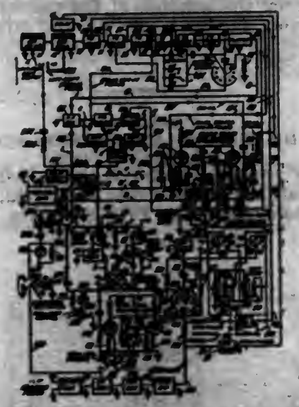


A rotary tool for beading-over an upstanding cylindrical flange, said tool comprising a head adapted to be rotated about an axis and to be fed in the direction of said axis toward a coaxial, flanged work piece; a plurality of similar notched, work-engaging members journaled symmetrically on said head to turn thereon in planes substantially radial to said axis; a collar mounted behind the head and guided to shift in the direction of said axis; a spring biasing said collar toward the head; arms, one fixed on each work-engaging member and engaged by said collar, whereby the spring, reacting through the collar similarly biases all the work-engaging means; and stop means serving to limit the motion of said members under said bias, the parts being so arranged that when the rotating head is shifted to cause the flange of the work piece to engage in the notches in said members, the members are first turned in one direction against the reaction of the spring and then reverse their motion and respond to the spring bias to follow the flange as it is spun into a bead.

2,445,358
PIPE JOINT
Lawrence G. Macchtlen, San Marino, and Harold A. Duvall and Charles G. Esler, Los Angeles, Calif., assignors to Square D Company, Detroit, Mich., a corporation of Michigan
Application June 2, 1945, Serial No. 597,278
1 Claim. (Cl. 285—48)

A connector for use with a cabinet housing electrical equipment which cabinet has wall means provided with internally threaded openings, said connector comprising a plate-like annular stop member, an externally threaded sleeve member, an internally threaded sleeve member, said sleeve members being coaxially arranged on opposite sides of said annular stop member concentric therewith, the edges of said annular stop member projecting inwardly and outwardly beyond both said sleeve members, said members being rigidly secured together in the said relationship.

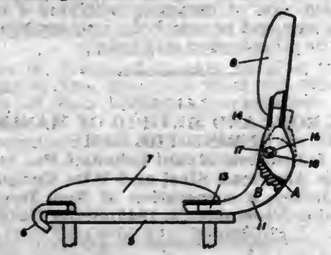
2,445,359
VALVE MECHANISM FOR BREATHING APPARATUS
Phillip E. Meidenbauer, Jr., Lancaster, N. Y., assignor to Scott Aviation Corporation, Lancaster, N. Y., a corporation of New York
Original application November 19, 1942, Serial No. 466,165, now Patent No. 2,399,954, dated April 23, 1946. Divided and this application December 24, 1943, Serial No. 515,549
2 Claims. (Cl. 137—153)



1. A breathing apparatus comprising a respiration chamber, a flexible diaphragm which forms a wall of said chamber and is moved by variations in pressure in said chamber, a fluid conduit leading to said chamber and having a valve seat the plane of which is arranged at an oblique angle relative to the plane of said diaphragm and a shoulder adjacent to said seat, and valve means for controlling the flow of fluid through said conduit into said chamber including a closure member engaging said seat, an inclined stem secured at one end to said closure member and bearing at its opposite end against said diaphragm, and a spring connected at one end with said stem and bearing at its opposite end against said shoulder.

2,445,360
MOTOR FUEL
Pharis Miller, Mountainside, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 31, 1946, Serial No. 694,437
11 Claims. (Cl. 44—69)

1. An aviation fuel consisting essentially of a minor portion of methylenecyclobutane and a major portion of hydrocarbons boiling in the gasoline boiling range.

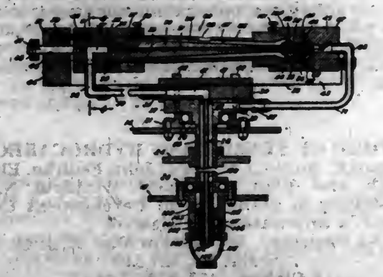


2,445,361
RADIO NAVIGATION SYSTEM
Garrard Mountjoy, Manhasset, N. Y., George D. Hulst, Jr., Upper Montclair, N. J., and Earl Scheenfeld, Mamaroneck, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application April 20, 1945, Serial No. 589,320
20 Claims. (Cl. 343—103)

1. In a radio navigation system wherein a pair of periodically recurring radio pulses transmitted from a pair of spaced synchronized radio ground stations are received to determine the time difference of said pair of pulses at the point of reception and thereby locate a position line for the point of reception, means including a cathode ray tube and a comparatively slow-sweep deflection circuit for determining or indicating said time difference in terms of time intervals of a certain duration within a fractional part of one of said time intervals, means including a comparatively fast sweep deflection circuit for deflecting the cathode ray of said cathode-ray tube during said fractional part of a time interval and for determining or indicating said fractional part of a time interval in terms of smaller time intervals, and means for selectively switching either of said time determining means to an operating condition.

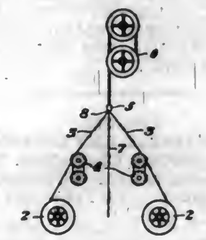
2,445,362
FOLDING BACK REST FOR BLEACHER SEATS
Edward Nunes, San Francisco, Calif.
Application January 21, 1946, Serial No. 642,517
1 Claim. (Cl. 155—100)

In a device of the character described, the combination with a seat section and a back section of a pair of hinges connecting said sections, each of said hinges comprising a pair of abutting plates, having a slot formed therebetween, a pivoted member positioned in said slot, the lower end of said pivoted member engaging the bottom of said slot when said back section is in upright position, said pivoted member having an eccentric disc positioned therein, a shaft in said disc extending through said plates, and means for rotating said shaft.



2,445,363
ELECTRODE EXTENSION
Homer L. Phillips, Charleston, W. Va.
Application January 27, 1948, Serial No. 4,673
4 Claims. (Cl. 176—119)

1. An electrode extension comprising a substantially cylindrical body having an enlarged portion at one end thereof, said body being provided with an axial bore and with a counterbore in said enlarged portion, said counterbore being substantially equal in diameter to the outside diameter of said body and being intended to receive an electrode therein, and an electrode ejecting plunger slidable in said bore.



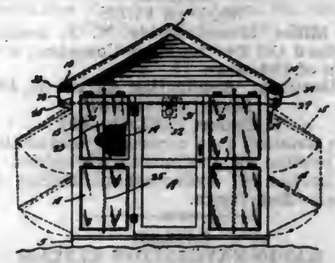
2,445,364
METHOD OF CASTING TUBULAR ELEMENTS
Dan R. Rankin, Los Angeles, and John B. Wade, Arcadia, Calif., assignors to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application October 12, 1945, Serial No. 621,966
2 Claims. (Cl. 22—200.5)

1. A method of employing a mold and a core, the latter having a hole extending therethrough from end to end, in the casting of a tubular ele-

ment which method comprises placing said core in said mold, rotating said mold rapidly about an axis transversely intersecting the axis of the mold, and, while said mold is being so rotated, pouring a stream of molten metal into said mold along said axis of rotation, supplying a cooling liquid to one end of said hole, and applying suction to the other end of said hole.

2,445,365
WIRE ROPE AND METHOD OF MANUFACTURING THE SAME
Eugene J. Reardon, Mount Lebanon, Pa., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application November 29, 1945, Serial No. 631,606
12 Claims. (Cl. 57—145)

1. In the manufacture of wire rope having a core member with a plurality of twisted steel wire strands helically arranged therearound, the method consisting of pulling the core and strands in one direction by forward tension, applying back tension uniformly to the strands as they are being pulled forwardly, and providing a point of lay intermediate the points of forward and back tension, said back tension being at least 15 per cent of the breaking strength of the strands to thereby set the strands down firmly at the point of lay to a substantial extent by radial forces which are the components of the tensions applied to the respective strands.



2,445,366
OPHTHALMIC COMPOSITIONS
George W. Rigby, Wilmington, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
No Drawing. Application October 2, 1945, Serial No. 619,900
12 Claims. (Cl. 167—59)

1. An anhydrous ophthalmic composition having a pH less than 5.5 comprising 2,3-dimercaptopropanol, an antioxidant for said mercapto compound, thiamine hydrochloride, and a glycol vehicle.

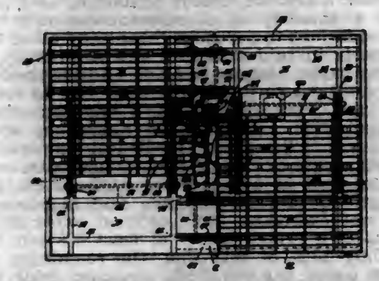
2,445,367
METHOD OF STABILIZING HYDROCARBONS
Richard F. Robey, Cranford, John Fedirko, Elizabeth, and Allan E. Barnett, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 26, 1944, Serial No. 537,540
6 Claims. (Cl. 260—666.5)

1. A diolefin containing dissolved therein a small amount of a phenolic type antioxidant and a small amount of methylene blue chloride.

2,445,368
HOUSE CONSTRUCTION
Henry Scharnhorst, Edinburg, Tex.
Application August 28, 1944, Serial No. 551,520
2 Claims. (Cl. 108—1)

1. In a building construction, a roof, said roof being open and provided with screens covering the opening, rolls on opposite sides of the building, a canvas roof covering wound on one of the rolls and provided with elongated flexible members extending therefrom and wound on the other roll, whereby the winding of the canvas on one roll uncovers the roof opening and winding of said flexible members on the other roll covers said opening.

2,445,369
HYDRAULIC TRANSMISSION FOR OUTBOARD MOTORS
Samuel F. Shields, McDavid, Fla., assignor of one-half to Paul M. Clyde, Pensacola, Fla.
Application January 22, 1942, Serial No. 427,800
2 Claims. (Cl. 60—53)



1. A hydraulic transmission comprising a pump mechanism having a housing containing a fluid, depending valves on said housing, a conduit from one of the valves to the outlet side of the pump housing, a conduit from the other valve to the inlet side of the pump housing, a rotor provided with a casing, a main pipe connecting the valve, associated with the outlet side of the pump housing, to one side of the rotor casing, a second main pipe connecting the other valve to the opposite side of the rotor casing, branch pipes leading from the valves and crossing and communicating with the opposed main pipes, said pipes forming the sole support of the rotor, one of the conduits and the main pipe associated therewith conveying the pumped fluid to the rotor casing to drive the rotor and the other main pipe and associated conduit returning the fluid to the pump housing, and means by which said valves are operable as a unit to divert the flow of the fluid through the branch pipes for reversing the direction of movement of the fluid in the rotor.

2,445,370
CATALYTIC CRACKING OF HYDROCARBON OILS WITH ACTIVATED CLAYS
William E. Spicer and Jerry A. Pierce, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 19, 1942, Serial No. 455,233
2 Claims. (Cl. 196—52)

1. A process for cracking hydrocarbon oils which comprises passing the oil to be cracked through a cracking zone containing a catalyst consisting essentially of a bentonite clay activated by first digesting said clay with a dilute solution of a mineral acid having a concentration below 25%, thereafter separating the clay from the acid solution, again digesting the clay with a fresh dilute solution of the same mineral acid, the total amount of 100% acid used being at least 50% of the weight of the clay, and the amount of 100% acid used in each digesting treatment being at least 25% by weight of the clay, thereafter washing and drying the resulting product, and keeping the oil in contact with said catalyst for a period sufficient to convert a substantial portion into lower boiling hydrocarbons.

2,445,371
WASHING MACHINE CONVEYER
Harry A. Thurn, Warren, Pa., assignor to Harry S. Rapp, Warren, Pa.
Application June 12, 1944, Serial No. 539,877
5 Claims. (Cl. 198—19)

1. In a washing machine, a conveyor for a plurality of carriers, comprising a rectangular frame providing two parallel rows of stations along its opposite sides with the number of stations in both rows exceeding the number of carriers by two, said carriers being arranged in two equal groups in said rows, a unidirectional rotary conveyer under each of said rows, a plurality of members on each of said pair of conveyers and engaging the carrier at the lead end of each conveyer and releasing the carrier at the trailing end of each conveyer, means for driving said unidirectional rotary conveyers in opposite directions for simultaneously moving said groups in opposite directions along said rows to the opposite ends thereof, means for thereafter stopping said unidirectional rotary conveyor, means for thereafter moving the advance carrier of each row into the adjacent empty station of the other row to be subsequently moved by said unidirectional rotary conveyors along said other row, and means for thereafter again driving said conveyors whereby said carriers traverse an endless generally rectangular path.

2,445,372
PROCESS OF COPPER COATING STAINLESS STEEL
Herbert W. Trenbath, Shaker Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application April 26, 1945, Serial No. 590,414
1 Claim. (Cl. 204—28)

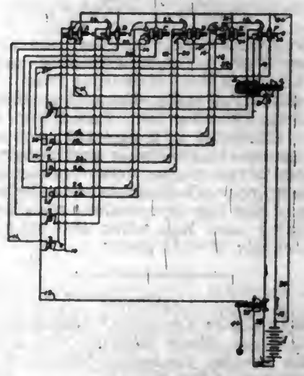
The process of electrochemically coating stainless steel wire with copper without externally applied electric current, which comprises moving the stainless steel wire through an aqueous solution of copper sulphate as electrolyte and maintaining the wire while immersed in said solution in contact with plain carbon steel bodies, the stainless steel wire and plain carbon steel bodies being in direct contact with each other at spaced apart points within said solution, thereby forming a galvanic couple between the stainless steel wire and the plain carbon steel bodies, said contact being maintained until said wire is coated with copper from the electrolyte.

2,445,373
HAIRPIN OPENER
Erville W. Turner, Manchester, Wash., assignor of one-half to Hope E. Wood, Glendale, Calif.
Application May 2, 1947, Serial No. 745,389
6 Claims. (Cl. 132—1)

3. In an opener or spreader for hair pins of the bobby pin type, a finger engaging supporting member having a stem projecting from a portion thereof, said stem being disposed to project radially outwardly from the supporting member and being elongated in a direction circumferential of the supporting member and being provided with side walls converging toward one end thereof to provide an edge adapted to engage between the free ends of the legs or members of a bobby pin for spreading said legs when the bobby pin is moved inwardly of said stem.

2,445,374
STABILIZATION OF CELLULOSE ETHERS
Peter Van Wyck, Bland District, Va., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 10, 1944, Serial No. 539,782
10 Claims. (Cl. 106—194)

3. As a new composition of matter, granular ethyl cellulose characterized by the presence



therein of an agent capable of stabilizing the ethyl cellulose against the degrading effects of heat and oxygen without reducing the viscosity of the ether, said agent being an inorganic compound of copper in an amount from about 0.0002% to about 1% of copper based on the weight of the ether.

2,445,375
SPRING STRUCTURE FOR MATTRESS, CUSHIONS, OR THE LIKE
Lionel Selby Wallis, Knowle, England
Application September 15, 1944, Serial No. 554,268
In Great Britain October 1, 1943
3 Claims. (Cl. 5—270)

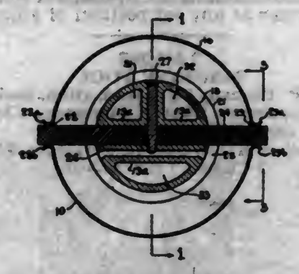
1. A spring assembly for mattresses, cushions, seats and like structures, comprising a plurality of helical springs, a clip plate underlying the terminal turns of two adjacent helical springs having arches extending upwardly from one side of the clip between which pass the said terminal turns of two adjacent helical springs, a wire underlying said clip having an arched portion extending through an opening in the clip and between the arches of the clip and also between and in contact with said terminal turns to separate said turns, and retaining means extending through the arches of the clip and through the arch in said wire to prevent separation of the clip from the adjacent springs and to prevent separation of said wire in one direction from the clip.

2,445,376
ELECTROMAGNETIC LOCK-OPENING SYSTEM
Thomas J. Woolmer, Jr., Baltimore, Md.
Application December 16, 1944, Serial No. 568,526
1 Claim. (Cl. 70—278)

In combination with an appropriate source of electro-motive force, a lock-operating electric-conducting system that is normally in circuit with said source and includes a solenoid and a circuit-closing element and a series of alternately arranged primary and secondary manipulative switch-elements, a magnetic plunger in and protruding from said solenoid and adapted to be put in a proper relation with a keeper to constitute a lock-bolt; a circuit-breaking system of electric conductors normally in circuit with said source and including a series of alternately arranged primary and secondary manipulative switch-elements, and electro-magnetic means to move said circuit-closing element to circuit-opening position and thereby prevent said source from energizing said lock-operating system; insulating elements respectively between and rigidly united with the primary switch-elements of the lock-operating system and circuit-breaking system so as to form a series of independently operable primary or setting switch-couplets; and insulating elements respectively between and rigidly united with the secondary switch elements of the lock-operating system and circuit-breaking system so as to form a series of independently operable lock-operating switch-couplets in which each secondary switch-element of the circuit-breaking system is operatively connected mechanically with its rigidly united complemental secondary switch-element of the lock-operating system while being electrically disconnected therefrom.

2,445,377
METHOD OF TREATING ORES AND CONCENTRATE PRODUCED THEREBY
Lewis B. Wyckoff, Lewiston, N. Y., assignor to Electro Metallurgical Company, a corporation of West Virginia
No Drawing. Application May 1, 1945, Serial No. 591,415
4 Claims. (Cl. 75—30)

1. The method of treating a material containing an oxydic compound of titanium and an oxydic compound of iron, which method comprises preparing a furnace charge containing said material, a quantity of a carbonaceous reducing agent sufficient to reduce substantially all of the iron oxide in said material, and a quantity of calcium oxide, aluminum oxide and magnesium oxide sufficient to flux said charge and to form, when said charge is smelted, a slag containing titanium oxide, calcium oxide, aluminum oxide, magnesium oxide, and incidental impurities, said aluminum oxide and magnesium oxide each being present in a proportion at least 5% the aggregate of aluminum oxide and magnesium oxide not exceeding 20%, calcium oxide being present in a proportion of at least 8% but not exceeding 20% of said slag, the remainder titanium oxide, the minimum titanium oxide being 62% calculated as TiO_2; and smelting said charge in a furnace at a temperature below 1650° C. to produce molten iron and a fluid, titanium-rich slag of such composition.

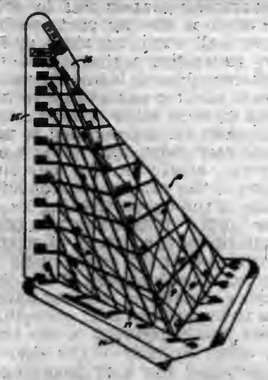


2,445,378
ALKOXYPOLYOLEFIN POLYMERS AND PROCESS OF MAKING SAME
David W. Young, Roselle, and Norman M. Elmore, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application July 22, 1943, Serial No. 495,764
14 Claims. (Cl. 260—92.6)

1. A copolymer from between 99.5% and 0.5% of an isomonoolefin having 4 to 8 carbon atoms per molecule and 0.5% to 99.5% of a conjugated monoalkoxy-2-diolefin of 5 to 13 carbon atoms per molecule and having 1 to 3 carbon atoms in the alkoxy substituent.

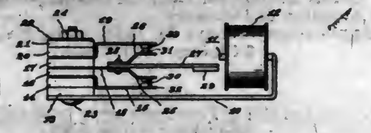
2,445,379
POLYMERIZING DIALKOXYDIOLEFINS AND ISOOLEFINS
David W. Young, Roselle, and Norman M. Elmore, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 24, 1944, Serial No. 542,027
8 Claims. (Cl. 260—92.6)

1. A copolymer of isobutylene in the proportion of 5% to 99.5% and a dialkoxy conjugated diolefin having 6 to 10 carbon atoms per molecule in the proportion of 0.5% to 95%.



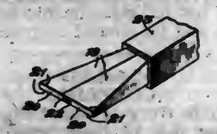
2,445,380
COAXIAL TRANSMISSION LINE
Paul D. Zottu, Indian Hills, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application February 16, 1944, Serial No. 522,647
12 Claims. (Cl. 174—28)

1. A transmission line comprising an outer hollow conductor, an inner hollow conductor having a slot elongated lengthwise thereof, means for supporting said inner conductor in fixed spaced relation within said outer conductor comprising an insulating bar having a materially greater width than thickness and extending through said slot with the ends of said bar supported by said outer conductor, clamping means within said inner conductor for clamping said bar against the side of said slot, said bar in its clamped position extending symmetrically across said inner conductor, and means for securing in fixed position at least one end of said bar to said outer conductor.



2,445,381
CUTTER LIFE CALCULATOR
Joseph F. Allen, Cleveland Heights, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application September 19, 1947, Serial No. 775,057
7 Claims. (Cl. 235—85)

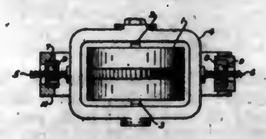
3. A calculating device for a cutter tool comprising a three dimensional body having plane faces which are parallel with planes respectively representing a constant cutting speed of the tool, a constant rate of feed of the tool, a constant depth of cut of the tool and a constant rate of material removal, and graduations on certain of the faces of the body representing the edges of sets of planes, each of said sets of planes being parallel with one of the faces of the body and the planes of each set representing gradations in the value of the factor represented by that face of the body which is parallel therewith and other graduations upon the body representing the life of the cutter, whereby the length of life of a cutter for given values of cutting speed, rate of feed, depth of cut and rate of material removal is determined by observing the relation of the common intersection of the planes



corresponding to the given values of these factors with said other graduations representing cutter life.

2,445,382
HIGH-FREQUENCY VIBRATOR
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application April 14, 1944, Serial No. 531,092
5 Claims. (Cl. 200—90)

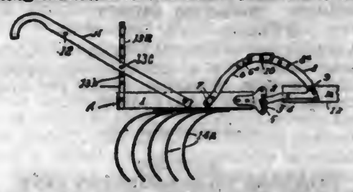
1. A vibratory electromagnetic interrupter which comprises in combination a flexible hinge plate clamped at one of its ends and carrying a set of vibratory contacts at its other end, a plurality of compliant side springs clamped at one of their ends and each carrying a contact at its other end for cooperation with a vibratory contact, a non-compliant actuating rod having one of its ends connected to said set of vibratory contacts and having its other end extending away therefrom and carrying a ferromagnetic weight, and a driver electromagnet applying deflecting force to said weight.



2,445,383
SCREW DRIVER HAVING TWO-PART EXPANDING BIT
George Walker Barlow, Salt Lake City, Utah
Application July 11, 1944, Serial No. 544,358
1 Claim. (Cl. 145—50)

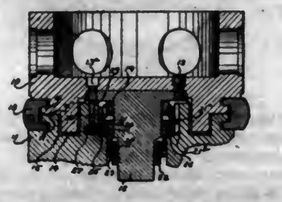
A screw driver of the character described, including a metallic shank having one end thereof split to provide a pair of resilient normally separated legs, each of said legs having on the free end thereof a kerf engaging tip part of a width less than the width of the kerf, means for main-

taining the legs in substantially the same plane for easy insertion into the kerf of a screw head, the kerf engaging end of each of said tip parts being substantially trapezoidal in cross-section to provide each of the tip parts with a pair of parallel kerf wall engaging sides and a pair of confronting contacting walls, the said confronting walls of the tip parts being oppositely beveled so as to cause said tip parts to move transversely with respect to each other toward opposite sides of the kerf when force is applied to urge the tip parts toward each other and linearly of the kerf, the transverse length of the effective surface forming each of the beveled confronting and contacting walls of the tip parts being less than one-half of the length of the kerf engaging side of either of said tip parts whereby when the tip parts are in a position that the confronting faces completely overlap, the thickness of the tip along its kerf engaging length is substantially uniform throughout the combined kerf engaging length of the tip parts and movement of the tip parts toward each other linearly of the kerf a distance less than one-half the kerf engaging length of either of the tip parts produces maximum relative transverse movement of the tip parts toward engagement with the kerf sides, movement of said first mentioned means toward the kerf engaging end forcing the tip parts toward each other and linearly of the kerf.



2,445,384
ERECTOR SYSTEM
Samuel Bousky, Shaker Heights, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application January 24, 1945, Serial No. 574,340
6 Claims. (Cl. 74—5)

1. A self-erecting gyro vertical comprising a gyroscope supported on horizontal axes in substantially neutral equilibrium and with its rotor having a normally vertical spin axis, an outer gimbal pivotally supported about one horizontal axis by a stationary frame, an inner gimbal carrying said rotor and pivotally connected to said outer gimbal about an horizontal axis at right angles to that of the latter by a pair of multilead screw pivots engaging ball bearing assemblies anchored in said outer gimbal and having predeterminedly spaced balls to separately engage each screw thread whereby a bodily linear shifting of said inner gimbal with its rotor occurs in a predetermined direction coincident with its axis of suspension in said outer gimbal as the inner gimbal rotates about its axis in response to precessional variations of normal relationship between the rotor spin axis and its gimbal suspension.

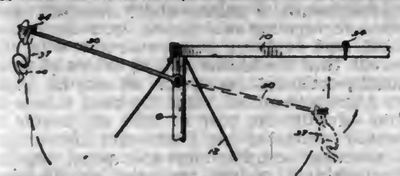


2,445,385
COUPLING
Early R. Burgess, Good Hope, Ga.
Application July 13, 1944, Serial No. 544,667
2 Claims. (Cl. 97—199)

1. In a cultivator having a main beam and a separate tongue or work-beam positioned forwardly thereof in longitudinal alignment therewith and pivotally connected therewith for vertical movement, means for vertically and angularly adjusting the tongue or work beam relative to the main beam, said means including two pairs of arcuate overhead links, one of said pairs being secured at their rear ends to each side of the forward end of the main beam with their free ends extended upwardly and forwardly in transverse alignment, and the other pair being secured

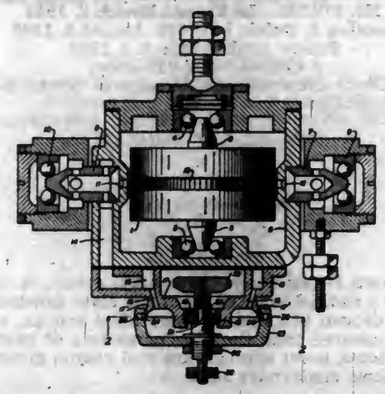
at their forward ends to each side of the rear end of the tongue or work-beam with their free ends extended upwardly and rearwardly in overlapping relation across the free ends of the first named pair of links, and means for releasably and adjustably locking the overlapped ends of the links together at any set position of adjustment.

2,445,386
MACHINE TOOL
Nicholas P. Darash, Cleveland, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application March 5, 1945, Serial No. 581,035
3 Claims. (Cl. 29—48)



1. In a machine tool, a supporting member having an opening, a turret having a stud, means in said opening for rotatably supporting said stud and including bearings spaced axially of the opening and stud, an externally threaded spacer sleeve interposed between said bearings and within which said stud rotates, means maintaining said sleeve against rotation in said opening but allowing the same to move axially therein, a nut mounted on said externally threaded sleeve and provided on its outer circumference with gear teeth, a pinion carried by said supporting member and meshing with said gear teeth, a shaft having one of its ends operatively connected to said pinion and its opposite end underlying said turret, said turret being provided with an opening affording access to said last mentioned end of said shaft.

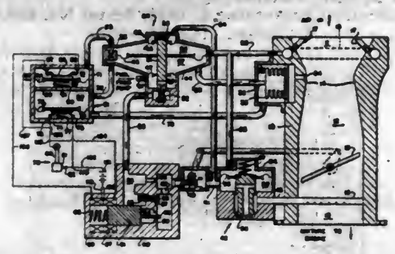
2,445,387
AMUSEMENT DEVICE
Lawrence C. Davis, Miami, Fla.
Application November 24, 1945, Serial No. 630,606
3 Claims. (Cl. 46—130)



1. A simulated circus comprising a rectangular base and a rectangular frame, means for rigidly supporting the frame in spaced parallelism to the base, a trapeze longitudinally swingably supported upon the frame, a cross bar rigidly supported upon the frame, a simulated gymnast, means for supporting the gymnast upon the trapeze for swinging movement, said last named supporting means permitting automatic disengagement of the gymnast from the trapeze upon

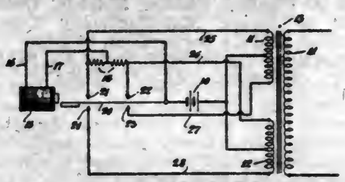
predetermined contact of the trapeze riding gymnast with the cross bar, said contact automatically

causing the gymnast to be suspended upon said cross bar.



2,445,388
VERTICAL HYDRAULIC GYRO
Bert G. Carlson, Gates Mills, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application February 17, 1945, Serial No. 578,525
6 Claims. (Cl. 74—5)

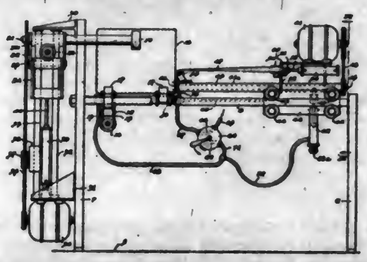
1. An erecting device for gyro verticals comprising a universally supported rotor bearing frame and a fluid driven gyro rotor therein, a wheel rotatably and pendulously mounted on said frame and in communication with the pressure fluid for driving said rotor, said wheel having a plurality of circumferentially spaced outlet passages extending tangentially through its outer rim to impel rotation to said wheel in the same direction as that of said gyro rotor and normally about an axis coincidental with that of said gyro as pressure fluid is discharged through said passages and valve means carried by said frame for maintaining said outlet passages equally open while said gyro remains vertical and when said gyro is tilted adapted to restrict fluid flow through said passages as they pass by the low side of said gyro and more fully open fluid flow through said passages as they pass by the high side of the tilted gyro and its valve means for creating a torque to erect said gyro.



2,445,389
CARBURETOR
Milton E. Chandler, New Britain, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application August 13, 1943, Serial No. 498,471
10 Claims. (Cl. 123—119)

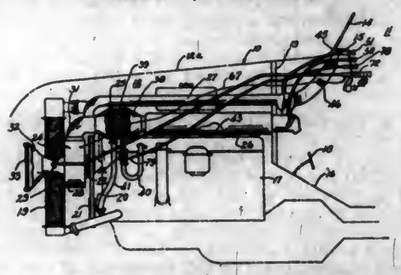
1. In a fuel supply system for an internal combustion engine, a conduit for air flowing to said engine for combustion purposes, means associated with said conduit for producing two unequal pressures whose difference is a measure of the rate of flow of air thru said conduit, a conduit for fuel flowing to said engine, a metering restriction in said fuel conduit for regulating the flow thru said fuel conduit as a function of the fuel pressure differential across said restriction, means for controlling said fuel pressure differential as a function of the difference of said two unequal pressures so as to maintain a substantially constant fuel-to-air ratio as long as the cross-sec-

tional area of said metering restriction remains fixed, means responsive to said fuel pressure differential for increasing the cross-sectional area of said restriction when said differential exceeds a predetermined value to increase said fuel-to-air ratio, and additional means responsive to a condition affecting the thermal capacity of the air passing said engine for increasing the cross-sectional area of said restriction to increase said fuel-to-air ratio when said condition assumes a predetermined value indicative of insufficient cooling of said engine.



2,445,390
VIBRATOR CIRCUIT WITH PRIMARY CURRENT DIVISION
Robert M. Ellis, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application January 4, 1944, Serial No. 516,985
6 Claims. (Cl. 175—365)

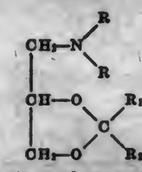
6. A vibrator system comprising, in combination, a pair of center-tapped primary windings, a source of current having one terminal thereof connected to both of said center taps, a vibratory reed connected to the other terminal of said source, a driver coil for said reed, a pair of contacts connected, respectively, to the terminals of the first primary winding, a pair of contacts connected, respectively, to the terminals of the second primary winding, each pair including a contact on the driver coil side of the reed and a contact on the other side of the reed, and a dual branch circuit for energizing said driver coil, one branch of said circuit being connected between the first driver coil side contact and the reed, another branch of said circuit being connected between the second driver coil side contact and the reed, each branch circuit being disabled when the contact associated therewith is engaged by



the reed, whereby current flows through the driver coil when either of said driver coil side contacts is not engaged by the reed and no current flows through the driver coil when both of said driver coil side contacts are engaged by the reed.

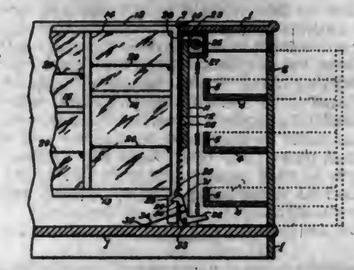
2,445,391
GRINDING MACHINE
John A. Elmes, Beaver Falls, and Howard F. Johnson, Ellwood City, Pa., assignors to Walter L. Ryman, Pittsburgh, Pa.
Application September 4, 1946, Serial No. 694,800
8 Claims. (Cl. 51—142)

1. Apparatus for grinding interior surfaces of open-end hollow articles, comprising a sanding belt, a supporting member movable axially into an article, a pulley mounted on the forward end of the supporting member, on an axis that is parallel to the axis of the article, a sanding belt extending around the pulley and looped throughout a greater distance than the length of the article, means on the supporting member for guiding the belt through a path that extends around the pulley and thence parallel to the axis thereof and to a point exteriorly of the article when the supporting member is at its foremost position in the article, and means for driving the belt.



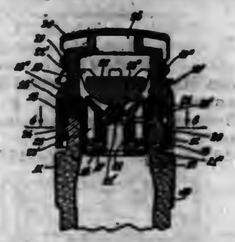
2,445,392
HEATING AND VENTILATING APPARATUS FOR VEHICLES
Howard J. Findley, Shaker Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application July 10, 1944, Serial No. 544,296
8 Claims. (Cl. 237—12.3)

3. In heating and ventilating apparatus for a vehicle having a passenger compartment provided with a windshield, an engine compartment and an engine in the latter compartment provided with a power take-off and a liquid cooling system, an air heater located in the engine compartment and having a core connected with said cooling system and an air discharge means leading to said passenger compartment, a blower provided with a cold air intake and connected with said heater for the delivery of air to said passenger compartment through said core and discharge means, a substantially constant speed coupling for driving said blower from said power take-off, said coupling being operable with slippage such that the blower will be driven at a substantially constant speed for all engine speeds above a predetermined value, by-pass means extending around the core of said air heater for delivering unheated air from said blower into said passenger compartment at a point adjacent said windshield, valves for said air discharge means and said by-pass means, and control means in said passenger compartment and operably connected with said valves to actuate the same.



2,445,393
NEW AMINO-DERIVATIVES OF DIOXA-CYCLOPENTANE
Ernest Fourneau, Paris, France, assignor to Societe des Usines Chimiques Rhone Poulenc, Paris, France, a French body corporate
No Drawing. Application June 26, 1946, Serial No. 679,583. In France March 8, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 8, 1964
5 Claims. (Cl. 260—338)

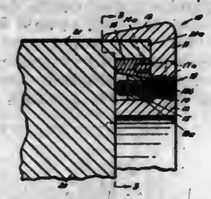
1. Dioxa-cyclopentane derivatives of the general formula:



(wherein R denotes a lower alkyl group, R_1 denotes a radical selected from the class consisting of hydrogen atoms and lower alkyl groups, and R_2 is selected from the class consisting of hydrogen atoms, lower alkyl groups and phenyl groups) and their quaternary salts.

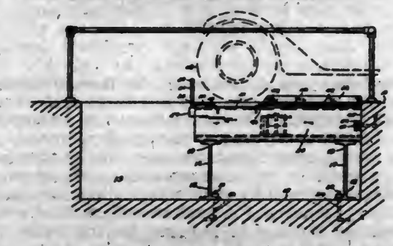
2,445,394
DOMESTIC BAR WITH DISAPPEARING SHELVE COMPARTMENT
Tomas Ramirez Giralt, Habana, Cuba
Application March 23, 1946, Serial No. 656,616
In Cuba February 20, 1946
1 Claim. (Cl. 312—140.1)

A combined chest and bar comprising a cabinet having a base and top and back walls, an opening in said top wall, door leaves hinged to the ends of the back wall, a plurality of shelves supported on the inner faces of the door leaves to support drinking vessels, a shelving compartment having a side extension for beverage containers slidably mounted across the opening in the top wall of the cabinet, slide guides vertically fixed within the cabinet and between which said shelving compartment is slidably mounted, a spring formed of a wound metallic strip and supported adjacent the top portion of one of the slide guides and opposite to said compartment and having its free end connected to the lower end of the side extension of said compartment, a bell-crank pivotally mounted on the lower end of the slide guide adjacent the wound metallic-strip spring and having an arm provided with a notch and serving as a catch and another arm serving as a treadle, a stop fixed to the lower portion of the last named slide guide and adapted to engage the notch of the former arm of the bell-crank to limit its oscillatory movement, and a coil spring connecting the catch arm of the bell-crank to a fixed point of the cabinet base, the latter spring tending to cause the bell-crank to swing to a position in which a pin on the side extension of the compartment is locked beneath the catch and the stop engages the notch in the catch arm of the bell-crank upon the shelving compartment being caused to descend to remain concealed within the cabinet.



2,445,395
BOTTLE CLOSURE
Edgeworth Greene, Upper Montclair, N. J., and William H. Ferrest, Brooklyn, N. Y.
Application October 7, 1941, Serial No. 413,940
10 Claims. (Cl. 215—22)

1. A closure for locking attachment to a bottle having an externally threaded neck, comprising an outer and an inner element, the former consisting of an internally threaded cap for rotatable engagement with said bottle threads, and the latter being adapted for assembly within said cap, and fashioned so as to also extend within the bore of a bottle neck, means forming an integral part of the exterior walls of the inner element adapted to engage the walls of said bore and thereby prevent the inner element from being rotated, a flange carried by the inner element adapted to overlie the top of a bottle neck, a compressible gasket beneath said flange for effecting a joint between th same and a bottle top when the closure is tightened on said threads, and means above said gasket forming a part of each of the said elements cooperatively effective to prevent counter-rotation of the outer element following the tight application of the closure to a bottle.

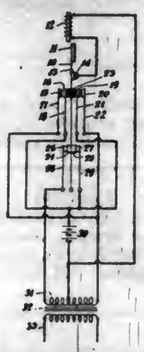


2,445,396
CLAMP
Henry D. Gursky, Gloversville, N. Y., assignor to Curtin-Hebert Company, Inc., Gloversville, N. Y., a corporation of New York
Application July 12, 1946, Serial No. 683,286
8 Claims. (Cl. 51—194)

1. A clamp comprising a U-shaped member, a wedge member movably supported within the arms of said U-shaped member, and a second wedge member positioned within the arms of said U-shaped member in abutting relation to

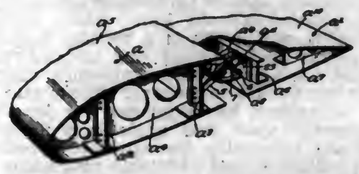
said first wedge member, and means for moving one wedge member relative to the other to control the position of said first wedge member.

2,445,397
WHEEL ALIGNING STAND
Alfred George Herton, Jacksonville, Fla.
Application June 7, 1945, Serial No. 598,141
2 Claims. (Cl. 153—32)



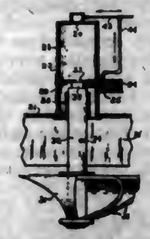
2. A wheel aligning stand adapted to be secured within a work pit to extend substantially on a level with the top edge of the pit, said stand comprising pairs of transversely spaced longitudinally aligned piers, parallel lintels secured upon the longitudinally spaced pairs of piers, longitudinally spaced trackways secured upon said lintels and formed with the adjacent ends of said trackways being undercut, turntable supporting plates disposed upon said lintels between the adjacent ends of said trackways and formed with opposed cut-out inner edges, means for anchoring said lintels to a vertical wall of said pit, means for anchoring said piers to the floor of said pit, longitudinally extending supporting angle iron flanges on the inner sides of said lintels, and a reaction bar supported for longitudinal adjustment upon said angle iron flanges and vertically adjustable through said opposed cut-out portions of said turntable supporting plates whereby either end of said reaction bar may be elevated to and above the level of said trackways.

2,445,398
VIBRATOR SYSTEM
Clarence Huetten, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application August 18, 1944, Serial No. 549,969
3 Claims. (Cl. 175—365)



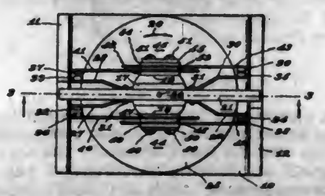
1. A vibrator system comprising in combination a transformer having a tapped primary winding, a vibratory reed, a first set of contacts including a pair of normally open contacts at each side of said reed connected in parallel with each other and connected in series with the first half of said winding, said pairs of contacts being alternately operable by said reed in the two extreme deflected positions thereof to connect said

first half winding to a source of direct current and to pass current therethrough in one direction twice during a complete cycle of the reed, a second set of normally closed contacts connected in series with the second half of said winding operable by said reed to connect said second half winding to said source and to pass current therethrough in opposite direction when the reed passes through its medial position twice during



a complete cycle of the reed, the flow of current alternating in the two half windings and occurring at time intervals of one-fourth of a complete cycle of the reed, means including a driver coil and a set of driver contacts operable by said reed and adapted to be connected to said source to maintain the reed in continuous vibration, and a secondary winding for said transformer wherein alternating voltage is induced having twice the frequency of the reed.

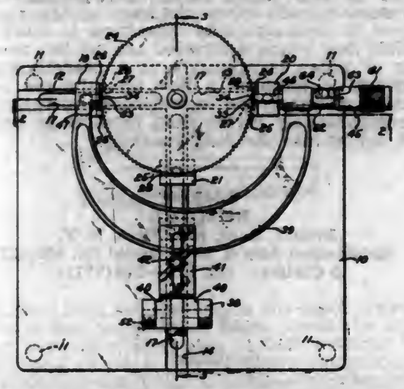
2,445,399
AIRPLANE HINGE CONNECTION
Francis B. Johnson, Wayne, Mich., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application June 14, 1945, Serial No. 599,485
6 Claims. (Cl. 244—99)



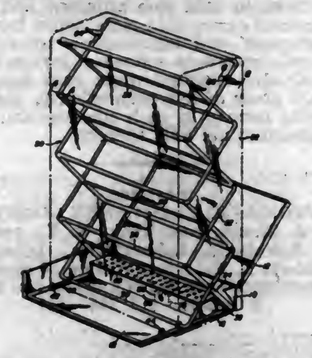
1. In combination with an airplane having a primary surface and a hollow skin covered control surface positioned adjacent the primary surface and provided with a transverse slot opposite said primary surface, a readily detachable hinge connection adapted pivotally to connect the control surface to the primary surface and comprising a bracket connected to the primary surface and having a part projecting into the slot and provided with a transverse aperture therein, a pin mounted within the control surface so that it is shiftable axially back and forth between an operative position wherein one end thereof extends transversely across the slot and into said aperture and an inoperative position wherein it is disposed substantially entirely within the control surface, and mechanical shifting means for the pin mounted within said control surface and arranged so that it is accessible for manipulation purposes via the slot.

2,445,400
DESCENT RETARDER
Loreene Johnston, Cleveland, Ohio
Application November 27, 1944, Serial No. 565,236
5 Claims. (Cl. 244—139)

1. In combination with an airplane having a body including a wall provided with an outwardly facing recess, a vertically extending cylinder mounted within said body and communicating with said recess, a piston slidably and rotatably mounted in said cylinder, a rotor carried by said piston and disposed for movement into and out of said recess, and means for locking the piston against rotation when the piston and thereby the rotor is moved to inoperative position within the recess, and for locking the piston and thereby the rotor in projected position while permitting free and independent rotation of the piston and rotor, while in said projected position.



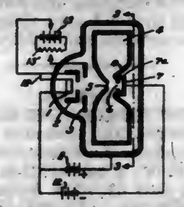
2,445,401
VIBRATOR
Application May 26, 1944, Serial No. 537,463
Nicholas Langer, New York, N. Y., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
18 Claims. (Cl. 172—126)



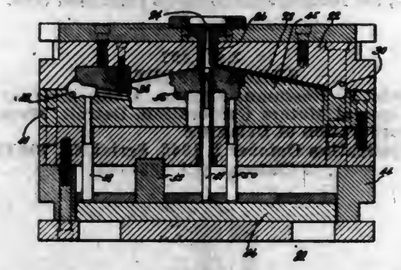
2. A vibratory electromagnetic interrupter which comprises in combination an elongated and self-supporting torsionally deformable member fixed only at one end thereof and free for limited rotation at the other end thereof, an armature mounted on said member, electromagnetic means for deflecting said armature thereby to torsionally deform said member, said member having such stiffness and being so constructed and arranged as to retain its shape and to support said armature for free deflection in any position of the interrupter with respect to gravity, and contact means operable by said armature for controlling said electromagnetic means thereby to maintain said armature in vibration.

2,445,402
GEAR MEASURING DEVICE
Bror V. Malmberg, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 11, 1944, Serial No. 530,452
5 Claims. (Cl. 33—179.5)

3. A device for measuring the pitch diameter of gears comprising a three-point support for a gear to be measured, two of said points being diametrically opposite, a measuring means resting on said two diametrically opposite points of said support, a universal support for said measuring means, and means for loosely supporting gauge pins at said diametrically opposite support points for engagement by said measuring means to measure the pitch diameter of the gear.



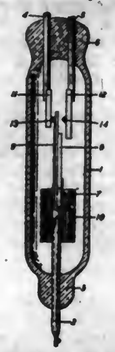
2,445,403
PORTABLE DRIER
Phillip Mayerman, Yonkers, N. Y.
Application July 1, 1947, Serial No. 758,422
2 Claims. (Cl. 34—163)



1. A portable dryer comprising a rectangular housing having a base and removable cover for the top thereof, a drying frame formed of a plurality of intersecting articulated rods interconnecting a plurality of horizontal rods adapted to assume different levels as said frame is adjusted between its maximum raised level above the base of said housing and its minimum level when the same is in collapsed position fully within the confines of said housing and cover, abutments mounted on one side of the base of said housing and engaging one of the lowermost horizontal rods for adjusting the lateral distension of said drying rack and consequently the levels of said horizontal rods, a heating chamber mounted on the opposite side of the base of said housing and underlying the rack in all positions thereof, said heating chamber containing electrical heating means therein and a circulating fan for directing heated air upwardly between the lateral boundaries of said drying frame.

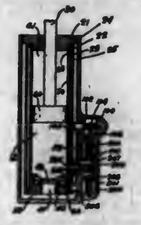
2,445,404
ELECTRON DISCHARGE DEVICE AND ASSOCIATED CIRCUIT
Bernard Joseph Mayo, Hayes, England, assignor to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application March 13, 1944, Serial No. 526,181
In Great Britain August 8, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 8, 1961
4 Claims. (Cl. 250—27.5)

1. An electron discharge device having a cathode for supplying a stream of electrons, and a reflecting electrode in the path of said electrons, a cavity resonator having a pair of oppositely disposed apertures through which said stream path extends, the transverse dimension of the aperture in said resonator adjacent said reflecting electrode being between one-third and one-fourth the transverse dimension of said reflecting electrode, said reflecting electrode having a conducting flange parallel to the beam path, said flange having a dimension along the beam path one-third that of the transverse dimension of said reflecting electrode.



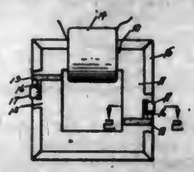
2,445,405
APPARATUS FOR MOLDING
Paul A. Norris, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 27, 1944, Serial No. 542,293
2 Claims. (Cl. 18—36)

1. A mold for use in injection molding of plastic material into annular steering wheels which include a metallic reinforcing spider therein, comprising; a two-part separable mold including a portion of an annular mold cavity in each part thereof so that the completed cavity is formed when the two parts of the mold are placed in juxtaposition, the upper of said mold parts including a single sprue opening in the upper mold part, said opening being located centrally of the upper mold part, three equally spaced grooves in said upper mold part extending radially from said sprue opening, each of said grooves connecting with a portion of the annular cavity carried in said part, positioning means associated with the lower mold part for positioning the reinforcing spider within the



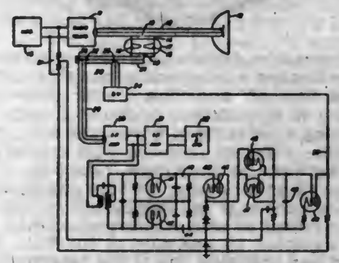
mold cavity, a removable mold segment for covering the hub portion of the spider and adapted to fit in a predetermined position with respect to said lower mold part, said removable segment together with said lower mold part closing the grooves in said upper mold part to form closed passages therewith when the two mold parts are in juxtaposition, said segment simultaneously clamping the spider into position due to pressure exerted thereon by the upper mold part whereby plastic material may be injected through said single sprue opening and over said segment for distribution through said closed passages into said cavity and around said spider.

2,445,406
CIRCUIT MAKER AND BREAKER
Charles E. Pollard, Jr., Hohokus, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 21, 1944, Serial No. 545,896
3 Claims. (Cl. 200—152)



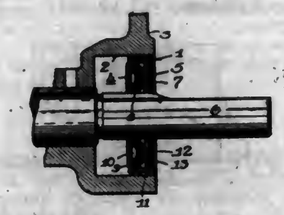
1. A contact device having mercury wetted contacts, a mercury wettable sponge, a pool of mercury trapped in said sponge and a mercury wick for feeding said contacts from said pool.

2,445,407
SHOCK ABSORBER
Edwin F. Roesman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 1, 1946, Serial No. 700,414
5 Claims. (Cl. 188—88)



1. An hydraulic shock absorber having a cylinder provided with an end through which a rod slidably extends, said rod having a piston attached thereto which divides the cylinder into two working chambers; a fluid containing reservoir; and a plurality of valves for controlling fluid flow as the piston is reciprocated in one direction or the other, certain of said valves being operative by fluid pressure, as the piston moves to force fluid from the rod containing working chamber, to establish separate fluid flow from said rod containing chamber and from the reservoir into the other working chamber, another of said valves being operative by fluid pressure in said other chamber as the piston moves to discharge fluid therefrom, to establish a fluid flow which is directed against two valves, one of which is operative at a predetermined pressure to establish a flow into the rod containing chamber, the second being operative at a comparatively higher fluid pressure to establish a flow into the fluid reservoir.

2,445,408
REACTOR
John J. Root, New York, N. Y.
Application July 6, 1945, Serial No. 603,567
5 Claims. (Cl. 171—242(777))

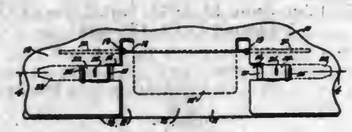


1. A laminated core reactor comprising core legs, bonding means for maintaining the assembly of the reactor, a plurality of areas of low permeability disposed transversely in said laminated core, means to prevent chattering of said core against the action of said bonding means, said chattering prevention means comprising short circuited coils disposed in and encircling slots formed in said core adjacent and extending into said areas, said slots being formed entirely through said laminations, whereby each of said coils embraces a stack of laminations the width of said reactor where said laminations abut said areas of low permeability, one of said slots being formed in each core leg and parallel to the longitudinal axis thereof.

2,445,409
AUTOMATIC FREQUENCY CONTROL
Robert J. Shank, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 3, 1945, Serial No. 580,814
5 Claims. (Cl. 343—11)

1. In a pulse reflection system, a receiver for reflected pulses, a frequency discriminator, a storage capacitor, a normally open electronic switching circuit between the output of said discriminator and said storage capacitor, means for closing said electronic switching circuit during the transmission of pulses, and means responsive to the charge on said capacitor for regulating the tuning of said receiver.

2,445,410
SHAFT SEALING MEANS
Thomas R. Smith, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a corporation of Delaware
Application April 27, 1946, Serial No. 665,495
3 Claims. (Cl. 286—5)

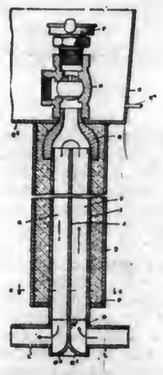


1. In a fluid seal for sealing the space between a shaft and an enlarged recess about the shaft with a radially extending surface between the shaft and recess, a seal assembly comprising a preformed anular and resilient seal member composed of impervious material of substantial and uniform thickness and of arcuate-shaped cross-section through the circumferential axis and having a concave and a convex side portion with its inner and outer edge portions uniformly rounded to conform to its thickness, said member being disposed in the recess with its concave side portion adjacent the radially extending surface, a washer disposed adjacent the convex side portion of the seal member, a fixed member, and a spring member disposed between the washer and fixed member to act in an axial direction to force the seal member against the surface, outside diameter of the recess, and shaft so that in operation the distance from the surface to the apex of the concave side of said seal member is substantially less than the radius of the concave side of the arcuate section.

2,445,411
FILAMENTARY ELECTRODE MOUNTING FOR ELECTRONIC DEVICES
William D. Stratton, Paterson, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 30, 1947, Serial No. 764,622
7 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an enclosing vessel, an electrode unit mounted therein including a folded filamentary cathode and a pair of spacer discs on opposite ends of the electrodes having elongated slots therein in line with said cathode, a plurality of tension springs on one disc engaging the bights of said cathode, a plurality of metallic clips secured to the outer surface of the other disc, said clips having portions projecting across the slot in said other disc, and bent tabs on said portions secured to the ends and intermediate sections of said cathode.

2,445,412
BOX FASTENING MEANS
William Trogman, Chicago, Ill.
Application October 14, 1944, Serial No. 558,655
1 Claim. (Cl. 229—47)

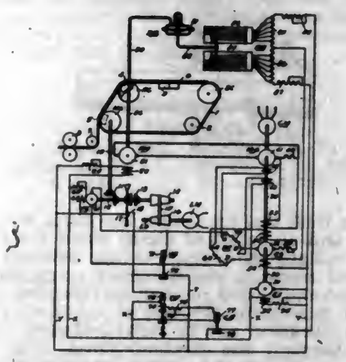


A box comprising two interfitting box sections with a wall of one of the sections providing a recessed area and a wall of the other section a slotted portion providing a yieldable tab, means for latching the box sections in interfitting relation with respect to each other with the recessed area in said one of said sections in registration with the slotted portion provided in the other section, said means comprising a resilient substantially U-shaped member removably mounted in the recessed area and insertable in the slot and frictionally engaging adjacent portions of the said walls, the tab provided by said slotted portion frictionally bearing against said member.

2,445,413
CLEAR VISION WINDSHIELD DEICER
John Harold Webster, Rocky Hill, Conn., assignor to The Stanley Works, New Britain, Conn., a corporation of Connecticut
Application August 21, 1944, Serial No. 550,474
5 Claims. (Cl. 20—40.5)

5. In a windshield de-icer panel, an air supply distributor shell located along one edge of said panel, said shell having a narrow vertical baffle located in the central portion thereof, said baffle having a pair of rearwardly-extending parallel side wings of unequal length, means to supply a stream of air to the rear of said shell against the edges of said baffle, the wings of said baffle being adapted to divide said air stream into three separate portions before it is directed laterally by said shell into said panel, the outer wing of said baffle being shorter than the inner wing thereof.

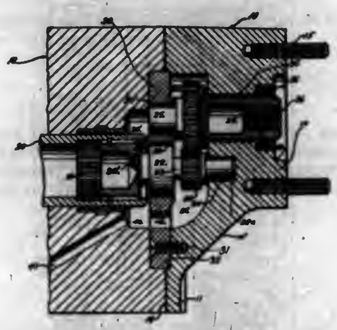
2,445,414
WATER SERVICE SYSTEM FOR RAILWAY YARDS
William F. Zabriskie, Detroit, and Hoyt Post, Grosse Pointe, Mich., assignors to Gabriel Steel Company, Detroit, Mich., a corporation of Michigan
Application June 12, 1944, Serial No. 539,962
3 Claims. (Cl. 137—78)



1. In a water service system, the combination with a water supply conduit located below the frost line, of means for positively circulating water through said conduit a hydrant connected into said conduit and extending upward therefrom being provided at its upper end with a service fitting and an adjacent valve controlling the same, and means dividing said hydrant into separate water passages connected at their upper ends adjacent to said valve and at their lower ends connected to separate portions of said conduit.

2,445,415
INSULATING BOARD AND METHOD OF MAKING THE SAME
Harvey Roland Anderson, Eureka, Pa., assignor to Keasbey & Mattison Company, Ambler, Pa., a corporation of Pennsylvania
Application February 16, 1944, Serial No. 522,658
3 Claims. (Cl. 18—47.5)

1. The method of forming an insulating board or slab comprising the steps of opening asbestos fibers, permeating said opened asbestos fibers with a water-proofing agent in a solvent bath, drying said permeated asbestos fibers to remove said solvent and leave thin water-proofing films encasing the fibrils of said fibers, mixing said encased water-proofed fibers with dry thermo-setting resin particles, working said mixture into a water slurry emulsion employing an excess of water, then pressing the slurry with the resin particles dispersed through the fibers to a solid blank form in a mold to substantially remove excess water and then drying said blank so molded in final form, and then pressing and heating said dried blank to give a substantially finished board.



2,445,416
CONTROL SYSTEM FOR PAPER MACHINE DRIVES
Rest R. Baker, Swissvale, and Walter R. Harris, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 22, 1945, Serial No. 579,254
6 Claims. (Cl. 92—44)

3. In a paper machine, the combination of a paper-forming, travelling foraminous member, a main couch roll and a breast roll engaging said member and being spaced from each other so as to lie substantially at the end and beginning respectively of the paper-forming portion of said member when in operation, a main drive for driving said main roll, an auxiliary couch roll engaging said member between said couch roll and breast roll, a suction box disposed within said auxiliary couch roll and adjacent said member, a motor in driving connection with said auxiliary roll, a main generator connected with said motor for supplying energization thereto and having field means for varying said energization, a bridge type circuit having two diagonal branches and including said field means outside of said diagonal branches so as to energize said field means in dependence upon the voltages across said diagonal branches, a pilot generator operative in accordance with the speed of said main drive and connected across one of said diagonal branches to impress thereon a voltage substantially proportional to said speed, a control generator having an output circuit connected across said other branch to impress another voltage thereon and having two differential field windings for controlling said latter voltage, one of said windings being connected with said main generator so as to be excited in dependence upon the energization supplied to said motor, a source of controllable voltage connected to said other winding, and a manometric control device hydraulically connected to said suction means and electrically connected to said source for controlling the latter in accordance with changes in vacuum of said suction box so as to increase the torque of said motor at decreasing vacuum pressure in said suction box.

5. An electric drive for suction section of a paper machine, comprising a main roll drive, a direct-current helper drive motor, a main generator having an armature series-connected with said helper drive motor and being controlled in dependence upon the speed of said main roll drive to provide for said helper drive motor a voltage variable in dependence upon said speed, said main generator having field means for imposing a regulation on said voltage, a regulating generator having an armature connected to said field means and having two control field windings of differential action relative to each other, one of said control field windings being connected to said main generator and said helper drive motor so as to be excited in accordance with the current flowing from said main generator through said helper drive motor, and suction-responsive control means connected with said other control field winding for exciting it in accordance with variations in suction vacuum so as to cause an increase in torque of said helper drive motor at decreasing vacuum.

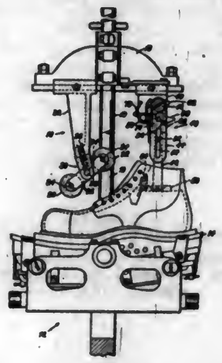
2,445,417
AIRCRAFT POWER PLANT STRUCTURE
William A. Bohannon, Uniondale, N. Y., assignor to Republic Aviation Corporation, a corporation of Delaware
Application September 30, 1943, Serial No. 504,476
12 Claims. (Cl. 74—11)

1. As a new article of manufacture, a unitary, interchangeable adapter for effectuating indirect drive of an auxiliary mechanism from a prime-mover having power take-off shafts; comprising a substantially open-face plate carrying a septum over the open-face, and a boss integral with the other face, the septum and plate defining and outlining a space therebetween containing a power-transmission device having a member for operationally engaging said power take-off and a member for operationally engaging the auxiliary mechanism, said first member projecting to the exterior through said plate and said second member projecting through said boss.

2,445,418
IRONER ROLLER EXTENSION SUPPORT
Frank Breckenridge, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 4, 1945, Serial No. 591,970
1 Claim. (Cl. 38—64)

In a roll type ironing machine, the combination of a padded roll having such girth that the sleeve of a conventional man's shirt may be telescoped thereover, a heated shoe movable into and out of pressing engagement with the padded roll, a head arranged at one end of the roll, the opposite end of the roll being unobstructed, said head having a surface spaced axially from said one end of the roll and provided with an annular groove therein, a member carried by the head for rotatably supporting the roll, a collar rotatable with the roll and extending between said one end of the roll and the portion of the head spaced therefrom, said collar terminating within said groove and defining a support for the end portion of a sleeve being ironed and which may overhang said one end of the roll, means for rotating the roll and collar and means for moving said shoe toward and away from the roll.

2,445,419
NOVELTY WALL BIRD CAGE
Reeve J. Brown, Brooklyn, N. Y.
Application October 7, 1944, Serial No. 557,652
1 Claim. (Cl. 41—10)

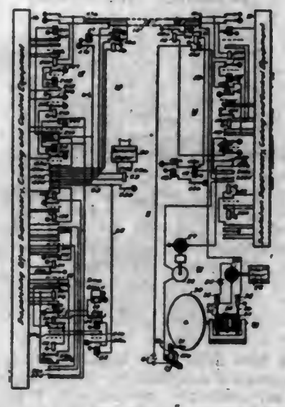


A novelty wall bird cage, comprising a flat vertical back member having side portions, said flat vertical back member being adapted to rest against a wall, a pair of horizontal superimposed semi-circular members mounted with their straight sides on and against said back member and having opposed grooves along their straight sides, a mirror mounted across said back member and having its top and bottom edges engaging said grooves, spaced vertical bars mounted along the curved edge portions of said semi-circular members and a front group of said bars being removable, a plurality of side members, means for hinging said side members to the vertical edges of said side portions of said flat vertical back member, said side members being enlarged vertically and laterally at the lower ends thereof to engage the edge and front faces respectively of said mirror at the corner thereof, and means for pivotally connecting said laterally enlarged portion to the lowermost semi-circular member whereby the mirror can be removed from said back member.

2,445,420
MACHINE FOR APPLYING PRESSURE TO SHOE BOTTOMS
George H. Collins, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 23, 1946, Serial No. 671,807
7 Claims. (Cl. 12—33)

1. In a machine for applying pressure to shoe bottoms, a pad for supporting a sole against which a shoe is to be pressed, a member for pressing a shoe against the sole supported on said pad, a heel abutment pivotally carried by said member for movements into and out of register with the heel end of said pad, means for locking said heel abutment in a position in which it is located directly over said pad, a spring acting on said abutment to move it out of said position, and means

operative in response to the application of pressure through said heel abutment on a shoe supported on said pad for releasing said locking means.

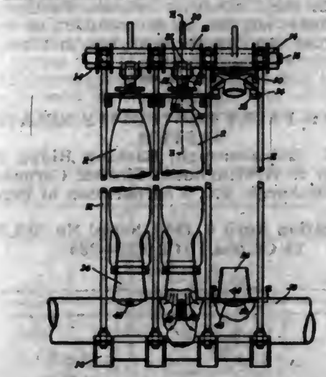


2,445,421
ALPHABET JIGSAW GAME
Leo Davis, New York, N. Y.
Application March 24, 1944, Serial No. 527,869
2 Claims. (Cl. 273—157)

1. An alphabet jigsaw game having a character cutout cut into a number of unlike sections with portions of the matching ends of the unlike sections being overlapped and interengaged, other portions of the matching ends having walls normally spaced from each other and other walls which contact each other when the overlapped and interengaged portions of the matching ends are engaged, said spaced walls and contacting walls being so related to each other that longitudinal movement of the sections moving the spaced walls away from each other moves the contacting walls into firmer contact with each other, and a compressible member disposed between said spaced walls and being attached to one of said spaced walls and engaging the other spaced wall to normally urge the spaced walls apart and the contacting walls into contact with each other and maintain the overlapped and interengaged portions of the matching ends engaged, whereby when the sections are manually moved relative to each other in a direction to close the space between said spaced walls said compressible member will be compressed and the overlapped and interengaged portions may be disengaged freeing the sections to be separated.

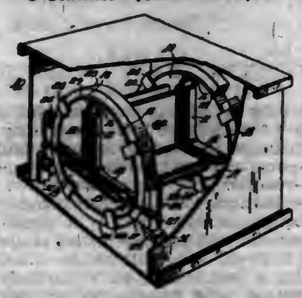
2,445,422
CONTROL SYSTEM
Willard A. Derr, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 27, 1944, Serial No. 569,998
3 Claims. (Cl. 177—353)

1. In a supervisory control system having a dispatching office and a remote station with supervisory sending and receiving equipment normally available for operating in either direction over a single signal channel for selecting any one of a number of operating points over the channel to perform different control and supervisory operations, impulse telemetering means at a metering point at a remote station including means for producing electrical impulses at a rate proportional to a quantity to be measured and means for storing said impulses and producing an equivalent number of impulses at a much faster rate, demand indicating means at the dispatching office including an impulse operated demand meter having a predetermined demand interval, transfer means at the remote station and dispatching office operable under the control of the supervisory equipment for transferring the channel from the supervisory equipment to the telemetering means



and the demand indicating means at the termination of a point selection check code, control means at the dispatching office including a time-clock operable at predetermined intervals corresponding to the demand interval to produce a timed impulse, a control relay operable in response to said impulse to effect operation of the supervisory equipment automatically to effect selection of the remote metering point and operation of the transfer means, and reset means at the dispatching office including a reset relay of the delayed dropout type disposed to be maintained in the operated position during receipt of the equivalent impulses and responsive to the termination of the equivalent pulses for rendering the transfer means inoperative and effecting reset of the supervisory equipment.

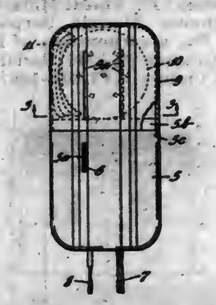
2,445,423
SAFETY CONTAINER FOR ROCKETS
Fred C. Eastman, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 6, 1946, Serial No. 652,471
6 Claims. (Cl. 102—49)



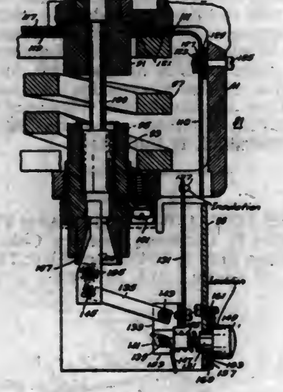
1. A safety container for rockets comprising a rocket holder provided with means for positively holding a rocket against movement, an open exhaust manifold disposed transversely of the axis of a rocket in the holder and spaced from the tail

end of the rocket, and an exhaust tube opening into said manifold, said tube being coaxial with

the rocket and having one of its ends in contact with the tail end of the rocket.



2,445,424
BUS BAR SUPPORT
Lawrence L. Fountain, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 10, 1944, Serial No. 562,785
5 Claims. (Cl. 174—99)

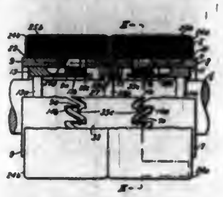


1. A multi-phase bus structure comprising, a pair of right angle bars and a flat bar disposed in a T formation, insulating means disposed between said bars, a curved yoke surrounding the bars, insulating blocks disposed between the bars and the yoke, said blocks having curved outer surfaces engaging substantially the entire inner surface of the curved yoke, the radius of said outer surface of one of said blocks being different from the others, and means for drawing the yoke together to compress the blocks against the bars.

2,445,425
HEARING AID
Ferdinand A. Gabbert, Minneapolis, Minn., assignor, by mesne assignments, to William Edward Johnston
Application April 27, 1944, Serial No. 532,986
5 Claims. (Cl. 179—107)

1. In a hearing aid device, thermionic amplifying apparatus, a casing housing said apparatus and having an elongated microphone cord extending therefrom, a microphone electrically connected with the conductors of said cord and a hollow cap member detachably connectable with one end of said casing and when connected constituting substantially a continuation of said casing, the interior of said cap being constructed to snugly receive and detachably house said microphone and its service cord when the latter is folded in compact relation.

2,445,426
CIRCUIT BREAKER
Gayne D. Gamel, Verona, and Walter S. Hawkins, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1942, Serial No. 495,418
11 Claims. (Cl. 200—88)



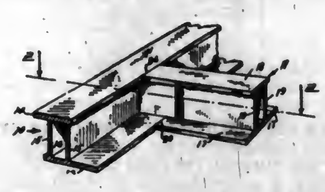
5. In an electrical circuit breaker, an overload trip device comprising an electromagnet energized by the current through the circuit breaker and having a magnetizable core structure and at least one armature operable when moved to attracted position to trip said circuit breaker, a latch normally restraining said armature against tripping movement, a thermally responsive bimetal trip element deflectable when heated a predetermined amount in response to overload current to cause said latch to release said armature, means for heating said bimetal trip element comprising a loop conductor surrounding a portion of said core structure, said loop conductor being fixedly mounted relative to said core structure and having a gap therein, one end of said bimetal trip element being rigidly secured to the ends of said loop conductor across said gap, and a second bimetal element operatively relating said latch with the free end of said bimetal trip element for compensating the device for variations in ambient temperature.

2,445,427

TORQUE METER

Frank W. Godsey, Jr., Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 29, 1943, Serial No. 508,197
8 Claims. (Cl. 73—136)



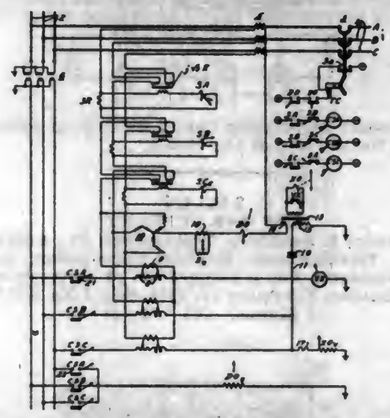
1. In a device for indicating an operating characteristic of a shaft, the combination of, a primary winding, a secondary winding, a stationary magnetic housing for the windings, a rotor member of magnetic material rotated by the shaft, said rotor member having portions thereof so disposed with respect to the stationary magnetic housing that airgaps of constant magnetic characteristic are formed therebetween whether the rotor is rotating or stationary, a source of alternating current for energizing the primary winding whereby an alternating magnetic flux is produced in the stationary magnetic housing which links the rotor member across said airgaps of constant magnetic characteristic and induces a voltage in the secondary winding, a plurality of relatively displaceable magnetic elements forming a part of the rotor member responsive to an operating characteristic of the shaft for changing the value of the alternating magnetic flux, and means for measuring the voltage of the secondary winding whereby an operating characteristic of the shaft is indicated.

2,445,428

JOINT FOR METAL WINDOW SASH FRAMES

Harry H. Goldberg, Denver, Colo.

Application May 5, 1947, Serial No. 746,090
1 Claim. (Cl. 287—54)



In a window sash comprising two frame members, each of which has two parallel flanges spaced apart and interconnected by webs, in which one frame member is connected with the other in substantially right angular relation and in which one of the members has a tubular web, the flanges on the last mentioned member being cut back to permit the ends of the web to engage the adjacent side of the web on the other member while the cut back ends of the flanges abut the edges of the flanges on the other member, the web on said other member having an opening of the same size and shape as the opening in the tubular web, a headed pin extending through the hole in the web and into the registering opening in the tubular web, and means for interconnecting the pin with the tubular web to resist forces tending to produce relative longitudinal movement, the ends of the cut back flanges, in their abutting relation to the edges of the flanges on the other member, serving to resist forces tending to move the members angularly.

2,445,429

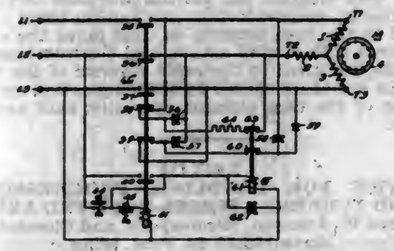
GROUND-FAULT PROTECTIVE RELAYING SYSTEM

Shirley L. Goldsborough, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 6, 1945, Serial No. 586,991
25 Claims. (Cl. 175—294)

1. Relaying apparatus for ascertaining ground-faults on a three-phase line, comprising a single-phase distance-measuring ground-fault reactance-responsive relaying-means for responding to the line-reactance of a predetermined phase of the line-conductors, said distance-measuring response being accurate only if a single ground-fault occurs on said predetermined phase, in combination with ground-fault phase-selector means for making a selection of an apparently ground-faulted phase, said phase-selector means being operative to properly select the faulted phase in the event of a single ground-fault, and being operative to select only the leading one of the two faulted phases in the event of a double ground-fault having adequate resistance, and being operative to erroneously select the sound phase in the event of a resistanceless double ground-fault, said phase-selection of the phase-selector means being made without an accurate determination of the distance of the fault by said phase-selector means, means for obtaining an indication of a joint response of said distance-measuring relaying-means in said predetermined phase, and a selection of that same phase by said phase-selector means, and means for blocking said indication in response to a double ground-fault of predeterminably low resistance.

2,445,430



INDUCTION MOTOR BRAKING SYSTEM

Louis W. Herchenroeder, Pittsburgh, Pa., and Arden L. Scott, Portland, Oreg., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 21, 1947, Serial No. 730,058
7 Claims. (Cl. 318—212)

7. A motor control system, comprising a three-phase motor having three terminals, a contactor

connected to said terminals for energizing said motor when closed, capacitor means controlled by said contactor and connected across said terminals only when said contactor is closed, a rectifier and a capacitor series-connected with each other across two of said terminals under control by said contactor so that said capacitor is charged through said rectifier when said contactor is closed, timing means connected with said con-

tactor and having a contact connected with said capacitor for causing said capacitor to discharge through said two terminals a timed interval after the opening of said contactor, a resistor, and a contact in said relay connected in series with said resistor between the third terminal and one of said two terminals in order to short the two connected terminals through said resistor during the discharge period of said capacitor.

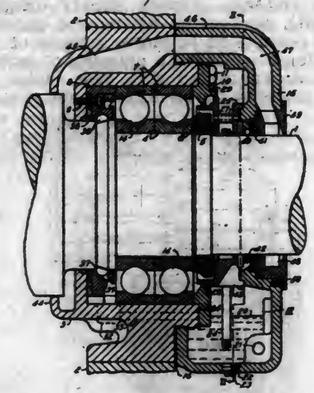
2,445,431

SOLDERING WITH RESIN FLUXES

Lawrence R. Hill, Pittsburgh 21, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application August 26, 1943, Serial No. 500,163
3 Claims. (Cl. 29—148)

3. In the process of soldering an electrical member, the step of applying to predetermined portions of the electrical member the partial reaction product of substantially molar equivalents of an organic polybasic acid and a polyhydric alcohol, the product having an acid number of over 100, soldering at the predetermined portions of the electrical member, and heat treating the soldered electrical member to react further the organic polybasic acid and polyhydric alcohol into a relatively non-corrosive resin of an acid number of less than 50, the resin providing for electrical insulation at the predetermined areas.



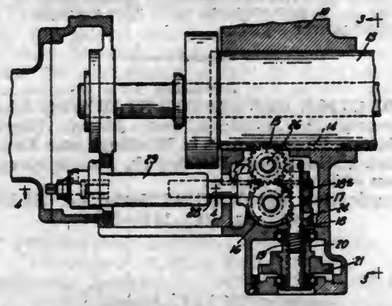
2,445,432

BEARING ASSEMBLY

William R. Hodell, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 24, 1945, Serial No. 606,729
2 Claims. (Cl. 308—128)

1. A bearing assembly comprising a cartridge-type bearing housing, an anti-friction bearing in said bearing housing for supporting a rotatable shaft, an outer bearing cap closing the end of the bearing housing, said bearing cap having an oil reservoir in the lower part thereof, an oil ring on the shaft extending down into said oil reservoir for carrying oil therefrom, means for directing oil from the oil ring to the bearing, and an inner cap member disposed between said bearing housing and said outer bearing cap, said inner cap member having a circumferential groove extending around at least the upper part of the cap member for catching oil thrown off the oil ring, an oil-receiving basin at each side of the inner



cap member for receiving oil from said groove, and means for draining oil from said basins into the bearing.

2,445,433

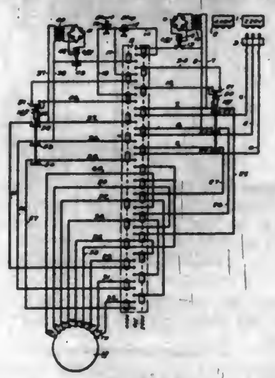
CUTTER RELIEF MECHANISM FOR MILLING MACHINES

Carl Leland Holmstrom, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois

Application August 9, 1944, Serial No. 548,686
11 Claims. (Cl. 90—16)

1. In a milling machine which includes a frame and a quill slidably mounted therein, means for shifting said quill comprising a rack on the quill, a first pinion meshing with said rack, a motor and drive gearing connecting said motor with the pinion, a second pinion independent of said first pinion and also meshing with the rack on the quill, a slidably mounted rod having a rack in mesh with the second pinion, said rod having a pair of oppositely facing stop shoulders, and a pair of stops engageable by said shoulders respectively for limiting the travel of the quill.

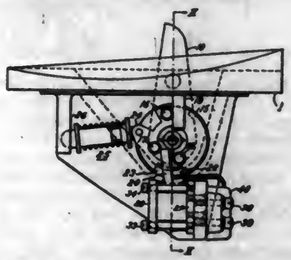
2,445,434



DUAL-VOLTAGE MOTOR CONTROL SYSTEM

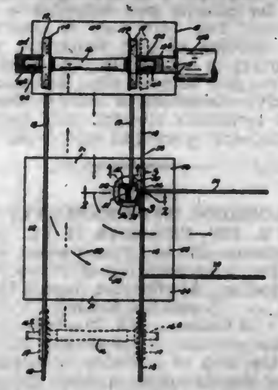
Earl H. Hornbarger, Edgewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 20, 1946, Serial No. 685,062
6 Claims. (Cl. 318—225)



1. A control system, comprising an induction motor having a plurality of field windings, selec-

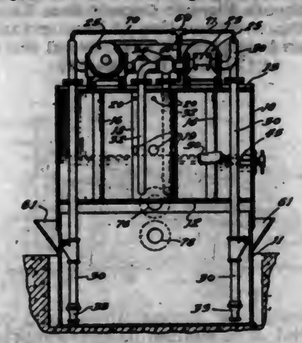
tor switch means for selectively interconnecting said field windings in different circuit arrangements relative to one another in order to adjust said motor for energization by correspondingly different voltages, current supply means connected with said switch means and disposed for selective connection to power sources of respectively different voltages, a plurality of motor control circuits connected with said switch means and said motor so that a different one of said con-



trol circuits is in operative connection with each of said field circuit arrangements respectively, said control circuits having each a voltage responsive relay of respectively different pick-up voltages, said relays having respective contacts disposed in said control circuits respectively for providing energization for said motor only when the selected voltage adjustment of said switch means is in accordance with the voltage of the selected power source.

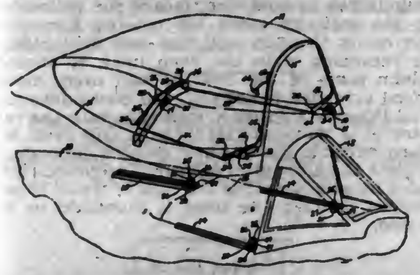
2,445,435
INDUCTION GENERATOR STARTING GEAR
Lawrence D. Jennings and Joseph Naymik, Sharon, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 8, 1946, Serial No. 653,193
2 Claims. (Cl. 171—209)

1. An impulse generator, in combination, a U-shaped permanent magnet having like poles at the ends of the legs, a similar magnet having like poles at the ends of the legs but of opposite polarity to the first magnet, said second magnet being so disposed with reference to the first that the ends of the legs are in alignment with each other but spaced a selected distance from each other, an armature of magnetic material disposed for angular movement between the legs of the U-shaped magnets so that said armature may, when in one position, bridge one pair of non-adjacent opposite poles or bridge the other pair of non-adjacent opposite poles, said armature having an actuating end for moving the armature from one position to the other position, a generally disc-shaped cam element having a pair of pins disposed on each side of the actuating end of the armature and being mounted for a limited angular movement so as to move said armature, an overcenter mechanism, a pivoted lever, a lost-motion coupling between the lever and cam element for moving the cam element angularly, said overcenter mechanism being coupled to the cam element to thus move the cam element with a snap action, and electromagnetic means energized by the rapid reversal of the flux in the armature caused by the snap action movement of the cam element operating said armature.



2,445,436
DEVICE FOR HANDLING, PROGRESSING, AND TURNING A WHEEL-EQUIPPED AXLE
Sigurd W. Johnson, Minneapolis, and Clement G. Zarembinski, St. Paul, Minn.
Application February 5, 1945, Serial No. 576,346
14 Claims. (Cl. 238—1)

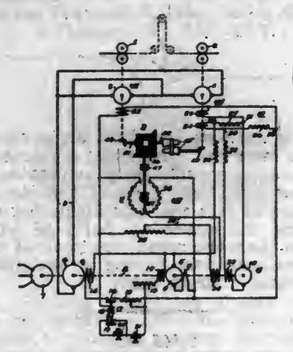
1. Apparatus for turning a pair of railway wheels mounted in spaced relation on a common axle and which wheels have peripheral flanges at their adjacent sides only, said apparatus comprising, rails on which said wheels move, a member revoluble on a vertical axis and having means alined with one of said rails adapted to receive and stop the movement of one of said wheels in a direction longitudinally of said rail, whereby the momentum of the other wheel causes it to swing in an arc concentric with the vertical axis of revolution of said member and turn said revoluble member and first mentioned wheel, wheel supporting means underlying the arcuate path of travel of said other wheel and supporting the same during its arcuate travel, and means for stopping the revolution of said member at the desired point whereby the impact of said stopping causes said wheel to leave said means.



2,445,437
FLUID PRESSURE SYSTEM
Joseph Kellogg, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application August 21, 1946, Serial No. 692,009
4 Claims. (Cl. 103—6)

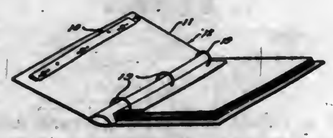
1. An oil pressure system of the character described comprising, a base, a pressure tank mounted on the base, a standpipe having apertures therethrough, said standpipe being mounted co-axially within said pressure tank and integrally connected to the top and bottom thereof

to reinforce the tank, and means to introduce fluid into said standpipe tangentially thereof and adjacent the lower end to separate air from liquid.



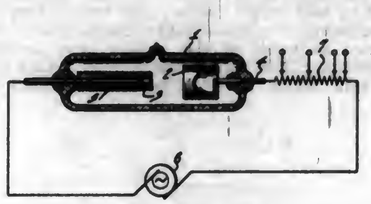
2,445,438
CANOPY MOUNTING AND RELEASING MECHANISM
Carl C. King, Massapequa, N. Y., assignor to Republic Aviation Corporation, near Farmingdale, N. Y., a corporation of Delaware
Application September 14, 1944, Serial No. 554,050
14 Claims. (Cl. 244—121)

1. The combination with a fuselage and canopy, of mortised bracket plates fixed to the canopy, tenon plates on the fuselage, each to be received in the mortise of one of the bracket plates, and means individual to each coacting mortise and tenon to lock them in inter-engagement.



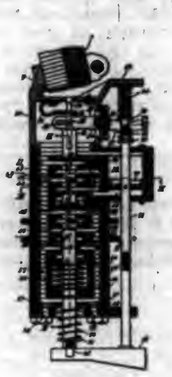
2,445,439
MOTOR CONTROL SYSTEM
George E. King, Swissvale, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1947, Serial No. 726,463
6 Claims. (Cl. 318—76)

6. A control system, comprising two variable-speed direct-current motors having respective armatures and field windings, a main generator connected to said two motor armatures to apply adjustable voltage thereto, circuit means for providing constant voltage, said field winding of one of said motors being connected to said circuit means, said field winding of said other motor having two winding sections, an impedance network of the bridge type containing said two winding sections and having two pairs of diagonal points of which one pair is connected to said circuit means for cumulatively exciting said two winding sections by constant voltage, an amplifying generator having an armature connected across said other pair of diagonal points for superimposing on said winding sections a reversible corrective voltage for modifying the excitation of said winding sections to thereby regulate the speed of said other motor, said amplifying generator having a control field winding, another impedance network of the bridge type having a rheostat provided with a movable adjusting member, said latter network being connected with



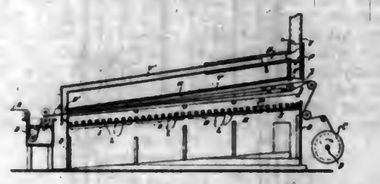
said control field winding for applying a reversible control excitation thereto depending upon the departure of said member from a given position, a differential transmission having an input shaft connected to said movable member to position the latter and having two input shafts connected to said respective motors so as to change the adjustment of said movable member in accordance with the departure of said motors from a given positional relation to each other, thus causing said corrective voltage to change the relative field excitation of said motors in the direction required to minimize said latter departure.

2,445,440
PUNCH FOR LOOSE-LEAF BINDERS
William F. Klemm, Detroit, Mich.
Application January 20, 1945, Serial No. 573,673
5 Claims. (Cl. 164—119)



1. A device for punching holes in the edge of a sheet which includes a U-shaped sheet metal element formed from a single resilient metal sheet to have a bottom flange, vertically disposed web and a top flange disposed above and spaced from said bottom flange, tubular punches formed in and projecting upwardly from the bottom flange, said top flange being provided with apertures aligned and snugly engageable with said punches, said punches and aligned apertures being disposed in pairs which are spaced a predetermined distance from each other.

2,445,441
RECTIFIER
Gardner L. Krieger, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 28, 1945, Serial No. 637,714
3 Claims. (Cl. 250—27.5)

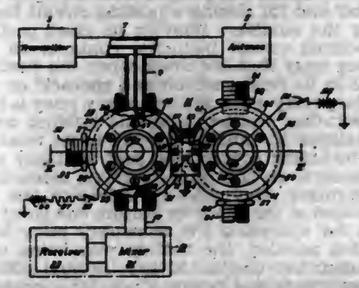


1. In cold cathode rectifiers, an envelope containing an inert gas, a cathode, an anode spaced from the cathode sufficiently to provide a path beyond the mean free path of the electrons at the pressure of said gas, and insulating material surrounding the anode all parts of which are spaced less than the mean free path of the electrons therefrom and having a multiplicity of electron paths therethrough.

2,445,442
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Forest Hills, and Robert E. Friedrich, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 31, 1944, Serial No. 552,132
9 Claims. (Cl. 200—150)

1. In a circuit interrupter, means defining a pressure-generating chamber and an interrupting chamber, means for establishing a pressure-generating arc within the pressure-generating chamber and an interrupting arc within the interrupting chamber, the pressure-generating arc forcing fluid toward the interrupting arc to effect the extinction thereof, means forming at least two inlet passages at different levels leading toward the pressure-generating arc, means forming two orifices adjacent the pressure-generating arc through which it is drawn, one orifice associated with each inlet passage, and means for forcing fluid through the inlet passages toward the pressure-generating arc.

2,445,443
MEANS FOR DRYING EXTENDED LENGTHS OF THREAD WITH INFRARED LAMPS
Charles R. Long, Fort Monroe, Va., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 10, 1942, Serial No. 430,226
4 Claims. (Cl. 34—60)

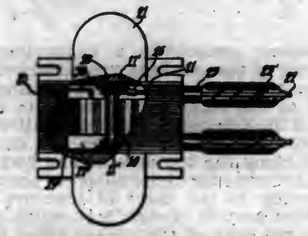


1. Apparatus for drying thread and continuous material of a similar nature comprising an oven, inlet and outlet openings in the respective end walls of said oven and adjacent the top thereof, a plurality of infra-red radiation generating lamps disposed in predetermined spaced relation in a plane below said openings, the total number thereof being at least sufficient to provide for the projection of infra-red radiation throughout substantially the entire horizontal cross-section area of the oven, reflector means above the level of said inlet and outlet openings and cooperating with said individual lamps to confine the radiations substantially within the space gap therebetween, an insulated flue connecting the inlet and outlet ends of said oven, a dehumidifier in said flue, means for recirculating the moisture-laden air passing from said oven outlet through said flue and dehumidifier and returning it to the oven inlet, to thereby reclaim some of the heat of said oven, means to feed extended lengths of said continuous material through said oven, means to vary the rate of travel of said material through said oven, and means movable therewith to directly increase or decrease the amount of infra-red radiations generated by said lamps, as the rate of travel of said material through the oven is increased or decreased.

2,445,444
FUR CURLER
David Mainwold, Brooklyn, N. Y.
Application September 16, 1944, Serial No. 554,478
3 Claims. (Cl. 69—20)

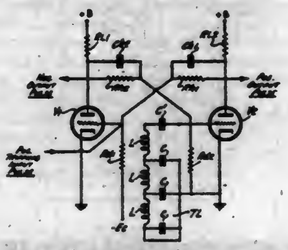
1. A fur curler, comprising a plate-like member for attachment on the flat face of a thermostatically controlled electric iron and having outwardly tapering rib-like projections on its outer face outlining a lamb type of fur curl, and the depth of and the spacing of said rib-like projections depending upon the size of the curl of the fur to be curled, and a backing plate upon the outer face of said member having openings through which said rib-like projections extend, and means for holding said backing plate in selected positions spaced from the outer edges of said rib-like projections.

2,445,445
DUAL CAVITY-RESONATOR SWITCHING SYSTEM
Jess I. Marcum, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 13, 1943, Serial No. 510,161
10 Claims. (Cl. 178—44)



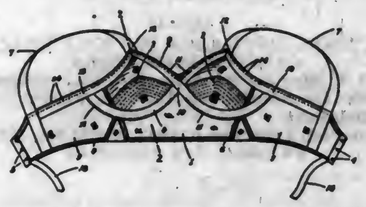
10. For use in an ultra-high frequency system, the combination comprising first and second cavity resonators having a communicating passage therebetween below the cutoff dimension for transmission of electromagnetic waves of the frequencies at which the system is to be operated, said resonators being effective to form a single composite resonator tuned to a first frequency, means coupled to said first resonator for introducing energy thereinto, means coupled to said first resonator for extracting energy therefrom, and a pair of electrodes in each of said resonators, each pair of electrodes being adapted to have an electric discharge established therebetween independently of the other pair to change the tuning of the composite resonator.

2,445,446
PROPELLER TRANSMISSION MEANS
Antonio Mas, New York, N. Y.
Application March 14, 1947, Serial No. 734,804
4 Claims. (Cl. 170—135.5)



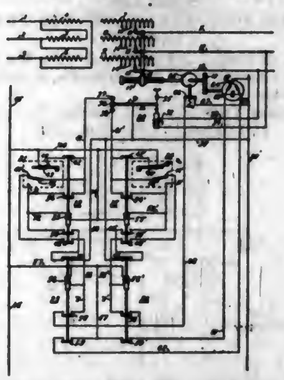
1. A reversing means for twin propellers, comprising a prime mover, a propeller connected with said prime mover for turning in one direction, a second propeller to be driven by said prime mover, a reversing transmission for connecting said second propeller with said prime mover, a clutch for disconnecting said second propeller, a rotary electric control, a motor for driving said control, a circuit and a manually operable gang of switches for controlling said motor, a clutch solenoid for opening said clutch, a circuit for controlling said clutch solenoid and including said last named circuit, a bolt for restricting said clutch from fully reclosing, resilient means for urging said bolt closed, a bolt controlling solenoid for opening said bolt, a circuit for said bolt controlling solenoid and including said rotary control for opening said bolt, a reverse control solenoid for said reversing transmission, a circuit including a switch of said gang of switches for controlling said reverse control solenoid, a forward control solenoid for said transmission, a circuit and a manually operable switch for controlling said forward control solenoid, and a solenoid operated latch for releasably holding said gang of switches closed and connected in series with said bolt controlling solenoid.

2,445,447
ELECTRON DISCHARGE DEVICE UTILIZING CAVITY RESONATORS
Stuart T. Martin, Jr., Arlington, Va., assignor to Radio Corporation of America, a corporation of Delaware
Application February 6, 1943, Serial No. 474,912
9 Claims. (Cl. 250—27.5)



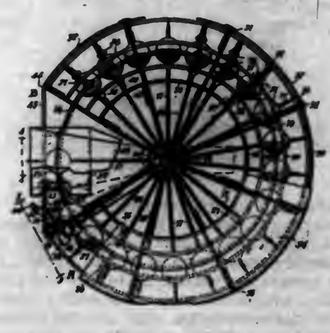
1. An electron discharge device having a cathode for supplying electrons, an anode member of solid conducting material having a chamber centrally thereof into which electrons are directed, said anode member having a plurality of cavities positioned around the central chamber and coextensive therewith and having slots connecting said cavities with said central chamber to provide anode segments between said slots, and a getter loop adjacent one end of said anode member and positioned to be in the radio frequency field extending between the ends of said cavities for flashing the getter when said device is excited.

2,445,448
ELECTRON DISCHARGE DEVICE TRIGGER CIRCUIT
William A. Miller, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 27, 1944, Serial No. 546,890
13 Claims. (Cl. 250—27)



8. The combination with an electron discharge device trigger circuit having one degree of electrical stability and including a pair of interconnected electrode structures so connected and arranged as to have a stable state and an active state, of a transmission line of predetermined electrical length connected at one end to one of said structures and short-circuited for direct current at the other end, in order to control the active time of said trigger circuit.

2,445,449
BRASSIÈRE
Adelle M. Moon, Oakland, Calif., assignor of one-third to Virginia A. Burke and one-third to Elsie Lausten, both of San Francisco, Calif.
Application June 1, 1945, Serial No. 597,135
1 Claim. (Cl. 2—42)

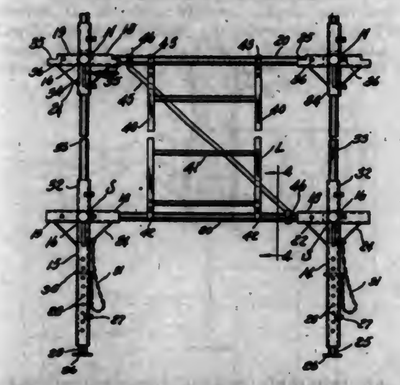


A brassière comprising a supporting front panel, a pair of bias cut bust cups attached to the upper edge of the panel, a side panel connected to each end of the front panel, means to connect the ends of the side panel, a pair of relatively wide non-elastic tapes cut on the straight, each tape extending along the top edge of one pocket and along the bottom edge of the adjacent pocket, said tapes crossing at the point of juncture of the pockets, that portion of each tape which extends along the top edge of the pocket being stitched only along its upper edge to the adjacent edge of the pocket, and that portion of each tape which extends along the bottom edge of the pocket being stitched only along its lower edge to the adjacent edge of the pocket, the tapes at the point of crossing thereof both being free and unattached to each other or to the pockets.

2,445,450
ELECTRICAL INDUCTION APPARATUS
Paul Narbutovskih, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 11, 1943, Serial No. 490,445
8 Claims. (Cl. 323—55)

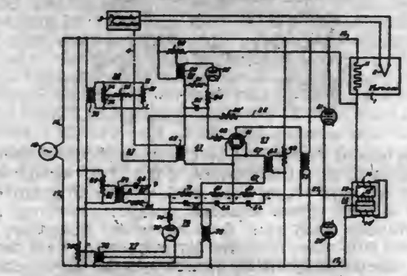
5. In a time delay control system for an automatic step-type reversible motor driven regulator, in combination, means including a primary relay responsive to the value of a condition, and relay means controlled thereby for initiating the operation of the control system, said relay means including a timing relay, an auxiliary relay and a secondary relay, the timing relay having a thermal responsive element and a heating element therefor, a circuit closed through contacts on the primary relay and contacts on the auxiliary relay for energizing the heating element of the timing relay, said timing relay having contacts operable upon a predetermined temperature of the heating element for closing a circuit for operating the auxiliary relay to a preset position, said auxiliary relay being operative upon movement to its preset position for interrupting the circuit energizing the heating element of the timing relay and for closing a holding circuit for retaining the auxiliary relay in its reset position, said holding circuit including contacts on said auxiliary relay that are closed when the auxiliary relay is in its reset position and contacts on said secondary relay when the secondary relay is in its non-operating position, a second holding circuit for retaining the auxiliary relay in its reset position including contacts on said auxiliary relay and contacts on the primary relay, contacts on said auxiliary relay that are closed in the preset position of the relay for closing one point in a circuit for operating the secondary relay to its operating position, the timing relay being operative upon the cooling of the thermal element to a predetermined temperature for completing the circuit for operating the secondary relay, the auxiliary relay being operative to its initial position upon separation of the primary relay contacts for preventing operation of the regulator unless the primary relay contacts are closed upon completion of the above-defined cycle of operation of the several relays, circuit controlling means for sealing said secondary relay in its circuit closing position upon operation of said regulator for effecting continued operation of the regulator throughout one operating step independently of the separation of the primary relay contacts.

2,445,451
COMBINATION SPRAYING BOOTH AND DRYING CHAMBER
Lester E. Padelford, North Arlington, N. J.
Application May 20, 1945, Serial No. 596,727
8 Claims. (Cl. 91—60)



1. A spraying apparatus comprising a spraying chamber, a plurality of article supports, means mounting said article supports for movement in a path in predetermined spaced relation to each other with the space between two contiguous supports greater than the other spaces between said supports and so that each support is movable in said path relatively to the other supports, power means for moving said mounting means, and control means for causing step-by-step actuation of said mounting means by said power means.

2,445,452
WINDOW SHADE ROLLER
Horace S. Peed, Denver, Colo.
Application December 13, 1945, Serial No. 634,655
5 Claims. (Cl. 160—296)

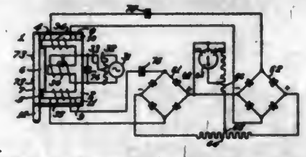


1. The combination with a cylindrical roller having a mounting pin fixedly projecting axially from one of its ends and a flexible sheet operatively associated with and for extension and retraction relative to said roller, of a peripherally-grooved wheel fixed to and in axial coincidence with the other roller end, an actuating cord frictionally engaging about said wheel in said groove, a mounting pin fixedly projecting axially and exteriorly from said wheel, a mounting cup housing said wheel in frictional engagement with the groove-positioned cord, an axial journal bearing in said cup rotatably accommodating said wheel pin, spaced slots longitudinally of the cup cylindrical wall for the accommodation of depending cord portions, and a bracket-engageable angular mounting lug fixedly projecting axially and exteriorly from said cup.

2,445,453
PORTABLE SCAFFOLD
Lacy K. Pennington, Fremont, Mich.
Application April 5, 1946, Serial No. 659,829
6 Claims. (Cl. 304—2)

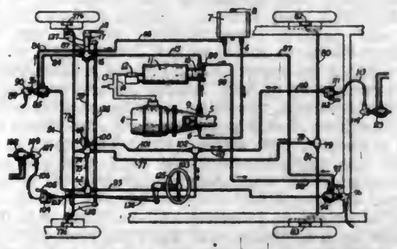
1. A scaffold comprising a plurality of spaced-apart legs, each of said legs including an extensible section telescopically and adjustably mounted therein, means for securing the extendable sections in adjusted position, a corner coupling member mounted on each leg, and formed with a plurality of radially disposed hollow pipe spoke sections projecting horizontally therefrom, angularly disposed braces welded to the respective spokes and to the leg of the corner coupling, and tubular pipe sections removably mounted in and connecting certain spoke sections of each corner member for securing the legs in spaced-apart relation and forming a rigid scaffold unit.

2,445,454
REACTOR OPERATED ELECTRONIC CONTROL SYSTEM
Konstanty P. Puchlowski, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 30, 1943, Serial No. 492,962
9 Claims. (Cl. 323—89)



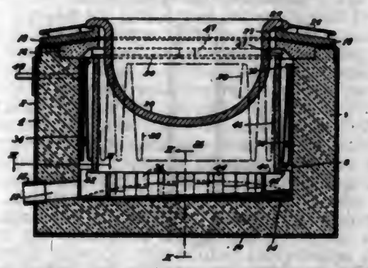
3. A system for controlling the power supply to a load circuit, comprising a saturable reactor having an alternating current winding connected in said load circuit and a direct-current winding for varying the reactance of said alternating current winding, supply means for feeding alternating current to said load circuit, a gaseous discharge rectifier arranged between said alternating current supply means and said direct-current winding for providing the latter with rectified current and having a grid circuit for controlling said current, a control network connected with said grid circuit and comprising a phase shifting circuit attached to said supply means for providing said grid circuit with a variable component grid voltage of the frequency of said alternating load current, control means disposed in said control network for varying said grid voltage so as to displace the firing angle of said rectifier, a saturated diode having a filament circuit connected to said supply means so that the filament current varies in accordance with voltage fluctuations of said supply means, said diode having a plate circuit connected to said control network for superimposing on said grid voltage a direct-current component varying in proportional and amplified relation to said voltage fluctuations so as to increase and decrease said firing angle for a decrease and increase respectively in the voltage of said supply means, and variable impedance means interposed between said phase shifting circuit and said supply means for adjusting the amplitude of said variable grid voltage relative to that of said direct-current component.

2,445,455
ELECTRICAL MICROMETER GAUGE
Herbert T. Rights, Verona, and Hershel Toomim, Newark, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 5, 1941, Serial No. 421,850
3 Claims. (Cl. 177—351)



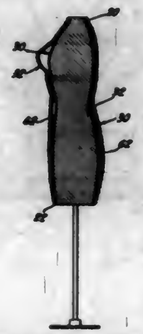
1. In an electrical measuring system for a gauge device including a gauge head having a movable member, and means producing a first alternating electrical quantity increasing with

movement of said movable member in a first direction and decreasing with movement of said movable member in a second direction; said gauge device also including means producing a second alternating electrical quantity increasing with movement of said movable member in said second direction and decreasing with movement of said movable member in said first direction, said alternating current quantities being equal for an intermediate position of said movable member; a direct current responsive instrument having an element movable in either of two directions in accordance with the polarity of energization of said instrument, said element being moved



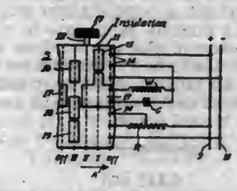
to an extent dependent on the magnitude of energization of said instrument, a first full-wave rectifier for converting said first electrical quantity into a first direct current quantity varying in magnitude with said first electrical quantity, a second full-wave rectifier for converting said second electrical quantity into a second direct-current quantity varying in magnitude with said second electrical quantity, means connecting the positive output terminal of said first rectifier and the negative output terminal of said second rectifier to a first terminal of said instrument, and means connecting the remaining output terminals of said rectifiers to a second terminal of said instrument.

2,445,456
BRAKING MEANS FOR CONNECTED VEHICLES
Edward A. Rockwell, Cleveland, Ohio
Application June 9, 1944, Serial No. 539,582
11 Claims. (Cl. 188—3)



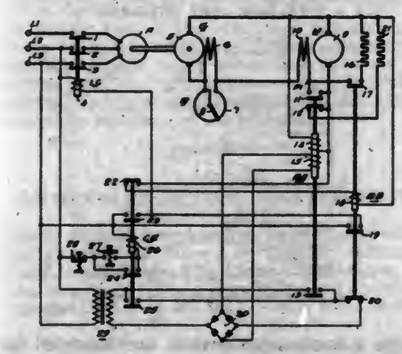
1. A succession of connected vehicles having a braking means on a plurality of the individual vehicles thereof, said braking means being constructed and connected so as to operate together, and a manual controlling device each comprising a modulating valve, an accumulator, operable independently of the other accumulators, for supplying power pressure liquid thereto and a reservoir connected between the accumulator and the valve to receive the discharge from the valve and including a double check valve connected between the deliveries of a plurality of the modulating valves, located on each of said plurality of vehicles constructed and arranged to transmit liquid pressure from one or more of said vehicles simultaneously so as to operate the braking means on one or more of said plurality of vehicles from each and all of the same simultaneously.

2,445,457
POT FURNACE
Willard Roth, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 21, 1945, Serial No. 589,642
3 Claims. (Cl. 13—22)



2. A pot-type furnace of a type described, comprising wall means including a cylindrical side wall and a bottom wall, said wall means having an upper ring provided with a circular lip, a vessel inside said upper ring, having a circular upper lip adapted to rest on said ring-lip, electrical resistor heating means supported at said side wall along its inner surface, said vessel having a bottom portion below the top of said heating means, an upstanding hollow cylindrical nonmetallic refractory tube having a solid wall between said vessel and said heating means, means for supporting said refractory tube so as to provide for convection around its upper and lower edges, said bottom wall being sloped downwardly to a drain passing through said furnace below said heating means.

2,445,458
CLOTHES FORM
Otta Lucille Simonsen, Burbank, Calif.
Application June 18, 1945, Serial No. 599,998
13 Claims. (Cl. 223—67)



1. An inflatable clothes form comprising an inner and an outer envelope of elastic and impermeable material, said envelopes being joined along their edges and intermittently along longitudinal medial lines in front and back, respectively, said outer envelope having in registration with its inner surfaces in front and back, respectively, a plastron extending approximately from the waist line to the lower margin, said plastrons being of less elastic material than said outer envelope.

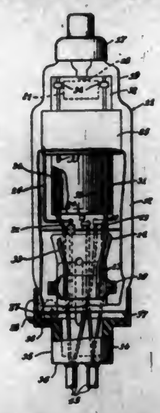
2,445,459
CONTROL CIRCUITS FOR ELECTRO-MAGNETIC CHUCKS
Frederick D. Snyder, Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 7, 1944, Serial No. 553,034
4 Claims. (Cl. 175—335)

1. With a magnetic chuck having a holding magnet, the combination of coil means inductively associated with said magnet, circuit means for energizing said coil means from a direct-current source, a capacitor, a selective control switch movable between at least three sequential positions and having three sets of contacts operative when said switch is in said respective three positions, a first one of said sets of contacts being connected to said coil means and said capacitor and said circuit means so as to magnetize said magnet and charge said capacitor when said switch is in one of said positions to substantially demagnetize the chuck when said switch is in the next position, a second one of said sets of contacts connecting said coil means across said capacitor for discharging said capacitor through said coil means, and the third set of contacts being connected to said circuit means and said capacitor for recharging said capacitor while maintaining said coil means disconnected from said capacitor and said circuit means when said switch is in the third position.

2,445,460
DYNAMIC BRAKING SYSTEM
Frederick D. Snyder, Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 21, 1947, Serial No. 730,149
7 Claims. (Cl. 318—154)

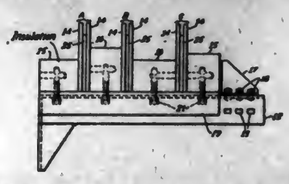
1. An electric drive system, comprising a direct-current drive motor to operate at adjustable speed having an armature and a field winding, an adjustable-voltage generator having an armature and a field winding series-connected with said armature and said field winding of said motor, first contact means disposed between said field winding and said armature of said motor to disconnect them from each other when said contact means is open, constant-speed drive means for driving said generator armature, control means connected with said drive means and having a start contact and a stop contact, a field resistor, second contact means for connecting when closed said field resistor in series with said generator armature and said generator and motor field windings, a braking resistor, third contact means for connecting when closed said braking resistor across said motor armature, a voltage relay connected across said motor armature so as to cause said control means to maintain said drive means running for a braking interval after the actuation of said stop contact until said motor armature ceases regenerating a sufficient voltage to keep said relay picked up, and means linking said first, second and third contact means with said control means and said relay so as to open said first contact means and close said second and third contact means during said interval in response to the actuation of said stop contact and under control by said relay.

2,445,461
WEEDLESS FISHING PLUG
Lewis D. St. John, Edgerton, Wis.
Application June 10, 1946, Serial No. 675,595
1 Claim. (Cl. 43—35)



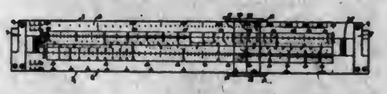
A device of the character specified, comprising a tapering plug formed with a central longitudinal bore, a hollow spring controlled plunger, slidably mounted in the bore of said tapering plug, a cable extending through the plunger and formed at its outer end with a loop, double barbed hooks loosely connected to the loop of said cable, a spring controlled latch device to hold the plunger in retracted position, a housing on the tapering plug over the latch device to release the latter from the plunger when pressure is applied to the housing, a second loop at the inner end of the cable to limit the outward movement of the plunger, a metal ring or disk secured to the cable and fitting against the inner end of the plunger, and a second cable extending through the second loop to the fishing line.

2,445,462
ELECTRICAL DISCHARGE DEVICE AND BASE
Ward W. Watrous, Jr., Chatham, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 26, 1944, Serial No. 532,730
11 Claims. (Cl. 250—27.5)



1. A base for an electrical device comprising a hollow portion with a plurality of contact elements, a hollow generally-cylindrical portion of minimum internal diameter larger than the maximum external diameter of said first-mentioned hollow portion to receive a portion of the envelope of said device, connected to one end of said first-mentioned portion by a flat web out-

standing peripherally therefrom, a contact member on said portion of larger diameter, and an

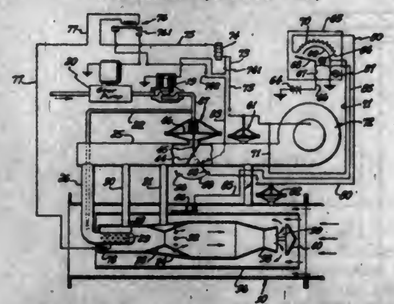


aperture in said larger cylindrical portion to receive a lead to said contact member.

2,445,463
UNIVERSAL BUS-BAR SUPPORT
Charles P. West, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 30, 1944, Serial No. 538,077
5 Claims. (Cl. 174—70)

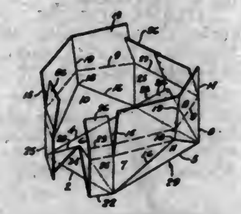
1. A bus structure comprising, a horizontally disposed support member having a plurality of openings through the top thereof, rectangular bus bars disposed edgewise on the support member in spaced relation, rectangular spacing members disposed between said bars, a brace secured to said support member, an additional rectangular spacing member disposed between one of said bars and the brace, and bolts extending through said openings into said spacing members for retaining them in position, said spacing members being rotatable about a transverse axis of the members through an angle of 90° to provide space for additional bus bars and having openings in the sides and ends thereof for receiving said bolts when so rotated.

2,445,464
SLIDE RULE
Jeremiah F. Ailinger, Dorchester, Mass.
Application May 27, 1944, Serial No. 537,574
22 Claims. (Cl. 235—70)



1. A slide rule comprising a body having a straight flat face provided with a recess extending longitudinally intermediate of the width thereof and dividing said face into spaced parallel scale sections lying in the same plane, scales on the respective scale sections, a polygonal slide longitudinally and rotatably movable in said recess having flat faces carrying scales selectively movable into the space between and into the plane of the scales of said body section and a runner having a flat plate provided with a hairline cooperating with suitable scales on said body and slide to perform a computation and yieldable means normally holding said plate in close proximity to the plane of the cooperating scales but enabling said plate to be raised and lowered relatively thereto to permit rotative positioning of another face and the scale on said face of said polygonal slide in said plane.

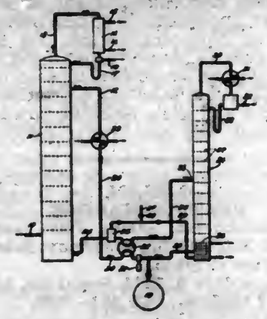
2,445,465
CLOSURE PLUG FOR CONTAINERS
Earl M. Amesbury, Theodore W. Franks, and John Jesevich, Jr., Chicago, Ill., assignors to American Flange & Manufacturing Co., Inc., New York, N. Y., a corporation of Illinois
Application July 6, 1944, Serial No. 543,640
6 Claims. (Cl. 220—39)



4. An integral one-piece sheet metal plug for containers, comprising, a bottom portion, a side wall extending up therearound in substantially cylindrical form and a re-inforcing bead around the open free end of said cylindrical wall, said bead being formed by extending the stock of said wall outwardly and then turning it inwardly to terminate in a free edge and a tool engaging member extending from said free edge inwardly of said plug and away from said adjacent side wall, said tool engaging member extending a substantial distance away from the adjacent portion of said side wall and engaging the same again at a position spaced from its commencement.

2,445,466
FLUID FUEL COMBUSTION DEVICE
Albert A. Arnhym, Los Angeles, Calif., assignor to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application June 2, 1944, Serial No. 538,517
3 Claims. (Cl. 263—19)

1. In a combustion device: an elongated combustion chamber, means for introducing a mixture of air and fuel into said combustion chamber at one end thereof, the other end of said chamber being open for the discharge of products of combustion, a casing surrounding said combustion chamber and adapted to have a stream of air to be heated forced therethrough in direction opposite to the flow through said combustion chamber, a cap juxtaposed to the open end of said combustion chamber for deflecting products of combustion laterally into said air stream, said casing being fully open at the ends whereby the smallest cross-sectional area of said air stream occurs in the annular space between said casing and said combustion chamber.

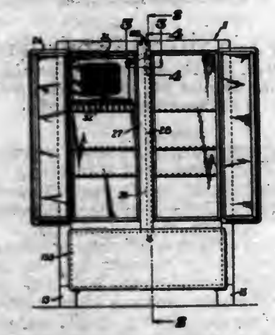


2,445,467
SHIPPING CONTAINER
Aaron Berke, New York, N. Y., assignor to Victory Container Corporation, New York, N. Y., a corporation of New York
Application October 23, 1947, Serial No. 781,715
7 Claims. (Cl. 229—41)

1. A blank and a shipping container erectable therefrom having a rectangular median portion thereof bordered by scorings to define the bottom wall of the container, said blank having a rectangular portion adjacent each side of said median portion bordered by scorings to define both side walls of the container, the portion of said blank between each of said side walls and the margin of the blank consituting a side flap for closing the container, each of said side flaps being bisected by a transverse scoring, each of said side walls having oblique scorings, each remainder portion of the blank between said bottom wall, said side walls, and said flaps having transverse scorings defining an area adjacent said bottom wall, an area adjacent each of said side walls, and a terminating corner area adjacent each of said flaps, each of said corner areas being separated from its adjacent flap by a slit, each of said areas adjacent said bottom wall having oblique scorings, each of said remainder portions being foldable along all of its said scorings to form a front and a rear wall and a front and rear closing flap of the container through cooperation of the simultaneous folding action of said bottom and side walls along all of their said scorings, and the securing to each other of the margins of each of said remainder portions completing the erection of the container.

2,445,468
REMOVAL OF ACIDIC CONSTITUENTS FROM GASES
Clyde L. Blohm, Los Angeles, Fred C. Riesenfeld, Hollywood, and Henry D. Frazier, Alhambra, Calif., assignors to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application May 19, 1947, Serial No. 749,046
12 Claims. (Cl. 23—2)

12. The method of treating a gas for removal of an acidic impurity of the group consisting of hydrogen sulfide, sulfur dioxide and carbon dioxide, that comprises contacting the gas with a solution of an amine, water and a monohydric aliphatic alcohol of the group consisting of benzyl alcohol and tetrahydrofurfuryl alcohol, to form a rich solution containing the absorbed impurity, and heating and regenerating the rich so-



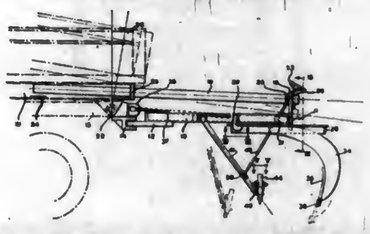
lution for reuse, the quantity of said alcohol in the solution being in excess of the amine.

2,445,469
CONVEYER
Robert Auldom Bradley, Vancouver, British Columbia, Canada
Application May 17, 1945, Serial No. 594,295
In Canada January 31, 1945
6 Claims. (Cl. 104—124)

1. A flexible trestlework conveyor consisting of at least one section comprising a plurality of transverse bents, longitudinal connecting means carried by said bents, a plurality of diagonal braces connected pivotally at one end to the longitudinal connecting means and at the other end pivotally to means connected to a bent and movable vertically with respect to such bent towards and away from said longitudinal connecting means.

2,445,470
REFRIGERATING APPARATUS ASSEMBLED AND REMOVED FROM CABINET AS A UNIT
David George Brauer, West Los Angeles, Calif., assignor to Boypower Incorporated, Los Angeles, Calif., a corporation of California
Application September 4, 1944, Serial No. 552,606
4 Claims. (Cl. 62—116)

1. In a refrigerator, a cabinet forming a refrigerating compartment having insulated walls and a side opening door and a vertical paneled

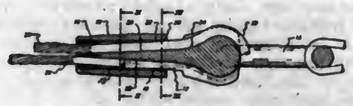


door stile having an interior chamber packed with heat insulation material, a compressor unit mounted below said compartment, an expansion coil unit in an upper portion of said compartment, a plurality of pipes connecting said units and the vertical portion thereof being disposed within said door stile and embedded in said insulating material, said door stile having a detachable panel and said pipes and units being integrally removable from said stile and the refrigerator.

2,445,471
HEAT EXCHANGER
Robert E. Buckholdt, Salem, Ohio, assignor to The Salem Engineering Company, Salem, Ohio, a corporation of Ohio
Application May 9, 1944, Serial No. 534,723
2 Claims. (Cl. 257—246)

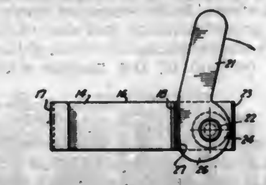
1. Heat exchanging apparatus comprising a tubular structure having a metallic side wall formed of circumferentially spaced portions extending radially outward of the longitudinal center of said structure thereby providing a plurality of circumferentially spaced but axially extending fluid receiving pockets in open communication with the general space within said structure, a fluid deflecting member comprising an elongated body of refractory material positioned centrally in said structure and being operative to force fluid passing through said structure into said pockets, a fluid conducting casing having end walls enclosing said structure, said structure having fluid conducting components extending through said walls, and an axially yieldable metal seal between one of said components and the adjacent wall of said casing.

2,445,472
SUPPORT AND TRACTION OF IMPLEMENTS
Adam F. Butch, Lawrence County, Pa.
Application August 24, 1944, Serial No. 551,042
6 Claims. (Cl. 37—156)



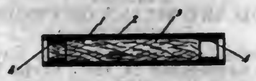
6. An attachment for a conventional motor truck of the load dumping type having a load-carrying body pivotally supported at its rear end comprising a boom-like support adapted to be rigidly but detachably coupled with said body in rearwardly projecting relation therewith whereby upon upward tilting movement of said body the outer or rear end of said support will be moved downwardly, an earth working implement carried by said outer or rear end of said support in depending relation therewith, and means for tractively connecting said truck to said implement the arrangement being such that upon upward tilting of said body said implement may be forced into the surface of the earth while upon said body being lowered to horizontal position said implement is supported in a position above said surface to facilitate its transportation.

2,445,473
GLARE SCREEN
Maurice Constant, Reno, Nev.
Application November 19, 1945, Serial No. 629,477
3 Claims. (Cl. 296—97)



1. In an automobile having a hood and a transparent front windshield mounted at the rear of the hood, a glare screen comprising a flat plate of opaque, translucent or light-resistant material in form to contact the rear face of the windshield and to lie parallel therewith, pivot pins mounted upon the side frames of the windshield carrying cams positioned to bear against and hold the screen in contact with the windshield.

2,445,474
CABLE CLAMPING DEVICE
Stephen De Orlow, Jackson, Mich.
Application March 23, 1944, Serial No. 527,772
2 Claims. (Cl. 24—124)



1. A cable terminal assembly comprising a one-piece unitary female part having a screw-threaded opening of substantially uniform diameter at one end and a conical flaring internally smooth walled portion at the other end, and a male part having threaded portions engaging the screw threads in the female part and provided with an axially extending inclined groove on one side, the depth of which in the area embraced by the flaring portion of the female member being less than the diameter of the cable to be engaged, whereby the cable is adapted to be compressed within the groove of the male member and against the conical portion of the female member when said parts are threaded together and the clamping portion of the female member is positively withdrawn from such clamping relation with the cable when the parts are threaded apart.

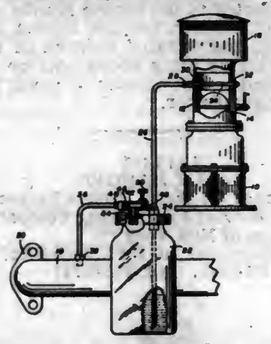
2,445,475
CLAMP
Albert A. Durant, Honolulu, Territory of Hawaii
Application February 17, 1947, Serial No. 729,155
2 Claims. (Cl. 24—84)

1. A clamp for securing adjacent but spaced edges of a metal sheet in a fixed spaced parallel relation to one another, each of said metal sheet edges being turned back upon the sheet to form a U-shaped lip along the sheet edge, said clamp comprising a spacer member having a hook at one end to engage one of said U-shaped lips, a projecting member on said spacer member for engaging the base of the other U-shaped lip to position said sheet edges in a parallel spaced relation to one another, and means for securing said spacer member in an engaging position with said sheet edges.

2,445,476
CIGARETTE ARTICLE
Marvin L. Folkman, Shaker Heights, Ohio
Application December 29, 1944, Serial No. 570,350
2 Claims. (Cl. 128—185)

1. In a cigarette article, in combination, a resilient tubular body of flexible material, internally impervious to volatile agents, and externally impervious to moisture, an air pervious filler within the body, saturated with a volatile agent, and resilient plugs in and at the ends of the body, said plugs having air flow openings therethrough.

2,445,477
AMPOULE
Marvin L. Folkman, Shaker Heights, Ohio
Application March 12, 1945, Serial No. 582,399
10 Claims. (Cl. 128—272)

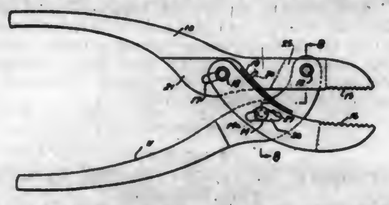


1. An ampoule comprising a tubular body, a mixing plunger at one end of the body, movable thereinto, and comprising a puncturable plug, a stationary closure at the other end of the body, said mixing plunger having a hollow portion forming a medicament containing chamber, said chamber having ports for establishing communication between the interior of the chamber and the space within the body, a member stationary in the body normally closing said ports until the mixing plunger and chamber are moved inwardly of the body, and a medicament ejecting plunger spaced from the mixing plunger and providing a space in the body for a medicament liquefying agent.

2,445,478
CRYSTALLINE MATERIAL PREPARATION
George H. Foster, Stamford, and Emil F. Williams, Old Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application September 6, 1944, Serial No. 552,836
5 Claims. (Cl. 260—564)

1. A method of preparing finely divided nitroguanidine which includes the step of crystallizing the same from an aqueous solution thereof in the presence of a crystal modifying amount of a member of the group consisting of amino and substituted amino compounds.

2,445,479
AUTOMATIC METERING WATER INJECTOR FOR ENGINES
Fred P. Francis, Hartford, Conn.
Application February 26, 1947, Serial No. 731,110
8 Claims. (Cl. 123—25)



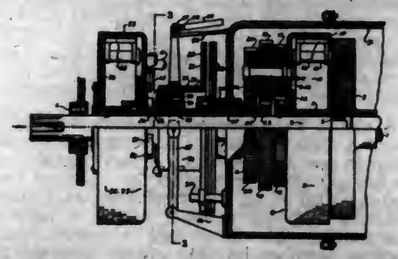
5. A device for injecting water into an internal combustion engine including a closed water tank, a water delivery conduit connecting said tank with an engine intake pipe means for maintaining a column of water in said water-delivery conduit at a level proportional to the engine exhaust pipe pressure ready for induction into said intake pipe, means for varying the height of the column, said first means including an exhaust passage communicating with the engine exhaust pipe and having an outlet discharging directly and freely to the atmosphere, said second means including means for variably throttling the escape of exhaust from said outlet and maintaining a pressure in said passage, and a conduit connecting said passage with said tank, means for inducting water by intake pipe suction from the top of said column into said intake pipe, said last means including discharge nozzles connected with said conduit and positioned in the intake pipe.

2,445,480
PIVOTED JAW PLIER WRENCH WITH SLOTTED FULCRUM GUIDE
Jacob Plannie Gantt, Rock Hill, S. C.
Application November 2, 1944, Serial No. 561,520
1 Claim. (Cl. 81—78)

A wrench comprising a handle member having a jaw on one end thereof, a jaw member having a jaw on one end thereof cooperating with the jaw on the handle member, the other end of the jaw member being pivoted on an intermediate portion of the handle member, a second handle member having one end pivotally secured to the first handle member at a point between the jaw on the first handle member and the point where

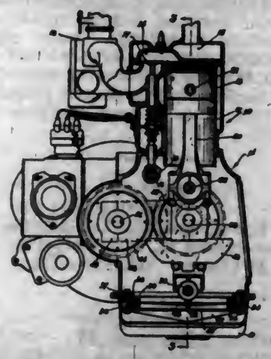
the jaw member is pivoted on the first handle member and extending past an intermediate portion of the jaw member, a pivotal connection between an intermediate portion of the jaw member and an intermediate portion of the second handle member, the pivotal connection between the jaw member and the first handle member being a slot and sliding pin connection, and the

pivotal connection between the jaw member and the second handle member being a slot in the jaw member having one of its sidewalls serrated and a pin mounted in the second handle member and extending through the slot having the serrated sidewall, the serrated sidewall of the slot in the jaw member being engageable by the pin when the second handle member is moved towards the first handle member.



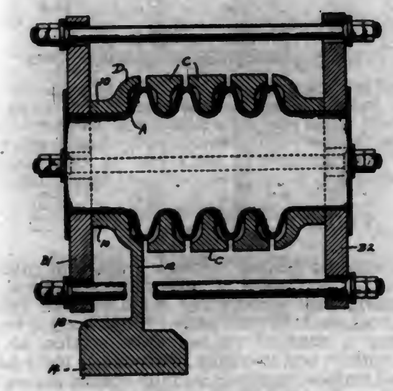
2,445,481
CABLE HANGER
Arthur Lawrence Ge Werts, Mount Vernon, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
Application December 20, 1943, Serial No. 514,902
1 Claim. (Cl. 248—74)

A hanger for supporting wiring or the like to a supporting structure, said hanger comprising a band of non-metallic material having a free end and a supported end, said supported end having a stud member for attaching the supported end to a supporting structure, said stud member being provided with a head; a socket attached to the free end of the band for engaging the head of the stud and being assembled and retained in position independently of any resiliency in the band, for locking the free end of the plastic band to the stud member for forming a closed loop.



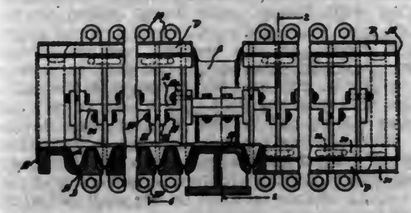
2,445,482
AUTOMATIC TRANSMISSION
Richard Harold Hodgson, Vancouver, British Columbia, Canada
Application May 1, 1946, Serial No. 666,498
4 Claims. (Cl. 74—260)

1. An automatic transmission adapted for connection to an engine drive shaft, said transmission comprising a driven shaft aligned with said drive shaft, a clutch having a drive member engaging the drive shaft and a driven member, said drive and driven members being adapted for operative engagement in response to a predetermined increase in drive shaft speed, a gear secured to the driven shaft and two axially aligned and connected planet idlers mounted upon the driven member of the clutch, a sleeve rotatable upon the driven shaft, a gear secured to said sleeve, said gears being in meshing engagement with the two planet idlers, an overriding brake having a non-rotatable annulus and an annulus rotatable in one direction around the sleeve, means for slidably supporting the fixed annulus, a second clutch having an engagement mechanism and a drum to be engaged thereby in response to a predetermined increase of the driven speed of the engaging mechanism, said engaging mechanism portion of the second clutch being



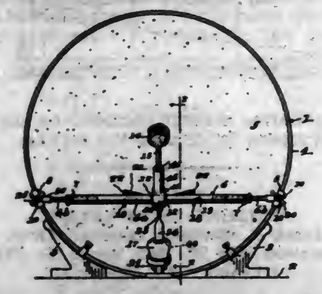
secured to the driven shaft and said drum being secured to the sleeve, a positive drive clutch interposed between the drum and the rotatable annulus of the overriding brake, means for resiliently urging the positive drive clutch into engaging position, means response to speed increase of the second clutch for disengaging the positive drive clutch, and manually operable means for moving the positive drive clutch into disengaging position.

2,445,483
METHOD AND MEANS OF PRODUCING POWER
Edwin Jacobsen, Altadena, Calif.
Application September 24, 1945, Serial No. 618,212
5 Claims. (Cl. 123—197)



3. An internal combustion engine comprising a cylinder, a piston therein, a crankshaft formed with a crank throw carrying a pin and having concentric and eccentric crankshaft sections, the axes of which are offset with relation to each other and both of which axes lie in a plane common to that of the crank-pin, a power output shaft parallel to the crankshaft, a radius arm pivotally mounted upon the power output shaft and rotatably holding the concentric portion of the crankshaft at its outer end, the arc of the axis of the concentric crankshaft section being tangent to the longitudinal center line of the cylinder, an oscillating arm rotatably engaging the eccentric shaft section and extending downwardly beneath the crankshaft, a pivot shaft for the lower end of said oscillating arm, said shaft being parallel to the crankshaft and intersecting the longitudinal center line of the cylinder, the radial length of said arm being such as to dispose the axis of the eccentric shaft section above the axis of the concentric shaft section when the piston is on top dead-center, and constantly meshed driving gears, one carried upon the power output shaft and the other carried by the concentric crankshaft section.

2,445,484
EXPANSION JOINT AND INTEGRAL ANCHOR
Paul Kopperman, Philadelphia, Pa.
Application January 10, 1946, Serial No. 640,203
2 Claims. (Cl. 285—90)



2. An expansion joint comprising a pair of rigid flanges, an expansion tubing attached to said flanges, a ring encircling a portion of said tubing, and an anchor integrally formed with said ring to rigidly fasten said joint to a fixed member.

2,445,485
CORRUGATION LIMIT STOP
Paul Kopperman, Philadelphia, Pa.
Application January 10, 1946, Serial No. 640,204
1 Claim. (Cl. 285—90)

In a corrugated expansion joint, a plurality of rings, one ring being located in the trough of each corrugation, a Z-shaped flange integrally formed with each ring, a bolt extending between adjacent Z-shaped flanges to limit the expansion of said rings, and a single channel having longitudinally extending slots therein whereby radially extending bolts in said rings will keep said rings in alignment.

2,445,486
DRUM PEDAL APPARATUS
Frederick J. La Londe, Los Angeles, Calif.
Application April 4, 1945, Serial No. 586,598
14 Claims. (Cl. 84—422)

1. In a drum pedal construction, the combination of a transversely disposed bar, means for supporting the same adjacent its ends on the drum so that it extends across the drum head, a rocker mounted for rotation on the bar, a drum beater carried on said rocker, a pedal, and means for actuating the rocker by the pedal.

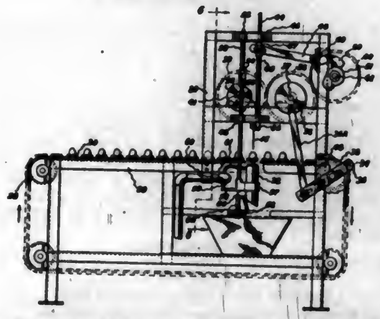
2,445,487
HEAD COVER
Dorothy Lester and Andrew Lester, Hobe Sound, Fla.
Application December 5, 1945, Serial No. 632,966
4 Claims. (Cl. 2—174)

1. A head covering of the class described comprising a bag embodying front and rear edge seam connected panels having inverted V-shaped notches adjacent the opposite lower ends of the seams, said lower end portions of said panels having horizontal open-ended pockets, and separate drawstrings running slidably through the respective pockets, the free ends of the strings being adapted to be pulled in opposing directions, the opposite ends of said drawstrings being anchored on opposite panels and end portions of the mouth of said bag.

2,445,488
PIECE CUTTING MACHINE
Frank D. Luteran, Dearborn, Mich.
Application October 14, 1943, Serial No. 506,133
8 Claims. (Cl. 107—22)

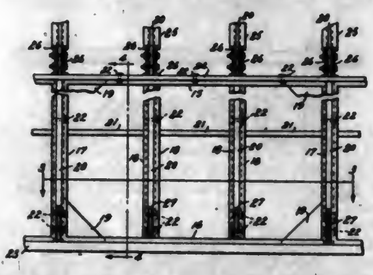
5. In a machine for severing lengths of material into a plurality of individual pieces which includes, in combination, a frame, a base supporting said frame, a carrier in said frame by which the lengths are carried through the machine, a plurality of cutting blades mounted in said machine in diverging relation from a front central blade which initially severs the length

into two halves and spaces the halves apart so that the blades diverging therefrom can cut pieces



from the halves without compressing the material, and means for driving the carrier.

2,445,489
FOLDING CAMP STOOL
Jacob A. Mangold, Lebanon, Oreg.
Application May 22, 1945, Serial No. 595,100
1 Claim. (Cl. 155—149)

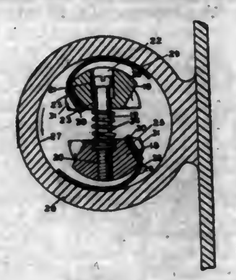


A folding camp stool comprising a tubular body, spaced enlargements disposed within the body adjacent to one of the open ends thereof, a movable head within the body, extensions on the movable head adapted to engage the enlargements, limiting downward movement of the head, pivoted leg members connected with the head and adapted to extend beyond one end of the body providing a support for the body, and a pivoted seat embodying foldable arms slidable within the tubular body, and a flexible seat cover secured to the foldable arms.

2,445,490
AUTOMATIC SUCTION MEANS FOR REMOVING EGG LIQUID
John Meade, Erskineville, near Sydney, New South Wales, Australia
Application May 15, 1945, Serial No. 593,940
In Australia May 25, 1944
8 Claims. (Cl. 146—2)

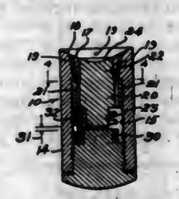
1. In a machine for evacuating the contents of an egg, a container having a cushioned aperture at its upper end and vacuum suction connection adjacent to its upper end, a needle disposed above said aperture, an endless conveyor having spaced supports thereon adapted to seat an egg with portion of said egg depending from said support, means to intermittently advance said conveyor to successively position said supports between said container and said needle, means to raise said container and simultaneously apply vacuum suction thereto, means to advance said needle through said support and aperture and then withdraw said needle, and means to lower said container and cut off said vacuum suction whereby an egg seated on a said support and advanced to a position between said needle and said container is contacted at its depending portion by said cushioned aperture, pierced by said needle and its contents simultaneously passed into said container.

2,445,491
BUILDING CONSTRUCTION
Edgar John Moloney, East Orange, N. J.
Application June 19, 1946, Serial No. 677,843
1 Claim. (Cl. 189—1)



A building having exterior walls and interior partitions composed of preformed structural interchangeable rectangular building wall panels of metal, each of said panels comprising a frame having a channel shaped cross section at the top, bottom and two sides, with one or more additional vertical members equally spaced across the panel, and with a horizontal stiffening member, and with adjoining panels secured together by fastening devises, and with continuous nailing strips placed between side channel frames of adjoining panels and secured in place by bolts securing the panels together, and with continuous nailing strips secured in place between the channel shaped additional vertical members of panels with fastening devices, and with floor, ceiling and roof beams each composed of two preformed channel shaped members placed back to back and separated by a continuous nailing strip, secured in place between the channel shaped members by fastening devices, and with said floor beams secured to exterior wall panels by the vertical sections of the floor beams passing between adjoining wall panels, and being bolted to wall panels, and with said roof beams secured to said ceiling beams by the vertical sections of roof beams passing between the vertical sections of the ceiling beams, and being bolted to the ceiling beams, and with the wall panels secured to a continuous sill at the bottom by fastening devices, and with the wall panels having a continuous channel shaped sill at the top to which the wall panels are secured by fastening devices, and with the ceiling beams secured to the wall sill at the top by fastening devices.

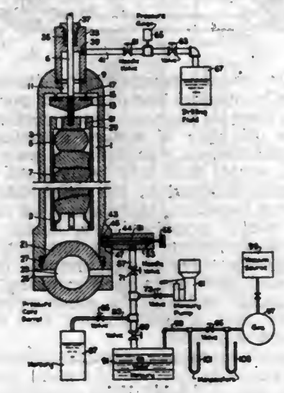
2,445,492
HONING DEVICE
Lionel G. Pentecost, Portland, Oreg.
Application May 22, 1946, Serial No. 671,473
1 Claim. (Cl. 51—184.2)



A honing device including a pin, an element for a power connection supporting said pin, spaced apart honing heads on said pin, each head

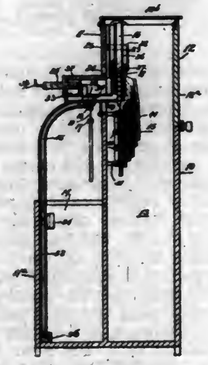
having converging edges in opposed relationship to the next head, spring means for connecting the respective heads to maintain the heads under relative spacing tension when in use, a pair of resilient honing shoes, each shoe having one end secured to one side of a head and curved upwardly

and circumferentially and spaced from the head and extended beyond the opposite side of the head when in contact with a surface being honed, the curved and circumferential portion of each shoe being at all times out of contact with the outer surface of the head to which it is attached.



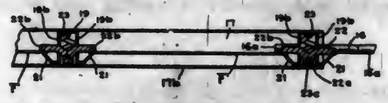
2,445,493
VALVE ACTUATING MEANS
Vail C. Priest, Mountainair, N. Mex.
Application July 9, 1946, Serial No. 682,321
1 Claim. (Cl. 74—569)

Valve actuating means comprising in combination, a cam actuated cylinder and a base plug in the lower end thereof, an inturned shoulder at the upper end of said cylinder, a plunger slidably positioned in said cylinder and forming a push rod seat, coacting abutments on the adjacent surfaces of said plunger and said plug, a compression spring between said plunger and said plug, the adjacent surfaces of said abutments being normally spaced and forming a clearance gap, and a plurality of oil passages provided in said plunger and in said shoulder.



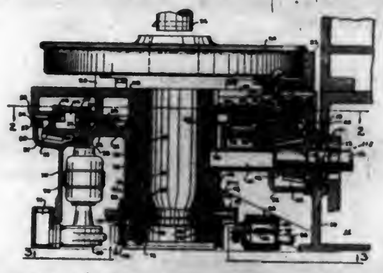
2,445,494
METHOD OF DETERMINING THE FLUID CONTENTS OF UNDERGROUND FORMATION SAMPLES
John F. Redmond, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application October 10, 1944, Serial No. 558,102
6 Claims. (Cl. 23—230)

2. In a method for measuring the natural formation fluid contents of a core drilled out while circulating an oil-base drilling fluid in a borehole, the steps of adding a tracer material to the drilling fluid in known concentration, confining the core and a portion of the surrounding drilling fluid in situ at bottom hole pressure in a sealed container, raising said container to the surface, injecting mercury into said container to displace the drilling fluid therefrom while maintaining the pressure within said container substantially constant at bottom hole pressure until the drilling fluid has been completely displaced therefrom, releasing said pressure, removing said mercury



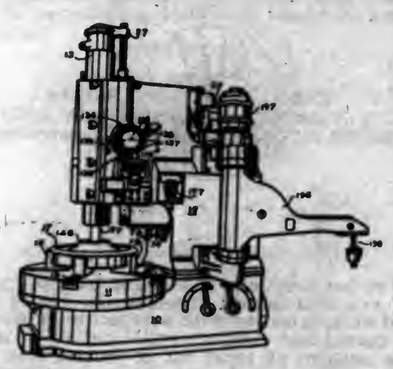
from said container and the fluids present in the core from said core, determining the amount of the fluids present in said core, and analyzing said fluids for the concentration of said tracer material in said fluids, whereby the respective amounts of the drilling fluid contaminating said core and of the natural formation fluid in said core may be determined.

2,445,495
MULTIPLE TOWEL HOLDER AND DISPENSER
Jacques Rousso, Los Angeles, Calif.
Application May 14, 1945, Serial No. 593,578
7 Claims. (Cl. 312—37)



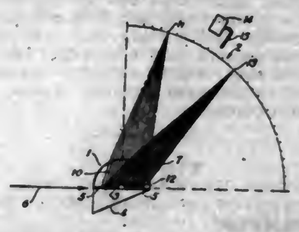
1. In a towel holding device of the class described, a cabinet, a plurality of towels therein, a set of rollers attached to each towel, a trackway for said rollers, and a coin-controlled, manually operated gripping device adapted to grip a single set of rollers and to pull said rollers with the attached towel from said cabinet.

2,445,496
PHOTOGRAPHIC FILM HOLDER
Robert Sardeson and Edward H. Savela, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a corporation of Delaware
Application August 12, 1944, Serial No. 549,163
17 Claims. (Cl. 95—100)



1. A film hanger comprising a frame having substantially parallel portions, said portions being in the form of channels, each portion having thereon a plurality of spaced gripping means, each of said means comprising a pair of gripping jaws, one of said jaws being rigid with and having parts disposed at the outer sides of said channel and extending transversely of said channel the other gripping jaw being disposed largely in said channel and having parts projecting through the sides of said channel to cooperate with said first mentioned gripping jaw and resilient means urging said other gripping jaw toward said first mentioned jaw and into gripping relation therewith.

2,445,497
BORING MILL
Otto E. Schurr, Hamilton, Ohio, assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application March 12, 1945, Serial No. 582,243
11 Claims. (Cl. 77—4)

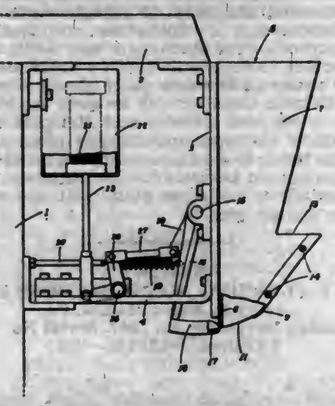


1. A vertical boring mill that includes in combination, a frame, a horizontally rotatable table, spindle means downwardly extending from said table and journaled in bearing means in said frame to provide an axis of rotation for said table, bearing means carried by said frame for supporting the weight of said table and upon which it is rotated to thereby relieve said spindle from the supporting thrust load of said table, a ring gear for driving said table, bearing means co-axial with said spindle carried by said frame upon which said ring gear is journaled and supported independently of said table to thereby relieve said table of any supporting thrust load of said ring gear, means including a lost motion connection operably connecting said ring gear to drive said table, means for driving said ring gear, a brake drum fixed on the lower end of said spindle, a brake band carried upon said frame and co-operating with said brake drum, and fluid actuated means on said frame for operating said brake band to engage said brake drum to arrest rotation of said table when said ring gear is being actuated by said ring gear driving means to control the operation of said lost motion connection.

2,445,498
CONTROL FOR BORING MILLS
Otto E. Schurr, Hamilton, Ohio, assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application May 30, 1945, Serial No. 596,776
16 Claims. (Cl. 77—4)

1. The combination in a boring machine of, a rotatable work table, chucking means on said table, an electric motor for driving said work table and operating said chucking means, a generator driven by said motor, electric control means for controlling the supply of current to said electric motor, electric operating means responsive to the current generated by the generator for operating said electric control means to automatically cause said drive motor to operate at a predetermined cyclical variable rate of speed for intermittently driving said chucking means, and manually actuated means operable for constantly rendering said electric operating means effective for any desired period of time.

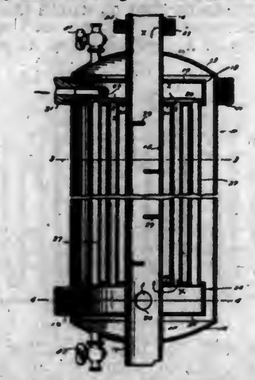
2,445,499
REFRACTOMETER BASED ON THE PRINCIPLE OF TOTAL REFLECTIONS
Martin Silge, Oakland, Calif.
Application June 15, 1946, Serial No. 676,878
2 Claims. (Cl. 88—14)



1. In a refractometer, an index prism having an exit surface optically effective to form an image of the borderline of total reflection at a definite distance and a screen mounted at said distance to render the image visible, the screen having a scale thereon to indicate data with respect to objects disposed in optical contact with the entrance surface of the prism and a microscope mounted for movement over the screen to give an enlarged reading of the scale divisions.

2,445,500
MANUFACTURE OF ETHERS OF PHENOLS
Daniel Tyrer, Stockton-on-Tees, England
No Drawing. Application May 22, 1945, Serial No. 595,247. In Great Britain June 9, 1944
8 Claims. (Cl. 260—612)

1. A process for the manufacture of ethers of phenols, which comprises preparing a substantially solid mixture of an inorganic base and an alkali salt of a sulphonic acid selected from the group consisting of the monosulphonic acids of benzene, toluene, meta-xylene and naphthalene and pyridine-β-monosulphonic acid, subjecting the said mixture at a temperature ranging from 200° C. to 400° C. to the action of the vapour of an alcohol selected from the group consisting of saturated monohydric alcohols of the aliphatic and cycloaliphatic series containing at most 6 carbon atoms, the quantity of the alcohol vapour being in excess of that required to form the ether, and expelling the ether from the reaction mixture with the excess of the alcohol vapour.



2,445,501
HOPPER ASSEMBLY WITH SOLENOID OPERATED GATE
Edward J. Vagim, Fresno, Calif.
Application March 28, 1945, Serial No. 585,364
3 Claims. (Cl. 222—459)

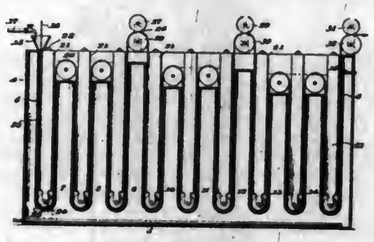
1. A hopper assembly including a frame, a hopper mounted on the frame, the hopper comprising a vertical rear wall, side walls, and a dual front wall, one front wall inclining from its upward edge downwardly and inwardly toward the vertical rear wall to a point intermediate the upper and lower edges of such rear wall to there form a throat, the second front wall having its upper edge laterally out from the lower edge of the first front wall and in substantially the same horizontal plane thereof, such second front wall inclining downwardly toward the vertical rear wall to a point spaced from the lower edge of such rear wall to form a discharge opening, and a gate operable to close said discharge opening.

2,445,502
APPARATUS FOR CONVERTING FUELS FROM LIQUID TO GASEOUS STATE
Thomas J. Vaughn and Ben O. Morgan, Odessa, Tex.; said Morgan assignor to said Vaughn
Application May 4, 1944, Serial No. 534,136
5 Claims. (Cl. 62—1)

1. A vaporizer unit for converting fuel from liquid into gaseous state, comprising a common, closed cylindrical housing, means for heating said housing, a plurality of interconnected coaxial expansion chambers consisting of one central and two end chambers, spaced within the housing around the central chamber; liquid fuel admitting means extending through one side of the housing into the first of said end chambers for

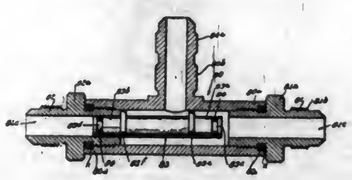
admitting liquid fuel under pressure and in which regulation takes place to initially reduce the pressure, and having an atomizer nozzle opening into said first end chamber, a distributing screen therein, tubular connections between the end chambers within the common housing, whereby the liquid fuel becomes gradually increasingly vaporized in each subsequent expansion chamber.

2,445,503
TWIN TIRES FOR MOTOR VEHICLES
John H. Williams, St. Johns, Newfoundland, Canada
Application September 21, 1944, Serial No. 555,085
2 Claims. (Cl. 152—352)



1. A twin pneumatic tire comprising two heavy rubber flanges adapted to fit in a wheel rim and to engage each other along their inner faces, a rubber wall connecting said flanges and including the tread of said tire, said wall having a middle portion extending inwardly toward but not to said flange inner faces, dividing the interior of said tire into two annular chambers, a separate annular rubber ring disposed between and in engagement with said middle portion and said flanges, closing one of said chambers from the other of said chambers, said middle portion including two spaced parts forming a groove therebetween, a rubber air-containing tube in each of said chambers, and means in said groove holding said middle portion against said ring.

2,445,504
PROCESS OF FLUID TREATING WEBS OF FABRIC
Sumner H. Williams, Charlotte, N. C.
Application October 6, 1944, Serial No. 557,459
1 Claim. (Cl. 8—151)

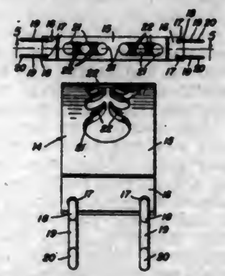


A continuous process of treating a continuous web of fabric with a chemical solution, which

consists in drawing the web successively downwardly and upwardly through a tank, reducing the elevation of the web drawn through said tank successively and progressively with the highest elevation of said web being nearest the point of admission of said web into the tank, feeding a chemical solution into the tank at a point immediately adjacent that at which the web enters the tank, successively baffling said solution and web together in a confined area at progressively

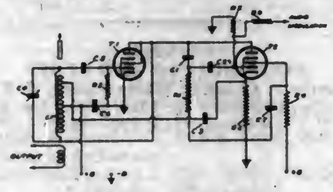
lower levels with the highest baffling point being nearest the point of admission of said solution into the tank, moving the chemical solution through the tank by the combined action of drawing said web therethrough and the effect of gravity to cause said solution to travel in a thin stream immediately surrounding and with said web, removing said web from the tank, and simultaneously withdrawing spent solution from said tank adjacent the point of removal of the web from said tank.

2,445,505
VALVE
Benjamin N. Ashton, Kingston, N. Y., assignor to Electrol Incorporated, Kingston, N. Y., a corporation of Delaware
Application September 30, 1943, Serial No. 504,409
3 Claims. (Cl. 251—118)



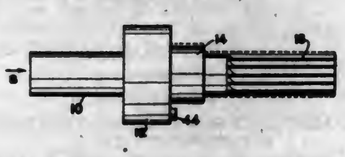
1. A fluid pressure responsive valve comprising a tubular valve housing having inlets at opposite ends, an outlet between its ends and spaced apart cylindrical valve seats of less diameter than the internal diameter of said valve housing between said seats, an elongated valve plug of greater length than the distance between said valve seats and smaller diameter than said internal diameter between said seats to provide a passage for fluid around said plug, said plug being slidable axially in said housing and having cylindrical end portions alternately receivable in and substantially fitting said valve seats, means forming annular grooves in said end portions, resilient rubbery rings in said grooves effecting sealing engagement with said end portions and said seats, and means on said valve plug engaging the interior of said housing for guiding said plug in said housing and limiting the extent of axial movement of said plug.

2,445,506
STEAM GENERATING ATTACHMENT FOR ELECTRIC IRONS
Walter E. Baker, Boaz, Ala.
Application November 15, 1946, Serial No. 710,042
4 Claims. (Cl. 38—77)



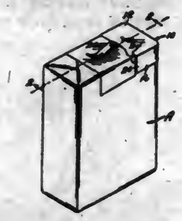
1. In a steam generating attachment for an electric iron, comprising a pair of identically opposite curved hollow housings fitting against the curved side walls of an electric iron body, there being a division plate dividing each curved hollow housing into two separate sections and the one or first of the latter in each housing being adapted to receive and vaporize water, external passage means interconnecting the one or first and the other of the two sections in each housing, and means adapting said other of said two sections in each housing to receive through said external passage the vapor generated in the one or first section in said housing and direct said vapor onto the fabric being pressed by the iron, the features including a flexible band securely interconnecting the forward ends of said curved housings adapting them to assume varied angular relationships to each other, locating means on the inner curved surfaces of both hollow housings serving to co-operate with corresponding locating means in the side walls of said iron body, and a flexible band serving to span the rear end of the latter and interconnect the rear ends of said hollow housings and thereby removably secure the latter to said iron adjacent its side walls with the curved bottoms thereof adjacent to and substantially in the same plane with the pressing surface of said iron.

2,445,507
SELF-CLEANING NONSKID CROSS LINK
Jerry L. Batts, Rahns, Pa.
Application November 25, 1947, Serial No. 787,901
2 Claims. (Cl. 152—228)



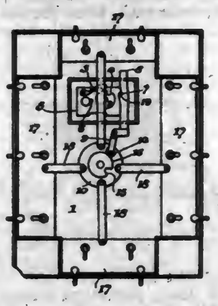
1. A self cleaning non-skid cross link for an anti-skid tire chain comprising an elongated sheet metal body bowed longitudinally to conform to the transverse contour of a tire tread, means at each end of the body for connecting the body to the flexible side members of an anti-skid tire chain, said body being provided on each side of its transverse axis with a longitudinal row of longitudinally spaced apertures the axes of which lie in a plane which coincides with the longitudinal axis of the body, said body having incisions extending therethrough midway between the opposite side edges to form in conjunction with the apertures longitudinally spaced opposed tongues, and said tongues inclining outwardly from the convex side of the body to form surface contacting anti-skid lugs.

2,445,508
REACTANCE TUBE AND MODULATOR CIRCUIT
Stanley M. Beleskas, Oakiyn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 10, 1944, Serial No. 517,670
9 Claims. (Cl. 179—171.5)



1. In a tube reactance of the type wherein a tube has an electron receiving electrode and a cathode connected across a pair of terminals at which alternating voltage of radio frequency appears and the tube has an electron flow control electrode excited by said alternating voltage substantially in phase quadrature with respect to the alternating voltage on the electron receiving electrode so that a reactive effect is developed in said tube of a value which may be varied by varying the tube transconductance and means for extending the range through which the reactive effect may be varied including, a radio frequency connection to the cathode for exciting the cathode of said tube by said alternating voltage approximately in phase opposition with respect to the phase of the alternating voltage on the electron receiving electrode.

2,445,509
FLOATING TOOLHOLDER
Auguste J. Bouthiller and Jean P. Bouthiller, Worcester, Mass., assignors to Imperial Machine Corporation, Worcester, Mass., a corporation of Massachusetts
Application December 29, 1945, Serial No. 637,912
2 Claims. (Cl. 279—16)

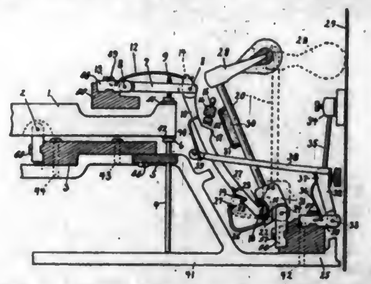


2. A floating tool holder comprising a hollow elongated socket having an enlarged hollow portion at the open end thereof, said enlarged portion providing an interior surface transverse to the axis of the socket, a separable tool holding element having a transverse surface receivable in the enlarged portion, a hollow sleeve connecting the socket and element for relative radial and non-rotational movement, positive means engaging the element to maintain said two surfaces parallel, and a thrust bearing between said two parallel surfaces.

2,445,510
CLOSURE ATTACHMENT FOR CIGARETTE PACKAGES
Vernon A. Bowers, Baltimore, Md.
Application October 26, 1945, Serial No. 624,758
2 Claims. (Cl. 206—41)

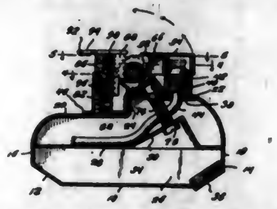
1. A device of the character described comprising a flat top having a forward bevelled edge and a depending marginal flange on the rear end thereof, said flange comprising an end and sides extending for approximately one-half of the length of said top, shoulders formed in said top at the inner ends of the sides of said flange, said top being of a size to conform to the top of a cigarette package and means for retaining said top on said package.

2,445,511
SAFE AND VAULT LOCKING AND UNLOCKING MECHANISM
Manuel Bretos y Claveria, Mexico City, Mexico
Application August 19, 1944, Serial No. 550,191
In Mexico January 4, 1944
3 Claims. (Cl. 70—119)



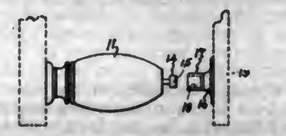
1. The combination with a safe door having a main locking mechanism, of an auxiliary locking device comprising a vertically movable bar having means cooperating with the main locking mechanism for normally retaining said bar in its uppermost position, a rotatable disk disposed below said bar and having means for actuating the closing members of the safe, said bar having at its lower end a roller disposed in position to engage said actuating means, and means associated with said roller for rotating the disk and operating said actuating means thereby to move the closing members into safe-opening position.

2,445,512
PIANO ACTION
Alexander P. Brown, Beechhurst, Long Island, N. Y.
Application January 9, 1946, Serial No. 639,922
2 Claims. (Cl. 84—240)



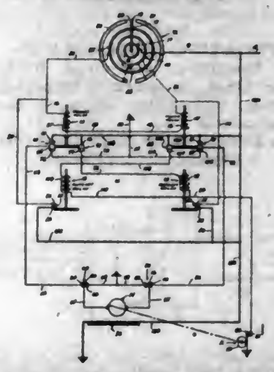
1. A piano action comprising a key having a back part moving up when the key is struck, a

horizontal arm drivingly contacted by said key part and having a fixed pivot positioned over said key, a jack hinged to said arm and extending from said hinge down to a level considerably lower than said key, the lower part of said jack having a projection at its back side and a recess at its front side, and a hammer having a shank positioned at the back side of said jack and having a



butt affixed to the lower end of said shank, said butt having a recess at its front side, and having a fixed pivot, and an extension affixed to said butt and having an end positioned in front of said jack, said extension end being engageable with said jack recess whereby said jack forms a back check for said hammer said butt recess and said projection engaging each other releasably.

2,445,513
LIGHTER CONSTRUCTION
Adolph Campos, Clifton, N. J.
Application October 18, 1944, Serial No. 559,267
2 Claims. (Cl. 67—7.1)



1. In a cigarette lighter having the usual fuel reservoir, wick, flint, abrading wheel, and snuffer cap, the combination, which comprises a comparatively low casing with a stepped upper surface rectangularly-shaped in plan and with the opposite lower corners of the ends diagonally shaped, said casing having an intermediate horizontally disposed partition with an upwardly extending recess therein in which a surface at one side of the recess extends diagonally in a plane parallel to one of the diagonally-shaped corners of the lower surface at one end of the casing, a diagonally disposed tubular flint-holding chamber with one end mounted in the diagonal surface at one end of the recess and perpendicular thereto and the other end mounted in the stepped upper surface of the casing, a cap threaded in an opening in the diagonal surface at the corner of the casing parallel to the surface of the recess in the partition aligned with the flint-holding chamber, a screw positioned in the recess threaded in the end of the flint-holding chamber, a spring in the flint-holding chamber, the outer end of said flint-holding chamber extending through the upper surface of the casing and having a flint-contacting opening in the side thereof, a threaded nipple extending upward from the upper surface of the casing positioned in close proximity to the end of the flint-holding chamber, a threaded wick-holding bushing in said nipple, an abrading wheel positioned at the end of said flint-holding chamber, a shaft pivotally mounting the abrading wheel on the upper stepped surface of the casing, a snuffer cap carried by said shaft extending over the end of the wick-holding bushing, a tube extending upward from and perpendicular to the upper surface of the casing, a tubular actuator vertically slidable in said tube having a finger piece at the upper end, a spring in said tube urging said actuator upward, and means actuating the abrading wheel and snuffer cap as the actuator is pressed downward.

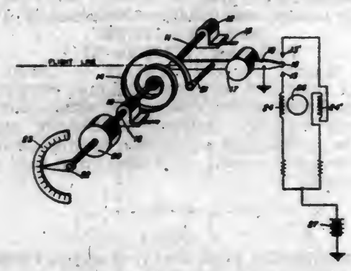
2,445,514
DOOR HOLDER AND STOP
Henry P. Clausen, White Plains, N. Y.
Application February 16, 1946, Serial No. 648,086
4 Claims. (Cl. 292—70)

1. A device of the type described comprising a body member having means for attachment to a support, a projection secured to the free end thereof, and a suction cup releasably and frictionally attached to said projection.

2,445,515
ELECTRIC MOTOR FOLLOW-UP TYPE OF CONTROL
Clinton H. Dederick, Brentwood, Mo., assignor to The Emerson Electric Mfg. Company, St. Louis, Mo., a corporation of Missouri
Application November 24, 1943, Serial No. 511,548
6 Claims. (Cl. 318—31)

1. In a control, a setting device having a setting contact and a pair of opposite contacts comprising a second and a third contact from between which the setting contact may be moved to selectively engage one of them by relative movement of the devices, a reversible power means, a pair of power relays, a pair of control relays adapted to actuate mechanism to reestablish starting relationship between the main contact and the pair of contacts wherein the setting contact is between the pair of contacts, power relay

circuits, one adapted to be closed through each of the second and third contacts and the main contact, a circuit for each control relay adapted to be established through one power relay in de-energized position, a switch in both control relay circuits, said switch being intermittently closed by the reversible power means during operation thereof, circuit means for the reversible power means, said circuit means being connectable to ground or to power at each power relay, whereby when one power relay is energized and the other released, the circuit through the reversible power means delivers power in one direction, and when the other power relay is energized and the one released, the circuit delivers power in the other direction, and means to insure opening of the switch of the control relay circuits when the main contact is between the second and third contacts.

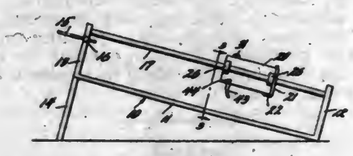


2,445,516
LAUNDRY DRIER
John W. Dickey, Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 5, 1944, Serial No. 548,209
3 Claims. (Cl. 34—44)

1. In a laundry dryer a vertical container having a substantially uniform cross-section, a perforated piston in the container adapted to support the material to be dried, a partition below the piston having a movable shutter therein, means for vertically reciprocating the piston and means actuated by the reciprocating means for opening the shutter during the upward movement of the piston and closing the shutter during the downward movement thereof so as to pump air up through the material to be dried.

2,445,517
PENDULUM CONTROLLED ELECTRIC DIVE ANGLE INDICATOR
Uselma C. S. Dilks, Narberth, Pa., assignor to the United States of America as represented by the Secretary of the Navy
Application March 4, 1947, Serial No. 732,267
4 Claims. (Cl. 33—215)

4. A device for measuring the angle of attack of an aircraft comprising a pendulous contact arm mounted on said aircraft, a pair of electrical contacts fixed to said aircraft and positioned proximately above and below said contact arm, a motor having oppositely wound field coils and capable of rotation in either direction, one of said field coils electrically connected to each of said contacts, a spring operationally disposed between the shaft of said motor and said contact arm, and indicating means for measuring the extent of rotation of said motor shaft, said



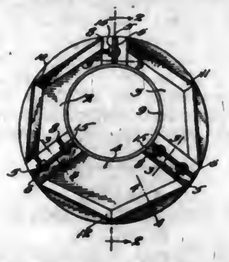
motor being adapted to rotate when said arm engages one of said contacts whereby the resilience of said spring is changed and said arm is urged out of engagement with said contact.

2,445,518
ALKYLENE DIHYDRAZINES AND PROCESS FOR PRODUCTION
Henry Dreyfus, deceased, late of London, England, by Claude Bonard, administrator, London, England, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application May 13, 1946, Serial No. 669,451. In Great Britain February 10, 1943
11 Claims. (Cl. 260—583)

4. Process for the manufacture of a polymethylene dihydrazine which comprises heating to a temperature of 50 to 100° C. 1 molecular proportion of an unsubstituted alkylene dihalide with more than 6 molecular proportions of hydrazine, the hydrazine being the only basic substance present.

2,445,519
DEVICE FOR EXERCISING OCULAR MUSCLES
Merle E. Floegel, Takoma Park, Md.
Application January 30, 1947, Serial No. 725,317
5 Claims. (Cl. 128—76.5)

1. A device for the exercising of ocular muscles comprising a frame, a fixation object housing slidably mounted thereon, a fixation object mounted upon said housing, an electric circuit for electrically illuminating the fixation object, a spring switch in said circuit for controlling said illumination, and a handle pivotally attached to said housing for facilitating the moving of said housing slidably along the frame in two directions and for simultaneously operating said switch, wherein the fixation object will be illuminated in one direction of travel but extinguished in the other.



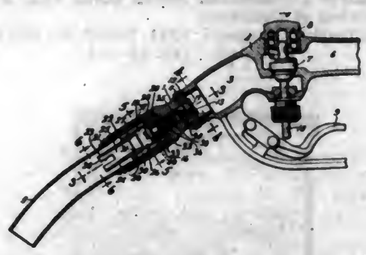
2,445,520
SEPARATION OF OLEFINS
Alfred W. Francis, Woodbury, N. J., and Ebenezer E. Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application November 20, 1946, Serial No. 711,202
9 Claims. (Cl. 260—677)

1. A process for the recovery of olefins from gaseous mixtures of saturated and unsaturated hydrocarbons which comprises contacting said mixtures with an aqueous solution of cuprous chloride, an N-alkyl amide and hydrochloric acid and thereafter expelling olefins from said aqueous solution.

2,445,521
COMPOSITION FOR COLD WATER CEMENT PAINT
John G. Franco, Cristobal, C. Z.
No Drawing. Application November 12, 1946, Serial No. 709,101
2 Claims. (Cl. 106—92)

1. A cold water miscible cement paint mixture comprising, by weight, 99.338% Portland cement, 0.530% potato starch, 0.0993% rice flour and 0.0327% sodium chloride.

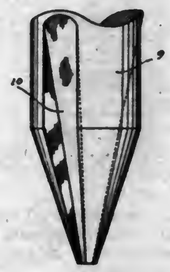
2,445,522
DIRT RETAINER FOR CULVERTS AND PIPES
Nicholas Fritsch, Graf, Iowa
Application July 3, 1946, Serial No. 681,236
3 Claims. (Cl. 61—16)



1. A sectional and adjustable bulkhead for conduits including a plurality of segments having inner and outer arcuate edges, said segments including radially extending slip-joints, and means adjustably securing said segments together, the inner arcuate edges forming an eccentrically positioned circular opening in relation to the outer arcuate edges to receive a conduit therein.

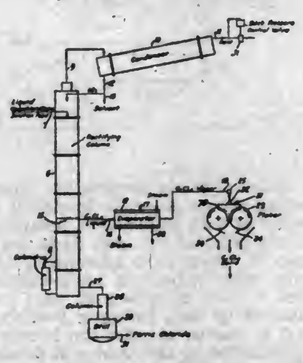
2,445,523
FISHING LURE
John C. Goldbach, Jacksonville, Fla.
Application May 8, 1947, Serial No. 746,721
2 Claims. (Cl. 43—46)

2. In a fish lure, an arcuate and hollow body having a front end portion formed with a fluid inlet aperture and a flat rear end wall formed with a fluid outlet aperture, said apertures effecting flow of fluid through said body and said outlet aperture being of substantially lesser diameter than the inside diameter of said body, an agitable tail piece comprising a flat plate disposed substantially in parallelism with and movably attached to said wall immediately behind said outlet aperture, a fin secured centrally on the rear surface of said plate and extending rearwardly therefrom, said plate being provided with an opening, and a fastener extending freely through said opening into said end wall.



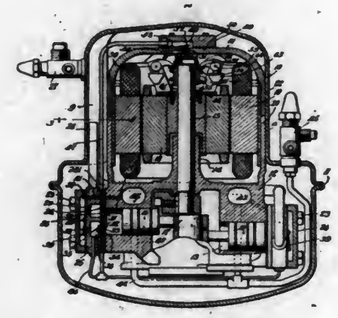
2,445,524
AUTOMATIC SHUT-OFF VALVE FOR HOSE NOZZLES
Alfred L. Grisé, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application August 22, 1946, Serial No. 692,212
2 Claims. (Cl. 226—127)

1. An automatic shut-off valve for hose nozzles, comprising, a casing having extending therethrough a liquid-conducting conduit the inlet end of which is adapted for connection to the outlet end of the hose nozzle, a delivery spout connected to the outlet end of said conduit, said casing having a nozzle extending into the spout and spaced from the wall of the spout to form an annular space, said conduit including a venturi discharging through said nozzle into the spout, a valve to control the flow through said conduit, resilient means tending to hold the valve in position to allow flow through said conduit, suction-operated means for moving said valve into position to stop such flow, a suction conduit extending from the throat of the venturi to said means for actuating the latter, and a vent conduit extending from said means to said annular space, said nozzle having slots in its wall at opposite locations to enable some of the liquid to discharge from the venturi through the sides of the nozzle before reaching the outer end of the latter, whereby to produce in the spout a flattened down stream of liquid spaced from its wall enough to leave a continuous air space extending from the delivery end of the spout to said annular space for the purpose of venting said means and rendering it ineffective to close said valve until the delivery end of said spout becomes submerged in liquid.



2,445,525
FASTENING DEVICE
Moses L. Gulden, Milwaukie, Oreg.
Application February 19, 1945, Serial No. 578,671
4 Claims. (Cl. 85—45)

1. A screw having a head, a screwdriver receiving recess formed therein, said recess being of conical form and having wings projecting radially inwardly from the general sweep of the recess, said wings alternating with spaces between them, said wings terminating short of the centerline of said screw, thus leaving an uninterrupted portion of said recess at said centerline, said

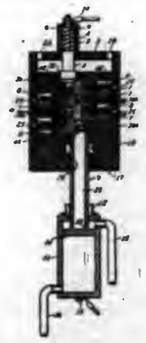


wings being narrower than the spaces between them, said spaces thus having substantial circular bearing surfaces, respectively, lying in the sweep of said conical recess for a complementarily formed screwdriver seated in said recess.

2,445,526
DISTILLATION OF HEXACHLORETHANE
Robert G. Heitz, Antioch, and Charles F. Oldershaw, Concord, Calif., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
Application October 10, 1944, Serial No. 558,071
3 Claims. (Cl. 202—51)

1. A method of separating hexachlorethane in purified form from a solution of the same in a volatile solvent which comprises fractionally distilling the solution in a column to remove the solvent as overhead under a pressure of at least about 7 pounds gauge and at a temperature sufficient to maintain the hexachlorethane in a liquid state in all concentrations in the solvent in the distillation, withdrawing from a lower part of the column a liquid side-stream consisting substantially of hexachlorethane, vaporizing the liquid without releasing the pressure thereon to form a vapor stream, releasing the pressure on the vapor stream to substantially that of the atmosphere, and cooling the atmospheric pressure vapor stream to condense the hexachlorethane to a solid.

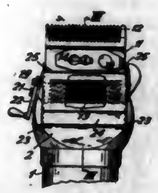
2,445,527
COMPRESSOR UNLOADER
Sylvan Roos Hirsch, Utica, N. Y., assignor to Brunner Manufacturing Company, Utica, N. Y., a corporation of New York
Application October 1, 1945, Serial No. 619,541
9 Claims. (Cl. 62—115)



1. In a refrigeration compressor assembly, a compressor, a housing containing said compressor providing a space therein through which gas is returned to the housing, unloader mechanism for the compressor, and a discharge line for the compressor in communication with said unloader mechanism including a valve which is seated during operation of the compressor and unseated when the compressor is idle, said discharge line including a portion extending through said space so as to be subject to the cooling effect of said space during operation of the compressor to cause sufficient condensation of gas in said line to liquid seal the valve of the unloader mechanism.

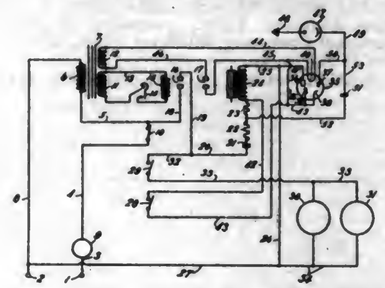
2,445,528
RAZOR
Edward S. Keogh, Jr., Monmouth County, N. J.
Application March 16, 1946, Serial No. 654,864
4 Claims. (Cl. 30—41)

1. A razor of the character described comprising a housing made of a single piece of material, an opening at the top of said housing, said opening running to the front of said housing, a blade firmly positioned at said top and within said opening so that its cutting edge faces the front of said housing, a space between said cutting edge and the top edge of said front, said top edge of said front acting as the safety guard, a drawer with compartments within said housing to receive the shaved hairs and shaving cream.



2,445,529
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 19, 1944, Serial No. 554,788
5 Claims. (Cl. 200—148)

1. A circuit interrupter of the fluid blast type including a relatively stationary contact, a movable contact, means for moving the movable contact to the open circuit position and for spacing the movable contact from the relatively stationary contact in the closed circuit position of the interrupter, two sets of movable bridging contact blocks, the one or more contact blocks of each set all being movable and staggered in side-by-side abutting engagement with the one or more movable contact blocks of the other set, the two sets being arranged to move in substantially opposite directions and in the closed circuit position of the interrupter bridging conductively the space between the relatively stationary contact and the movable contact, a piston chamber for each movable bridging contact block, means biasing each movable bridging contact block within its respective piston chamber toward the closed circuit position, and means permitting the entrance of a blast of fluid into the arcing region to raise the fluid pressure therein to a sufficient extent to cause the simultaneous lateral separating motion of all the movable bridging contact blocks within their respective piston chambers against the action of the biasing means, the initial separating motion of the contact blocks causing the establishment of a plurality of serially related arcs in zig-zag manner within the arcing region, further separating motion of the contact blocks causing a coalescence of the several arcs into a single arc of considerable length extending between the relatively stationary and movable contacts, and the blast of fluid causing the extinction of the single merged arc.



2,445,530
HAIRCUTTING MACHINE WITH ADJUSTABLE CUT REGULATOR
Ferdinand Majer, Zurich, Switzerland, assignor to Hans Majer, Zurich, Switzerland
Application March 26, 1945, Serial No. 584,888
In Switzerland April 18, 1944
4 Claims. (Cl. 30—201)

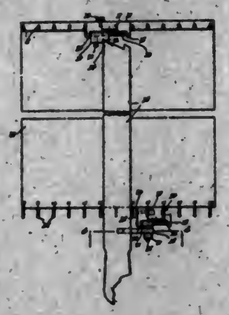
1. In an electrically driven hair cutting machine inclosed in a casing, a pivotal lid having side walls arranged on said casing, a cutting comb stationarily arranged in the machine between said side walls on said lid, a drivable cutting comb arranged for reciprocation relative to said stationary cutting comb, oblong comb teeth on each of said two cutting combs for corporation with each other for effecting the cutting of the hair, and means for adjusting said stationary

cutting comb in the longitudinal direction of said oblong comb teeth relative to said movable cutting comb for setting said machine for cutting the hair in various lengths.

2,445,531
SAFETY CONTROL SYSTEM FOR BURNERS
Theodore J. Mesh, Easthampton, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application April 16, 1945, Serial No. 588,451
16 Claims. (Cl. 158—28)

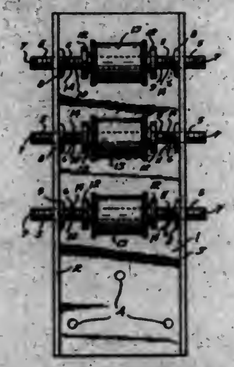
1. In a burner control system, an alternating current timing motor, an electric circuit including said motor and an impedance, means to close said circuit on demand for heat from the burner and to open it when said demand is satisfied, an electronic tube having its plate-cathode circuit coupled to the terminals of said motor, a switch actuated by said motor a predetermined time after it is started to start the burner, a second switch actuated by said motor at another and later predetermined time after starting of the motor to stop the burner, means responsive to combustion at the burner to activate said tube and cause said motor to be stopped and magnetically held in its stopped position, whereby on failure of combustion at the burner the motor continues to turn and actuate said second switch to stop the burner.

2,445,532
RAZOR STROP STERILIZER
Versie R. Minton, New Orleans, La., assignor of one-third to Frederick Irvin Dymond, New Orleans, La.
Application April 2, 1946, Serial No. 659,114
1 Claim. (Cl. 21—82)



A razor strop sterilizer comprising a cylindrical case and inwardly extending peripherally flanged

end closures removably supported thereon and overlying the ends thereof, an axially disposed bolt extending through said case and end closures, a cylindrical block fixed upon said bolt, a cylinder rotatably mounted about said cylindrical block, a razor strop secured to and wound about said cylinder, a clock-type spring fixed at one end to said bolt and fixed at its opposite end to said cylinder for resiliently winding up



the strop upon said cylinder, said case being longitudinally slotted, a handle plate attached to the outer end of said razor strop adapted to extend through said slot and to be connected with said strop for sealing said slot when the strop is rolled up within said case, and a sterilizer receptacle at the bottom of said case having perforated means between the same and said case.

2,445,533
VARIABLE FRACTION PLUG
Ralph R. Mondron and Romaine E. Mondron, Mount Vernon, Ohio
Application April 29, 1947, Serial No. 744,642
7 Claims. (Cl. 33—80)

1. For use with a standard glass cutting table having spaced pins at opposite edges thereof and a standard cutting rule having a tip at its far end and a hook near its handle end, a variable fraction plug device comprising a pair of plugs including a tip plug and a hook plug, said plugs adapted to engage the tip and hook respectively of the cutting rule, said plugs each having slide blocks constructed and arranged to receive the tip and hook respectively of the rule and slidably mounted in their respective plugs, a fraction scale and the index between the plugs and their respective side blocks for indicating fractional positions of the slide blocks between the pins, and means for holding the slide blocks in adjusted position.

2,445,534
SPOOL SUPPORT
Leo P. Masso, Ecorse, Mich., assignor of forty-nine per cent to Clara Ann Kemper, Lincoln Park, Mich.
Application September 26, 1946, Serial No. 699,556
2 Claims. (Cl. 242—130)

1. A spool support comprising a U-shaped frame, tension adjusting rods extending through the sides thereof, spool supporting rods rotatably mounted between the inner ends of said tension adjusting rods, spool locking cone heads adjustably supported on said spool supporting rods, and oppositely disposed cone-shaped bearing seats formed in the adjacent ends of said spool supporting rods and said tension adjusting rods.

2,445,535
THERMOSETTING LENS CEMENT
William F. Parsons, Rochester, N. Y., and John R. Dann, Boulder, Colo., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application March 19, 1945, Serial No. 583,646
11 Claims. (Cl. 260—77.5)

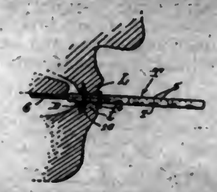
1. A thermosetting lens cement comprising a partially polymerized mixture of from 2 to 8 parts by weight of an ester of α-methacrylic acid and a saturated monohydric alcohol containing from 1 to 4 carbon atoms, from 8 to 2 parts by weight of the bis allyl carbonate of diethylene glycol, and from 0.25 per cent to 6 per cent of the weight of the methacrylic ester of divinylbenzene.

2,445,536
THERMOSETTING LENS CEMENT
William F. Parsons, Cambridge, Mass., and John R. Dann, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Original application March 19, 1945, Serial No. 583,646. Divided and this application May 16, 1947, Serial No. 748,666
9 Claims. (Cl. 260—77.5)

1. A thermosetting lens cement comprising a partially polymerized mixture of from 2 to 8 parts by weight of an organic compound containing a single $CH_2{=}C<$ group and selected from the group consisting of α-methacrylic esters of saturated monohydric alcohols containing from 1 to 4 carbon atoms, acrylic esters of saturated monohydric alcohols containing from 1 to 4 carbon atoms, vinyl esters of saturated monocarboxylic acids containing from 2 to 4 carbon atoms

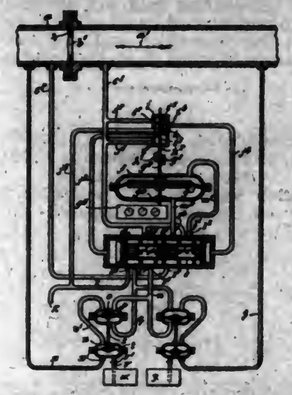
and styrene, from 8 to 2 parts by weight of an organic compound selected from the group consisting of the bis allyl carbonate of diethylene glycol, the bis allyl carbonate of triethylene glycol, the bis 2-alkallyl carbonates of diethylene glycol in which the alkyl group contains from 1 to 2 carbon atoms and the bis 2-alkallyl carbonates of triethylene glycol in which the alkyl group contains from 1 to 2 carbon atoms, and from 0.25 per cent to 6 per cent of the weight of the organic compound containing the single $CH_2=C<$ group of a compound selected from the group consisting of acrylic anhydride and α-alkacrylic anhydrides in which the alkyl group contains from 1 to 2 carbon atoms.

2,445,537
METHOD OF PRODUCING ELECTRICAL OUTLET PLUGS
Edward G. Schaeffer, Holyoke, Mass.
Application July 14, 1945, Serial No. 605,093
3 Claims. (Cl. 18—59)



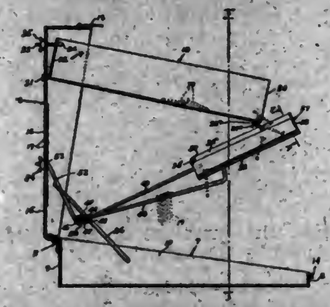
1. A method of producing electric outlet plugs which consists in molding a plug body of rubber insulation material with contact prong receiving openings extending inwardly from one end thereof, applying heat to said plug body to partially vulcanize the same into a yieldable resilient state, inserting into said receiving openings while the plug body is in said yieldable resilient state contact prongs having offset portions for expanding the walls of the openings as the prongs are inserted and the resilient character of the plug body functioning to return the expanded receiving openings into close engagement with the contact prongs after insertion therein and then heating said plug body to harden the same by vulcanization and permanently harden the walls of the plug body about the contact prongs and the offset portions thereof and effect permanent anchorage of the prongs in the plug body.

2,445,538
MANUFACTURE OF QUINIZARINE
Frederic L. Sievenpiper, Alden, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application April 13, 1946, Serial No. 662,083
6 Claims. (Cl. 260—383)



1. In the production of quinizarine by a process which comprises heating one part by weight of a non-sulfonated derivative of phenol adapted to condense with phthalic anhydride to form quinizarine, with at least 1.8 parts by weight of phthalic anhydride in a boric-sulfuric acid reaction medium containing one-fifth to 1½ parts by weight of boric anhydride, at a quinizarine-forming temperature, the improvement which comprises adding one part by weight of said derivative of phenol over the course of at least two hours to a mixture of the other reactants containing not more than 10 parts by weight of sulfuric acid of at least 95% strength while maintaining the mixture at a temperature within the range 180° to 250° C.

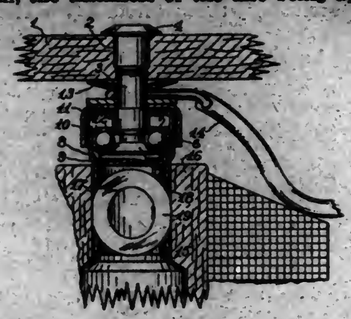
2,445,539
CLINICAL THERMOMETER
Harry Singer, Montreal, Quebec, Canada
Application November 4, 1944, Serial No. 561,890
3 Claims. (Cl. 73—371)



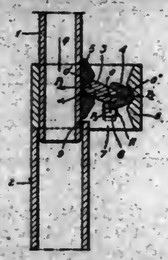
3. As a new article of manufacture, a clinical thermometer embodying a pair of intermediate, spaced, projecting flanges on the stem thereof for receiving therebetween the lips, and one of which will rest against the teeth, of a patient.

2,445,540
APPARATUS FOR INJECTING LIQUID CHEMICALS INTO A FLOWING STREAM
George Smillie, London, England
Application June 14, 1945, Serial No. 599,357
1 Claim. (Cl. 137—165)

In a metering apparatus responding directly proportionally to the flow of a liquid in a main pipe, means constricting the flow in said main pipe, a pipe connected to said main pipe upstream of said flow constriction, a pipe connected to said main pipe downstream of said flow constriction, a chamber divided by a flexible diaphragm, a change-over slide valve alternately displaced in opposite directions by the alternate application of pressure liquid from said main pipe and the alternate exhausting of said liquid to atmosphere and controlling the connection of said chamber at opposite sides of said diaphragm alternately and oppositely to said upstream and downstream connected pipes, a pilot slide valve displaced by said diaphragm and controlling the supply of said pressure liquid to said change-over valve and the exhaust thereof therefrom to atmosphere, a second chamber divided by a flexible diaphragm and at opposite sides of its diaphragm connected by said change-over valve alternately to said main pipe and to the atmosphere, a third chamber divided by a flexible diaphragm mechanically coupled to said diaphragm dividing said second chamber and at one side of its diaphragm alternately connected by said change-over valve to said main pipe and to the atmosphere, a suction pipe connected to said third chamber at the other side of its diaphragm, a non-return valve in said suction pipe and opening towards said third chamber, a delivery pipe connected to said third chamber on said other side of its diaphragm and to said main pipe, and a non-return valve in said delivery pipe and opening towards said main pipe.



2,445,541
NAIL STRIPPER
Howard L. Snyder, Sodus, N. Y.
Application November 16, 1945, Serial No. 629,147
6 Claims. (Cl. 1—49.7)

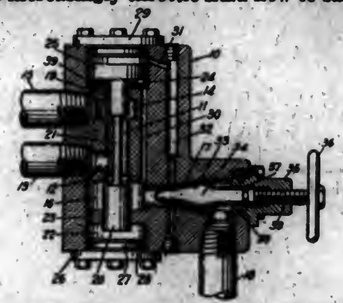


1. A nail stripper comprising a base, an upright supported on said base, an upper slide for holding nails, a pivotal supporting connection between the elevated end of the upper slide and the upper part of said upright, elements connected to and between the upright and the upper slide at points above the pivotal connection, said elements being adjustable to determine and fix the declining angle of the upper slide, a lower slide positioned beneath the depressed end of the upper slide to receive nails therefrom, means tiltably suspending the lower slide from the depressed end of the upper slide, said lower slide having longitudinal troughs including nail slots and being tilted at an opposite angle from the upper slide, a framework secured to the lower slide and positioned thereunder and extending beyond the depressed end of the lower slide toward and terminating in spaced relation to the said upright, said framework comprising nail slides longitudinally aligned with said nail slots, a detachable brace rod pivoted at its lower end to the depressed end of said framework and having a terminal portion at its upper end selectively insertible in any one of a plurality of vertically spaced openings formed in said upright so as to determine the declining angularity of said lower slide and framework, and means for securing said terminal portion in the opening selected.

2,445,542
BOBBIN HOLDER
Anthony J. Strozinski, Elmira Heights, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application March 4, 1946, Serial No. 651,822
3 Claims. (Cl. 242—130)

1. In a pendulous bobbin holder for spinning frames and the like, a cylindrical body adapted to loosely fit in the axial bore of a bobbin and having diametrically arranged longitudinal slots intermediate its length, means for pendulously supporting the body from a creelboard with freedom for rotation and universal movement, and a disc of elastically deformable material mounted lengthwise in the body and projecting through said slots to frictionally engage the bore of the bobbin, the thickness of the disc being approximately as great as the maximum distance the disc protrudes from said slots.

2,445,543
MINE PROP
Hubert Thines, Brussels, Belgium
Application September 7, 1945, Serial No. 615,069
In Belgium September 8, 1944
10 Claims. (Cl. 248—354)



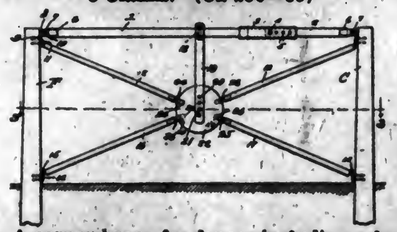
5. In a metal mine prop, the combination of an outer column, an inner column slidable in said outer column, a shoe in frictional engagement with said inner column and movable therewith, a shoe rigidly fixed to said outer column, a pair of co-operating toggle arms interposed between said movable shoe and said fixed shoe, and a stop on said outer column for limiting the downward movement of said movable shoe.

2,445,544
FLOW-REGULATING VALVE
Walter C. Trautman, Los Angeles, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 16, 1945, Serial No. 578,265
8 Claims. (Cl. 137—152.5)

1. In a flow-regulating valve: a casing defining an inlet passage adapted to be connected to a source of pressure fluid, a line fluid passage extending from said inlet passage and adapted to be connected to a line for delivering a regulated flow of fluid thereto, and an exhaust passage also extending from said inlet passage and adapted to be connected to an exhaust line; valve means movable in either direction for inversely throttling fluid flow from said inlet passage to said line fluid passage and from said inlet passage to said exhaust passage respectively; piston means for actuating said valve means; Venturi means in said line fluid passage for producing a reduced pressure in response to fluid flow through said line fluid passage; means for

applying pressure from said line fluid passage to one side of said piston means to urge it in direction to increasingly throttle fluid flow to said line

passage; and means for applying said reduced pressure produced by said Venturi means to the other side of said piston means.



2,445,545

CORNER BRACE FOR FENCES

James Verner, Pocahontas, Iowa

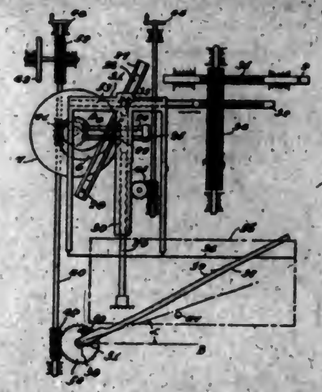
Application October 15, 1945, Serial No. 622,274

3 Claims. (Cl. 256—35)

1. A corner brace for fences including a longitudinally adjustable top rail, a pair of downwardly converging upper braces, means for securing the ends of the top rail and the upper ends of the upper braces to the upper portions of the posts to be braced, a pair of downwardly diverging braces, means for connecting the lower ends thereof to the lower portions of said posts, connected relatively rotatable disks, means for adjustably suspending said disks from the top rail and separate means carried by each of the disks for engaging one of the braces of each of said pairs.

2,445,546

TRIANGULATION APPARATUS FOR DETERMINING THE PATH OF AN AERIAL TARGET



Ernst von Segebaden, Drottningholm, Sweden, assignor to Arenco Aktiebolag, Stockholm, Sweden, a Swedish joint-stock company

Application June 26, 1944, Serial No. 542,180

In Sweden July 3, 1943

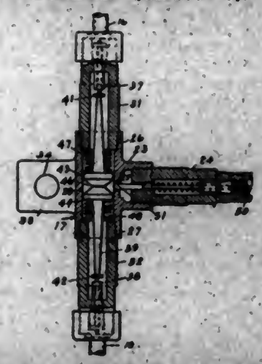
2 Claims. (Cl. 235—61.5)

1. In a fire control instrument for anti-aircraft guns, a primary element movable in dependence upon varying altitudinal angle of an aerial target, a rotatable member having a spiral guide for displacing said primary element, a turnable multiplying member connected to said primary element and having a rectilinear guide, a secondary element pivotally connected to said multiplying member and movable along said rectilinear guide to be displaced in a predetermined direction in dependence upon angular movements of said multiplying member as well as in dependence of its movements along said rectilinear guide, an image plane for recording altitudes of the target, a range member located at said image plane and having a range scale and being yieldingly operably connected to said rotatable member to turn relative to said rotatable member at the ratio $1/k$, where k is greater than 1, into angular positions corresponding to the altitudinal angle of

said target, the curvature of said spiral guide being defined by the formula

$$r = r_0 + k_0 \tan \frac{\varphi}{k}$$

r denoting the linear co-ordinate of said spiral guide, φ denoting the angular displacement of said rotatable member from a position of origin, k being a constant greater than 1, r_0 being a constant and k_0 being a constant.



2,445,547

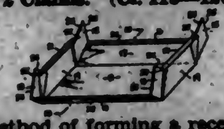
DUAL TIRE VALVE

Harry N. Wheeler, Birmingham, Ala., assignor to Dual Valve Company, Birmingham, Ala., a copartnership composed of Harry N. Wheeler and Ormond Somerville

Application August 23, 1945, Serial No. 612,246

6 Claims. (Cl. 277—7)

4. In a pressure equalizing device, a valve body, a pair of aligned valve casings having opposed seats communicating with the body, a pair of connected valves adapted to coact with the seats and so disposed that only one valve may be seated at a time, means for holding the valves off their seats against a predetermined minimum pressure, means to admit air between the valves to the casings comprising an inflation valve, and a member carried by the inflation valve disposed to make operative connection with the connected valves and hold both of the same off their seats when the inflation valve is open.



2,445,548

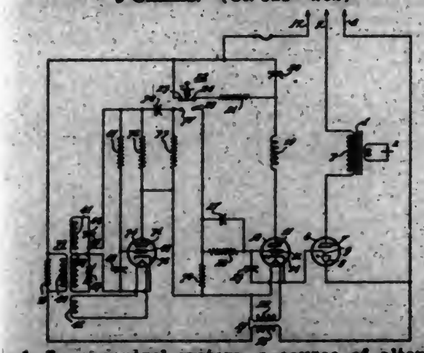
METHOD OF MAKING BOX-LIKE CONTAINERS

George Douglas Wispert, Branford, Conn., assignor to The Merriam Manufacturing Company, Durham, Conn., a corporation of Connecticut

Application January 30, 1947, Serial No. 725,311

2 Claims. (Cl. 113—120)

1. The method of forming a receptacle having a bottom, a pair of side walls and a pair of double-walled end-closures comprising the steps of forming a blank from sheet metal, the said blank having a bottom-portion and side-wall and end-wall portions: beveling the opposite corners respectively of each end-wall portion to form mitered edges; bending-up opposite end-portions of each side wall at substantially right angles thereto to form rectangular flaps; bending-up a relatively-narrow longitudinal strip along the outer edge of each respective end-wall portion at substantially right angles thereto to form a fastening-flange embodying said mitered edges, folding-up said end-wall portions and said side-wall portions at substantially right angles to said bottom so as to simultaneously engage the straight edges of said rectangular flaps with the respective mitered edges of said fastening-flanges initially to flex the said flaps inwardly from beneath said fastening-flanges and subsequently to release said flaps to permit the latter to spring back beneath said fastening-flanges against the inner faces of said end walls; and then bending said fastening-flanges down over the upper edges of the respective pairs of flaps at corresponding ends of said receptacle to secure each end wall and its corresponding pair of flaps in assembled relationship.



2,445,549

CONTROL CIRCUIT

Hubert H. Wittenberg, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware

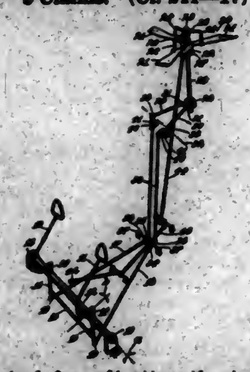
Application October 6, 1947, Serial No. 778,217

9 Claims. (Cl. 315—262)

1. In a control system, a source of alternating potential, a load, a main discharge device connected in series with said load across the source of potential, said main discharge device having an ignitor electrode and a mercury pool cathode, an auxiliary discharge device having an anode, a cathode, and a control electrode, a circuit connecting the cathode of said auxiliary discharge device to said ignitor electrode, an electric storage device interposed between said anode and said source of potential, circuit connected so as to provide a potential pulse in predetermined time relation to said supply potential, and a circuit applying said pulse to said control electrode.

2,445,550

CONTROL SYSTEM FOR ADJUSTING THE INCIDENCE OF THE BLADES OF THE ROTOR OF A ROTARY-WING AIRCRAFT



John Wotton, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company

Application June 3, 1947, Serial No. 752,643

In Great Britain May 30, 1946

Section 1, Public Law 690, August 8, 1946

3 Claims. (Cl. 244—17)

1. A control for adjusting the incidence of a rotor for rotary-wing aircraft comprising an incidence adjusting mechanism, a cockpit control movable in two directions mutually at right angles, a pair of articulated, converging rods jointed together and movable by the control in one direction to pull or push both rods and in the other direction to pull one and push the other rod and a connection between the rods and an element of the incidence-adjusting mechanism to which the pull and/or push of the rods is applied to reproduce the control movements.

2,445,551

RIVET SET RETAINER SPRING

Arthur W. Barry, Los Angeles, Calif.

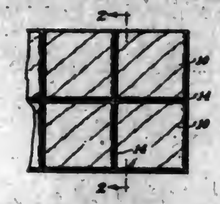
Application November 24, 1944, Serial No. 564,965

1 Claim. (Cl. 279—19.6)

A rivet set retaining device formed of resilient wire and comprising a plurality of convolutions, the rear one of which is smaller in diameter than the others, an arm projecting from the forward one of said convolutions and a transversely disposed C-shaped member on the forward end of said arm.

2,445,552

DISPLAY STRUCTURE



Jack E. Baxter, Mariemont, Ohio

Application November 6, 1946, Serial No. 364,545

3 Claims. (Cl. 72—18)

1. A panel unit for display purposes comprising a shallow, thin-walled, tray-like member of

molded translucent material, said member having a face and a depending peripheral skirt portion, said face being configured with rounded edge portions merging it into substantially normal depending portions peripherally inwardly offset from said skirt portion and connected thereto by shoulder-like configurations, the said unit having a regular polygonal contour, and the skirt portion of the unit being so disposed that it may be attached to other similar members to form a self-sustaining, continuous, translucent, panel, the said skirt portions being provided with perforations having a regular spacing such that

when individual units are assembled to other individual units, the perforations will match, whereby fastening means may be employed passing through the perforations in skirt portions of adjacent units, the said unit while stiff having walls characterized by flexibility, the said skirt portions being bowed slightly outwardly whereby fastening means engaging skirt portions of different units are enabled to provide a tight fit between said skirt portions by slightly deflecting them.

2,445,553

PRESSURE-SENSITIVE ADHESIVE SHEET

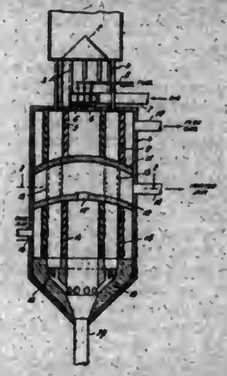
Ellington M. Beavers, Philadelphia, Pa., assignor to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application November 30, 1945, Serial No. 632,115

3 Claims. (Cl. 117—122)

1. A pressure-sensitive adhesive sheet, which is flexible and will conform to a surface against which it is pressed, which comprises a flexible backing to which is securely anchored an insoluble resinous coating having a tacky surface and the remainder in an infusible state, said resinous coating being the product resulting from heating at a temperature of 100° C. to 225° C. in contact with said backing and with oxygen a mixture of 0.5 to five parts of a peroxidic curing agent and one hundred parts of a tacky, non-crystalline, linear polyester having a molecular weight from about 8000 to 20,000 and containing alternate chains from dicarboxylic acids and 1,2-propylene glycol, the chains of the dicarboxylic acids in the linear polyester consisting of 80% to 99% of chains from sebacic acid and 20% to 1% of chains from maleic acid.

2,445,554



HEATER

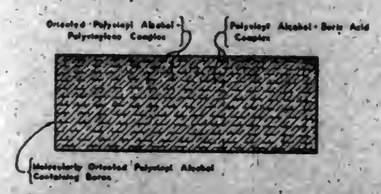
Eric V. Bergstrom, Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application December 13, 1946, Serial No. 716,143

1 Claim. (Cl. 263—19)

A heater comprising a vertical shell, two vertically spaced horizontal partitions at adjacent intermediate levels in said shell, the lowermost of said partitions having a central orifice, a first louvered wall in said shell above the uppermost partition surrounding a central combustion zone, a second louvered wall about said first louvered wall defining therewith an upper annular space, means to supply air and fuel to said combustion zone, means to withdraw gases from about said second louvered wall, means to admit granular solid material to the top of said upper annular space, a third louvered wall in said shell below the lowermost partition surrounding a central gas discharge zone communicating with the space between said partitions by way of said orifice, a fourth louvered wall about said third louvered wall

defining therewith a lower annular space, means to supply a gas about said fourth louvered wall, means to withdraw gas from the space between said partitions, means to withdraw granular solid from the bottom of said lower annular space, and a plurality of vertical tubes passing through said space between said partitions from the bottom of said upper annular space to the top of said lower annular space for transfer of granular solids therebetween.



2,445,555

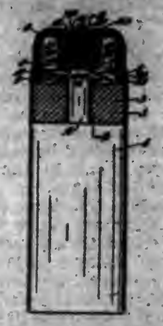
LIGHT-POLARIZING POLYVINYL SHEET CONTAINING POLYVINYL COMPOUND-BORIC ACID COMPLEX

Frederick J. Binda, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application April 16, 1945, Serial No. 588,706

3 Claims. (Cl. 88—65)

1. A light-polarizing sheet comprising a molecularly oriented linear polyvinyl alcohol, said sheet having an oriented dichroic polyvinyl alcohol-polyvinylene-complex incorporated therein, and a layer of a polyvinyl alcohol-boric acid-complex present on at least one surface of the sheet in a predetermined concentration and extending from said surface into the sheet in a progressively attenuated concentration, said polyvinyl alcohol-boric acid complex being heat and moisture resistant.



2,445,556

DRY CELL BATTERY WITH TERMINAL CAP

Clifford M. Bircher, Minneapolis, Minn., assignor to The Maico Company, Incorporated, Minneapolis, Minn., a corporation of Minnesota

Application August 2, 1945, Serial No. 608,449

2 Claims. (Cl. 136—135)

1. In a dry cell battery having a tubular metallic open-ended shell constituting one electrode of the battery, a center pole piece exposed through the said open end of the shell and constituting the other electrode of the battery, a plastic insulating cap telescopically applied to the interior of the open end of said shell, said cap comprising a head which is axially spaced from said center pole piece and a depending annular flange, a pair of parallel slots extending axially through said head, said slots being reduced in width near their lower ends to provide terminal-receiving sockets, electrical terminals in said sockets, a reduced lead extending downwardly through the reduced portion of one of said slots into the space between the core and the center pole piece and thereafter being bent downwardly and outwardly under said flange and terminating in an upturned end in contact with said metallic shell, and a reduced lead extending downwardly through the reduced portion of the other of said slots into the space between the pole piece and the head and connected to said pole piece, said last-mentioned lead being of a length to be secured to said center pole piece when the cap is removed from the open-ended shell and being bent upon itself within the space between the pole piece and the head when said cap is in telescoped position within the shell.

2,445,557

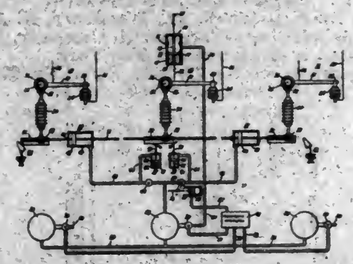
GRINDING APPARATUS

Herbert E. Blaster, South Pasadena, Calif.

Application January 31, 1944, Serial No. 520,429

4 Claims. (Cl. 51—161)

2. In a grinder, a circular member supported for rotation about a vertical axis, axially extending peripheral slots in said member, each of said slots being formed by a pair of outwardly flaring vertical plane wall surfaces and being closed at its lower end, and means forming a grinding surface closely surrounding said member.



2,445,558

CIRCUIT BREAKER OPERATING MECHANISM

Alexander C. Boisseau, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York

Application April 5, 1944, Serial No. 529,670

1 Claim. (Cl. 200—18)

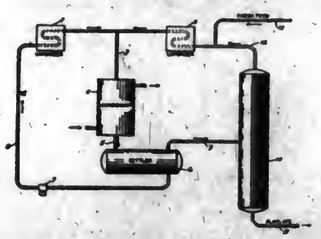
In an arrangement for causing simultaneous operation of all of the poles of a polyphase electric circuit breaker having a plurality of poles spaced a substantial distance apart and each including a pair of relatively movable contacts, the combination of a long relatively light reciprocally movable operating rod extending between the most remote of said plurality of poles, means for moving said rod in one direction to operate simultaneously said relatively movable contacts only by applying a tensive force to said rod near one end thereof, means for moving said rod in the other direction to operate simultaneously said relatively movable contacts only by applying a tensive force near the other end of said rod, a plurality of racks mounted in spaced relationship on said rod, a separate gear mechanism interposed between each rack and a corresponding pair of relatively movable contacts, and means engaging one of said racks to hold said relatively movable contacts in the open and closed positions said last-named means being automatically operable to permit movement of said rack whenever said contacts are operated.

2,445,559

BEVEL GEAR

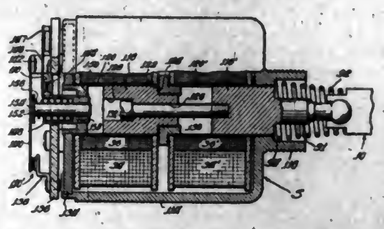
Francis H. Boor, La Fayette, Ind., assignor to Fairfield Manufacturing Company

Application March 31, 1944, Serial No. 528,847



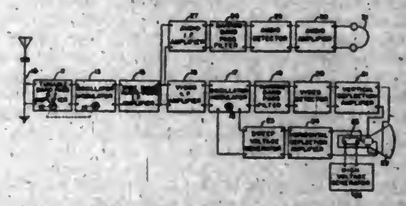
4 Claims. (Cl. 74—459.5)

1. In combination with a radial pinion gear, a bevelled gear wheel meshing therewith, said bevelled gear wheel having a tooth area defined by an inner circumference and an outer circumference and having a plurality of curved teeth with sides extending across the tooth area, the sides of said teeth beginning at the intersection of a radial line and the inner circumference and departing circumferentially from the radial line and intersecting the outer circumference at a circumferential distance from said radial line, the acute



angles between the radial line and a tangent drawn to the sides of the teeth near the inner circumference being greater than the acute angles between the radial line and a tangent drawn to the sides of the teeth near the outer circumference.

2,445,560
CATALYTIC ALKYLATION
Hamilton P. Caldwell, Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application October 31, 1945, Serial No. 625,873
4 Claims. (Cl. 260—683.4)



1. A process for the alkylation of isoparaffins with olefins which comprises preparing a vapor phase mixture of isoparaffin, olefin and hydrogen fluoride under conditions of temperature and pressure which inhibit alkylation in the vapor phase in proportions suitable for liquid phase alkylation catalyzed by hydrogen fluoride, condensing the said mixture to effect intimate contact between a condensed hydrocarbon phase containing isoparaffin and olefin and a condensed hydrogen fluoride phase under alkylation conditions, separating the hydrocarbon phase from the hydrogen fluoride phase and recovering products of the reaction from the hydrocarbon phase.

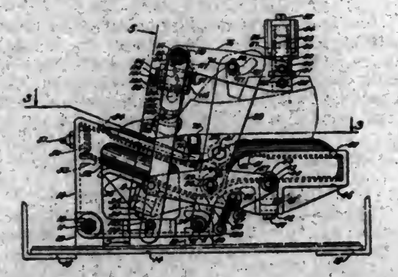
2,445,561
ELECTROMAGNETIC ACTUATOR
Harold E. Carnagua, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application October 7, 1942, Serial No. 461,169
5 Claims. (Cl. 175—335)

1. A solenoid including a housing and a plurality of pairs of coils in said housing, said pairs of coils having their axes on a common line and each pair including a moving coil and a holding coil, a tubular armature positioned within one of said pairs of coils, a second armature positioned within another of said pairs of coils, a pull rod connected with said second armature and extending through said tubular armature and having a head adapted to coact with the tubular armature to form a lost motion connection for mechanically transmitting movement of said tubular armature to said second armature, said tubular armature being adapted to be moved to its attracted position and to transmit such movement to said second armature through said pull rod when the moving coil corresponding to said tubular armature is energized, and said second armature being adapted to be moved farther in the direction of the aforesaid movement to its attracted position when its corresponding moving coil is energized, said latter movement being permitted by the movement of said pull rod through said tubular armature, a first self-closing switch carried by said housing for completing the circuit through the moving coil of one of said pairs of coils, a second self-closing switch carried by said housing for completing the circuit through the moving coil of the other of said pairs of coils, a thrust member supported by said housing adjacent said first switch and in the path of movement of said tubular armature and adapted to open said first switch following energized movement of said tubular armature to its attracted position, and a second thrust member supported by said first thrust member adjacent the second switch and in the path of movement of said pull rod and adapted to open said second switch following energized movement of said second armature and the pull rod connected therewith.

2,445,562
PANORAMIC RECEIVING SYSTEM
Madison Cawein and Robert W. Sanders, Fort Wayne, Ind., assignors, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application February 25, 1943, Serial No. 477,048
11 Claims. (Cl. 250—20)

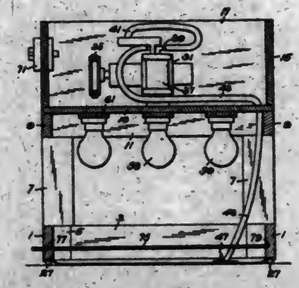
1. In a radio receiver for visually indicating a plurality of simultaneously received signals of different frequencies within a predetermined band of frequencies lying within one of a plurality of frequency spectrum divisions and for concurrently reproducing in audible form one of said signals exclusively of others of said received signals, means to select one of said spectrum divisions, a radio frequency signal amplifier having a band pass width equal to said predetermined band of frequencies and tunable over said selected spectrum division, means to convert said band of amplified radio frequency signals to a predetermined band of first intermediate frequency signals, means for selecting a predetermined one of said band of first intermediate frequency signals, means including an aural output device for translating into sound said selected signal exclusively of all other non-selected ones of said band of first intermediate frequency signals, means to generate periodically a frequency-modulated wave, means utilizing said frequency-modulated wave for converting said band of first intermediate frequency signals to a time-spaced series of signals of a single predetermined second intermediate frequency, a cathode ray tube having a fluorescent screen, means for translating said time-spaced series of signals into vertical traces on said screen, means utilizing said frequency-modulated wave to generate a saw-tooth wave, and means utilizing said saw-tooth wave to horizontally space said vertical traces on said screen, one of said traces appearing at a predetermined point on said screen and corresponding with the signal translated into sound by said aural output device.

2,445,563
DIELECTRIC COMPOSITION
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application July 10, 1946, Serial No. 682,545
4 Claims. (Cl. 252—63.7)



1. A composition which is suitable for dielectric purposes and consists of about 60 to 80 percent of dichlor alpha nitronaphthalene and about 40 to 20 percent of halogenated polyphenyl hydrocarbon.

2,445,564
POWER TUBE
Irvin W. Cox, West Allis, and Lester D. Drugmand, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application January 30, 1946, Serial No. 644,270
21 Claims. (Cl. 250—27.5)

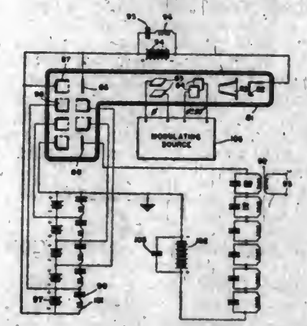


1. In a gridless power tube having therein an anode and a mercury pool type cathode, a long-lifed make alive starter requiring less than one watt of energy on sixty cycle power, said starter including a reconstructible body of mercury normally electrically separated from the mercury of said cathode, said tube being operable without a holding arc.

2,445,565
SHOE PRESSING APPARATUS
Fred Dawson, West Roxbury, Mass., assignor to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application October 12, 1944, Serial No. 558,374
3 Claims. (Cl. 12—33)

1. A shoe press comprising a toe engaging member, a heel engaging member, arms interconnecting said members at opposite sides of said press, supporting members extending upwardly from said press for supporting said arms, said supporting members having curved slots formed therein, and means extending through said slots and slidable along the curve thereof for adjustably pivoting said arms from said supporting members.

2,445,566
PNEUMATICALLY OPERATED CONTACT PRINTER
Willis L. De Lano, Chelsea, Mass.
Application November 29, 1945, Serial No. 631,557
3 Claims. (Cl. 95—76)

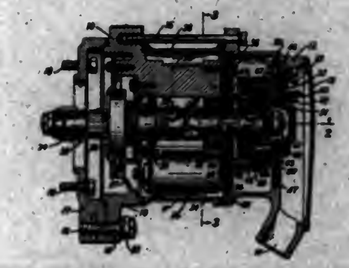


1. Portable apparatus for use in making contact prints of drawings and the like having, in combination, a support having a substantially continuous opaque lower wall portion forming an opening, a sheet of transparent flexible material carried by said wall portion adjacent its lower edge for closing said opening whereby said support may be placed on the surface having the drawing with said sheet in closely adjacent relation to said surface, light emitting means carried by said support above said sheet, said support having provision for movably supporting an opaque mask between said light emitting means and sheet, a vacuum pump carried by said support, said sheet having an orifice, and conduit means for connecting said orifice to the suction intake of said pump.

2,445,567
STABILIZING ORGANO-SUBSTITUTED POLYSILOXANES
John R. Elliott, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application August 27, 1946, Serial No. 693,376
17 Claims. (Cl. 260—448.2)

1. The method of stabilizing a liquid organopolysiloxane which comprises incorporating therein stabilizing amounts of a metal salt of an organic carboxylic acid, the metal cation of the said salt being selected from the class consisting of iron, cobalt, nickel, and copper.

2,445,568
MODULATING SYSTEM
Joe C. Ferguson, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application October 7, 1943, Serial No. 505,291
3 Claims. (Cl. 179—171.5)

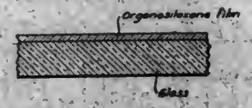


1. A device for generating a series of impulses having variable time durations comprising, means for producing a beam of electrons, means for effecting a variable amplitude deflection of said beam, an electrode disposed in the path of said electron beam and having an aperture for effecting periodic passages of said beam therethrough, said aperture being triangularly shaped to effect a variation in the time durations of said beam passages in accordance with the amplitude of said electron beam deflection and being defined by web members having their inner ends joined together at the center of said electrode and their outer ends joined together at the periphery of said electrode, and means including an electron multiplier disposed in a manner to intercept and amplify the portions of said electron beam passing through said apertured electrode for developing corresponding voltage impulses of substantially constant amplitude and having time durations varying in accordance with said modulating signal.

2,445,569
SULFONATED POLYBENZYL
Arthur Lawrence Fox, Easton, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 17, 1944, Serial No. 545,391
1 Claim. (Cl. 260—2)

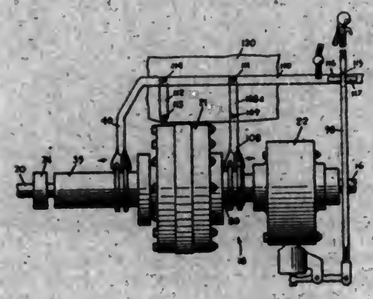
A process for preparing a sulfonated polybenzyl compound containing one sulfonic acid group for every four benzyl radicals which comprises reacting with chlorosulfonic acid, at a temperature between 0° C. and 10° C. a reaction mass obtained by adding benzyl chloride to a suspension of aluminum chloride in an organic solvent at a temperature below 10° C.

2,445,570
IGNITION APPARATUS
Jakob R. Frei, Sidney, and Rolland M. Purdy, Bainbridge, N. Y., assignors to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application June 24, 1944, Serial No. 541,989
12 Claims. (Cl. 200—21)



6. In an ignition distributor, a supporting member, a shaft rotatably journalled in said member, an insulating plate mounted on said member around said shaft, a conducting ring on said plate concentric with the axis of rotation of said shaft, a terminal on said plate electrically connected with said ring, a distributor block removably supported by said supporting member, a plurality of contacts on said block circularly disposed around the axis of rotation of said shaft, a terminal in said block, means for automatically electrically connecting said terminals when said block is secured in place on said supporting member, a rotor on said shaft between said block and plate, and means including spring-pressed brushes on said rotor for conducting electrical current from said ring to said contacts during rotation of the rotor.

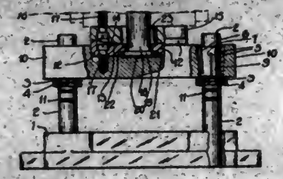
2,445,571
TOOTHBRUSH
Leon L. Fuston, Oak Park, Ill.
Application August 21, 1946, Serial No. 691,930
2 Claims. (Cl. 132—84)



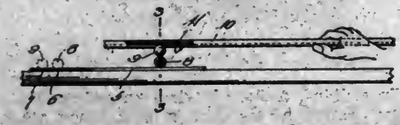
1. In a dentifrice-dispensing tooth-brush having a brush-equipped portion and a handle, the novel combination of an element comprising at least a portion of said handle constructed to accommodate a collapsible dentifrice-tube having a discharge-aperture at one end, means movably mounting said element on the tooth-brush to temporarily convey the dentifrice-tube to discharge position with relation to the surface of the brush, means to discharge some of the dentifrice from the tube onto the brush when so positioned, whereupon said element and tube are returned to tooth-brush handle position, said dentifrice-tube conveying means having a rocking and sliding connection with the brush-equipped portion of the tooth-brush.

2,445,572
DRYING PHOTOGRAPHIC PRINTS
Charles H. Gerould and Paul C. Woodland, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application July 8, 1946, Serial No. 682,028
1 Claim. (Cl. 34—9)

A method of producing a glossy photographic print which comprises drying the wet print in contact with a glass plate bearing a film of an organosiloxane polymer.



2,445,573
TRANSMISSION
Murray Godbe, Jr., Salt Lake City, Utah
Application February 17, 1945, Serial No. 578,414
3 Claims. (Cl. 74—293)

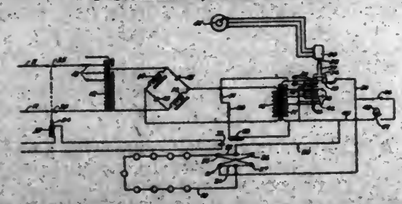


1. In a planetary transmission including as elements a ring gear, a sun gear and means supporting planet gears therebetween, a driven shaft permanently connected to one of said elements, a drive shaft, a resistance pump supported on said driven shaft, means for selectively establishing a driving connection between said drive shaft and either of said elements not connected to the driven shaft, means for selectively establishing a driving connection between the remaining element not so connected and said pump and means for varying the resistance imposed by said pump.

2,445,574
DIE SET
Alfred W. Grunow, Nutley, N. J.
Application April 5, 1945, Serial No. 586,794
5 Claims. (Cl. 164—118)

5. A die set of the character disclosed having fixed and movable parts, means for driving said movable part, concave and convex concentric bearing rings between said movable part and driving means, one of said rings loosely engaging said movable part and said driving means, to allow automatic paralleling of said parts when in use, one of said bearings rigidly secured to part of said driving means and loosely to said movable means.

2,445,575
BALL ROLLING GAME
Andrew J. Guthrie, St. Albans, W. Va.
Application March 27, 1946, Serial No. 657,522
2 Claims. (Cl. 273—123)



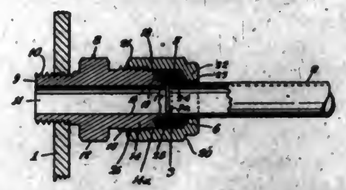
1. A game comprising a base having seats for the lodgment of game pieces, the said seats being juxtaposed, two spherical members adapted to be superimposed in contact with each other, and a manipulator moved in contact with the uppermost spherical member and operative to rotate and propel the spherical members over the surface of the base and to lodge the spherical members in the said seats.

2,445,576
METHOD FOR PREPARING ORTHOSILICATES
Charles P. Haber, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application June 19, 1946, Serial No. 677,915
9 Claims. (Cl. 260—448.8)

1. The method of preparing aliphatic esters of silicic acid which comprises refluxing aliphatic alcohols with magnesium silicide under anhydrous conditions.

2,445,577
ADJUSTABLE CONSTANT-CURRENT CONTROL SYSTEM
Eugene H. Haug, Glencoe, Ill., assignor to La Salle National Bank, Chicago, Ill., as trustee
Application February 17, 1944, Serial No. 522,740
5 Claims. (Cl. 323—55)

1. In an electric control system, a transformer having secondary winding, a plurality of taps



thereon, a load circuit permanently connected at one side to one end of the transformer secondary, means adapted to selectively connect the other side of the load circuit to any one of the taps, and automatic means operable in consonance with the tap selecting means to short circuit the transformer secondary when the selecting means is about to make a tap selection.

2,445,578

JOINT FOR TUBES

Earl E. Howe, Chicago, Ill., assignor, by mesne assignments, to Chicago Forging and Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application January 1, 1945, Serial No. 570,891
3 Claims. (Cl. 285—90)

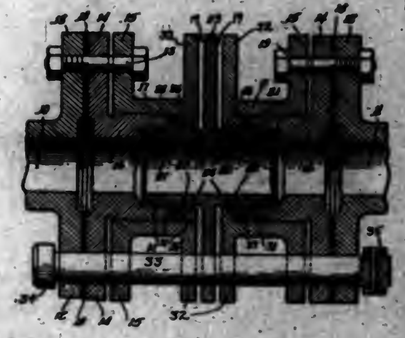
1. In a joint, a tube having an outwardly extending flange at its end, a preformed washer of flexible material surrounding the edge of the tube and provided with a central bore and a channel in said bore adapted to receive said flange and engage both sides thereof, said washer extending endwise beyond the ends of the tube, and a fitting including interpenetrating portions adapted to form, with the exterior end of the tube, a pressure chamber, the washer filling said pressure chamber when the members are in locked position, the bore, at opposite sides of said channel, being of unequal diameters, one portion of said fitting having a tubular extension extending into and surrounded by that part of the bore which is of larger diameter, the inner face of said bore having a circumferential enlargement extending inwardly between said channel and the adjacent end of said fitting portion, adapted to serve as a yielding separation between the fitting portion and the end of the tube, whereby a metal to metal contact is prevented.

2,445,579

SHEETLIKE LIGHT-POLARIZING COMPLEX OF IODINE AND A POLYVINYL COMPOUND WITH PROTECTIVE SURFACE BORIC ACID-POLYVINYL COMPOUND COMPLEX

Mark Hyman, Jr., and Cutler D. West, Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application February 8, 1945, Serial No. 576,850
5 Claims. (Cl. 88—65)



1. A light-polarizing sheet comprising a molecularly oriented linear polyvinyl compound selected from the group consisting of polyvinyl alcohol, the polyvinyl acetals and the polyvinyl ketals; said sheet having an oriented dichroic sorption complex of said polyvinyl compound and iodine incorporated therein, and a complex of boric acid and said polyvinyl compound present on at least one surface of the sheet in a predetermined concentration and extending from said surface into the sheet in a progressively attenuated concentration, said boric acid-polyvinyl compound complex forming a layer which is heat and moisture resistant, whereby the said iodine-polyvinyl compound complex is protected from heat and moisture.

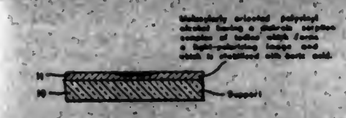
2,445,580

EXPANSION JOINT

Walter Kasten, Franklin, Mich., assignor to Renniks Company, Detroit, Mich., a copartnership

Application May 15, 1946, Serial No. 669,965
6 Claims. (Cl. 285—162)

1. In an expansion-and-contraction joint adapted to be secured between and to terminal flanges of spaced-apart ends of a pair of aligned pipe-sections, the novel combination of an intermediate externally-cylindrical tube, a pair of longitudinally spaced-apart conduits each including an outer tubular-member and a complementary inner tubular-member lengthwise slidingly accommodated in said outer tubular member, each said tubular member having an external terminal flange, means to adjust said flanges longitudinally relative to one another, each said inner tubular member housing its corresponding end portion of said tube with a space between and around the two and with lengthwise play between the two, each said outer tubular member having an internal annular shoulder in register with the end of its corresponding inner tubular member and a thin, flexible, truncated-cone reed-gasket between each said shoulder and the end of the corresponding inner tubular member bearing edgewise in slidable engagement with said tube, said two reed-gaskets sloping in opposite directions and adapted to be subjected to the fluid-pressure in the joint.



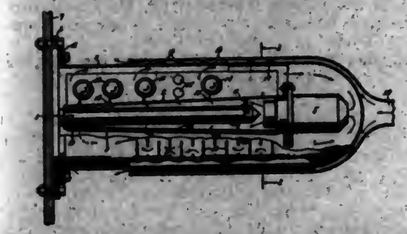
2,445,581

TREATMENT OF POLARIZING POLYVINYL ALCOHOL-IODINE SORPTION COMPLEX IMAGE WITH BORIC ACID

Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware

Application December 9, 1943, Serial No. 513,629
5 Claims. (Cl. 95—88)

1. In a method of treating an image-bearing layer comprising molecularly oriented polyvinyl alcohol having a dichroic sorption complex of iodine formed in predetermined portions of said layer to provide a light-polarizing image, the step of treating the image-bearing layer of polyvinyl alcohol and the image formed of said complex



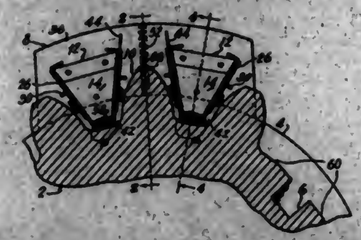
with a boric acid solution to alter the light-transmitting properties of said complex.

2,445,582

THERMIONIC VALVE AND CIRCUIT MOUNTING

William S. Melville, Rugby, England, assignor to General Electric Company, a corporation of New York

Application October 30, 1946, Serial No. 706,661
In Great Britain November 7, 1945
7 Claims. (Cl. 250—27.5)



1. Thermionic valve apparatus comprising a plurality of chassis members for electronic circuit elements, hollow perforated telescoping mounting means peripherally supporting said members in spaced relationship about said means, a removable casing hermetically enclosing said means and said members, said casing containing a fluid cooling medium, means within said casing for circulating said medium, said perforated mounting means comprising a duct whereby said medium is directed through the perforations substantially radially with respect to said mounting means.

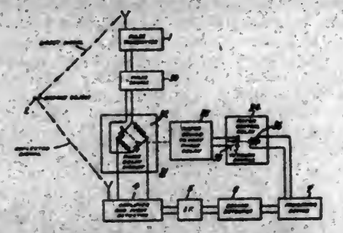
2,445,583

METHOD AND APPARATUS FOR CASTING METALS

Philip Morooe, Farrell, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey

Application March 28, 1945, Serial No. 585,230
3 Claims. (Cl. 22—116)

1. The method of replacing a broken tooth in a gear comprising placing a spacer box in the valley on each side of a good tooth, fastening anchor plates to each side of each spacer box with a liner therebetween, fastening each end of each of the spacer boxes to end saddles, casting a low melting point material onto the anchor plates to fill the valleys on each side of the good tooth to form a mold, removing the spacer boxes, anchor plates, molds and end saddles, placing the spacer boxes in the valleys on each side of the tooth to be replaced, fastening anchor plates with the molds thereon to each side of each spacer box with the liners removed, fastening each end of each of the spacer boxes to the end saddles, pouring wax into the mold to form a pattern of a good tooth, removing the spacer boxes, anchor plates, molds and end saddles from the wax tooth, packing sand around the wax tooth to form a sand mold, melting out the wax tooth by heating the gear, and then pouring molten metal into the sand mold.



2. A jig for use in obtaining a mold for a gear tooth which comprises, spacer boxes, one adapted to be placed in the valley on each side of a gear tooth, an anchor plate fastened to each side of each spacer box, a liner between each of the anchor plates adjacent the gear tooth and the spacer box, and end saddles fastened to the ends of the spacer boxes.

2,445,584

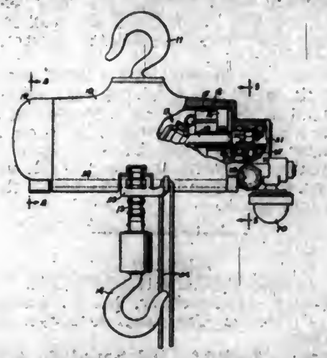
PULSE RECEIVING SYSTEM

Simon Ramo, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application April 13, 1942, Serial No. 438,699
6 Claims. (Cl. 343—5)

2. In a system for detecting a distant object comprising a transmitter to project a succession of signal pulses at a predetermined frequency to said object, a receiver adapted to have said signal pulses impressed thereon after reflection from said object, means to apply to said receiver a succession of high intensity pulses of operating potential at said predetermined frequency, a phase delay device interposed between said means and said receiver, means to actuate said phase delay device over a range of phase delay positions, an indicating device, means to impress a signal derived from said receiver upon said indicating device when said pulses of operating potential become in phase with said pulses impressed upon said receiver, and means responsive to said signal to stop said phase delay actuating means.

2,445,585



PNEUMATIC HOIST AND REVERSING VALVE MECHANISM THEREFOR

Ernest H. Shaff, Spring Lake, Mich., assignor to Keller Tool Company, Grand Haven, Mich., a corporation of Michigan

Application February 15, 1946, Serial No. 647,955
1 Claim. (Cl. 192—3)

In a pneumatic hoist having a reversible pressure fluid operated motor, a load support, a shaft driven by the motor and operatively connected with the load support, a manually operable control shaft, a brake for the motor driven shaft including spring operated means operatively connected with the control shaft and operating to

hold it yieldably in an intermediate rest position, valve means for controlling the direction of rotation including a valve member operatively connected with the control shaft for movement thereby in one direction or the other when the control shaft is rocked in opposite directions from its said intermediate position against the action of said spring means, a pair of poppet valves respectively controlling the supply of pressure fluid to the motor when the latter is to be operated in

one direction or the other, said poppet valves being respectively arranged for actuation by the reversing valve when the latter is actuated in opposite directions by the control shaft, said spring means acting upon said valve member to restore it to its intermediate position upon release of the control shaft, and a spring for each of said poppet valves acting to move it to its closed position when said valve member is in said intermediate position.

2,445,586

MOISTURE-SENSITIVE PAPER AND THE MANUFACTURE THEREOF

Francis L. Simons, Montclair, N. J., assignor to George La Monte & Son, Nutley, N. J., a corporation of New Jersey

No Drawing. Application January 14, 1943, Serial No. 472,337
17 Claims. (Cl. 117—1)

16. A method of making a moisture sensitive coating which comprises forming an aqueous mixture containing a diamino-triphenylmethane dyestuff and an alkaline-earth hydroxide, the amount by weight of alkaline-earth hydroxide being about 1 to about 5 times the amount by weight of dyestuff, thereby decolorizing the dyestuff, applying the aqueous mixture to the surface to be coated and drying the coating thereby producing a coating wherein the color of said dyestuff is decolorized and, wherein the color of said dyestuff is restorable upon application of pure water to said coating.

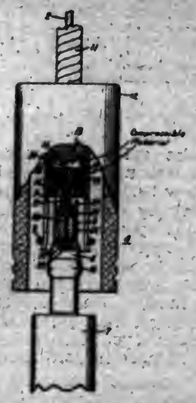
2,445,587

ELECTRIC TERMINAL AND COIL

Marion W. Sims, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application May 10, 1945, Serial No. 592,948
3 Claims. (Cl. 175—21)

1. The combination, with an electrical coil of wire which is provided with layers of insulating material and impregnated by insulating varnish, of an electrical terminal for said coil including a main body and two flat separated legs which straddle a continuous edge of at least one intermediate layer of insulating material, said legs being substantially thinner than said main body whereby the maximum separation of adjacent lay-



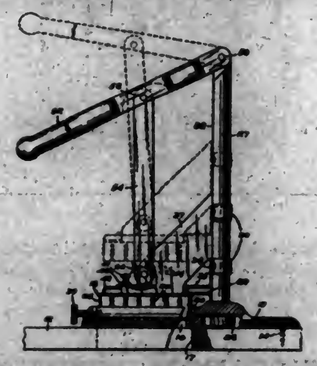
ers of insulating material which is produced by said terminal is substantially less than the thickness of the main body of said terminal.

2,445,588

ELECTRICAL SWITCHGEAR

Wilfred F. Skeats, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York

Application July 11, 1944, Serial No. 544,412
3 Claims. (Cl. 200—146)



1. In a circuit interrupting device having a plug contact and a cooperating contact socket, an arrangement for preventing residual currents from causing arcing in the atmosphere surrounding said device when said plug contact is withdrawn from said socket comprising resilient means mounted inside said socket and affixed thereto, a plate member mounted on said resilient means so as to form a fluid tight chamber defined by said plate member, said resilient means and a portion of the inside surface of said socket, a pair of relatively movable contacts mounted in said chamber and movable into engagement with each other when said resilient means is compressed, one of said relatively movable contacts being electrically connected to said contact socket, a pair of telescoping members mounted within the plug contact opening of said socket comprising a stationary member secured to said plate member and a cooperating movable member having a contact thereon for engaging said plug contact, and a compression spring interposed between said movable member and said plate member for compressing said resilient means to maintain said relatively movable contacts in engagement until after said plug contact has disengaged said socket and for maintaining said contact on said movable member in engagement with said plug contact until after said relatively movable contacts have parted.

2,445,589

SLICING MACHINE INCLUDING A STATIONARY CUTTING GRID AND A RECIPROCATING PLUNGER

Carl Francis Spang, Milton, Mass., assignor to Cube Steak Machine Co., Boston, Mass., a partnership

Application January 4, 1946, Serial No. 639,079
1 Claim. (Cl. 146—169)

A food slicer comprising a base adapted to be secured to a table and having a downwardly extending opening therethrough adapted to align with an opening through the table, a slicing member disposed on the base over the opening and embodying two sets of upwardly facing knives, each set comprising a plurality of spaced and parallel knives disposed transversely across the knives of the other set, a single post carried by and extending upwardly from the base rearwardly of its said opening and having a flat forwardly facing surface in a vertical plane, a carrier having a vertical portion in sliding contact with said surface and a forwardly extending horizontal portion over the base opening, said vertical and horizontal portions of the carrier embodying one integral sheet of metal, side brackets also integral with said sheet and connecting said vertical and horizontal portions, means securing the carrier to the post and maintaining said vertical portion in flat contact with said forwardly facing surface, a piston, means on the horizontal portion of the carrier for detachably connecting the piston therewith and in cooperative relation with the knives, an elongated handle member pivoted at one end to the upper end of the post, and a link pivoted to the handle member at one end and to the carrier at the other end to raise and lower the carrier and piston relative to the knives.

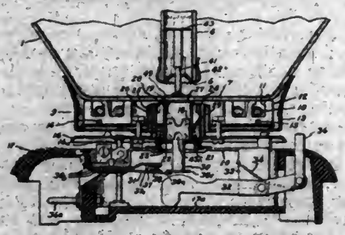
2,445,590

DRIVING MECHANISM

Hugh M. Stephenson, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application July 8, 1944, Serial No. 544,069
13 Claims. (Cl. 192—54)

1. A driving mechanism including a driving member and a driven member adapted to be coupled by a slip clutch comprising a drum secured to said driving member, means including an arcuate spring having spaced apart ends and formed with a radial width which varies inversely with the circumferential distance from the midpoint circumferentially of the spring and arranged under compression in said drum for providing a frictional driving connection with said drum, means including a drive plate secured to said driven member arranged to apply force on said spring for transmitting torque from said driving member to said driven member through said spring, means including an inertia load re-

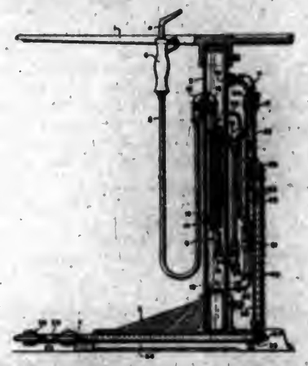


lease device comprising a plate member rotatably mounted on said driven member and arranged for mechanical connection with said spring for biasing said spring to a smaller diameter for releasing the driving connection therebetween on sudden deceleration of said mechanism.

2,445,591

COFFEE MAKER

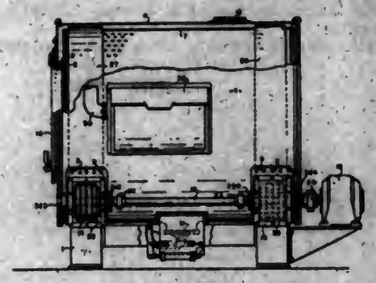
Earle C. Sullivan, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York



Application March 9, 1946, Serial No. 653,365
2 Claims. (Cl. 99—281)

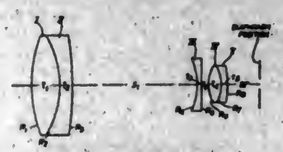
1. In a vacuum type coffee maker having a water heating bowl, a coffee infusion bowl and a liquid transfer tube between the bowls, a heater for supporting and applying heat to said water heating bowl, a control device for said heater, a magnet and an armature controlling the operation of said control device, one of said magnet and armature constructed and arranged to rest on said bottom wall and the other of said members being located under said wall at a point opposite the one on said wall and operably associated with said control device to effect the operation thereof to cause said heater to apply heat to said water heating bowl when said other member is moved to one position into attractive relation with said one member and to apply said heat as long as said other member remains in said one position due to the magnetic attraction between said members, means biasing said other member to move from said one position to a second position to cause said control device to reduce the heat applied to said water heating bowl, an actuator connected to said one member constructed and arranged to move in said tube by the force of the fluid flowing therein so as to move said one member to separate said members when the rate of flow of said fluid attains a predetermined velocity, thereby to release said other member for movement toward said other position by said biasing means, and a second coacting magnet and armature, one in a stationary

position, and the other attached to said other member for attracting it in to said other position as said other member is moved by said biasing means to a position where said second magnet and armature mutually attract each other.

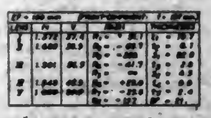


2,445,592
GARMENT SPOTTING APPARATUS
Basil J. Yanchenko, Syracuse, N. Y., assignor to G. A. Braun, Inc., Chicago, Ill., a corporation of Illinois
Application February 1, 1946, Serial No. 644,945
3 Claims. (Cl. 68—5)

1. In a garment spotting apparatus, a spotting head, a nozzle through which steam can be projected onto the head through the article thereon, a support for the head including a column formed with an internal chamber, a system for supplying steam to the nozzle including said chamber in the column, the chamber having an inlet for the steam, a return pipe communicating with the chamber, a conduit communicating with the chamber to receive steam therefrom and having a control valve therein, a heating coil exposed in said chamber extending vertically thereof, a conduit connecting the lower end of the coil and said valve, a conduit leading from the upper end of the coil to the nozzle, a moist steam conduit leading from the return pipe extending outside of said chamber and said column, a moist steam control valve therein, a conduit from the moist steam conduit extending around and by-passing the coil and connected to the conduit leading from the upper end of the coil to the nozzle, and means for operating the control valves.



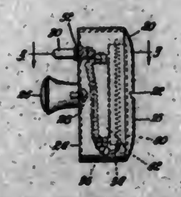
2,445,593
OUTER AND INNER CYLINDRICAL DRUM SUPPORTING BASE AND ACTUATING MECHANISM ASSEMBLY FOR WASHING MACHINES
Louis Zimarik, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a corporation of New York
Application April 19, 1946, Serial No. 663,271
3 Claims. (Cl. 68—140)



1. In a washing machine, a base frame, an outer stationary cylindrical fluid receiving drum carried by the base frame, the base frame having hollow boxlike portions communicating with the interior of the drum through individual openings in the cylindrical wall of the drum at spaced apart locations, power actuated rollers located in the hollow boxlike portions of the base frame and projecting through said individual openings into the drum, power means for actuating the rollers located outside of the hollow boxlike portions of the frame and outside of the outer drum,

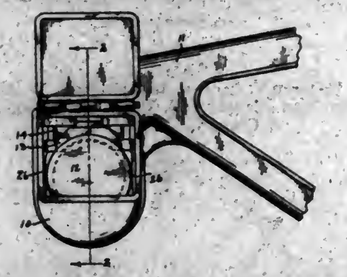
and a perforated washing drum located within the outer drum and resting on said rollers and operable about an axis by said rollers.

2,445,594
TELECENTRIC PROJECTION LENS
Harold F. Bennett, Rochester, N. Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application November 2, 1945, Serial No. 626,370
7 Claims. (Cl. 88—57)



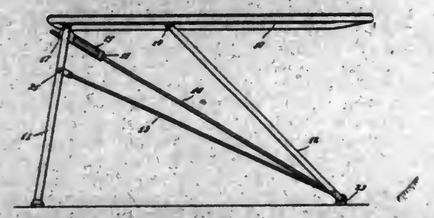
1. A telecentric objective having a diaphragm position and comprising three components in axial alignment in front of the diaphragm position, of which the first and third are positive and the middle one is negative, each positive component consisting of a biconvex element cemented onto the front of a meniscus negative element with higher refractive index, the front positive component being air-spaced from the negative component by a distance greater than 0.4 f and less than 0.8 f where f is the focal length of the front positive component and which focal length (f) is substantially 1.37 times the focal length (F) of the whole system, the rear positive component having a focal length less than f and greater than its distance from the diaphram position and being spaced from the negative component by a finite distance less than 0.2 f, and the focal length of the two rear components combined is algebraically greater than that of the rear component alone.

2,445,595
TELESCOPE MOUNTING FOR GUNS
Edgar F. Bengert, Kansas City, Mo., assignor of one-half to A. N. Branson
Application July 24, 1944, Serial No. 546,322
1 Claim. (Cl. 33—50)



A telescope mounting for guns comprising, a base member rigidly secured to a gun barrel, said base member having a cylindrical aperture extending vertically through the center of said base member and said base member having recesses in the upper edges of the respective sides near the rear end thereof provided with threaded openings, a split sleeve for carrying a telescope, said sleeve having a depending boss at substantially the center of said sleeve for rotatable engagement in the aperture in said base member and said boss having an annular recess therein, screws having threaded shanks engaging in the openings in the recesses in said base member and having heads extending above the upper edge of said base member for engaging the sides of said sleeve to rotate the sleeve on said base member for adjusting windage of the telescope carried by said sleeve, a boss extending from one side of said base member having a threaded opening extending through said boss and said base member to intersect with the aperture in said base member and align with the annular recess in the boss of said sleeve, and a screw having its shank engaged in said threaded opening and having its inner end pointed to engage in the annular groove in said boss to hold the sleeve rigidly to the base member.

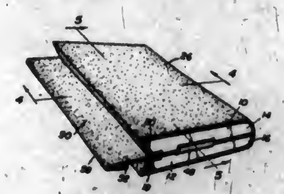
2,445,596
SKIN MASSAGER
Geia Jane Benton and William A. Schumacher, Chicago, Ill.
Application April 22, 1946, Serial No. 664,076
6 Claims. (Cl. 128—24.1)



1. A skin massager comprising an ovoid, continuous, substantially rigid, heat applying surface having major and minor axes, a heating element for heating said surface, a rounded ridge along the major axis of said surface, and a groove along the minor axis of said surface.

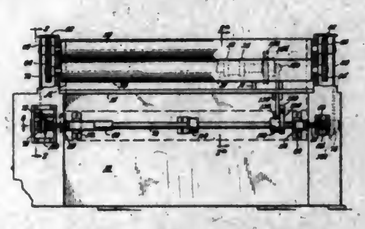
2,445,597
JOURNAL BOX
William T. Bissell, Indianapolis, Ind., assignor to Journal Box Servicing Corporation, Indianapolis, Ind., a corporation of Indiana
Application June 16, 1945, Serial No. 599,932
4 Claims. (Cl. 308—38)

1. For a railway car journal box having a groove opening inwardly around a rear box opening, through which the journal extends into the box, the groove being defined by and between spaced apart ribs extending vertically of the box on each side of the journal and around across thereunder, all in normally spaced relation from the journal, an impact head comprising an anvil head having a substantially vertical, planar outer face to be presented toward the journal; a body portion in the nature of a rib extending vertically across and fixed to the back of said head to fit slidably in said groove to bottom therein upon approximate contact of the back side of said head with the outer edges of said ribs; and a head supporting leg extending therebelow and curving around outwardly from the plane of said face to terminate approximately at the longitudinal, vertical, central plane of said box, the leg being formed to be slidably received within said groove; whereby said impact head may be inserted in said box with the journal therein by entering said leg in said groove to one side of the journal and dropping the head to allow the leg to slide around the groove under the journal and have the anvil head be located on the side of the journal to substantially fill in the space between that side of the journal and the groove ribs.



2,445,598
IRONING BOARD LEG AND BRACE STRUCTURE
Earl C. Booth, Columbus, Ind., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application November 6, 1946, Serial No. 708,065
6 Claims. (Cl. 38—117)

1. In an ironing board, a top, rear legs pivotally connected to said top near one end thereof, a front leg pivoted to said top at an intermediate point thereon, a brace member pivotally connected to said front leg near the free end thereof and extending upwardly to a point adjacent

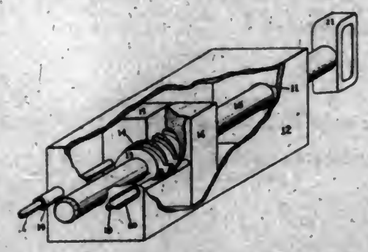


the rear end of said top, a link associated with each of said rear legs and having one end connected thereto and the other end connected to said brace adjacent the point at which said brace is connected to the front leg, and means for releasably securing the upper end of said brace to said top to maintain the legs in extended positions.

2,445,599
SANDER
Rayner V. Bowen, Huntington, W. Va.
Application January 20, 1947, Serial No. 723,123
5 Claims. (Cl. 51—187)

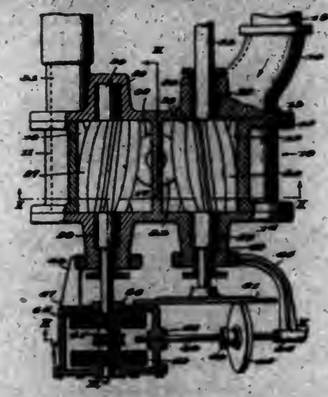
1. A sander comprising a pair of hinged abrasive sheet supporting blocks having slots in their adjacent faces, latch means mounted on said blocks and received between said blocks, detachable abrading means secured between said blocks and extending therefrom, said latch means including a slide secured in one of said slots, a latch on said slide and a staple in the other of said slots.

2,445,600
TENSION DEVICE
Carl O. Bruestle, Rahway, N. J., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application December 28, 1944, Serial No. 570,076
14 Claims. (Cl. 140—36)



1. In a weaving device having a weaving head for producing woven screen cloth with ribbon-like weft members; the improvement of means for rolling the woven screen onto a winding core and maintaining proper preselected tension on the woven screen, said means comprising in combination, a winding core; take-off means receiving the screen delivered from said weaving head, the screen being fastened to said core; a driven shaft; sprockets on said driven shaft, said take-off means, and said core; means comprising a chain driving said sprockets in synchronism; friction clutch means providing a driving connection between said core and the sprocket thereon, said clutch means also effecting slippage during overdrive of said sprocket; and yieldable tension means providing a driving connection between said driven shaft and the sprocket thereon.

2,445,601
FISHHOOK
Herbert M. Carlsen and Edwin F. Nordman, Spokane, Wash.
Application April 15, 1946, Serial No. 662,278
4 Claims. (Cl. 43—36)



1. A fish hook comprising a helical spring having its convolutions spaced from each other and an eye at its upper end, a plate adjacent the lower end of said spring having tongues engaged about a convolution and mounting the plate in the spring, and a strand of resilient wire bent midway its length to form a bridge and shanks extending therefrom, the bridge being of inverted V-shape and the shanks being bowed longitudinally in opposite directions and crossed near the bridge and having their lower portions slidably passing through an opening in the plate and their lower ends bent to form bills extending away from each other.

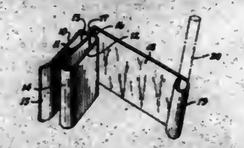
2,445,602
ADJUSTABLE CONTROL DEVICE
Ernest J. Casaroll, Detroit, Mich.
Application July 19, 1945, Serial No. 605,955
6 Claims. (Cl. 74—471)

1. An adjustable control device for controlling a plurality of engine throttles or the like and comprising a housing, a shaft in said housing mounted for rotation and axial movement relative thereto, means for rotating said shaft and for moving said shaft axially relative to said housing, a right-hand threaded portion and a left-hand threaded portion on said shaft, a threaded follower mounted one each on said right-hand threaded portion and said left-hand threaded portion for movement in opposite directions upon rotation of said shaft in either direction and for axial movement as a unit with said shaft, and a connecting member leading from each of said threaded followers to one engine throttle.

2,445,603
VARIABLE OUTPUT PUMP
Horace A. Cartwright, Galion, Ohio
Application September 24, 1943, Serial No. 503,631
6 Claims. (Cl. 103—11)

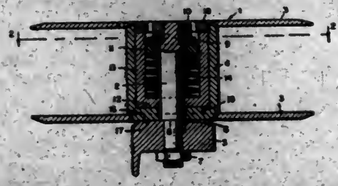
1. A variable output pump comprising a casing having an impeller-receiving chamber, a pair of rotatable power driven impellers mounted in said chamber, a secondary pair of impellers arranged in said chamber in spaced relation from said primary pair, a fluid inlet entering said chamber at one side of the primary impellers, a fluid outlet communicating with said chamber on the discharge side of the secondary impellers, gearing coacting with the secondary impellers to normally retain the latter against rotation, variable speed motion-transmitting means driven directly by one of the primary impellers for operating said gearing to admit of varying rotational speeds of the secondary impellers relative to the primary impellers from zero to one to one, a second fluid outlet disposed between said sets of impellers, and a pressure valve normally closing said second outlet.

2,445,604
CONTACT CLIP
Martin M. Clayton, Enon Valley, Pa., assignor to National Electric Products Corporation, Ambridge, Pa., a corporation of Delaware
Application April 11, 1945, Serial No. 587,752
8 Claims. (Cl. 173—334)



1. In combination with a conductor wire and a chambered insulating receptacle; a resilient light-gauge contact clip primarily of U-shape having an open end adapted to receive the prong of an attachment plug between its leaves, one leaf of the said clip at its end being outwardly deflected away from the prong-receiving cavity formed by the leaves of the clip to contact one wall of said receptacle chamber, a resilient structure at the free end of the other leaf of the clip reversely curved outwardly and inwardly to provide a bow-spring yieldingly receiving and embracing said conductor wire in unbonded engagement, and a resilient end element extended outwardly from the said reversely curved structure of the leaf to be tensioned by contact with the opposite wall of said receptacle chamber by compressive insertion of the contact clip thereinto.

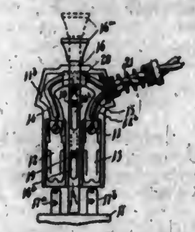
2,445,605
VARIABLE THROW ECCENTRIC
John G. Crosby, Minneapolis, Minn.
Application March 5, 1943, Serial No. 478,168
1 Claim. (Cl. 74—571)



In a device of the class described, a rotatable shaft having a cylindrical crank member, the axis of which intersects the axis of the shaft, and a ring member having screw-threaded engagement with the crank member, one of said members being adjustable relative to the other to vary the throw of the ring member.

2,445,606
ARTICLE HOLDER
Ralph Bernard Davis, Okmulgee, Okla.
Application October 9, 1947, Serial No. 778,979
5 Claims. (Cl. 248—226)

1. A holder of the type described comprising a pair of spaced, overlapping reaches and a third reach between said reaches and resiliently connected at either end to a respective one of said first reaches, a flat short reach being at the interconnection of two of said reaches, another flat short reach connected to one of said pair of reaches adjacent said first flat short reach and substantially perpendicular thereto, and means connected to said second flat short reach for holding an object.



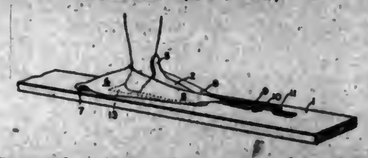
2,445,607
BRAKED ROTATIVE ASSEMBLY
Anselm De Ghetto, Clifton, N. J., assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Application February 18, 1947, Serial No. 729,387
7 Claims. (Cl. 139—197)

4. In a loom shuttle, the combination of a shuttle bracket, a spindle projecting therefrom, a

spool rotatably supported on said spindle and having an end face frictionally engageable with said bracket, said spool being formed with a cup-shaped recess into which said spindle extends in a direction toward the open end thereof, axially adjustable means on said spindle and within such recess projecting radially outward of said spindle at a region axially spaced from the bottom wall of such recess, axially spaced bearing members in such recess rotatable on said spindle and respectively disposed adjacent the bottom wall of such recess in said spool and said means on said spindle, one of said bearing members including a sleeve portion rotatably fitted in such recess and rotatably fitted over the other of said bearing members, and spring means compressed between said bearing members for urging the end face of said spool into frictional engagement with said bracket.

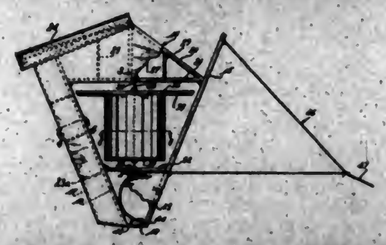
2,445,608
CONNECTING PLUG
Wilbur O. Detweiler, Toronto, Ontario, Canada
Application December 7, 1946, Serial No. 714,855
1 Claim. (Cl. 173—332)

A two-piece plug of electrical insulating material, each piece of the plug being formed with a longitudinal substantially central groove extending from one end to the other, said grooves forming between them a longitudinal guideway, a plunger slidably mounted in the guideway and adapted to extend beyond the ends of the plug, whereby by grasping the plug and pressing the plunger the plug may be removed from the terminal to which it is attached, each piece of the plug having formed therein a recess on either side of the central groove, said recesses forming between them spaces, electrical contacts mounted in said spaces, and each piece having grooves extending from the recesses to the exterior of the plug adjacent one end thereof and to one side of the plug in the transverse plane of the contacts to provide between them an aperture to admit electrical wires, the plunger having at least one longitudinal slot through it, and the plug being provided with at least one connecting member extending through both pieces of the plug substantially on the longitudinal centre line thereof and through the slot to connect the pieces and to limit the movement of the plunger relative to the plug.



2,445,609
ENGINE STARTER
Kenneth F. Douglas, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application March 29, 1946, Serial No. 658,019
4 Claims. (Cl. 74—7)

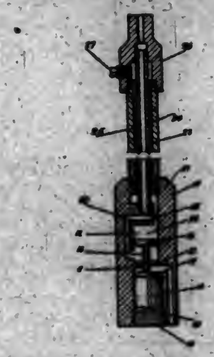
1. In an engine starter, a power shaft, a hollow shaft threaded for a portion of its length fixed on the power shaft, a pinion slidably journalled on the power shaft for movement into and out of mesh with a gear of an engine to be started, means for actuating the pinion from the screw shaft including a control nut threaded on the screw shaft and arranged to run off the threaded portion thereof when the pinion is demeshed from the engine gear, and means for urging the control nut into initial engagement with the threads of the screw shaft including a thimble having a limited sliding engagement with the



screw shaft and adapted to engage the control nut, a compression spring supported at one end on said thimble, a second thimble mounted on the screw shaft supporting the other end of the spring, and means providing a bayonet connection between the second thimble and the screw shaft so positioned as to maintain the spring under initial compression.

2,445,610
WATER SKI BINDING
Robert E. Drake, Morrisville, Pa., assignor to Winner Manufacturing Company, Inc., Trenton, N. J., a corporation of New Jersey
Application August 29, 1946, Serial No. 693,723
8 Claims. (Cl. 9—21)

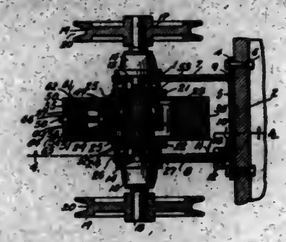
1. In combination with a water ski, a binding comprising a resilient vamp portion secured by its lower edge to the water ski, and a resilient counter portion having its rear edge secured to said ski and including integral tension members extending forwardly along opposite sides of the vamp portion and secured to the ski in advance of said vamp portion.



2,445,611
FLYING TOY
Harold E. Dunn, Corpus Christi, Tex.
Application January 23, 1947, Serial No. 723,818
2 Claims. (Cl. 244—153)

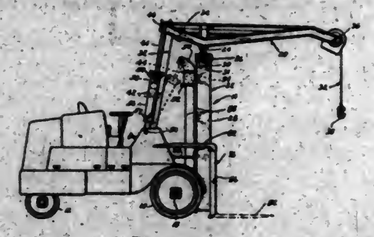
1. An aerial toy for sustained flight in wind comprising a flat frame, a bridle secured at vertically spaced points to the front edge of the frame, a tether secured to said bridle, a wing extending outwardly from each side of the frame adjacent the upper portion thereof, said frame

defining an opening therethrough, a shaft rotatably mounted to extend vertically from the lower to the upper edge of said opening, a plurality of trough-shaped impeller blades mounted on and parallel to said shaft and arranged to rotate said shaft upon passage of wind past said frame, a lift propeller secured to said shaft and to the upper ends of said impeller blades and arranged to rotate within said opening and to provide lift for said toy on rotation of said shaft, and a rudder member secured to the lower portion of said frame, said rudder being adjustable to maintain said frame in approximately vertical position during flight of said toy.



2,445,612
EXCESS FLOW VALVE
Chester Fanshier, Bartlesville, Okla.
Application March 23, 1945, Serial No. 584,395
4 Claims. (Cl. 137—153)

1. An excess flow valve structure through which a fluid under pressure flows comprising a body member, a conduit within the body member, a sliding member within the body member controlling flow of fluid under pressure through the conduit, a closed chamber within the body member separated from the conduit by a portion of the sliding member, concentric tubes connecting into the upper end of the body member, the inner tube of the concentric tubes connecting into the conduit to conduct normal flow of fluid under pressure away from the valve structure while the outer tube connects into the chamber and forms an extension of the chamber and said sliding member being moved into a closed position across the conduit upon a sudden drop of pressure in the chamber due to a break or leak in the outer tube by the pressure of fluid flowing through the conduit forcing the sliding member into sealing position across the conduit.

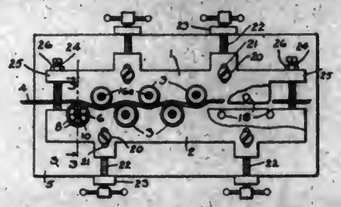


2,445,613
DRIVE MECHANISM FOR RECIPROCATING DEVICES
Walter Fincher, Salina, Kans.
Application November 22, 1943, Serial No. 511,264
11 Claims. (Cl. 74—26)

1. A device of the character described including a bracket having spaced arms, shaft bearings carried by the arms in registering alignment with each other, shafts in said bearings, eccentrics on said shafts, a ring-shaped weight positioned circumferentially of the eccentrics, means oscillatably supporting the weight from said arms, means connecting the eccentrics with said weight, and driving means on the respective shafts for

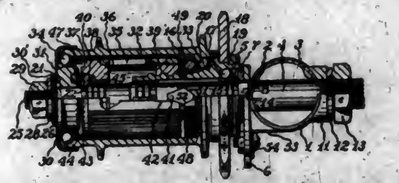
actuating the eccentrics to effect oscillation of said weight.

2,445,614
LOAD HANDLING APPARATUS
Francis K. Flynn and Reuben H. Adelman, New York, N. Y., assignors, by mesne assignments, to Silent Hoist & Crane Co., Inc., Brooklyn, N. Y., a corporation of New York
Application September 5, 1945, Serial No. 614,566
13 Claims. (Cl. 214—65)



1. In a load handling apparatus which comprises a vehicle provided with a tiering frame having a vertical frame section mounted for pivotal movement about a horizontal axis, power-operated means mounted on the body of the vehicle and operatively connected to said frame section at the upper part thereof for pivotally moving the same, the connection between said power-operated means and said frame section being detachable for disconnecting said means from said frame, a crane-boom, and means for supporting said crane-boom between its opposite ends at the top of said frame in position for pivotal movement on said tiering frame, said power-operated means, when detached from said frame, being operatively connectable to said boom for pivotally moving the latter when it is mounted on said frame.

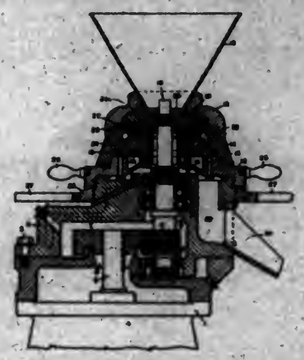
2,445,615
WIRE STRAIGHTENER OR SHAPER
Gunard Forsman, Worcester, Mass., assignor to Johnson Steel & Wire Company, Inc., Worcester, Mass., a corporation of Massachusetts
Application November 4, 1944, Serial No. 561,953
2 Claims. (Cl. 140—148)



1. A wire straightener comprising, a base providing a pair of opposed series of bores, the bores of one series being spaced in staggered relation with the bores of the other series, a spindle mounted within each of said bores so as to be capable of free axial movement therein, means for holding each spindle against rotation within its associated bore, and a plurality of roll assemblies between oppositely spaced pairs of which a wire is drawn, each of said roll assemblies being

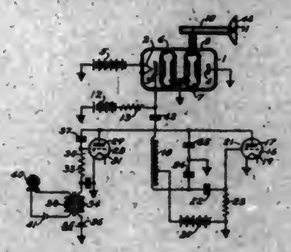
mounted upon a respective one of said spindles, with each such assembly including an inner race secured rigidly upon a spindle, anti-friction elements carried on said inner race, an outer race rotatably mounted upon said anti-friction ele-

ments, and a peripheral groove formed about said outer race for receiving and guiding the wire, each of said spindles being adapted to be shifted axially within its bore in response to thrusts set up by said wire upon the sides of said groove.



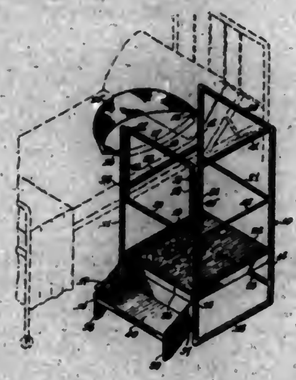
2,445,616
VEHICLE BRAKE
E. Elliott Hood, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application March 29, 1946, Serial No. 658,293
6 Claims. (Cl. 192—6)

1. A cantilever-mounted coaster brake for bicycles and the like including an axle fixedly mounted at one end in the frame of the vehicle, said mounting constituting the sole support of the frame thereon, a driving member journalled on the axle adjacent its mount, an anchor member non-rotatably mounted on the axle adjacent its free end, a wheel hub journalled on the anchor and driving members, brake mechanism for frictionally connecting the hub to the anchor member, means for applying the brake responsive to backward rotation of the driving member and a torque arm non-rotatably connected to the axle for transmitting braking torque from the axle to the vehicle frame.



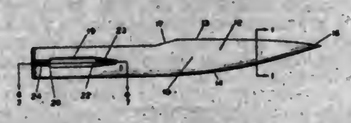
2,445,617
APPARATUS FOR MIXING
Maximilian P. Hofmann, Bay Village, Ohio, assignor to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a corporation of Ohio
Original application April 17, 1943, Serial No. 483,415. Divided and this application December 5, 1946, Serial No. 714,256
4 Claims. (Cl. 259—7)

1. In apparatus of the character described, the combination of a rotor member having a disc-like projection thereon having opposed faces and a stator embracing said rotor in close proximity to the opposite faces of said disc-like portion, said assembly provided with an inlet centrally of the first face of said disc-like projection and an outlet centrally of the second face of said disc-like projection, a plurality of impeller means carried by the said first face and so arranged as to provide therebetween a plurality of radially extending passages and to thus constitute a centrifugal pump in the space between said first face and adjacent stator parts, and said second face and adjacent stator parts arranged in such closely spaced relation as to constitute a treating stage for the material caused to flow radially inward therethrough in opposition to centrifugal force



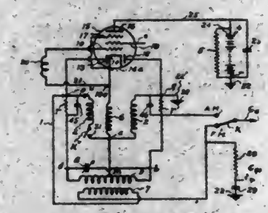
resisting such flow under the influence of said centrifugal pump whereby said treating stage is maintained in a filled condition during rotation of said rotor, said radially extending passages decreasing in depth and increasing in width in a direction outwardly from such inlet to an extent such that particles of material to be treated which are larger than can be accommodated in said treating stage are excluded therefrom.

2,445,618
MODULATION SYSTEM
John A. Hutcheson, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 1, 1943, Serial No. 481,383
4 Claims. (Cl. 179—171.5)



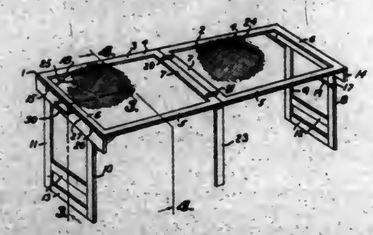
1. In a communication system operating at ultra-high frequencies, a source of ultra-high carrier frequency energy comprising an oscillator of the electron velocity actuated space-resonant type, a source of high frequency energy of a frequency lower than said carrier frequency, means for triggering the action of said oscillator at a rate determined by said source of high frequency energy, means for impressing modulations comprising means for shifting the frequency of said last-mentioned source in accordance with the amplitude of the signal to be transmitted and at a rate of said signal frequency.

2,445,619
RISER
John J. Josepha, Philadelphia, Pa.
Application March 30, 1945, Serial No. 585,708
7 Claims. (Cl. 5—92)



1. In a device for assisting a convalescent patient to develop the strength to rise from bed and walk, a frame having a horizontal platform at its lower portion and above the bottom thereof, vertical standards extending upwardly from the edges of the platform so that the platform is available as a floor at the base of the standards, horizontal hand grips extending at the top of the frame between cooperating standards, a bar connecting two vertical standards transverse to the hand grips and below the hand grips and located at one edge of the frame, and a removable back rest from one vertical standard to the other at the opposite ends of the hand grips, the frame being adapted to be placed adjacent a hospital bed with the horizontal platform below the level of the mattress of the bed, with the vertical standards extending upwardly above the bed surface with the horizontal grips extending away from the bed, with the bar below the level of the mattress and close to the bed and with the back rest above the surface of the mattress.

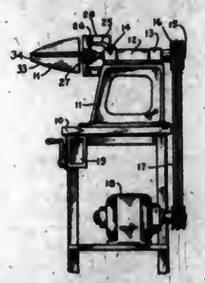
2,445,620
FISH PICKER
William E. Ketland, Alexandria, Va.
Application March 15, 1945, Serial No. 582,875
7 Claims. (Cl. 43—29)



4. A picker for the removing of hooks from fish, comprising an elongated shaft, an eyelet extending transversely through said shaft near the rear end thereof, the rear short wall of which, closely adjacent the rear end of the shaft, is substantially at right angles to the side surface of the shaft, and the front wall of which, remote from the rear end of the shaft, extends at an acute angle from the surface of the shaft, said eyelet being substantially longer on one face of the shaft than on the opposite face thereof.

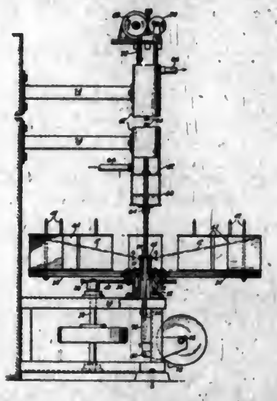
2,445,621
DEMODULATOR DEVICE FOR FREQUENCY AND AMPLITUDE MODULATION
Edward H. Lange, Baltimore, Md.
Application November 5, 1945, Serial No. 626,733
21 Claims. (Cl. 250—27)

1. A frequency-discriminator for providing unilaterally-grounded output voltages responsive in magnitude and polarity to modulation of frequency of a high-frequency carrier wave, having a thermionic tube with a cathode, a first and a second diode-anode with said cathode, a third anode, and grid control means for controlling thermionic currents between said third anode and cathode, an input-impedance connected between said grid control means and said cathode, a unidirectional voltage source with positive terminal connected to said third anode and negative terminal connected to ground, a phase-shifting network connected between said cathode and said diode-anodes including a common conductive connection between said cathode and each of said diode-anodes, and a junction-terminal of said conductive connection upon said network; a conductive ground connection of negligible impedance to one of said diode-anodes, a high-frequency choke-coil connected between said ground and said junction-terminal, and a high-frequency voltage neutralizing device including a conductive neutralizing-impedance coupled with said network for transferring opposing high-frequency voltages therefrom, and a conductive connection through said neutralizing-impedance to the ungrounded diode-anode.



2,445,622
SUN BATH DEVICE
Ida B. Lewk, Tulsa, Okla.
Application April 7, 1947, Serial No. 739,925
2 Claims. (Cl. 160—135)

1. A foldable sun bath device comprising, a top having sections hingedly connected together in end-to-end relation, a light diffusing material covering said top sections, an end leg structure hingedly connected to the outer ends of the top sections whereby said top sections and end legs may be folded to a compact position with the tops of said section in facing relation, one side of said leg structure being shorter than the other



side to provide a sloping top to said device, a support for the top sections at substantially their pivoted abutting ends, and means engaging the leg structure and the top sections for holding said sections and legs in rigid position.

2,445,623
FUR BUFFING MACHINE
Francis Luckower, Mount Vernon, N. Y.
Application October 15, 1947, Serial No. 780,051
13 Claims. (Cl. 69—27)

1. In a fur ironing machine, a conoidal fur-engaging member having at least one external fur buffing means, heating means within said element, and means rotating said element.

2,445,624
METHOD OF MAKING TUBULAR COVERINGS
Paul F. McDermott, Martinsville, N. J., and Harry E. Holcomb, Stratford, Conn., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application November 11, 1943, Serial No. 509,880
7 Claims. (Cl. 154—83)

1. In a method of making a tubular covering, the steps comprising, applying a relatively non-extensible carrier element to a mandrel, winding a plurality of strands in parallel, contiguous spirals around the carrier element and mandrel to form a tube extending lengthwise thereof, drawing the tube away from the winding operation without disruption of the contiguous relationship of the spirals by moving the carrier element along the mandrel, coating the outer face of the tube with an adhesive material, setting the adhesive material, and removing the carrier element.

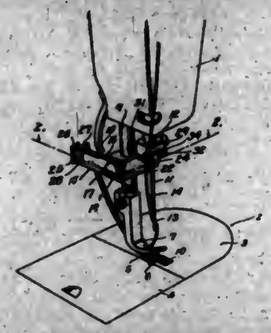
2,445,625
SAFETY SWITCH FOR INTERNAL-COMBUSTION ENGINES
Charles L. Meinholdt, Topeka, Kans.
Application January 26, 1945, Serial No. 574,798
2 Claims. (Cl. 200—140)

1. A safety device including a shell having an end adapted for mounting in an opening of an internal combustion engine, a bulb connected with said end of the shell and projecting coaxially therefrom for emersion in cooling liquid of the engine, said shell having axially spaced shoulders inset from the opposite end of the shell, a bellows in the shell having open and closed ends and adapted to be operated by heat responsive medium in said bulb, said open end of the bellows having an annulus engaging the inner of said shoulders, sealing means fixing the annulus to the shell for retaining the heat responsive medium, an insulator seated on the outer shoulder of the shell, a fixed contact carried by the insulator, a movable contact carried by the closed end of the bellows and extending coaxially through the bellows to project from the open end in registry with the fixed contact and adapted to engage the fixed contact responsive to contraction of the bellows by the heat responsive medium in said bulb, a guide on the closed end of the bellows and adapted for sliding contact with the shell during contraction of the bellows to retain said movable contact in coaxial alignment with the fixed contact, and means on the shell for retaining the insulator on the outer of said shoulders.

2,445,626
PROCESS FOR PREPARING ALKYLAMINO-KETONE OXIMES
Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application December 4, 1944, Serial No. 566,641
3 Claims. (Cl. 260—566)

1. A process for preparing alkyl aminoketone oximes which comprises reacting in an aqueous medium a chlorinated ketoneoxime of a ketone selected from the group consisting of acetone, methylethylketone and diethylketone with a primary alkyl amine.

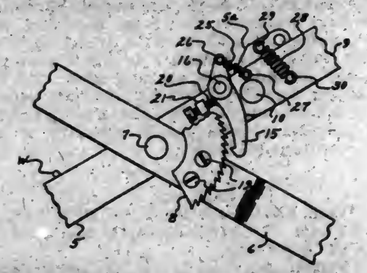
2,445,627
MONOMERIC AND POLYMERIC UNSATURATED ESTERS AND THEIR PRODUCTION
Rupert C. Morris and Robert M. Horowitz, Berkeley, and Alva V. Snider, Richmond, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 19, 1944, Serial No. 554,860
4 Claims. (Cl. 260—468)



1. A normally liquid polymer of diallyl 3-methyl-1,2,3,6-tetrahydrophthalate.

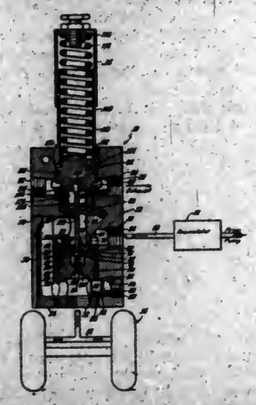
2,445,628
INSUBMERSIBLE PIPE LINE
Jacques Muller, La Garenne Colombes, France
Application February 28, 1949, Serial No. 321,301
In France March 1, 1939
Section 3, Public Law 690, August 8, 1946
Patent expires March 1, 1959
3 Claims. (Cl. 138—63)

1. A floating fuel pipe line comprising a flexible pipe, a plurality of flexible pneumatic elements surrounding the flexible pipe, said pneumatic elements having recesses in the periphery thereof, and a metal element extending longitudinally of the pipe and positioned in said recesses.



2,445,629
THREAD HOLDER AND CUTTER
Charles W. Newton, Kansas City, Mo.
Application January 28, 1946, Serial No. 643,888
2 Claims. (Cl. 112—252)

1. A thread holding device for sewing machines including a mounting bracket having an opening therethrough adapted to accommodate the presser foot stem of a sewing machine and having a substantially vertical seating face when mounted on the presser foot stem, a pair of substantially flat tongues arranged in juxtaposition with the flat face of one tongue in substantially face to face contact with the other tongue and having openings therethrough at one end and diverging terminals at the other to provide an entrance throat for thread between said flat faces, and fastening devices extending through said openings of the tongues for drawing the tongues into clamping contact with each other and the tongues against the seating face to support the tongues in substantially horizontal position and directed from said stem in the opposite direction to the presser foot on said stem when the device is in use, said tongues being of substantial length to materially space the entrance throat from said mounting bracket and to provide substantial resiliency in said tongues.



2,445,630
PRESSURE-APPLYING DEVICE
Herbert E. Page, Alhambra, Calif.
Application January 13, 1945, Serial No. 572,688
4 Claims. (Cl. 74—518)

1. A pressure applying device comprising a first lever and a second lever pivotally connected together between their ends for pliers-like swinging movement relative to each other, a third lever pivotally connected adjacent one end to the second lever for swinging movement relative thereto, pawl and ratchet means cooperating with the first and third levers to swing the first and second levers towards each other in response to

swinging movement of the third lever in one direction relative to the second lever, and a stop on said second lever engageable with said pawl normally to hold said pawl and ratchet disengaged and operative to disengage said pawl from said ratchet in response to return of said third lever from relative motion in said one direction.

2,445,631
METERING VALVE
Bud William Pasnow, South Euclid, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application May 31, 1946, Serial No. 673,499
7 Claims. (Cl. 303—54)

1. In a valve mechanism, in combination, a valve housing having an inlet passageway connectible to a source of fluid under pressure, an exhaust passageway, a chamber defined by said housing and connected with said passageways and adapted to have the pressure within it regulated, a first valve, said valve being positioned in said exhaust passageway for controlling the exhaust of fluid pressure from said chamber, and comprising a valve piston member and a valve seat member, said two members being movable, means resiliently biasing one of said members toward the other, stronger resilient means for moving the other member toward said one of said members to close the valve, a second valve, said second valve being positioned in said inlet passageway to control the admission of fluid

under pressure to said chamber and comprising a valve seat and an annular valve piston having its central passageway closed by a pilot valve, said annular valve piston providing a surface subject to fluid under pressure which tends to open the valve and providing a larger surface subject to fluid under pressure which tends to urge the piston to its seat, means restricting the flow of fluid under pressure to said second-mentioned surface, means operable by movement of the first valve when closed to open said pilot valve, said second valve opening after the pilot valve opens when the fluid under pressure on the first-mentioned surface on said annular valve piston thereafter exceeds the pressure on said second-mentioned surface.

2,445,632

INDIGOSOL COMPOSITION COMPRISING A NAPHTHOL SULFONATE AND METHOD OF APPLYING SAME

Earl L. Pelton and Charles O. Hutchenreuther, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application October 5, 1945, Serial No. 620,624
15 Claims. (Cl. 8—70)

14. The process which comprises printing a fabric with a printing paste comprising a salt of an acid-sulfate ester of a leuco dyestuff derived from tetrabromindigo and a salt of a naphthol sulphonic acid selected from a class consisting of 1-naphthol-2-sulphonic acid, 1-naphthol-4-sulphonic acid and 2-naphthol-7-sulphonic acid, the naphthol sulphonate being present in amount corresponding to at least 3 per cent of the weight of the acid-sulfate ester of a leuco dyestuff.

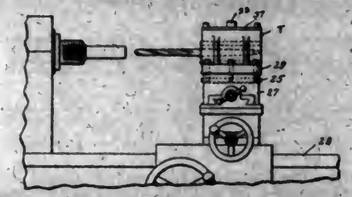
2,445,633

CABLE CONNECTOR

Walter Peters, Linden, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey

Application July 23, 1945, Serial No. 606,587
4 Claims. (Cl. 285—6.5)

1. A cable connector comprising a ring-like body having an annular groove and a longitudinal slit, and having the major portion of its ring-like body formed on a diameter adapted to be received into the knock-out hole of a box, the end portions of the body adjacent the longitudinal slit being depressed inwardly of said diameter, thereby adapting said end portions to have clearance relation with a ragged and uneven edge portion of the box hole, and an operating screw mounted in the body for clamping a cable inserted therein and expanding the annular groove into anchored engagement with the edge of the box hole.



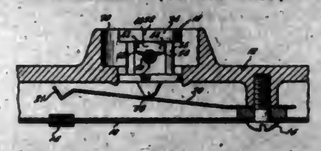
2,445,634

QUICK-CHANGE LATHE TOOLHOLDER

Edwin W. Plumb, Morris, Conn.

Application June 21, 1946, Serial No. 678,475
3 Claims. (Cl. 82—36)

1. In a lathe tool holder, a base for attachment to the compound rest of the lathe, a split block having a horizontal hole to receive the lathe tool or adaptor therefor, means to adjust the vertical position of said block with respect to said base, and means to selectively contract the sides of said block upon said tool or expand said sides to release said tool, comprising a manually-rockable shaft fitted into the upper portion of said block, said shaft having three eccentric cams, means to connect the two end cams to the bottom portion of said block, whereby when said shaft is rocked in one direction the sides of said block will be contracted, and means located in said lower block and engageable by said central cam to expand the sides of said block and release the tool mounted therein.



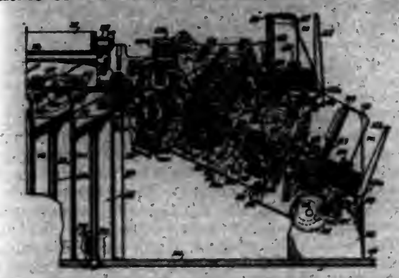
2,445,635

LOCK SWITCH

Theodore Poliakoff, New York, N. Y., assignor to Flashlight Company of America, Jersey City, N. J., a corporation of New Jersey

Application July 6, 1946, Serial No. 681,727
3 Claims. (Cl. 200—169)

1. A device of the character described for making and breaking an electrical circuit, comprising a base member, a pair of spaced contacts secured thereon, one of the contacts being fixed, the other comprising a conductive spring leaf member normally biased away from the first contact, a vertically and laterally shiftable button normally engaging the spring leaf member, vertical downward movement of the button bearing the spring leaf contact into engagement with the fixed contact to close the electrical circuit, lateral movement of the button in its down position thereafter locking the parts in the circuit closing position under the influence of the spring contact, the button being vertically and horizontally apertured and having a cross bar passing through the aperture the ends of which cross bar are secured within the sides of the base, holding the button captive thereon.



2,445,636

RECORD CONTROLLED MACHINE

David W. Rubidge, Chatham, N. J., Clarence R. Manning, Vestal, N. Y., James B. Greene, New Brunswick, N. J., and James DeK. Hood, Endwell, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York

Original application July 24, 1940, Serial No. 347,226. Divided and this application September 1, 1942, Serial No. 456,890
27 Claims. (Cl. 270—58)

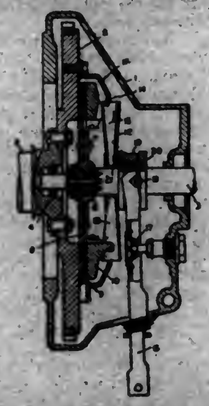
1. In a machine of the class described, a plurality of means to feed separate successions of records, a record counting device, means to place the record feeding mechanisms under selective control of the record counting device for automatic selection in rotation, and means to condition the counting device to predetermine the number of records in each succession fed by each of said feeding mechanisms.

2,445,637

COATING COMPOSITION COMPRISING A DRYING OIL, A RESIN, AND AN ACYCLIC TERPENE SOLVENT

Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 23, 1944, Serial No. 569,622
12 Claims. (Cl. 260—19)



9. As a varnish, a composition comprising a drying oil, a phenol-formaldehyde resin, and a solvent, said solvent containing at least about 10% of allo-ocimene.

2,445,638

FRICTION CLUTCH

Ira Saks, Shaker Heights, Ohio

Application November 3, 1944, Serial No. 561,677
4 Claims. (Cl. 267—1)

4. The combination of a resilient member of the Belleville washer type for use in a clutch as described, a bearing ring non-rotatably fitted in the central opening in said member and formed with a radially projecting flange on its one edge providing an outwardly facing bearing, hooked lugs on said ring projected through said member, and a split resilient ring engaged in said hooked lugs to retain said bearing ring against axial displacement in such opening.

2,445,639

ARTICULATING APPARATUS FOR ARTIFICIAL TEETH

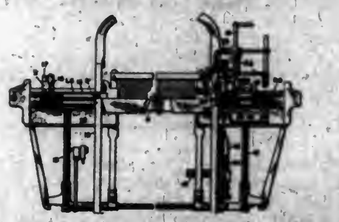
Richard Sandhofer, Zurich, Switzerland

Application August 5, 1943, Serial No. 497,460
In Switzerland March 16, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 16, 1962
1 Claim. (Cl. 32—32)

Articulator adapted for simulating combined vertical and transverse motions of the jaw comprising, an upper jaw model holder, a lower jaw model holder, the two holders simulating jaw positions as to the normal vertical and horizontal positions, complementary sets of inclined control surfaces defined by two planes on each holder intersecting in a single line in the vertical central plane and at an angle of 30 to 33 degrees to the horizontal plane defined by the holders, the lower jaw-model holder having a vertical thrust plate cooperating with a complementary vertical surface on the upper jaw model holder as a stop and abutment means.

2,445,640

SMOKE, SIGNAL, OR ILLUMINATING FLARE



Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England

Application June 13, 1944, Serial No. 540,092
In Great Britain, November 12, 1943
2 Claims. (Cl. 102—7)

1. A flare device comprising a casing, a rocket within said casing, a head secured to said rocket, a removable closure at the end of the casing adjacent said head, an apertured disc in said casing below said rocket, a burster charge in said casing below said disc, means for igniting said burster charge whereby said burster charge explodes and causes said rocket to force off said removable closure and at the same time ignites said rocket, and a buoyancy chamber secured to said casing, said buoyancy chamber being constructed and arranged to float said casing in water with said removable closure upwardly directed.

2,445,641
ELECTRIC WEFT DETECTING SYSTEM FOR LOOMS
Victor F. Sepavich, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application March 11, 1947, Serial No. 733,885
7 Claims. (Cl. 139—273)

2. In a weft replenishing loom effective to give indication of weft exhaustion during a given interval of the loom cycle, bobbin release means, an actuator for said release means moving subsequent to said interval, a controller for said actuator normally out of controlling relation with respect to the actuator but when in controlling relation with respect thereto causing said actuator to effect operation of the bobbin release means, a solenoid for the controller effective when energized to move the controller into controlling relation with respect to the actuator, a normally dead electric circuit for the solenoid including an electronic tube, electric control means for the electronic tube effective when the detector indicates weft exhaustion to energize said circuit, said circuit thereafter due to said electronic tube continuing energization of said circuit and solenoid after said interval, and electric means effective subsequent to operation of the release means by the actuator to open said circuit.

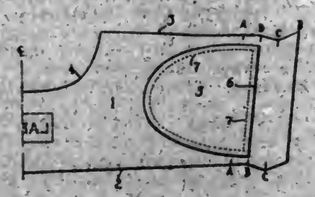
2,445,642
PLASTIC COMPOSITION COMPOSED OF A CELLULOSE COMPOUND AND AN INDANOL ESTER
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application February 9, 1944, Serial No. 521,713
3 Claims. (Cl. 106—178)

1. A plastic composition which consists of a plasticizable organic material selected from the group consisting of cellulose esters and cellulose ethers and a minor amount of a compound selected from the group consisting of carboxylic acid esters of indanol and carboxylic acid esters of a methyl indanol sufficient to plasticize said organic material.

2,445,643
HYDROCARBON RESINS AND COMPOSITIONS CONTAINING THE SAME
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application June 20, 1944, Serial No. 541,260
7 Claims. (Cl. 260—23)

5. A coating composition comprising a drying oil and a hydrocarbon resin polymer selected from the group consisting of heat resin polymer and catalytic resin polymer of polymerizable hydrocarbons contained in a hydrocarbon oil which has been physically separated from tar produced in the vapor phase pyrolysis of petroleum oil and which is free from and of greater volatility than the pitch of said tar, said hydrocarbon oil when separated and when subjected to polymerisation containing in addition to hydrocarbons boiling between 210° C. and 350° C. which are not polymerizable by the application to said oil of heat alone but which are polymerizable to catalytic resin polymer by treating said oil with a resin producing catalyst, other hydrocarbons boiling between 210° C. and 350° C. which are polymerizable to catalytic resin polymer by treating said oil with a resin producing catalyst but which last-mentioned hydrocarbons are also polymerizable to heat resin polymer by the application to said oil of heat alone, said last-mentioned hydrocarbons being present in said hydrocarbon oil in amount greater than approximately 5% of the total hydrocarbon oil boiling between 210° C. and 350° C., the properties of the said hydrocarbon resin polymer for inclusion in coating compositions having been improved by the removal of drying inhibitors naturally present in one of a group consisting of a solution of the said hydrocarbon resin polymer and the said hydrocarbon oil containing the aforesaid hydrocarbons polymerizable to the said hydrocarbon resin polymer in yet unpolymerized condition by a treatment which comprises reacting one of the said group of hydrocarbon materials with 1% to 30% of an inorganic alkali in aqueous solution at a temperature within the range of 0° C. to 200° C., and freeing the so treated hydrocarbon material from alkali by stratification, drainage and absorption, the proportion of drying oil to resin polymer being such as to produce a coating composition having an oil length of less than 25 gallons.

2,445,644
OXYGEN-TREATED HYDROCARBON RESINS AND COMPOSITIONS CONTAINING THE SAME
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application June 20, 1944, Serial No. 541,263
6 Claims. (Cl. 260—23)



1. A coating composition comprising a drying oil and a hydrocarbon resin polymer selected from the group consisting of heat resin polymer and catalytic resin polymer of polymerizable hydrocarbons contained in a hydrocarbon oil which has been physically separated from tar produced in the vapor phase pyrolysis of petroleum oil and which is free from and of greater volatility than the pitch of said tar, said hydrocarbon oil when separated and when subjected to polymerization containing in addition to hydrocarbons boiling between 210° C. and 350° C. which are not polymerizable by the application to said oil of heat alone but which are polymerizable to catalytic resin polymer by treating said oil with a resin-producing catalyst, other hydrocarbons boiling between 210° C. and 350° C. which are polymerizable to catalytic resin polymer by treating said oil with a resin-producing catalyst but which last-mentioned hydrocarbons are also polymerizable to heat resin polymer by the application to said oil of heat alone, said last-mentioned hydrocarbons being present in said hydrocarbon oil in amount greater than approximately 5% of the total hydrocarbon oil boiling between 210° C. and 350° C., the proportion of drying oil to resin polymer being such as to produce a coating composition having an oil length of less than 25 gallons, in the said resin the drying inhibitors naturally present in the resin as produced having been removed by reaction with oxygen at a temperature within the range of 30° C. to 200° C. in a solution of the said resin to improve the properties of the resin for inclusion in coating compositions.

2,445,645
APPARATUS FOR PAINTING THE INSIDE OF PIPE LINES
Dishman K. Stephens, Kansas City, Mo., assignor to Panhandle Eastern Pipe Line Company, Kansas City, Mo., a corporation of Delaware
Application February 6, 1946, Serial No. 645,796
7 Claims. (Cl. 91—39)

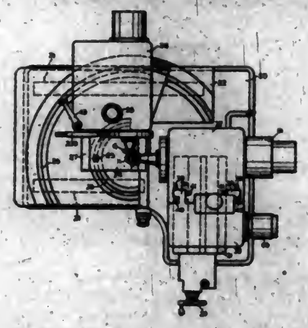
5. In an apparatus for coating the interior surfaces of a pipe line, a pair of spaced non-connected swab members in the pipe line, means for filling the space between the swab members with paint, fluid means for effecting movement of the swab members through the pipe line, and resilient means on said swab members having rearwardly directed flanges adapted to be expanded by the fluid means into engagement with the interior of the pipe line for wiping paint onto the pipe walls incidental to the movement of said swabs in said pipe line.

2,445,646
SHOULDER PAD ASSEMBLY
Bernard V. Starr, Mountain Lakes, N. J., assignor to David D. Doniger & Co., Inc., New York, N. Y., a corporation of New York
Application November 1, 1946, Serial No. 707,171
11 Claims. (Cl. 2—268)

3. A shoulder pad assembly for garments comprising a lining element, a shoulder pad of less width than the lining element and fastened thereto, an edge of the lining element being turned back over the pad, fastened to the underlying layer of the lining element along the sides of the tip of the shoulder pad, outwardly therefrom to the front and back edges of the lining element and cut out to form a pocket for the tip of the shoulder pad, a layer of material forming a freely extending flap joined to the lining element toward the inner edge of the said pocket and adapted for folding over with the front and back edges of the lining element for stitching to the garment along said edges and for fastening the assembly into a shoulder seam.

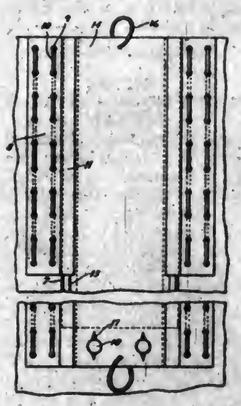
2,445,647
CLOSURE AND CONTAINER
John W. Thomas, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 3, 1944, Serial No. 561,774
3 Claims. (Cl. 215—40)

1. The combination comprising a container and closure for use in food processing operations involving heating the container after the closure is applied, said container having an arcuately concave outside sealing surface and outwardly disposed closure retaining means therebelow, and said closure including an upper skirt portion, a resilient lower skirt portion, inwardly disposed closure retaining means at the lower margin of said resilient skirt portion, and a resilient gasket located in said upper skirt portion and presenting a bottom corner of a substantially right angular shape when not compressed to bear upon said sealing surface, said inwardly disposed retaining means engaging and extending along the under side of said outwardly disposed retaining means far enough to permit raising of the closure to bring said gasket corner into substantially line contact on said sealing surface with said retaining means in engagement, whereby the pressure developed in heat processing raises the closure to permit escape of vapor between said gasket and said sealing surface without disengagement of said retaining means.



2,445,648
METHOD OF PRODUCING POWDERED METAL
Edward Cushman Truesdale, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application May 13, 1944, Serial No. 535,555
7 Claims. (Cl. 75—34)

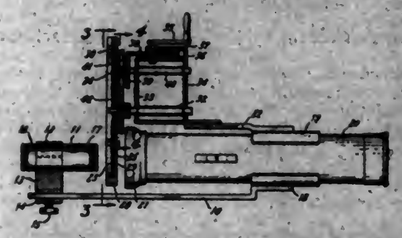
1. In the production of iron powder by reduction of iron oxide with hydrogen, the improvement which comprises mixing the iron oxide with a binder and forming agglomerated pellets thereof, subjecting the pellets to a roasting operation under strongly oxidizing conditions and at a temperature not exceeding about 1150° C., said roasted pellets being substantially free of oxidizable impurities, subjecting the roasted pellets to reduction with hydrogen at a temperature not to exceed 1025° C. to reduce the iron oxide to iron and leave it in a friable condition, and grinding the reduced iron to the desired particle size.



2,445,649
MACHINE FOR FINISHING GEARS
Lyman H. Turner, Irondequoit, Oliver F. Bauer, East Rochester, and Leonard C. Michelson, Brighton, N. Y., assignors to Gleason Works, Rochester, N. Y., a corporation of New York
Application November 6, 1945, Serial No. 627,024
19 Claims. (Cl. 51—26)

3. In a machine for finishing tapered gears, means for supporting a pair of gears to run together in mesh with angularly disposed axes,

means for rotating one of the gears to effect rotation of the pair through their intermeshing engagement, means for effecting relative movement between the gears in a direction lengthwise of their teeth during their rotation, means for simultaneously effecting relative movement between the gears transversely of their teeth, and means for adjusting one of said two last named means to adjust the amount of one of said movements independently of the other.



2,445,650
COTTON PICKER'S SACK
Marvin Alfred Walker, New Madrid, Mo.
Application May 3, 1945, Serial No. 591,648
1 Claim. (Cl. 150—2)

A cotton picker's sack having a longitudinally extending opening at the upper end of the sack, sectional tracks secured at the edges of said longitudinal opening with elongated sections in each track slightly spaced apart end to end and each including a tubular edge guide and with a longitudinal slot in the confronting edge of each guide, a flexible closure member of substantially the same length as said opening and having semi-rigid beadings at its side edges slidably received in the slots of said tubular guides whereby the closure member is slidable in said slots, and button and button-hole connections between said sack and said closure member near the bottom of said closure member, for preventing it of its own weight from sliding downwardly of said sack.

2,445,651
FLASHLIGHT MOVIE PROJECTOR
Karl D. Weavie, Saline, Mich., assignor of one-half to Stephen L. Piatkowski, Ann Arbor, Mich.
Application April 24, 1947, Serial No. 743,767
3 Claims. (Cl. 88—18.3)

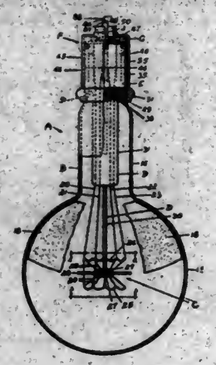
1. A projector of the kind described including a split sleeve, a flashlight held therein and having a light bulb at one end thereof, a horizontal bar connected to and extending forwardly of the lower portion of the sleeve, a lens barrel mounted on said bar and axially aligned with a flashlight to the front of the light bulb, a vertical bracket on top of the sleeve, a horizontal shaft journalled in the bracket, a circular holder axially mounted on said shaft for rotation therewith, in a vertical plane, between the lens barrel and the flashlight, said holder including a flat central surface with a plurality of radially disposed windows therein and an annular shoulder on the rim portion of the holder, a disk fitting within the annular shoulder and having a plurality of radially disposed apertures in register with said windows, an image carrying transparency over each aperture, the outer portion of the holder on the annular line of the windows being disposed between the light bulb and the lens barrel, and crank and gear means to impart to the shaft and the holder an intermittent rotary motion to bring the transparencies, one by one, into alinement with the light bulb and the lens barrel.

2,445,652
DERIVATIVES OF POLYMERIC ALLYL-TYPE ALCOHOLS
Richard R. Whetstone, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 11, 1944, Serial No. 558,285
4 Claims. (Cl. 260—465.6)

1. The beta-cyanoethyl ether of polymer of a beta, gamma-monoolefinic monohydric alcohol, said ether being soluble in alcohols and hydrocarbons.

2,445,653
NASAL APPLICATOR
Charles E. White, Salamanca, N. Y.
Application February 22, 1945, Serial No. 579,237
4 Claims. (Cl. 128—173)

1. A combined dropper and atomizer for nasal use designed to be attached to the neck of a liquid cointainer and comprising a hollow nozzle designed to enter and plug the nostril, a cap for removable leak-tight engagement with the container neck, and connecting means constituting a liquid path from the container to the nozzle and comprising a rigid S-shaped conduit, said conduit comprising an enlarged concave bend, the enlargement extending downwardly in the direction of the container, said enlarged bend defining a reservoir in said liquid path adapted for receiving and holding a determined quantity of liquid passed thereto from the container upon inversion of the container, and a part of the conduit beyond the reservoir in the direction of the nozzle being formed to provide a delivery passage of capillary dimensions.



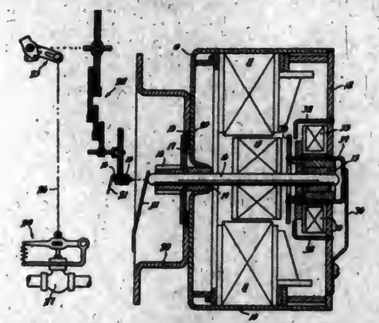
2,445,654
PROCESS FOR THE RECOVERY OF PARA-COUMARONE TYPE RESINS FROM POLYMERIZED RESIN OILS
Harry L. Allen and Herbert G. Kleinguenther, Philadelphia, Pa., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 11, 1946, Serial No. 696,245
6 Claims. (Cl. 260—81)

1. In the recovery of a resin comprising a polymer obtained by sulfuric acid polymerization of at least one compound of the group consisting of indene, coumarone, styrene and their homologs boiling within the range 130° to 350° C., from oil containing such resin and also containing acid- forming impurities introduced by the sulfuric acid polymerization, the improvement which comprises heating the oil in the presence of a compound selected from the group consisting of urea and thiourea, and distilling unpolymerized oil from said resin.

2,445,655
DISTILLATION OF SULFURIC ACID TREATED HYDROCARBON OILS
Harry L. Allen and Herbert G. Kleinguenther, Philadelphia, Pa., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 11, 1946, Serial No. 696,246
4 Claims. (Cl. 196—25)

1. In the refining of an aromatic hydrocarbon oil by treatment with sulfuric acid and subsequent distillation, the improvement which comprises eliminating excess acid from the acid-treated oil and thereafter distilling the oil in the presence of a compound selected from the group consisting of urea and thiourea.

2,445,656
MULTIPLE FILAMENT ELECTRIC LAMP
John Emmanuel Athanassiades, Teheran, Iran
Application July 19, 1946, Serial No. 684,311
5 Claims. (Cl. 176—26)



1. In a multiple filament electric lamp, an envelope and a filament structure within said envelope, including a disc-like portion, an arcuate filament disposed at adjacent one face of said portion and the other filament disposed at adjacent the other face of said portion, means to secure said filaments to said portion, a plurality of conductors within said envelope, including a separate conductor secured to the end of each filament, one of said conductors secured to one of said filaments being also secured directly to the other filament at a location spaced from the end of said other filament and being extended through said disc-like portion.

2,445,657
TOOTHBRUSH
Paul G. Bennett, Boston, Mass.
Application May 8, 1945, Serial No. 592,543
1 Claim. (Cl. 15—167)

A toothbrush having a handle, the latter at one end thereof carrying a longitudinally curved bendable elongated part tapered toward its free end formed of a single piece of resilient material presenting continuous longitudinal exterior surfaces for the entire length of said part on all sides thereof, said part being provided at its concave side with a row of projecting brush bristles distributed longitudinally thereof; the degrees of curvature and taper of said part, the resiliency of said material, and the stiffness of said bristles being such as to cause said part to bend transversely and resiliently press said row of bristles against the convex side of a row of human teeth of lesser degree of curvature than said part when said bristles are applied thereto, and said part to bend to cause its concave side to become convex and resiliently press said row of bristles against the concave side of a row of human teeth when said bristles are applied thereto, in each instance without collapsing of said bristles.

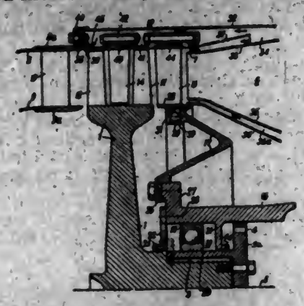
2,445,658
MOTOR AND BRAKE CONSTRUCTION
Carl J. Bishofberger and Walter E. Edelman, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 24, 1943, Serial No. 515,488
9 Claims. (Cl. 318—366)

1. In a motor, a stator, a rotor adapted to be moved into and out of alignment with said stator, a member movable with said rotor, a stationary member, cooperative braking surfaces on said members, means normally biasing said rotor and said movable member toward brake engaging position, electromagnetic means including an armature biased toward deenergized position, said biased armature when in energized position permitting longitudinal and rotational movement of said rotor and said movable member, said biased armature upon deenergization providing means for moving said biased movable member longitudinally against the normal bias thereof to release its braking surface from the braking surface of said stationary member.

2,445,659
CLEANOUT APPARATUS FOR DRILL STEEL
Clarence James Brown and Floyd Stillmen Brown, Hamilton, Mont., assignors, by direct and mesne assignments, of ten per cent to August R. Kurtz, Hamilton, Mont., and forty per cent to Myrtle Dohn, Bismarck, N. Dak.
Application September 24, 1945, Serial No. 618,124
5 Claims. (Cl. 279—20)

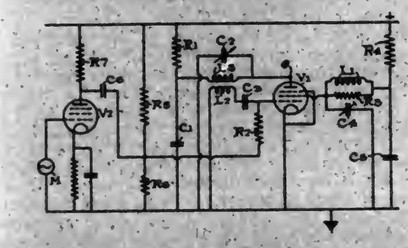
2. In apparatus for cleaning out the plugged lubricating fluid course in drill steel, having an upwardly extending stem with said course opening at the upper extremity of said stem, said apparatus including means for conducting fluid under pressure to said course, including a lowermost tubular member, an intermediate tubular member, an uppermost tubular member and a disc carried thereby, said lowermost tubular member having a bore greater in diameter than the widest transverse cross section of the upper end portion of said stem, with the upper section of said bore provided with screw threads, and means to couple said lowermost tubular member to the upper extremity of said stem, said intermediate tubular member having exterior screw threads upon its lower portion, cooperating with the first-named screw threads, a downwardly-extending, drill stem extremity-receiving opening, a shoulder above said opening and interior screw threads above said opening, said uppermost tubular member having a lowermost flat face and exterior screw threads above said face, cooperating with the interior screw threads of said intermediate tubular member, and said disc being disposed within said intermediate tubular member, above said opening, and provided with a perforation extending axially therethrough, said disc being constructed and arranged to slidably contact the interior face of said intermediate tubular member and said flat face and said shoulder.

2,445,660
ELECTRIC TREADLE
Carl O. Bruestle, Rahway, N. J., assignor to Elevator Supplies Company, Inc., Perth Amboy, N. J., a corporation of New Jersey
Application August 17, 1945, Serial No. 611,065
1 Claim. (Cl. 201—50)



In an electric treadle the combination comprising a housing, a sheet of conductive and compressible material in said housing formed of a mixture of a conductor and a non-conductor and having a normally high resistance to the passage of electric current, said sheet being of sepentine cross-section, and a pair of conductor sheets disposed on opposite sides of said first sheet and in contact therewith, the resistance to current flow of said first sheet being reduced under pressure.

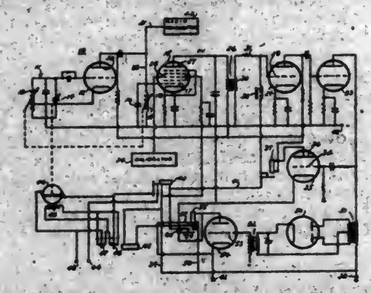
2,445,661
AXIAL FLOW TURBINE, COMPRESSOR AND THE LIKE
Hayne Constant, South Farnborough, and Wilfred Merchant, Salford, England; said Merchant assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application January 13, 1944, Serial No. 518,180
In Great Britain September 22, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 22, 1961
8 Claims. (Cl. 60—41)



1. An axial flow machine the blading of which is subjected to fluid at relatively high temperature comprising an outer casing of the machine and fixed blade-carrying members associated therewith, a fixed member in the interior of the machine, a ring connecting the inner ends of at least one row of the fixed blades of the machine,

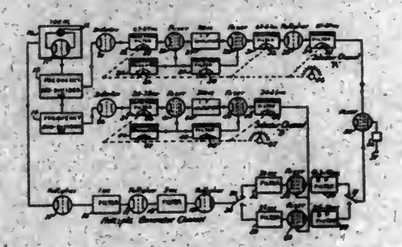
and a mechanical connection between said ring and fixed member comprising radial pins on the

inner periphery of said ring, engaging in radial holes in said inner fixed member.



2,445,662
FREQUENCY MODULATION SYSTEM
Owen Hosmer Davie, London, England, assignor to A. C. Cossor Limited, London, England, a British company
Application October 26, 1944, Serial No. 560,498
In Great Britain November 13, 1943
7 Claims. (Cl. 250—36)

1. A generator of frequency modulated oscillations comprising a thermionic valve having two output electrodes and having a control grid controlling the sum of the currents of said output electrodes, a feedback oscillator circuit connected between one of said output electrodes and said control grid and including a resonant network generating a carrier wave of predetermined frequency, a second resonant network connected to the other of said output electrodes and being tuned to a frequency lower than said carrier wave, and means to vary the control grid damping in accordance with the modulation of frequency required.

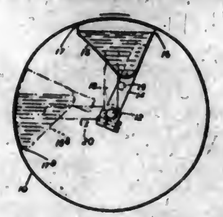


2,445,663
AUTOMATIC FREQUENCY CONTROL SYSTEM
Melvin L. Doelz, Minneapolis, Minn., assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application January 19, 1946, Serial No. 642,214
15 Claims. (Cl. 250—36)

1. In combination, an oscillator for generating a voltage of adjustable frequency, a source for producing another voltage of a certain standard frequency, a mixer network upon which signals from said oscillator and said source are simultaneously impressed to produce an oscillator tuning control voltage proportionate to the frequency difference between said oscillator and said source, a motor for controlling said oscillator, a directional control device for determining the direction of rotation of said motor, a relay arrangement responsive to said tuning control voltage above a predetermined minimum to cause said motor to rotate, and another relay arrange-

ment responsive to an increase in said tuning control voltage resulting from the starting of said motor in the wrong direction to operate said directional control device to reverse the motor rotation until said oscillator is at the desired frequency.

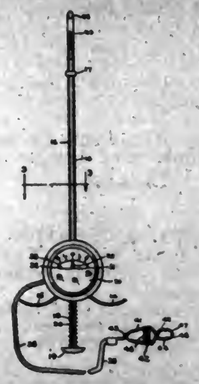
2,445,664
MULTIFREQUENCY GENERATING AND SELECTING SYSTEM
Melvin L. Doelz, Minneapolis, Minn., assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application February 27, 1946, Serial No. 650,666
15 Claims. (Cl. 250—36)



1. A selective multi-frequency producing system comprising a master oscillator, a plurality of frequency selector channels, a frequency multiplier channel, each of said selector channels being supplied with any selectable control frequency in a series of control frequencies derived from said master oscillator; each selector channel including a local source of adjustable frequency oscillations, means to combine the said series of control frequencies with a selectable frequency from the local oscillator to produce a series of beat frequencies, means to select a particular beat frequency, and means to combine with said particular beat frequency the frequency from the local oscillator to produce a resultant beat equal to the selected control frequency, and means to correlate the control frequencies applied to each channel so that there appears in the output of one channel any one of a series of frequencies spaced apart "a" cycles per second in a predetermined range, and at the output of the other channel there appears any one of a series of frequencies spaced apart "b" cycles per second where "a" and "b" are related by an integer.

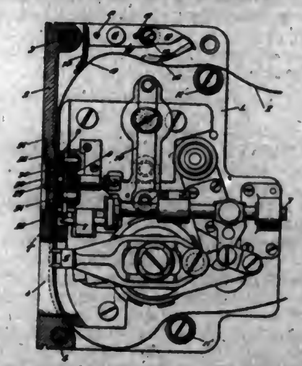
2,445,665
SHOE CONSTRUCTION
William H. Doherty, Elmhurst, N. Y.
Application March 29, 1946, Serial No. 658,107
4 Claims. (Cl. 36—14)

2. A welted shoe having a tread comprising a rubber strip affixed, along its inner edge, to the shoe welt, the outer edge of said strip being folded over the inner edge to form a pocket therebetween, a stiffening plate in said pocket, a plurality of tread blocks affixed to that part of the strip which is folded over the stiffening plate, and a filler of plastics occupying the space between said tread blocks.



2,445,666
INKING DEVICE FOR ROTARY DUPLICATING MACHINES
Frederick Ellam, Watford, England
Application April 17, 1946, Serial No. 662,831
In Great Britain May 4, 1945
3 Claims. (Cl. 101—119)

1. A rotary duplicating machine having a supporting frame, a horizontal spindle carried thereby, a metal cylinder formed with perforations and rotatably mounted on the spindle, an inking cloth covering said cylinder peripherally and arranged to receive a stencil of matter to be duplicated, radial arms pivotally mounted on the spindle within the ends of the cylinder and movable independently of the rotation of the cylinder, a trough carried by the arms within the cylinder and having walls fixed relatively to one another, the trough being open at the side directed towards the inner periphery of the cylinder, those walls directed towards the inner periphery fitting closely against said periphery, and means for moving said trough from an idle position in which the radial arms are vertical and the walls of the trough retain any ink in said trough out of contact with the inner periphery of the cylinder, to an operative position, in which the pivoted arms are maintained in a substantially horizontal position, and in which said ink is held in the trough with direct access to the inner periphery of the cylinder by gravitational flow into the perforations therein, providing a continuous and even charge of ink to the cylinder during its rotation.



2,445,667
ELECTRICAL CIRCUIT TESTER
Elmer A. Fuglie, Winona, Minn., assignor to Winona Tool Manufacturing Company, Winona, Minn., a corporation of Minnesota
Application October 22, 1943, Serial No. 507,346
1 Claim. (Cl. 175—183)

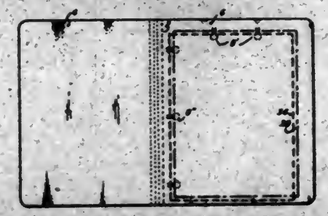
A short-and-break locator for electric wiring in position such as the insulated conducting electric wiring of an automobile, comprising a support formed of an integral elongated bar, an integral portion offset at right angles from said bar provided with a notch to receive and position an insulated wire, a plunger rod mounted for endwise movement close to and parallel with the bar having a sharpened point in longitudinal alignment with the center of said notch, said plunger extending beyond the outer end of the support and having a palm-engaging knob on its outer end, a spring about said extended portion for forcing the plunger away from the notch,

finger grips rigidly connected to the standard so the appliance can be held in one hand of an operator for forcing the point through the insulation to cause the point to contact the conducting wire within the insulation, an ammeter held by the standard close to the finger grips and plunger, and an elongated wire connected with one terminal of the ammeter having thereon a clip adapted to be put in electrical circuit connection with the source of electric current for the electric wiring the rod and the plunger point being in circuit connection with the other terminal of the ammeter.

2,445,668
COLOR CAMERA
Samuel B. Grimson, New York, N. Y., assignor to Color Research Corporation, New York, N. Y., a corporation of Delaware
Application October 4, 1946, Serial No. 701,180
6 Claims. (Cl. 88—16.4)

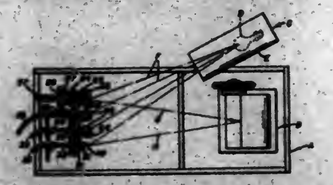
4. In a color camera the combination with an aperture plate having an aperture therein defined by raised surfaces, a color reseau mounted in said aperture in the plane of said raised surfaces, a reciprocable pressure plate, film feeding mechanism operating in timed relation therewith, the pressure plate clamping the film when stationary against said surfaces and reseau, means for disengaging the film from the raised aperture defining areas during periods of film movement, film cleaning means positioned to clean the film just before it moves into registry with said reseau, said aperture plate and pressure plate forming a film guideway, and means for supporting the film in a curved path in advance of the guideway, said film cleaning means being resiliently engaged by the film at its point of curvature, the natural resiliency of the film holding it against said cleaning means.

2,445,669
CHEMICAL PROCESS FOR PRODUCTION OF POTABLE WATER FROM NONPOTABLE SALINE WATER
Alexander Geetz, Pasadena, Calif., assignor to Sunshine Mining Company, Yakima, Wash., a corporation
No Drawing. Application June 22, 1943, Serial No. 491,240
5 Claims. (Cl. 210—23)



1. A process for the production of potable water from sea water, which comprises mixing said sea water with silver oxide and a zeolite and with barium hydroxide, each in an amount sufficient to precipitate chloride ion of the sea water as silver chloride and to bind sodium ion of the sea water to the zeolite as the sodium form of said zeolite and to convert magnesium ion into magnesium hydroxide and sulfate ion into barium sulfate, each in amount to give potable water, and separating the treated sea water from the magnesium hydroxide, sodium form of the zeolite and barium sulfate to give potable water.

2,445,670
APPARATUS FOR PRODUCING CAST METAL BODIES
Robert K. Hopkins, New York, N. Y., assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application February 3, 1944, Serial No. 520,986
2 Claims. (Cl. 22—57.2)



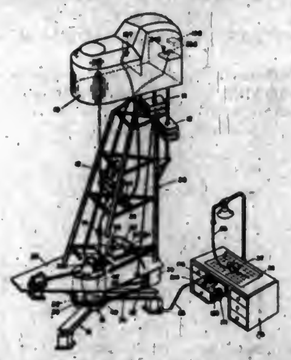
1. An apparatus for casting metal comprising a mold, a furnace outside said mold having a reservoir trap chamber and an overflow gate, a layer of flux over said chamber, a layer of flux in said mold, a spout connected to said gate and extending into said mold with its lower end submerged in the flux layer in said mold, said spout affording communication between the two flux layers, means for producing metal in said furnace under the protective action of the flux layer therein and depositing it in said furnace chamber under said latter flux layer, whereby the overflow from said furnace chamber passes over said gate through said spout and into said mold free from air contamination, while unfused particles of metal ingredients are trapped in said chamber, and means for solidifying the flux between said spout and the peripheral wall of said mold to form a substantially solid seal, whereby the flux is prevented from overflowing the upper end of the mold.

2,445,671
CONVERTIBLE FOLDER AND MANUSCRIPT COVER
Ervin G. Johnson, Eureka, Calif., assignor of one-half to Orville C. Whisman, Oakland, Calif.
Application April 25, 1946, Serial No. 664,860
5 Claims. (Cl. 129—16.7)

1. In an article of sheet material forming a letter file folder convertible to a manuscript cover having a front cover portion and a back cover portion and having a straight scored portion forming a cover hinge, a plurality of potential fasteners formed in said back cover portion, the potential fasteners being each rendered potential but not yet usable by a pair of identical straight parallel slits entirely through the sheet material forming a fastener shank portion normal to and terminating along a hinge line adjacent the cover hinge and a plurality of arcuate slits forming a ring of displaced slits centered adjacent the ends of said straight slits remote from the cover hinge, the ends of the various arcuate slits being separated by uncut portions of sheet material and the ends of the arcuate slits nearest the shank slits being separated from the latter slits by uncut portions of sheet material.

2,445,672
HEART TESTING MACHINE OF A BEAM REFLECTOR TYPE
William O. Jones, Baltimore, Md.
Application March 10, 1947, Serial No. 733,660
16 Claims. (Cl. 128—2.05)

1. In a structure of the class described, a mount including a pair of adjustably and separably connected blocks, said blocks embodying socket means, a tube having a ball jointing element



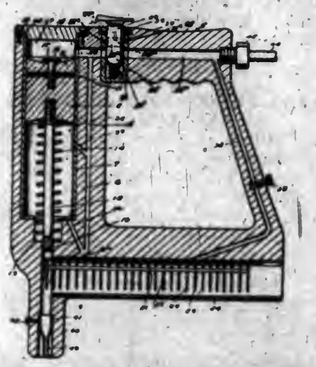
mounted in said socket means, one end of the tube embodying a hand-grip, the opposite end of the tube being formed with a screw threaded neck, said neck having a recess, a flexible diaphragm mounted in said recess, and means for holding the diaphragm in place in said recess.

2,445,673

MAGNETIC COMPASS INDICATING SYSTEM FOR AVIATION TRAINERS

Karl A. Kail, Montrose, Pa., assignor to Link Aviation, Inc., Binghamton, N. Y., a corporation of New York

Application July 30, 1943, Serial No. 496,738
7 Claims. (Cl. 35—10)



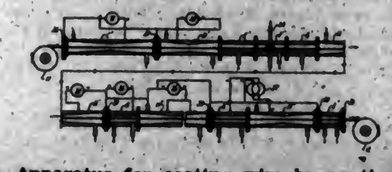
1. In a grounded aviation trainer the combination of a fuselage rotatable about a vertical axis, a simulated magnetic compass indicator in said fuselage, a control element carried by a member rotatable with said fuselage, said control element determining the reading of said simulated compass indicator, means for preventing a rotation of said control element whenever said fuselage is rotated, and additional operable means for changing the position of said control element.

2,445,674

PNEUMATIC NAIL DRIVER

Willard E. Kendall, Fitchburg, Mass.

Application March 3, 1945, Serial No. 580,776
6 Claims. (Cl. 1—46.1)



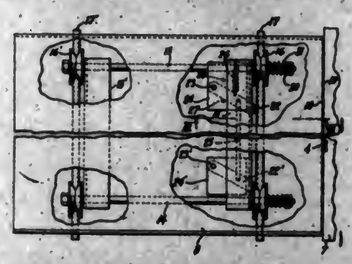
1. In a nailing machine, a pneumatically advanced reciprocable hammer, yielding means to retract said hammer, means to guide a carrier strip along a path which lies perpendicular to the hammer, said carrier strip being adapted to support a plurality of nails in spaced relation with their axes parallel to the axis of the hammer, means to admit air under pressure behind the hammer to advance it against the force of the yielding means and drive it against a nail carried by the carrier strip, and means to direct an air blast against the carrier strip to move it, and advance the next successive nail carried thereby into a position to be struck by the hammer.

2,445,675

APPARATUS FOR PRODUCING COATED WIRE BY CONTINUOUS PROCESS

William C. Lang, Willoughby, Ohio

Original application November 22, 1941, Serial No. 420,086, now Patent No. 2,370,973, dated March 6, 1945. Divided and this application June 20, 1944, Serial No. 541,207
5 Claims. (Cl. 204—209)



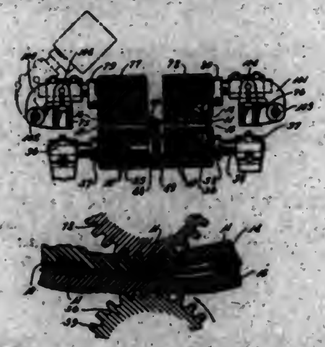
1. Apparatus for coating wire by continuous process comprising an electrically-conducting fluid-containing cylindrical treating chamber of varying inside diameter, electrically conducting drawing dies at the ends of the chamber, but insulated from the chamber, and an electric current supply means for supplying current to said chamber and to said dies, the wire to be treated passing through said dies and said chamber on the line of axis of said chamber, the walls of said chamber being of larger diameter at the ends and uniformly tapering to an intermediate smaller diameter at the center of the chamber so as to maintain uniform current density on the wire in its travel throughout the length of said chamber.

2,445,676

RECIPROCATING WORKTABLE FOR BAND SAWS WITH MEANS FOR RETRACTING THE TABLE FROM THE CUTTING PLANE AFTER EACH CUTTING STROKE

William Lasar, Los Angeles, Calif.

Application November 19, 1945, Serial No. 629,345
3 Claims. (Cl. 146—88)



1. A cutting machine comprising a cutting blade having a fixed location, a carriage for supporting a workpiece and movable on a selected path past the cutting blade, wheels on the carriage having a relative motion with respect to the carriage along a line at a large angle to the selected path, resilient means normally urging the table toward the cutter blade, a member extending parallel to the selected path, a lever pivoted to the carriage and having a length greater than the shortest distance from its pivot to the member, and resilient means urging the lever into contact with the member, whereby movement of the carriage in one direction along the path will cause the lever to drag against the member at an acute angle, and movement of the carriage in the other direction along the path will cause the lever to frictionally engage the member and move the carriage along the line of the relative motion of the wheels.

2,445,677

APPARATUS FOR APPLYING PLASTIC MATERIAL TO BANDS

Charles W. Leguillon, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application March 21, 1944, Serial No. 527,512
2 Claims. (Cl. 154—3)

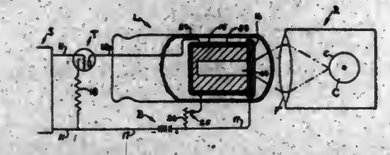
1. Apparatus for compacting plastic material about a band of tension members, said apparatus comprising roller means for supporting the band of tension members from one face thereof, roller means overhanging the margins of the opposite face of the band of tension members and engaging said margins in rolling relation thereto, the last said roller means comprising a pair of rollers, one for each margin of said band, means for adjusting said last-named roller means into and out of such overhanging relation by individual movement of each of said rollers to permit placement and removal of an endless band of tension members, roller-driving means for feeding the band of tension members between said roller means, and means for pressing said roller means against the plastic material at faces of the band.

2,445,678

ELECTRIC DISCHARGE DEVICE

Eugene Lemmers, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Application February 12, 1942, Serial No. 430,593
10 Claims. (Cl. 315—268)



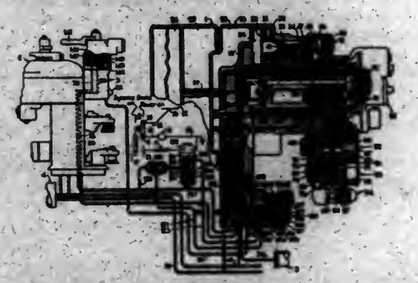
1. A gaseous electric discharge lamp comprising a sealed envelope containing an ionizable medium, a cathode and an anode connected to a source of potential and arranged to sustain therebetween a positive column discharge visible end-on past the anode, means for modulating the potential difference and the discharge current, a control electrode of hollow form surrounding the discharge path between said cathode and anode, and means to connect said control electrode in parallel with said anode and to bias it to a potential substantially different from that of the anode so that the intensity of radiation from the discharge varies in an appreciably greater proportion than the current input to the lamp.

2,445,679

MODULABLE ELECTRIC DISCHARGE LAMP

Eugene Lemmers, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Original application February 12, 1942, Serial No. 430,593. Divided and this application August 30, 1944, Serial No. 551,793
1 Claim. (Cl. 176—122)

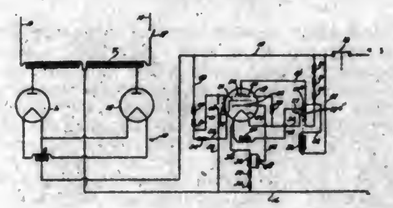


A modulable gaseous electric discharge lamp of the negative glow type comprising a sealed envelope containing an ionizable medium, a hollow cathode having an internally electron emissive bore, an annular sheet metal anode in front of said cathode and aligned axially with said bore and having a flange extending toward said cathode, and a shell-shaped sheet metal control electrode closely surrounding and enclosing the sides and back end of said cathode and extending inside said flange.

2,445,680

BRAKE APPARATUS

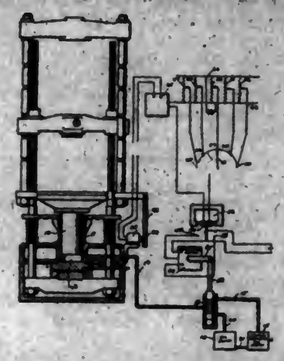
Harry M. Linhart, Pitcairn, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania



Application June 21, 1946, Serial No. 678,412
6 Claims. (Cl. 303—3)

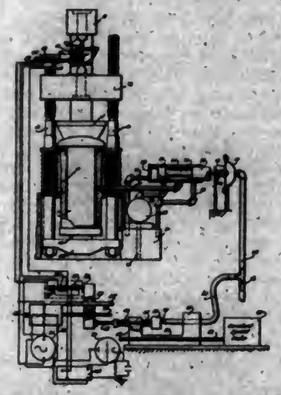
1. In a locomotive brake equipment, in combination, fluid pressure operative means for braking said locomotive, a brake pipe, control valve means operable upon a reduction in brake pipe pressure to effect a supply of fluid under pressure to said fluid pressure operative means, an engineer's automatic brake valve device for reducing the pressure in said brake pipe, an engineer's independent brake valve device for supplying fluid under pressure to said fluid pres-

sure operative means, a double check valve device interposed in the connection between said fluid pressure operative means and said control valve means and said independent brake valve device and operable upon supply of fluid under pressure by said control valve means to open communication therebetween and said fluid pressure operative means and to close communication between said fluid pressure operative means and said independent brake valve device and operable upon operation of said independent brake valve device to supply fluid under pressure to open communication therebetween and said fluid pressure operative means and to close communication between said fluid pressure operative means and said control valve means, electric braking means for braking said locomotive, and means responsive to action of said electric braking means to close communication between said control valve means and said double check valve device and upon de-energization of said electric braking means to open the last named communication.



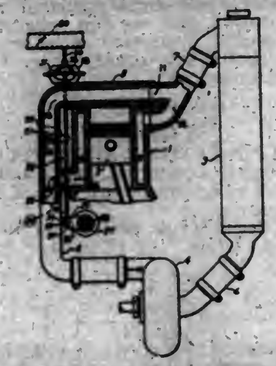
2,445,681
CONTROL APPARATUS
Leo F. Littwin, Chicago, Ill.
Application April 2, 1945, Serial No. 586,231
7 Claims. (Cl. 175—320)

1. Time control apparatus for a rectifier provided with rectifying tubes that require heating to an operating temperature before delivery to the load circuit of full load to avoid damage to the tubes, the time control apparatus comprising a circuit, a switch for opening and closing the output circuit, said circuit including electrically actuated means for closing said switch, a tube having a filament circuit connected across the leads of said output circuit, an anode and cathode in the tube connected across said leads and in circuit with said electrically actuated means for effecting actuation of the latter when the tube passes current, and a current control grid in the tube connected to the filament circuit of the tube for receiving initially therefrom a current blocking potential which is altered to a current passing potential by means of a voltage shift from the filament by the heating of the filament to a predetermined temperature.



2,445,682
RATE OF LOADING CONTROL FOR MATERIALS TESTING MACHINES
William D. Macgeorge, Drexel Hill, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application July 11, 1944, Serial No. 544,399
7 Claims. (Cl. 73—90)

1. In machines having a movable element, means for selecting a rate of head motion of the movable element, fluid power operated mechanism to actuate said movable element, means for controlling supply of fluid to and exhaust of fluid from said power mechanism, and means responsive to fluctuations of the rate of head motion



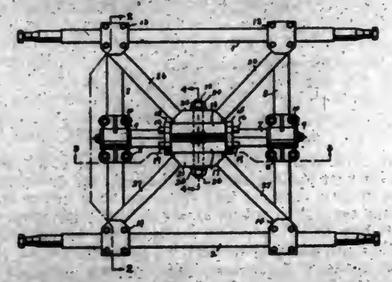
of the movable element from the preselected rate to oppositely render said supply and exhaust means effective and thereby vary the rate of head motion to reestablish the selected rate of head motion thereof.

2,445,683
APPARATUS FOR EFFECTING A PREDETERMINED RATE OF SPECIMEN STRAIN
William D. Macgeorge, Drexel Hill, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application November 2, 1944, Serial No. 561,587
11 Claims. (Cl. 73—90)

1. Materials testing apparatus comprising, in combination, a power operated mechanism for loading a specimen to produce strain therein, means for varying the power of said mechanism and thereby vary the rate of strain of the specimen, means responsive to the rate of strain of the specimen, means for establishing a predetermined speed at which it is desired to strain the specimen, and air jet and baffle means controlled by said strain responsive means and by said speed means for adjusting said power varying means in a direction to maintain a substantially predetermined rate of specimen strain automatically upon occurrence of variations in specimen strain from the predetermined rate.

2,445,684
ENGINE COOLING SYSTEM TEMPERATURE CONTROL
Marion Mallery, Detroit, Mich.
Application January 5, 1946, Serial No. 639,175
5 Claims. (Cl. 123—178)

5. In an internal combustion engine comprising a combustion chamber, an intake passageway, a throttle valve controlling the flow of motive fluid through said intake passageway, a body of coolant liquid in heat exchange relation with said combustion chamber, a valve controlling the circulation of said body of coolant liquid, and means actuated by changes in pressure in the intake passageway on the engine side of said throttle valve for operating said liquid control valve whereby said means responds to a fall in said intake passageway pressure to operate said control valve and decrease the circulation of coolant liquid and responds to a rise in said intake passageway pressure to operate said control valve and increase the circulation of coolant liquid, and temperature responsive means in heat exchange relation with said engine and having a limited lost motion connection with said liquid control valve whereby at one limit of the connection when the engine is operating below substantially the maximum temperature at which the engine will operate at wide open throttle without spark knock said temperature responsive means opposes the pressure actuated means so that the pressure actuated means is ineffective to open said liquid control valve and at the other limit of the lost motion connection when the engine becomes too hot said temperature responsive means will respond to such rise in temperature in opposition to the pressure actuated means and move the liquid control valve toward open position to increase the circulation through said cooling system and between said limits said pressure actuated means will be free to actuate said liquid control valve in response to intake passageway pressure as above specified.

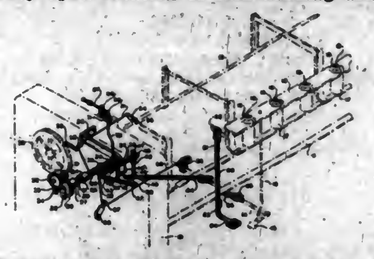


2,445,685
CAKE MAKE-UP CONTAINER
Gilbert De Wayne Miles, New York, N. Y., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
Application October 13, 1945, Serial No. 622,185
1 Claim. (Cl. 132—79)

A cake make-up container consisting of a cylindrical base cup and a cover only, said base cup having a height less than one-fifth its diameter, and a partition dividing the base cup into only two compartments, one of said compartments being centrally located and adapted to hold a sponge applicator, and the other being larger and adapted to contain a cake of compressed makeup for moist application to the skin

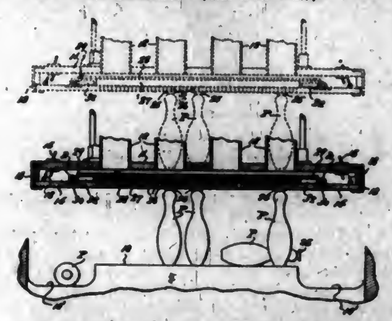
of the face, said base cup and partition being a one-piece integral unit made of a fiberless organic plastic.

2,445,686
TANDEM AXLE ASSEMBLY
William C. Nabors, Mansfield, La.
Application April 6, 1946, Serial No. 660,195
2 Claims. (Cl. 280—104.5)



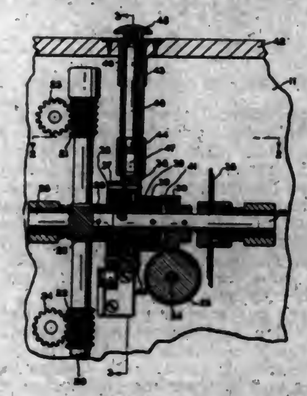
1. An assembly of the character described comprising, front and rear axles, ground wheels supporting the axles, spring perches secured to the front and rear axles and spaced apart, a load supporting master axle between, and substantially parallel with, said front and rear axles, side spring assemblies which are spaced apart and whose front and rear ends, respectively, rest on the corresponding spring perches, spring saddles having bearings to receive end spindles of the master axle, means for clamping said spring assemblies to the respective saddles, front and rear brackets secured to and depending from the master axle, blocks mounted to rotate on transverse axes between the front and rear brackets, front and rear yokes mounted to pivot on longitudinal axes on the respective blocks, front and rear radius bars fixed to the respective front and rear yokes and diverging therefrom and whose outer ends are immovably secured to the corresponding front and rear axles.

2,445,687
SPINNING FRAME CONTROL
David Robert Neely, Ellijay, Ga.
Application August 26, 1947, Serial No. 770,661
7 Claims. (Cl. 57—79)



1. A control mechanism for spinning frames provided with a drive belt, tight and loose pulleys, a belt shifter rod, drive gears, a rotatably mounted cross shaft, bobbin spindles, a ring rail and means connecting said ring rail and said cross shaft for upward and downward movement of said ring rail upon rotation of said cross shaft, said control mechanism comprising a shaft rotatably mounted on said frame, gearing for rotating said shaft, a winding drum rotatably and slidably received on said shaft, clutch teeth on said winding drum, cooperating clutch teeth on a collar fixed to said shaft, spring means tending to urge said clutch teeth into driving engage-

ment, a latch bar constructed and arranged to engage said winding drum and hold said clutch teeth out of engagement, a clutch reset lever constructed and arranged to engage said winding drum to move said clutch teeth out of engagement, a cable having one end attached to said winding drum and the other end attached to the belt shifter rod whereby upon rotation of said winding drum to wind said cable thereon said belt shifter rod will be moved to shift said drive belt from a tight to a loose pulley thus stopping the frame, a second cable having one end attached to said winding drum and the opposite end attached to a sector fixed on said cross shaft whereby upon rotation of said winding drum to

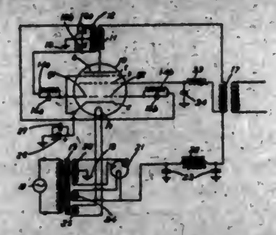


wind said second cable thereon said cross shaft will be rotated to move said ring rail downwardly, a clutch control bar fixed to said cross shaft, means on said clutch control bar engaging said latch bar to release the same upon movement of said clutch control bar with rotation of said cross shaft in one direction, said clutch control bar being further provided with means constructed and arranged to engage said clutch reset lever upon movement of said clutch control bar in the opposite direction whereby said clutch teeth are disengaged, and means fixed on said cross shaft constructed and arranged to cooperate with foot operated latch means pivotally mounted on said frame to hold said ring rail in lowered position.

2,445,688
PIN SPOTTER CARRIAGE FOR PIN SETTING APPARATUS
Joseph Parra and William White, Newark, N. J.
Application April 15, 1944, Serial No. 531,164
12 Claims. (Cl. 273—42)

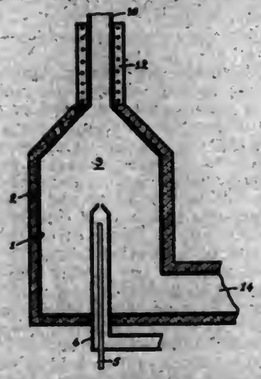
1. In pin setting apparatus, a vertically reciprocable pin spotter carriage having pin receiving means and means to release said pins for deposit in standing position upon an alley pin stand section when said carriage is lowered to pin spotting position, a set of pins, each pin having an upwardly presented suction cup at its top end, said carriage having means to adherently engage the suction cups of standing pins when the carriage is lowered toward said pins whereby, upon a succeeding upward movement of said carriage, to suspend said standing pins above the alley pin stand section while "dead wood" is swept from the alley, suction cup vacuum breaker means operative to release said engaged suction cups, and means to operate said vacuum breaker means when a succeeding downward movement of said carriage redeposits said standing pins upon the alley pin stand section.

2,445,689
MOTION-PICTURE APPARATUS
Robert D. Parry, Cincinnati, Ohio, assignor to Dayton Acme Co., Cincinnati, Ohio, a corporation of Ohio
Application December 19, 1945, Serial No. 635,880
4 Claims. (Cl. 88—18.4)



1. In a motion picture projector having an upper constant speed film feeding sprocket, a lower constant speed film feeding sprocket, an intermittent film feeding mechanism interposed between said feed sprockets operating with a free loop between each of said feed sprockets and the intermittent mechanism, means for increasing the speed of the intermittent mechanism for restoring the lower film loop, comprising a drive shaft, a member fixed to said shaft, a floating collar having driving connection with said member, a second shaft in axial alignment with said first-named shaft, a member fixed to said second shaft and having frictional means interposed between said last-named member and said member fixed to said first-named shaft for normal driving of said second shaft, and means for transversely shifting said collar to form a drive between said collar and the member fixed to said second shaft for increasing the speed of said second shaft.

2,445,690
ELECTRON OSCILLATOR
Elavathur Subramanian Viswanathan Pattamaly, Kannimangalam, Nemmara Post, India
Application May 22, 1945, Serial No. 595,211
In Great Britain June 2, 1944
3 Claims. (Cl. 250—36)



1. A self-excited oscillation generator comprising an electron discharge device comprising an envelope containing a single anode, an electron-emitting cathode and a plurality of control grids, with the same inter-electrode constants be-

tween each of said grids and said anode and said cathode, a source of electrical supply, conductors connecting said source to said anode to form an anode circuit, a coupling coil included in said

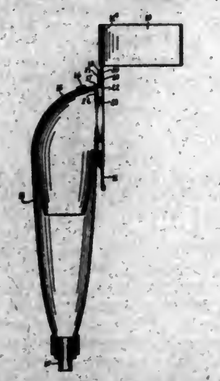
anode circuit, a plurality of frequency-determining tuned circuits coupled with said coupling coil and yielding a plurality of voltages with mutual phase displacement and connections for applying said voltages respectively to said grids.

2,445,691
PREPARATION OF TITANIUM DIOXIDE
Alphonse Pechukas, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application May 24, 1944, Serial No. 537,153
1 Claim. (Cl. 23—202)

A method of preparing titanium tetrachloride which comprises introducing a stream of air and titanium tetrachloride vapor into a reaction chamber through an inlet conduit extending into a central space of the chamber; the temperature of said stream being below about 400° C. introducing a second stream of air preheated to a temperature of at least 1000° C. into another portion of the reactor spaced from the inlet, said second stream being directed toward the inlet and in a direction countercurrent to the first stream and regulating the relative velocities of the two streams to maintain their point of contact in a central area in the reaction chamber and spaced from the inlet and walls thereof.

2,445,692
ULTRAVIOLET RAY GENERATOR
Lawrence C. Porter, East Cleveland, and Herman C. Froelich, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application October 11, 1945, Serial No. 621,732
2 Claims. (Cl. 176—122)

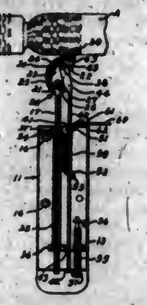
1. An ultraviolet ray generator comprising a gaseous electric discharge device of the low pressure mercury vapor type which during operation emits a preponderance of germicidal ultraviolet radiations of 2537 A. wavelength, said device comprising an envelope of material pervious to ultraviolet radiations including those of 2537 A. wavelength, and a coating on said envelope of fluorescent material consisting of thallium-activated calcium phosphate which is capable of con-



verting radiations of 2537 A. wavelength to ultraviolet radiations of longer wavelength including the erythemal range of about 2800 to 3200 A. wavelength, the said coating being proportioned in such relation to the area of the envelope that the said germicidal and erythemal radiations are emitted externally of the device in the ratio of about 60 to 90% germicidal and 40 to 10% erythemal radiations.

2,445,693
PREPARATION OF ACRYLONITRILE FROM HYDROCARBONS AND HCN
Frank Porter and Glenn A. Nesty, Morristown, N. J., assignors to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application April 11, 1946, Serial No. 661,359
14 Claims. (Cl. 260—465.3)

1. A process for the preparation of acrylonitrile, which comprises reacting a gaseous mixture of HCN and aliphatic non-acetylenic hydrocarbon having at least 2 carbon atoms, in a reaction zone at a temperature of 750° to 1000° C.



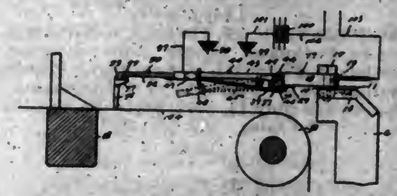
2,445,694
URINAL
Bert Predmore, New Haven, Conn., assignor to The Seamless Rubber Company, New Haven, Conn., a corporation of Connecticut
Application January 29, 1946, Serial No. 644,056
1 Claim. (Cl. 128—295)

In an article such as described, the combination of a supporting panel having an aperture, a

funnel member extending forwardly from said aperture and provided rearwardly of the aperture with a laterally and outwardly directed securing flange, and a liner of thin flexible cured elastic material within the funnel, said liner having an integral cured portion of its wall adjacent said aperture formed to provide an inwardly extending double-walled constriction in the liner creating an entrance opening for the liner of substantially less diameter than the body of the liner and of less diameter than said aperture and also to provide an outwardly extending double-walled securing flange portion to engage said first flange by folding thereover in a forward direction to thereby hold the liner detachably in place in the funnel member.

2,445,695
FILLING FEELER MECHANISM
John Rinne, Brooklyn, and Robert G. Mallard, Staten Island, N. Y., assignors to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application November 8, 1946, Serial No. 708,638
8 Claims. (Cl. 139—286)

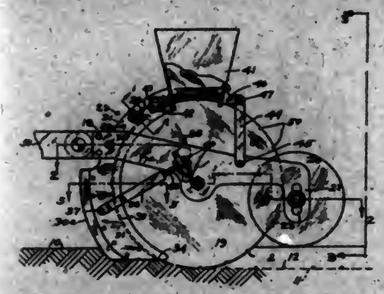
3. A feeler mechanism for a loom bobbin comprising, a support member, a feeler arm mounted on said support member for reciprocatory movement, means for urging said feeler arm toward the path of the bobbin, a feeler tip mounted adjacent one end thereof on said arm for bobbin exhaustion indicating pivotal movement and having an outer arcuate cam surface adapted to contact the bobbin, and means normally positioning said feeler tip with a section adjacent the other end thereof of said surface disposed for initial contact with the bobbin, said cam surface being so shaped that the locus of contact between said surface and said bobbin remains substantially constantly positioned along said bobbin as said feeler tip goes through said indicating pivotal movement.



2,445,696
LOCK NUT
Harry B. Rudd, Flushing, N. Y.
Application March 2, 1944, Serial No. 524,681
2 Claims. (Cl. 151—21)

1. A lock nut having a slot extending thereinto from and throughout the entire periphery thereof, said slot being disposed transversely of the lock nut axis and the interior surface of said slot, through the length thereof, being spaced from the interior lock nut thread to thereby define nut sections integrally secured to each other by a circumferentially complete connecting neck, one nut section having an elliptical bolt-receiving passage, the other nut section having a circular bolt-receiving passage alined with said elliptical passage, said nut sections having substantially equal cross-sectional areas, respectively, and the

exterior surfaces thereof having similar polygonal configuration.



2,445,697
FLAW DETECTOR FOR LOOMS
Andrew B. Shelton, Columbus, Ga., assignor to A. B. Shelton Corporation, Columbus, Ga.
Application June 10, 1946, Serial No. 675,557
5 Claims. (Cl. 139—348)

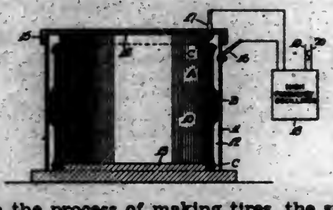
1. A flaw detector for looms comprising an elongated lever, a lever supporting member for attachment to a loom, means pivotally mounting an end of said lever on said supporting member, an elongated flat spring on said lever secured at one end thereto, a spring engaging member on said supporting member offset from the pivot of said lever for engaging the free end of said spring thereby biasing the free end of said lever downwardly, a cloth engaging finger pivotally mounted on the free end of said lever normally supporting said lever against the spring tension, said lever constituting a conductor of a switch, a movable switch contact member on said lever, a fixed switch contact member, and means supporting said fixed contact adjacent an end of said lever in normally spaced relation to said movable contact whereby said movable contact will engage said fixed contact upon rocking of said lever under spring tension upon engagement of the finger with a flaw in the fabric.

2,445,698
PLANTER
Maurice B. Siebring, Kersey, Colo.
Application December 29, 1945, Serial No. 638,301
3 Claims. (Cl. 111—77)

1. A seed planter comprising, in combination, a frame having its front end provided with a bearing block adapted to be connected with a tractor device, two spaced frame members extending rearwardly from the bearing block, a circular seed disk mounted between the frame members for rotation about an axis carried by them, an arcuate guide positioned between the frame members and to the front of the seed disk, the lower end of said guide forming a furrow opener, the concave surface of the guide having a groove of a width to receive the seed disk and of a curvature substantially the same as the periphery of the seed disk, means securing the guide to the frame in position to receive the periphery of the disk in the groove, the guide embracing the edge of the disk through an angle of substantially 135 degrees, a seed hopper connected with the upper end of the guide and with the frame, the bottom of the seed hopper having a slot of the proper width to receive the edge of the disk, the latter having its peripheral edge

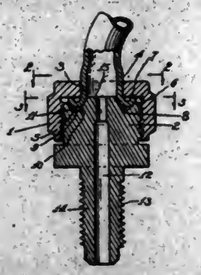
provided with spaced seed receiving notches, the frame members extending to a point to the rear of the disk, and a presser wheel mounted for rotation between the rear ends of the frame members in position to engage the soil surface and close the furrow.

2,445,699
MANUFACTURE OF 2-ANTHRAHYDROQUINONE-CARBOXYLIC ACID
Alvin J. Sweet, East Aurora, N. Y., assignor to Allied Chemical and Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 9, 1946, Serial No. 702,085
5 Claims. (Cl. 260—376)



1. The method of making 2-anthrahydroquinone-carboxylic acid, which comprises reacting 2-anthraquinone-carboxylic acid with aqueous hydrosulfite reducing solution at a pH of less than 5.

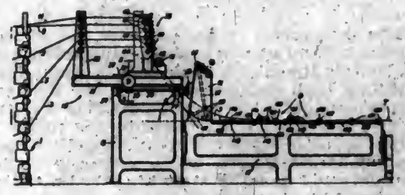
2,445,700
HIGH-FREQUENCY TUNING UNIT
Kenneth E. Vaughn, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application March 14, 1946, Serial No. 654,290
2 Claims. (Cl. 250—40)



1. A high frequency tuner unit comprising a tubular insulator member, an inductance coil wound around said member, a permeability core mounted for telescoping movement into said tubular member, an inverted cup-shaped member of insulation having a shouldered lip which seats against a corresponding shoulder on the end of said tubular member, a conductive coating on the outer flat wall of said cup-shaped member around the margin thereof, a conductive coating extending only partially around to said shoulder and serving as a soldering surface for uniting said tubular member and said cup-shaped member, a button-type condenser, means supporting said button-type condenser within said cup-shaped member and including a connector tab fastened to one electrode of said condenser and extending outwardly through the peripheral wall of said cup-shaped member, an adjusting member having a shank passing through the flat wall of said cup-shaped member and electrically connected to said conductive coating, a connector tab making electrical contact with the said shank of said adjusting member and extending outwardly through the peripheral wall of said cup-shaped member, and means including said conductive coating to complete an electrical circuit from the other electrode of said button-type condenser to said second-mentioned connector tab.

2,445,701
MANUFACTURE OF TIRES
Clarence W. Vogt, Norwalk, Conn.
Application March 1, 1944, Serial No. 524,537
19 Claims. (Cl. 18—53)

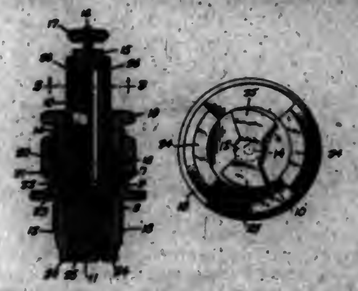
1. In the process of making tires, the steps of forming a band of fabric and unvulcanized rubber, heating the intermediate body portion of said band in a high frequency electrostatic field to a temperature not substantially exceeding the lower limit of the vulcanizing range of the rubber to soften the latter, while maintaining said body portion substantially free from externally applied pressure, and thereafter stretching the heated unvulcanized band to tire shape.



2,445,702
TUBE COUPLING
Henry Weyenberg and Cornelius Quist, Holland, Mich., assignors to Holland Furnace Company, Holland, Mich., a corporation of Delaware
Application November 6, 1944, Serial No. 562,692
6 Claims. (Cl. 285—86)

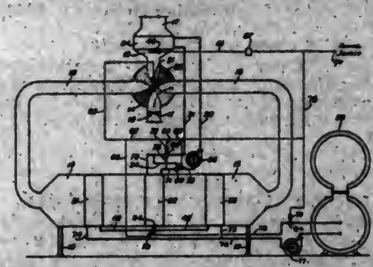
1. In combination with a tube of ductile material, a coupling comprising an externally threaded plug member having a longitudinal opening and a cup-shaped member internally threaded to engage the threads of said plug member, the cup-shaped member having an end wall formed with an axial bore to receive the tube, the inner face of said end wall being flat and extending in a plane at right angles to the axis of said axial bore, the inner end of the

plug member having an annular groove the opposite sides of which are divergently inclined upwardly at acute angles with relation to the axis of the coupling, the end portion of the tube being bent outwardly and back to form a channel-shaped bead the outer free edge of which bears squarely against said inner flat face of the end wall of the cup-shaped member, the rounded contour of the bead being positioned in said groove with its outer curved face bearing tangentially against the outer inclined face of the groove and its inner curved face bearing tangentially against the inner inclined face of the groove, whereby when the coupling members are screwed together the inner flat face of the cup-shaped member presses squarely against the free end of the bead of the tube and forces the outer curved face of the bead at an angle against the outer inclined side wall of the groove which in turn forces the inner face of the bead at an angle against the inner inclined side wall of the groove.



2,445,703
WEB ASSOCIATING MECHANISM
Russell J. Williams, Richmond Heights, Mo., assignor to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri
Application May 3, 1944, Serial No. 533,955
8 Claims. (Cl. 270—52)

1. In apparatus for forming composite multiply material from several plies, a unit for guiding a plurality of webs passing from an inter-ply applicator to a folder comprising an upright gang of guide rolls respectively guiding the webs and receiving them at various angles, said gang of receiving rolls being fixed in position, a carriage movable with respect to the folder, a delivery roll on the carriage on which said webs are organized into a single composite web moved substantially collinearly to the folder, a gang of guide rolls uprightly mounted on said carriage and respectively related to said fixed rolls to define spaced, parallel paths of travel for the webs, and means for adjustably moving the carriage in a direction parallel to said paths of travel to various positions longitudinally of said web and between said fixed rolls and said folder equally to vary the lengths of the reaches of webs travelling from said fixed rolls to the guide rolls on the carriage, whereby the angle of approach of the composite web from the delivery roll to the folder may be changed without changing the longitudinal phase relationship between the webs.



2,445,704
SPARK PLUG
Franklyn J. Wolff, Trenton, N. J.
Application July 6, 1944, Serial No. 543,631
3 Claims. (Cl. 123—169)

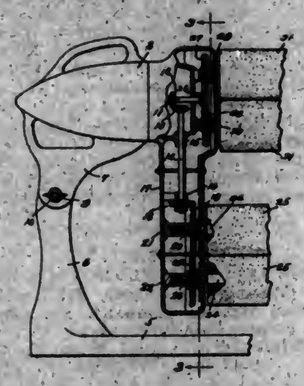
3. A spark plug having shell and core carried electrodes of which the former is in the form of angularly spaced terminals of the general shape of segments of a circle and the latter generally in the form of sectors, the core carried electrode being angularly adjustable on a center lying in the axis of the core, the free edges of the shell

carried electrode terminals lying in a common circle and the free edges of the core carried electrode terminals being arcuate with the arcs of all generated with the same radius but on centers eccentric to, and equally spaced from, the axis of the core.

2,445,705
AIR CONDITIONING APPARATUS
Norman Weinstein and Gerald F. Mannion, Chicago, Ill.
Application June 10, 1944, Serial No. 539,707
15 Claims. (Cl. 62—6)

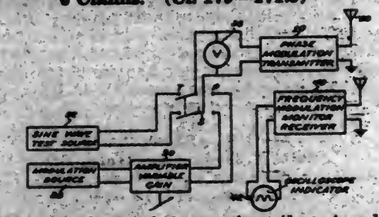
1. An air conditioning apparatus comprising a casing with air inlet and outlet, means to move air therethrough, two cooling coils interposed in said casing in the path of said air, and means to reverse the flow of air through said casing, and means to alternately supply refrigerant to one and then the other of said cooling coils, a third cooling coil interposed in said casing between said first mentioned cooling coils and operatively connected by conduits containing heat exchange medium with a reheating coil positioned in the path of the air emitting from said outlet.

2,445,706
VAPOR-SUPPLYING CARTRIDGE
William P. Zabel, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application June 1, 1944, Serial No. 538,262
1 Claim. (Cl. 206—0.4)



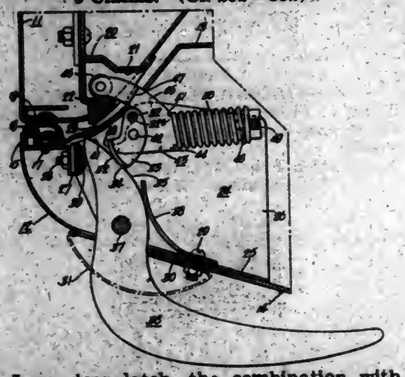
A cartridge for supplying vapor when heated comprising a length of sheet metal tubing having one end thereof firmly mashed shut to a non-linear contour of substantially no greater lateral extent than the diameter of the tubing, the other

end of said tubing being crimped into radially arranged narrow hollow fins defining a narrow multifluted vent opening which is likewise of substantially no greater lateral extent than the diameter of the tubing, the said ends of said tubing having distinctively different shapes whereby



to be readily distinguishable from each other, and a pelleted charge in said cartridge consisting of material yielding vapor when heated and occupying substantially less than the whole internal length of the cartridge between its closed end and its narrowed vents.

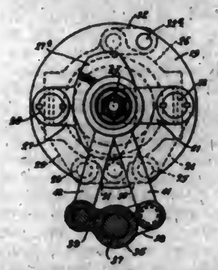
2,445,707
DISHWASHING AND DRYING MACHINE
Samuel Jackson Brown and Samuel Roscoe Brown, West Point, Ky.
Application October 3, 1945, Serial No. 620,104
1 Claim. (Cl. 15—74)



An article washing machine comprising a base, a pedestal rising from the base, a motor housing including a bracket, means for pivotally connecting the bracket to the pedestal for vertical swinging movement, said housing including a lower elongated section, an upper pair of horizontally disposed brushes mounted on shafts extending into the housing, the brushes being horizontally disposed, gears on the shafts, a gear mounted between the first mentioned gears for rotating the brushes in opposite directions, a shaft on which the latter gear is secured, a vertical shaft geared to the shaft on which the gear operating between the gears of the brush shafts is mounted, a gear mounted on the lower end of the vertical shaft, a pair of horizontal shafts disposed one above the other mounted within the lower portion of the elongated section of the housing, meshing gears on the shafts, means for transmitting movement of the vertical shaft to the meshing gears rotating the shafts towards each other, and a pair of horizontal brushes secured to the latter shafts to rotate therewith.

2,445,708
PHASE MODULATION
Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 4, 1944, Serial No. 557,195
6 Claims. (Cl. 179—171.5)

6. The method of improving the signal-to-noise ratio of a phase modulation system which transmits a complex modulating wave having a maximum frequency which includes, modulating the angular velocity of a carrier wave by a sinusoidal wave of a frequency about equal to said maximum frequency of said complex modulating wave, modulating the angular velocity of said carrier wave by the complex modulating wave, and controlling the degree of said last angular velocity modulation so that the effective peak frequency deviation of the carrier is made equal to the effective peak frequency deviation of said carrier when the same is being angularly velocity modulated by said sinusoidal wave.

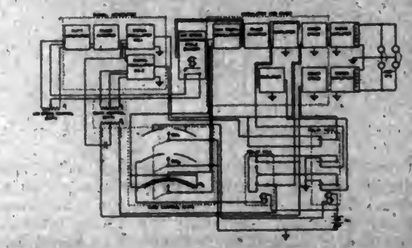


2,445,709
LATCH
George E. Curtiss, Jr., Penn Wynne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 29, 1944, Serial No. 556,402
9 Claims. (Cl. 292—332)

1. In a door latch, the combination with a support structure, of an elongated latch member adapted for interlocking engagement at one end with a keeper, means for anchoring the other end of the member for oscillation about a fixed axis in said structure, means affording longitudinal movement of the member with respect to said axis, a lever pivoted to said structure and having connection with the latch member at a point remote from the axis of the said pivot whereby oscillation of the lever will be accompanied by a longitudinal movement of the latch member between extended and retracted positions with respect to said keeper, a spring exerting pressure tending to advance the member into the extended position, said pivot and point of

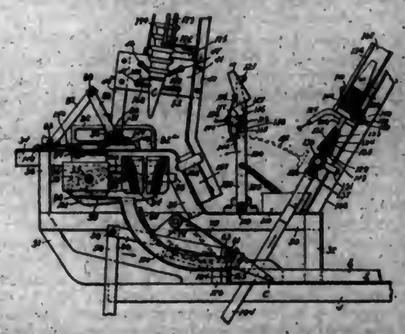
connection being arranged with respect to each other and to the axis of oscillation of the latch member so that when the member is in retracted position the said point will lie at one side of and contiguous to a straight line intersecting the said pivot and axis, and when the member is in extended position the point will lie at the other side of and relatively remote to said line, stop means for stabilizing the member in the said extended and retracted positions against the thrust of said spring, and means for manual retraction of the member from extended position.

2,445,710
ADJUSTABLE CRANK
Adiel Y. Dodge, Rockford, Ill.
Application February 14, 1944, Serial No. 522,221
5 Claims. (Cl. 74—600)



1. In a mechanical torque transmission for connecting a driving shaft to a driven shaft, a cross member adapted to be carried by the driving shaft, an eccentric adjacent the cross member, a bell crank pivoted in the cross member, means operatively connecting one end of the bell crank to the eccentric, a crank pin at the other end of the bell crank, a weight pivoted on the cross member, and means operatively connecting the weight to the eccentric to move the weight in a direction opposite to the direction of movement of the crank pin.

2,445,711
MECHANICAL MOVEMENT
William L. Fitch, Santa Cruz, Calif., assignor to Fitch and Sons, Inc., a corporation of California
Application June 17, 1946, Serial No. 677,269
4 Claims. (Cl. 3—12)



3. A mechanical movement for transmitting motion through a joint pivotally connecting two members comprising a cylindrical rack mounted for slidable movement along its axis and having its axis coincident with the pivot axis of the joint, a bearing support fixed relative to one of said members, a pinion journalled in said support and meshing with said rack, a flexible tension element in torque-reacting relation with said pinion, a second bearing support fixed relative to the other of said members, a second pinion journalled in said second support and meshing with said rack, and a second flexible tension element in torque-reacting relation with said second pinion.

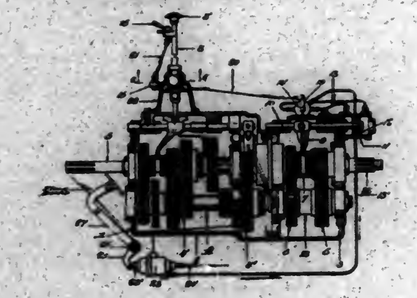
2,445,712
AUDITORY TONE SIGNAL INDICATIONS FOR FLYING
Theodore W. Forbes, Cambridge, Mass., assignor to United States of America as represented by the Executive Secretary of the Office of Scientific Research and Development
Application August 21, 1947, Serial No. 769,957
3 Claims. (Cl. 177—311)

2. An auditory indicating device for flying an airplane comprising oscillators for producing a tone signal, means for separately conducting the tone signals to each of a pilot's earphones, means for modulating separately and inversely signals to each earphone to indicate direction of turn of said airplane in a horizontal plane by producing a sound effect in which a single tone signal appears to start from one side of the pilot's head and to move toward the other side, said cycle being continuously repeated and moving in the same direction, means for reversing the direction of cycle of movement to indicate a reverse turn, means for causing the tone signal to remain stationary thereby to indicate absence of turn of the airplane, and means for continuously varying the pitch of the tone signal during the cycle in which it appears to swing from one side of the pilot's head to the other side, thereby to indicate deviation of the lateral attitude of the airplane from the correct lateral attitude during a turn.

2,445,713
CONE JACKET APPLYING MACHINE
Mitchel Glassner, Baltimore, Md., assignor to Maryland Baking Company, Inc., Baltimore, Md., a corporation of Maryland
Application April 14, 1943, Serial No. 483,075
9 Claims. (Cl. 226—2)

1. In a machine of the class described: a cone magazine, a receiver; means for depositing cones in the receiver with their points down; a magazine for nested conical jackets located at a place remote from the cone magazine and the receiver; means for holding said jackets in their magazine with their larger ends down; mechanism for removing the jackets from their magazine; mechanism for conveying the jackets from the removing mechanism to the receiver and depositing them in the receiver with their larger ends up; said removing mechanism comprising a reciprocally mounted plug carrier and plug, means to operate said carrier to cause said plug to enter the lowermost jacket in the jacket magazine, detach the jacket from the remainder in the magazine and remove the jacket from the magazine; and means to receive the jacket from the removing mechanism and conveying the jacket to and depositing it in said receiver.

2,445,714
MANUFACTURE OF METHYLFURAN
Robert F. Holdren, Ames, Iowa, assignor to Iowa State College Research Foundation, Ames, Iowa, a corporation of Iowa
No Drawing. Application November 13, 1945, Serial No. 628,365
8 Claims. (Cl. 260—345)



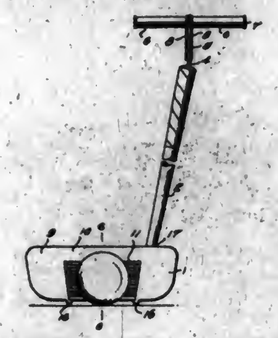
1. A process for the production of methylfuran from a liquid furan derivative selected from the group consisting of furfural and furfuryl alcohol a reduction product of furfural which comprises vaporizing said furan derivative, admixing it with an amount of hydrogen gas more than sufficient to reduce all of the furan derivative to methylfuran and passing the mixture at a temperature of 140–280° C. over a porous mass comprising a carrier impregnated and coated with at least an equal weight of a catalyst prepared by decomposing a copper-calcium-chromate at a temperature of 300–450° C.

2,445,715
CRANKCASE COMPRESSION, TWO-CYCLE ENGINE
Jarvis S. Jennings, Chicago, Ill., assignor to Hoof Products Company, Chicago, Ill., a corporation of Illinois
Application November 12, 1946, Serial No. 709,127
11 Claims. (Cl. 123—73)

7. An internal combustion engine comprising a cylinder jacket member; an open-sided crank case having inlet and exhaust ports; a closed-top combustion cylinder telescopically engaged interiorly of said jacket and having inlet and exhaust ports registering with the ports in said jacket, exteriorly disposed means on said combustion cylinder engaging supports on said jacket, means for detachably connecting said combustion chamber to said jacket supports, detachable side plates having fuel feeding passages on their inner faces leading from a compression chamber in said crank case to said combustion cylinder, a piston controlling the inlet and outlet ports, a crank shaft coupled to said piston, means for supplying fuel to a compression chamber in said crank case, and a valve actuated from said crank shaft to open and close the port from said fuel supply means to the crank case compression chamber.

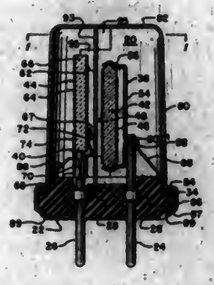
2,445,716
DUAL TRANSMISSION CONTROL
Ernst M. Sternberg, Miami, Fla.; Ernest R. Sternberg administrator cum testamento annexo of said Ernst M. Sternberg, deceased
Application March 30, 1944, Serial No. 528,712
3 Claims. (Cl. 74—338)

1. In a dual transmission system including variable speed main and auxiliary transmissions, and a manually operated shift lever for selective control of the main transmission; manually actuated means for selective control of said auxiliary transmission, said means comprising a finger actuated lever mounted upon the exterior of said shift lever adjacent its upper end for oscillatory movement in a horizontal plane to its selective operative positions, said lever being within reach of the forefingers of the operator's hand when the palm engages the top of the lever to permit speed selections in both transmissions simultaneously or independently.



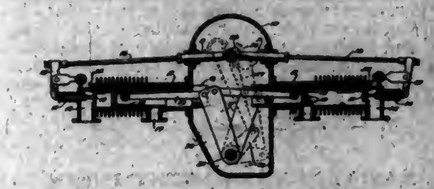
2,445,717
MEANS AND METHOD OF IRRIGATING PLANTS
Lorenzo A. Richards, Riverside, Calif.
Application August 6, 1945, Serial No. 609,109
14 Claims. (Cl. 47—38)

1. A method of irrigating plants characterterized by: placing a liquid filled porous cell in moisture transfer relation to soil in proximity to a plant to be irrigated thereby to produce liquid pressures in said cell between atmospheric and sub-atmospheric values corresponding to the tension of the moisture contained in the surrounding soil; supplying water to the soil upon reduction of liquid pressure in said cell to a predetermined



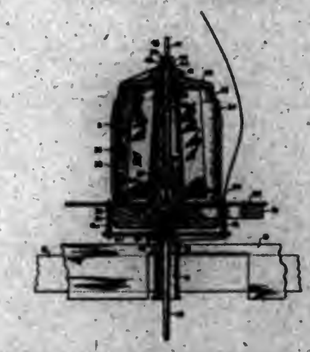
value caused by outward migration of liquid from said cell to the surrounding soil; and terminating the supply of water to the soil upon return of pressure in said cell caused by migration of water from the surrounding soil to said cell.

2,445,718
PUTTER TYPE GOLF CLUB
Jules B. Sternberg and Mary L. B. Sternberg, Fort Smith, Ark.
Application June 4, 1947, Serial No. 752,448
4 Claims. (Cl. 273—80)



4. A putter having a head, a shaft adjacent the heel portion of the head and extending upwardly away from the toe portion, an extension on the upper end of said shaft having a vertical portion, a fulcrum bar on said extension located in a horizontal plane parallel with the toe-heel axis of the head, and sleeves on the fulcrum bar on either side of the extension in which the same is freely rotatable.

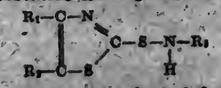
2,445,719
ELECTRICAL COMPONENT
Frederick F. Sylvester, Springfield, N. J.
Application April 1, 1946, Serial No. 658,618
12 Claims. (Cl. 171—327)



1. A tuning unit comprising a piezoelectric element and a fixed capacitor having a predetermined value based upon the operating frequency of the element, mounted in substantially non-inductive relationship in a closed container, and leads for said element and capacitor extending through said container.

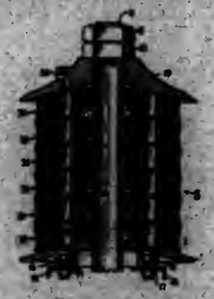
2,445,720
OPPOSED CYLINDER TWO-CYCLE ENGINE
John S. Wensel, Manchester, Conn., assignor to Wensel, Wensel, Macquire & Richardson, a partnership
Application September 26, 1945, Serial No. 618,684
7 Claims. (Cl. 123—56)

4. An engine comprising a central casing, cylinders opening into the casing and extending therefrom in opposite directions, pistons in the cylinders, a shaft pivotally mounted in the casing spaced laterally from the cylinders and extending transverse to the cylinder axes, a lever carried by the shaft with its free end between the inner ends of the cylinders, connecting rods connecting the pistons to the free end of the lever, mixture inlet valves in the outer ends of the cylinders, exhaust means communicating with the cylinders adjacent their inner ends whereby the engine operates on a two stroke cycle, a crankshaft, a crank arm on the crankshaft, a connecting rod connecting the crank arm and the lever, and a cam on the crankshaft controlling the mixture inlet valves.



2,445,721
TWISTING MACHINE
Robert J. Bartholomew, Philadelphia, Pa., assignor to Fletcher Works Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application July 29, 1947, Serial No. 764,329
9 Claims. (Cl. 57—58)

1. In a twisting machine, a vertical rotatable spindle, a fly member carried by said spindle, a yarn package supporting base, means for holding said base against rotation, a cap, a yarn package interposed between said base and said cap and supporting said cap, said cap having a skirt portion extending downwardly with respect to the upper portion of the yarn package for guiding the yarn from the yarn package in the upward movement thereof, and having a central opening for the downward passage of the yarn, and a shield carried by said base and surrounding said yarn package, said shield and said skirt portion being spaced for the upward passage of the yarn from the yarn package.



2,445,722
VULCANIZATION ACCELERATOR
Edward L. Carr and George E. P. Smith, Jr., Akron, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application May 26, 1943, Serial No. 488,555
12 Claims. (Cl. 260—783)

10. The method of vulcanizing rubber which includes heating rubber and sulfur in the presence of a substance having the formula

wherein R_1 and R_2 are selected from the group consisting of hydrogen and alkyl radicals at least one of said R_1 and R_2 being an alkyl radical, and R_3 is one of the group consisting of hydrogen, alkyl radicals and cyclo-alkyl radicals.

2,445,723
RUBBER SPRING
Roy W. Brown, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application March 1, 1944, Serial No. 524,829
14 Claims. (Cl. 267—21)

1. A rubber spring of the class described consisting of a plurality of contacting discs, each of said discs having a plurality of concentric rubber rings permanently attached to the convex surface only of a relatively thin strong conical shaped metallic plate, the concentric rubber rings of each of said discs being formed with conical surfaces opposite said permanently attached surfaces, each of said conical surfaces having frictional engagement with the confronting concave surface of an adjacent metallic plate.

2,445,724
VULCANIZATION ACCELERATOR
George E. P. Smith, Jr., Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application April 10, 1944, Serial No. 530,392
6 Claims. (Cl. 260—785)

1. The method of vulcanizing rubber which includes heating a rubber and sulfur in the presence of di-tetrahydrobensothiazyl-disulfide.

2,445,725
TIRE CONSTRUCTION
Ralph C. Walker, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 14, 1944, Serial No. 540,257
1 Claim. (Cl. 152—374)

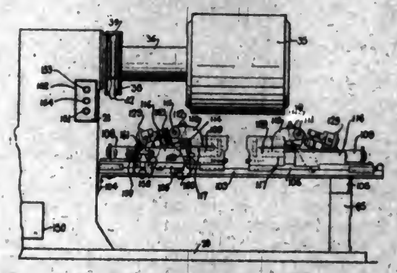
A tread for a pneumatic tire comprising an outer and an inner layer of rubber compound, said tread having circumferentially extending ribs defining grooves therebetween, said outer layer being of uniform thickness and being relatively thin compared to the total thickness of said tread at the ribbed portions thereof, said outer layer being formed of a better road wear resistant rubber compound than said inner layer, said inner layer being formed of a rubber compound having better adhesive qualities than said outer layer, the rubber compound of said inner layer extending into said ribs and forming the central portions thereof whereby when said outer layer on said ribs wears off to expose said inner layer, portions of said outer layer will remain between said ribs and on the sides of the ribs to reenforce said ribs and provide good edge wearing surfaces therefor.

2,445,726
PROCESS OF FORMING AND ORIENTING CRYSTALLINE RESINOUS BODIES
William H. Willert, Paterson, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application July 14, 1944, Serial No. 545,013
2 Claims. (Cl. 18—47.5)

1. Process which comprises extruding a preform having all dimensions greater than one-eighth inch of a resin selected from a group consisting of crystallizable polymers and copolymers of a vinylidene chloride and of 2,3-dichlorobutadiene-1,3, retaining the preform at such temperatures and for such duration of time as to effect random-oriented crystallization of the resin of which it is composed, and stretching said preform to from 7 to 8 times its original dimension at temperatures between the softening point of the selected resin and 50° C. below said softening point.

2,445,727
MOISTUREPROOF FILM
Siegfried M. Kinzinger, Montclair, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application August 25, 1944, Serial No. 551,267
3 Claims. (Cl. 260—28.5)

A flexible, self-supporting, transparent film comprising (1) an elastomeric copolymer of butadiene-1,3 and acrylonitrile and (2) a resin selected from the group consisting of homopolymers of vinyl chloride, copolymers thereof with vinyl acetate and copolymers thereof with vinylidene chloride, said film being rendered resistant to the passage of moisture therethrough by the presence therein of (3) from 0.2% to 2.0% of a microcrystalline paraffin wax melting in the range 125°–200° F., the ratio of the weight of the selected resin to the weight of the elastomeric copolymer being from 1:9 to 9:1.



2,445,728

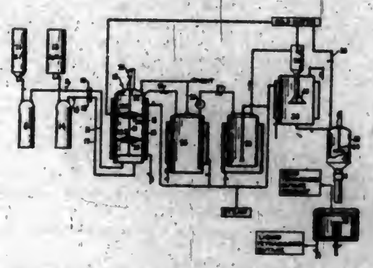
TIRE BUILDING APPARATUS (FLY TURNUP)

Horace D. Stevens, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Original application July 17, 1946, Serial No. 345,974. Divided and this application September 8, 1944, Serial No. 553,257

8 Claims. (Cl. 154—10.71)

1. Tire building apparatus comprising a rotatable tire building drum, and a pair of concurrently operable devices adapted to operate upon the work on opposite ends of said drum, each of said devices comprising a pair of tools for operating upon the work, power means for moving both said tools in the direction of the work to determinate positions wherein only one of the tools engages the work, and a second power means for imparting movement solely to the other of said tools so as to cause it to engage the work after the first tool has engaged the same.



2,445,729

PREPARATION OF SOLID TETRACHLOROBUTANE

Milton R. Radcliffe, Glen Rock, and Chris E. Best, Montclair, N. J., assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application December 13, 1944, Serial No. 568,056

3 Claims. (Cl. 260—660)

1. Process for the synthesis of high-melting-point tetrachlorobutane which comprises reacting, at emperatures from 72° C. to 150° C., at least 2 mols of gaseous chlorine and not more than one mol of gaseous butadiene by bubbling said chlorine and butadiene through a liquid chlorination medium consisting largely of molten high-melting-point tetrachlorobutane and containing from 0.1% to 2.0%, based on the weight of medium, of a catalyst selected from the group consisting of antimony pentachloride, ferric chloride, and mixtures thereof.

2,445,730

REINFORCED SECTIONAL BARREL

Max O. Kuhn, Cuyahoga Falls, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Original application February 27, 1942, Serial No. 432,673. Divided and this application March 5, 1945, Serial No. 580,269

3 Claims. (Cl. 220—5)

3. A barrel comprising two oppositely disposed tub-like end sections, an annular center section

concave-convex in cross section, an annular girth band, said center section having said girth band superimposed, the central area of said center section and said girth band being spaced apart and their edge portions being aligned and welded together in fluidtight relation, the inside of the radially outer wall portion of said girth band being reinforced by a transversely split ring, said split ring being circumferentially expanded against the girth band and retained in operative reenforcing position by means of a locking plate inserted between opposed radially inwardly stepped-off and circumferentially extending opposed lugs integrally formed with the ends of said split ring, a bung fitting connected with said girth band and center section and traversing the space therebetween, the opposed edges of said end sections abutting and being welded to the edges of said girth band.

2,445,731

TIRE INSPECTION DEVICE

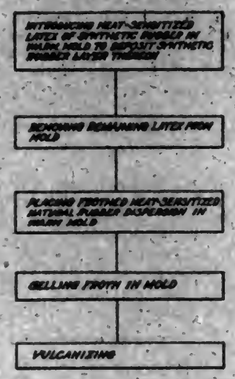
Edward V. K. Jaycox, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application April 7, 1945, Serial No. 587,181

1 Claim. (Cl. 177—311)

In combination, a relatively small elongated hard probing tool adapted for insertion into a cut in a tire, said tool being adapted for removal of foreign objects from tire cuts and to set up vibrations by contact with said objects, a manipulable supporting structure for said tool enabling mechanical vibration thereof relatively of said structure, a piezo-electric element in said supporting structure, means mechanically connecting said tool to said piezo-electric element whereby vibration of the tool is transmitted to said element to effect generation of electric voltage therein, and means electrically connected to said piezo-electric element for converting said electric voltage into audible sound.

2,445,732



MANUFACTURE OF SPONGE RUBBER

Mitchell Carter, Yardley, Pa., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

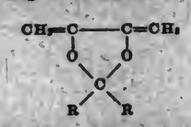
Original application December 19, 1940, Serial No. 370,791. Divided and this application June 5, 1945, Serial No. 597,663

2 Claims. (Cl. 18—53)

1. That method of forming cellular rubber articles having a synthetic rubber skin thereon, comprising introducing a heat-sensitized latex of synthetic rubber into a warm mold to deposit a layer of synthetic rubber thereon, pouring the remaining latex out of the mold, placing a

frothed heat-sensitized natural rubber dispersion in the warm mold, gelling the latex froth, and vulcanizing the rubber to obtain a cellular rubber article having a protective coating thereon.

2,445,733



RESINS FROM METHYLENE DIOXOLANES

Milton R. Radcliffe, Glen Rock, N. J., and William G. Mayes, Cuyahoga Falls, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Application July 21, 1945, Serial No. 606,470

4 Claims. (Cl. 260—94)

1. A substance selected from the group consisting of (1) resinous homopolymers of dimethylene dioxolanes having the formula:

in which formula "R," independently in each occurrence, is a substituent selected from the group consisting of hydrogen and methyl, ethyl, propyl, butyl, phenyl, benzyl, and tolyl groups, (2) resinous copolymers of said dimethylene dioxolanes with equal proportions of acrylonitrile and (3) resinous copolymers of said dimethylene dioxolanes with equal proportions of vinylidene chloride.

2,445,734

DISPERSION OF ANTIOXIDANTS IN RUBBER LATEX

John C. Carl, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Application December 6, 1945, Serial No. 633,261

1 Claim. (Cl. 260—740)

The method of producing a latex master batch which comprises melting together 6.75 parts of 2,2,4 - trimethyl-6-phenyl - 1,2 - dihydroquinoline and 23.25 parts diphenyl para-phenylene diamine, then adding a soap formed of .7 part of triethanolamine and 3.75 parts of oleic acid while keeping the mass molten, adding the resulting molten mass with violent agitation to a hot solution of ammonium caseinate containing the equivalent of 3 parts of casein, adding sufficient hot water at a temperature over 70° C. with agitation to the aforesaid aqueous mixture while at a temperature over 70° C. to reduce the content of the first two organic chemicals to 30 per cent, immediately running the mixture through a colloid mill, and adding the mixture to natural rubber latex of 60 per cent rubber content in the ratio 1:2.

2,445,735

ALKYLATED PHENOL AND PROCESS FOR PRODUCING SAME

Leland J. Kitchen, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Application March 8, 1946, Serial No. 653,175

2 Claims. (Cl. 260—624)

1. 2,6 - di(alpha,alpha,gamma,gamma - tetramethylbutyl) -4-methylphenol.

2,445,736

STABILIZATION OF RUBBERLIKE COPOLYMERS WITH REACTION PRODUCTS OF SULFUR DICHLORIDE, AN ALDEHYDE, AND A PHENOL

Gordon W. Gottschalk, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

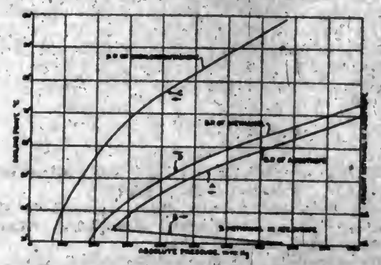
No Drawing. Application April 5, 1946, Serial No. 659,895

13 Claims. (Cl. 260—43)

1. Tacky, uncured, rubber-like composition composed of copolymer of a conjugated diene and a vinyl aromatic compound which includes as a tackifier a reaction product of (1) sulfur dichloride, (2) an aldehyde of the class consisting of formaldehyde, acetaldehyde, and glyoxal, and (3) a phenol of the class consisting of phenols substituted in ortho position and phenols substituted in the para position, the substituent being a hydrocarbon radical containing three to ten carbon atoms, the aldehyde reaction being alkali-catalyzed.

2,445,737

SYNTHETIC RUBBER COMPOSITION CONTAINING A REACTION PRODUCT OF SULFUR DICHLORIDE, AN ALDEHYDE AND AN ALKYL PHENOL



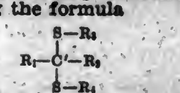
Harry E. Albert, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

No Drawing. Application April 5, 1946, Serial No. 659,896

18 Claims. (Cl. 260—43)

1. Tacky, uncured, rubber-like composition composed of copolymer of a conjugated diene and a vinyl aromatic compound which includes as a tackifier a reaction product of (1) sulfur dichloride, (2) an aldehyde of the class consisting of formaldehyde, acetaldehyde, and glyoxal, and (3) a phenol of the class which consists of phenols substituted in the ortho position by a hydrocarbon radical containing three to ten carbon atoms and phenols substituted in the para position by a hydrocarbon radical containing three to ten carbon atoms, the aldehyde reaction being acid-catalyzed.

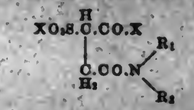
2,445,738
DISTILLATION OF 2,3-DICHLORO-BUTADIENE-1,3
William H. Willert, Clifton, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 26, 1947, Serial No. 757,300
7 Claims. (Cl. 260—655)



1. Process which comprises distilling a mixture containing 2,3-dichlorobutadiene-1,3 and methanol through a fractionating column, maintaining the temperature at the top of the column between about 0.5° and about 3.0° C. below the boiling point of pure methanol under the pressure reigning in the column, and maintaining, at each section of the column, a concentration of at least about 30% of methanol, based upon the total weight of 2,3-dichlorobutadiene-1,3 and of methanol at that section.

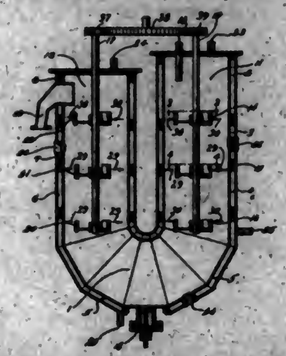
4. Process which comprises reacting together tetrachlorobutane and a caustic dehydrohalogenating agent in the presence of at least 50% of methanol, based on the total weight of 2,3-dichlorobutadiene-1,3 produced and of methanol, conducting the vapors resulting from the heat of reaction through a fractionating column, maintaining the top sections of the column between about 0.5° and about 3.0° C. below the boiling point of pure methanol under the pressure reigning in the column, and withdrawing vapors at the top of the column.

2,445,739
STABILIZATION OF DICHLOROBUTADIENE RESINS
George P. Rowland, Jr., Pottstown, Pa., and Robert J. Reid, Canal Fulton, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application August 16, 1947, Serial No. 769,076
14 Claims. (Cl. 23—82)



2. An oriented crystalline filament comprising a homopolymer of 2,3-dichlorobutadiene-1,3, together with at least 0.5% of a compound selected from the group consisting of mercaptols and mercaptals having the formula

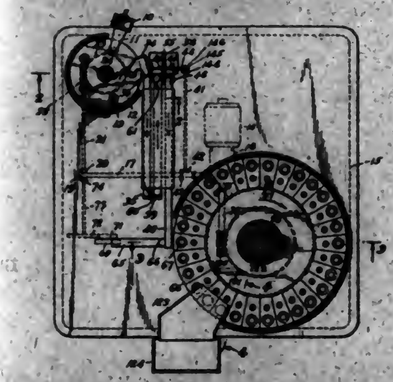
wherein R_1 and R_2, each independently of the other, represents a hydrogen atom or an aliphatic, araliphatic or aromatic radical attached through one of its carbon atoms to the central carbon atom C' of the formula, and R_3 and R_4, each independently of the other, represents an aliphatic, araliphatic or aromatic radical attached through one of its carbon atoms to the adjacent sulfur atom of the formula.



2,445,740
AQUEOUS RUBBER DISPERSIONS
Arnold R. Davis, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 8, 1945, Serial No. 627,541
5 Claims. (Cl. 260—760)

1. An aqueous rubber composition having dissolved therein a small amount of a water-soluble salt of a propylated naphthalene sulfonic acid together with a sulfosuccinamate of the formula

in which R_1 is a member of the group consisting of hydrogen and aliphatic and alkoxyalkyl radicals and R_2 is a member of the group consisting of alkyl and alkoxyalkyl radicals and X is a salt-forming radical, the sum of the carbon atoms in R_1 and R_2 being from 8 to 24 inclusive.

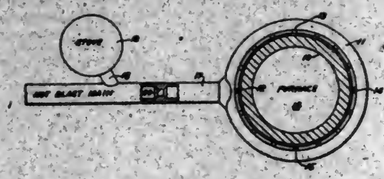


2,445,741
APPARATUS FOR THE MANUFACTURE OF EXPLOSIVES
Arvel O. Franz and Orin C. Keplinger, Alton, Ill., assignors to Olin Industries, Inc., a corporation of Delaware
Application March 31, 1943, Serial No. 481,369
6 Claims. (Cl. 23—266)

1. Continuous nitrating apparatus comprising a vessel having elongated substantially vertical portions connected at the bottom, agitator shafts in each of said substantially vertical portions, agitators carried by said shafts at a plurality of elevations in each of said substantially vertical portions, said agitators at one elevation having blades slanted substantially opposite to the blades of an agitator at a different elevation in each of said substantially vertical portions, means for controlling the temperature of the contents of said vessel, inlets for the reagents at one end of said vessel and an outlet for the reaction products at the other end of said vessel.

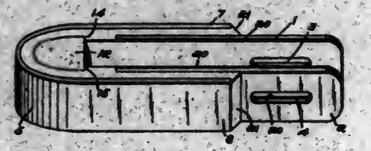
3. Continuous nitration apparatus comprising a vessel formed of two upwardly extending arms connected together at the bottom to form a continuous substantially unrestricted passage therethrough, agitating means having agitators at a plurality of elevations in each of said arms with at least one of said agitators in one arm having its impelling surface slanted to direct at least the suspended particles of mixture contained in the vessel in a direction opposite that of at least one agitator in the other arm, means for controlling the temperature of the contents of said vessel, inlets for the reagents at one end of said vessel, and an outlet for the reaction products at the other end of said vessel.

2,445,742
AUTOMATIC MOLDING MACHINE AND METHOD
John Hoch, Corona, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application December 7, 1944, Serial No. 567,006
22 Claims. (Cl. 18—20)



6. The method of molding plastic articles comprising molding pellets from powdered plastic, moving the pellets first in one straight horizontal direction and then in the opposite direction, inducing heat internally in said pellets to heat the pellets while the pellets are in motion by passing the pellets repeatedly through an electrically charged field, moving the pellets through a circular path while applying heat and pressure thereto in a confined space to shape said pellets into the desired articles, and freeing said articles from confinement to collect the articles.

20. In a machine of the character described, means for forming plastic pellets, a belt having a substantially horizontal upper reach for receiving pellets in succession from said means and thereby advancing the pellets, fixed electrically energized means at the upper and lower faces of the upper reach of the belt for producing an electrically charged field through the pellets and the belt for internally heating the pellets on the belt by induction heating during the passage of the pellets past the electrically energized means and through the field, a pair of reciprocating mating molds rotatable together about an axis spaced from said molds, means for removing a heated pellet from the belt and for advancing the heated pellet into one of the molds, means for rotating the mating molds as a unit about said axis, and means for relatively reciprocating said molds first in one direction to compress the pellet and then after an interval in the opposite direction to separate the molds.



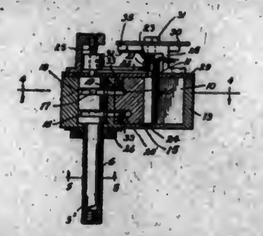
2,445,743
METALLURGICAL APPARATUS
Harry E. McDonnell, Steubenville, Ohio
Application March 5, 1947, Serial No. 732,598
2 Claims. (Cl. 263—19)

1. In a metallurgical furnace having a plurality of points of injection of an oxygen-bearing gas for combustion therein, a manifold conduit supplying the gas to such points, a connection on the manifold conduit for supplying the gas thereto symmetrically arranged with respect to the points of injection, a source for supplying a stream of the gas cold and a source for supplying a stream of the gas hot, the combination comprising a first conduit connected to the first

named source, a second conduit connected to the second named source, a third conduit connecting the first and second conduits to said connection on the manifold conduit, and the second conduit having off-center connection with the third conduit to induce rotation of a stream of gas passing therethrough to thereby mix the component streams of cold and hot gas.

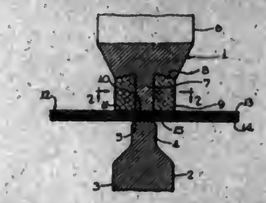
2,445,744
LUG STRAP
J. Edgar Moe, Danielson, Conn., assignor to Jacobs Rubber Products, Incorporated, Danielson, Conn., a corporation of Connecticut
Application December 26, 1946, Serial No. 718,566
4 Claims. (Cl. 139—153)

1. A lug strap of the kind described, comprising a pair of arms formed with bolt slots and a metallic U-shaped portion overlapping said metal arm portions, combined with a resilient portion separating said overlapped metallic portions.



2,445,745
SWEEPSTICK
J. Edgar Moe, Danielson, Conn., assignor to Jacobs Rubber Products, Incorporated, Danielson, Conn., a corporation of Connecticut
Application December 28, 1946, Serial No. 719,001
3 Claims. (Cl. 139—151)

1. A sweepstick of the kind described, comprising a pair of relatively inflexible longitudinally extending elements, an intermediate inflexible element spaced between said pairs, in combination with a resilient element bonded to said inflexible elements substantially throughout their length, whereby a lengthwise resilient action is produced.

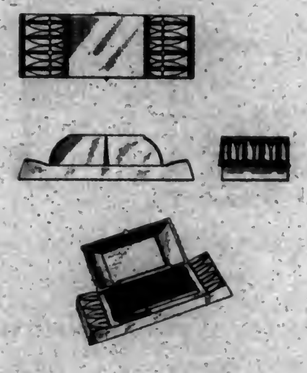


2,445,746
FLUID STREAM DIRECTION INDICATOR
August Raspet, Locust Valley, N. Y., assignor to Specialties, Inc.
Application April 11, 1946, Serial No. 661,271
5 Claims. (Cl. 73—188)

5. In an instrument of the character described, in combination, an angularly movable yaw head having a pair of fluid pressure apertures positioned at an angle to each other, a reversible motor connected to the yaw head to turn it angularly into the direction of the air stream

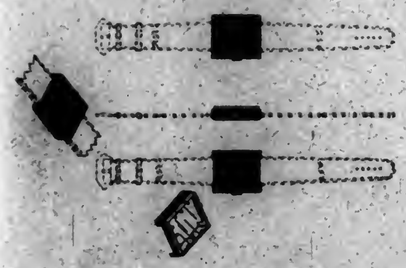
and connections between the fluid pressure apertures and the motor to control the operation of the motor.

2,445,747
INDENTATION-FREE WELDING
Michael Watter, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 19, 1946, Serial No. 655,397
8 Claims. (Cl. 219—4)



1. In resistance welders, a first metal electrode having a tip, a second coacting metal electrode having a tip of lesser diameter than the tip of the first electrode, and a tube of electrically nonconducting material surrounding the tip of the second electrode, the bearing faces of the tip and tube of the second electrode lying in a common plane passing at right angles through the axis of the second electrode.

DESIGNS



JULY 20, 1948

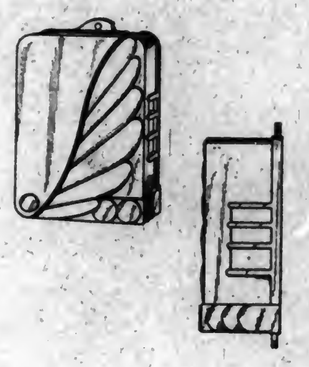
150,283
DESIGN FOR A WATCH BOX
Seymour Ackerman, Bell Harbor, N. Y., assignor to Parker Watch Company, New York, N. Y., a partnership
Application July 29, 1947, Serial No. 140,584
Term of patent 3½ years
(Cl. D86—5)

The ornamental design for a watch box, as shown.

150,284
DESIGN FOR A WRIST WATCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application May 20, 1947, Serial No. 139,153
Term of patent 7 years
(Cl. D42—8)

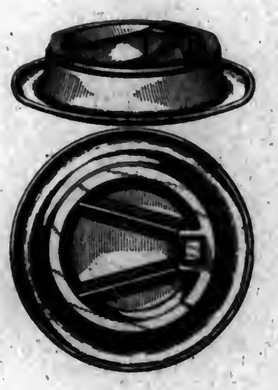
The ornamental design for a wrist watch or similar article, substantially as shown and described.

150,285
DESIGN FOR A WRIST WATCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application July 21, 1947, Serial No. 140,420
Term of patent 7 years
(Cl. D42—8)



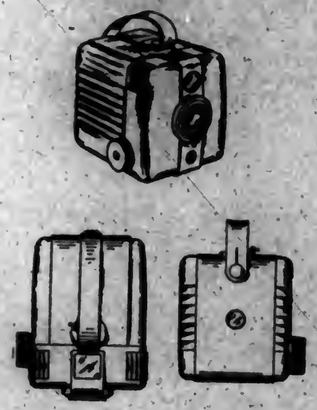
The ornamental design for a wrist watch or similar article, substantially as shown and described.

150,286
DESIGN FOR A MUSICAL LAMP OR SIMILAR ARTICLE
Howard Asch, New York, N. Y.
Application June 13, 1946, Serial No. 136,676
Term of patent 3½ years
(Cl. D48—20)



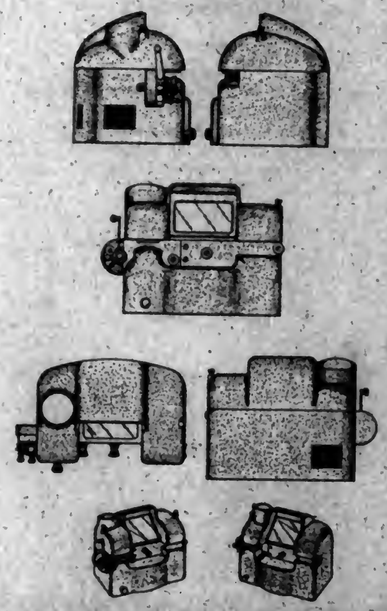
The ornamental design for a musical lamp or similar article, as shown and described.

150,287
DESIGN FOR AN ELECTRIC SIGNALLING DEVICE
Gisbert L. Bossard, Cleveland, Ohio
Application July 26, 1946, Serial No. 131,964
Term of patent 3½ years
(Cl. D72—1)



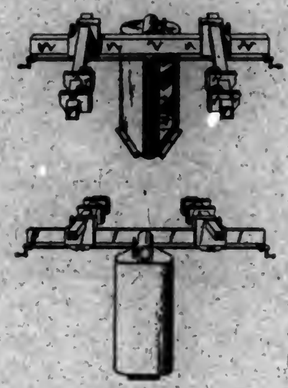
The ornamental design for an electric signalling device as shown and described.

150,288
DESIGN FOR A BABY DISH
David Chapman, Chicago, Ill., and Wayne Ramsay, Madison, Wis., assignors to Hankscraft Company, Madison, Wis., a corporation of Wisconsin
Application January 31, 1947, Serial No. 136,604
Term of patent 14 years
(Cl. D44—15)



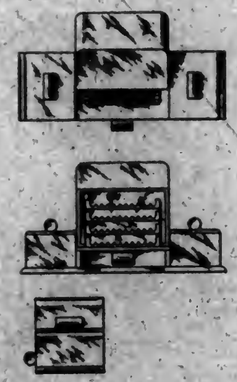
The ornamental design for a baby dish, as shown.

150,289
DESIGN FOR A BOX CAMERA
Arthur H. Crapsey, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application January 17, 1948, Serial No. 143,858
Term of patent 14 years
(Cl. D61—1)



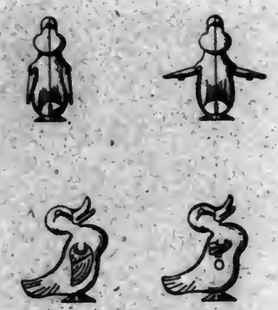
The ornamental design for a box camera, as shown.

150,290
DESIGN FOR A PHOTOGRAPHIC VIEWER
Leo Frankel, Chicago, Ill.
Application November 6, 1947, Serial No. 142,333
Term of patent 14 years
(Cl. D61—1)



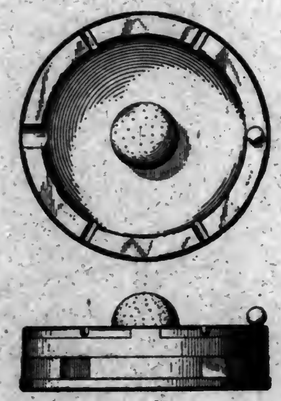
The ornamental design for a photographic viewer, as shown and described.

150,291
DESIGN FOR A WORK HOLDER
Kurt P. Friese, Norwalk, Conn.
Application December 29, 1945, Serial No. 125,186
Term of patent 7 years
(Cl. D54—14)



The ornamental design for a work holder, as shown.

150,292
DESIGN FOR A COMBINED CIGARETTE AND JEWELRY CONTAINER
Matteo Giannillo, Brooklyn, N. Y.
Application October 29, 1946, Serial No. 134,372
Term of patent 3½ years
(Cl. D85—2)

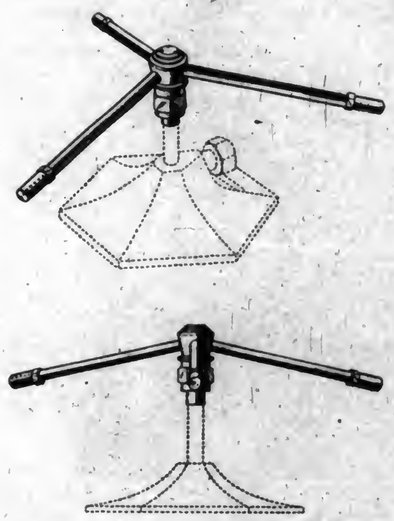


The ornamental design for a combined cigarette and jewelry container, as shown.

150,293
DESIGN FOR A TOY WHISTLE
Robert Y. Grant, Jr., Townsend, Mass.
Application October 17, 1947, Serial No. 141,963
Term of patent 14 years
(Cl. D34—15)

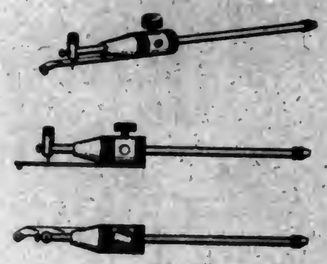
The ornamental design for a toy whistle, as shown.

150,294
DESIGN FOR A COMBINED ASH TRAY AND PIPE SMOKER'S ACCESSORY
Philip S. Harper, Chicago, Ill., assignor to Harper-Wyman Company, Chicago, Ill., a corporation of Illinois
Application June 24, 1946, Serial No. 130,982
Term of patent 14 years
(Cl. D85—2)



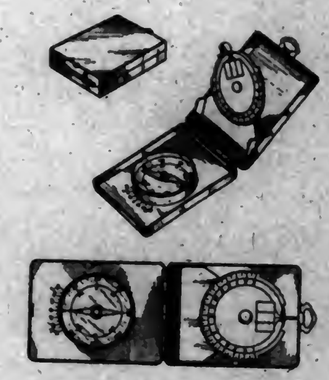
The ornamental design for a combined ash tray and pipe smoker's accessory, as shown.

150,295
DESIGN FOR A GAME BOARD
Herschel R. Hoskins and Frances M. Small, Los Angeles, Calif.
Application November 29, 1946, Serial No. 135,184
Term of patent 3½ years
(Cl. D34—5)



The ornamental design for a game board, as shown.

150,296
DESIGN FOR A LAWN SPRINKLER
Francis C. Hubbard, Minneapolis, Minn.
Application March 11, 1946, Serial No. 127,355
Term of patent 7 years
(Cl. D91—1)



The ornamental design for a lawn sprinkler, as shown and described.

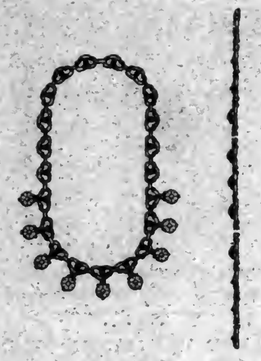
150,297
DESIGN FOR A SCRIBING TOOL
Roy A. Hutchinson, Columbus, Ohio
Application March 25, 1946, Serial No. 127,927
Term of patent 7 years
(Cl. D54—13)

The ornamental design for a scribing tool, as shown.

150,298
DESIGN FOR A SUN WATCH
John E. Johansen and Francis O. Boyd, Boonton, N. J.
Application January 29, 1947, Serial No. 136,496
Term of patent 14 years
(Cl. D42—6)

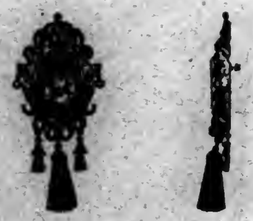
The ornamental design for a sun watch, as shown and described.

150,299
DESIGN FOR AN INSTRUMENT KEY GUARD OR SIMILAR ARTICLE
Wallace G. Johnson, Baldwin Park, Calif.
Application November 2, 1946, Serial No. 134,469
Term of patent 14 years
(Cl. D56—1)



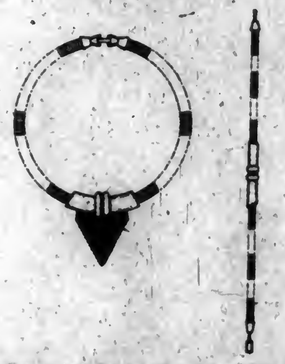
The ornamental design for an instrument key guard or similar article, as shown and described.

150,300
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,692
Term of patent 7 years
(Cl. D45—9)



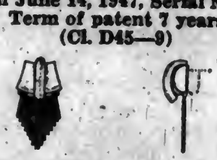
The ornamental design for an earring or similar article, substantially as shown.

150,301
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,696
Term of patent 7 years
(Cl. D45—16)



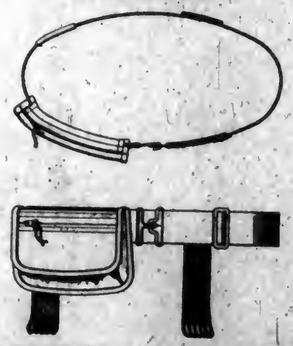
The ornamental design for a necklace or similar article, substantially as shown and described.

150,302
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,697
Term of patent 7 years
(Cl. D45—19)



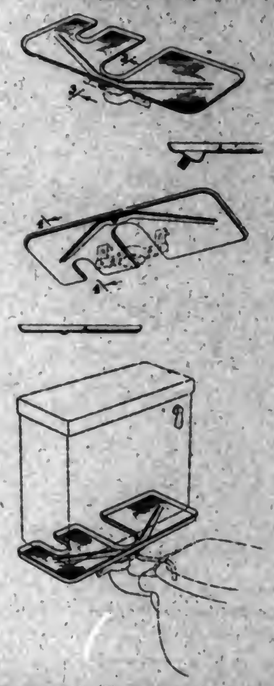
The ornamental design for a brooch or similar article, substantially as shown.

150,303
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,699
Term of patent 7 years
(Cl. D45—16)



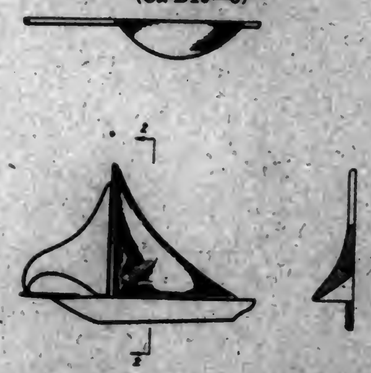
The ornamental design for a necklace or similar article, substantially as shown and described.

150,304
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 14, 1947, Serial No. 139,700
Term of patent 7 years
(Cl. D45—9)



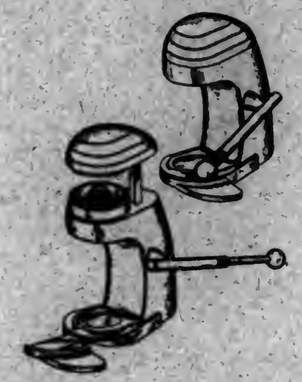
The ornamental design for an earring or similar article, substantially as shown.

150,305
DESIGN FOR A COMBINED HUNTER'S BELT, SHELL POCKET, AND GAME CARRIER
Melville Keim, Chicago, Ill.
Application August 30, 1946, Serial No. 132,959
Term of patent 14 years
(Cl. D3—10)

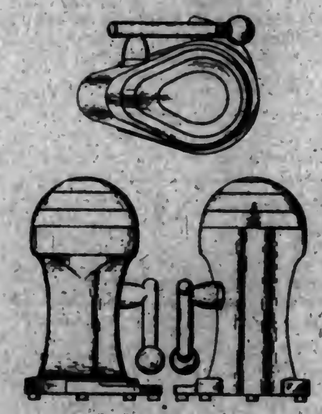


The ornamental design for a combined hunter's belt, shell pocket, and game carrier, as shown.

150,306
DESIGN FOR A DRIP PAN FOR WATER CLOSET TANKS
Virgil E. Laufenberg, Milwaukee, Wis., assignor to Laufenberg, Inc., Milwaukee, Wis., a corporation of Wisconsin
Application May 5, 1948, Serial No. 146,240
Term of patent 14 years
(Cl. D4—3)

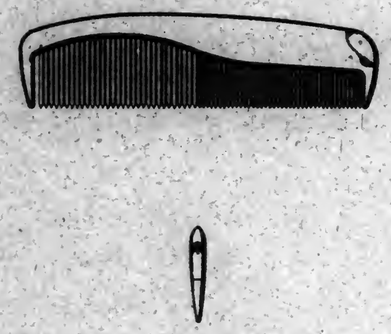


The ornamental design for a drip pan for water closet tanks, as shown and described.



150,307
DESIGN FOR A DRAWER PULL
Everett B. Lee, Meriden, Conn.
Application September 7, 1946, Serial No. 133,174
Term of patent 7 years
(Cl. D10—8)

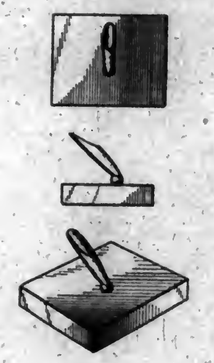
The ornamental design for a drawer pull, as shown.



150,308
DESIGN FOR A FRUIT JUICE SQUEEZER
Frank N. Mariani, Washington Heights, N. Y.
Application August 14, 1946, Serial No. 132,524
Term of patent 14 years
(Cl. D39—1)

The ornamental design for a fruit juice squeezer, substantially as shown.

150,309
DESIGN FOR A COMBINED COMB AND NAIL FILE CONTAINER OR THE LIKE
James Slater McHugh, Garden City, N. Y.
Application May 27, 1947, Serial No. 139,311
Term of patent 3½ years
(Cl. D86—8)



The ornamental design for a combined comb and nail file container or the like, substantially as shown.

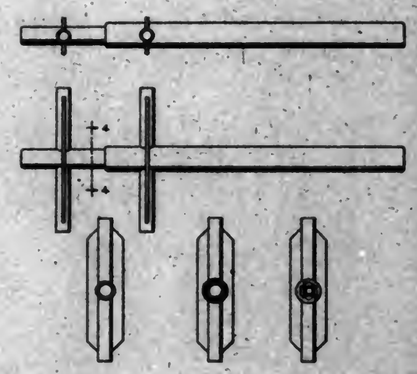
150,310
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Robert E. Minger, Manhattan Beach, Calif., assignor to Maha, Inc., Los Angeles, Calif., a corporation of California
Application March 15, 1947, Serial No. 137,623
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, substantially as shown and described.

150,311
DESIGN FOR A FOUNTAIN PEN RECEPTACLE UNIT
Laszlo Moholy-Nagy, Chicago, Ill., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Application August 22, 1946, Serial No. 132,726
Term of patent 14 years
(Cl. D74—1)

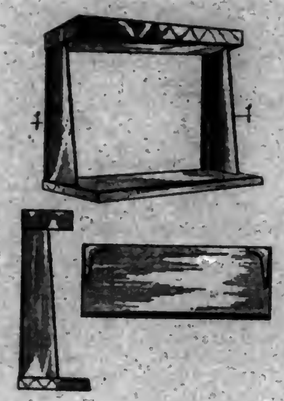
The ornamental design for a fountain pen receptacle unit, substantially as shown.

150,312
DESIGN FOR A FOUNTAIN PEN RECEPTACLE UNIT
Laszlo Moholy-Nagy, Chicago, Ill., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Application August 22, 1946, Serial No. 132,727
Term of patent 14 years
(Cl. D74—1)



The ornamental design for a fountain pen receptacle unit, substantially as shown and described.

150,313
DESIGN FOR A FOUNTAIN PEN RECEPTACLE UNIT
Laszlo Moholy-Nagy, Chicago, Ill., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Application August 22, 1946, Serial No. 132,728
Term of patent 14 years
(Cl. D74—1)

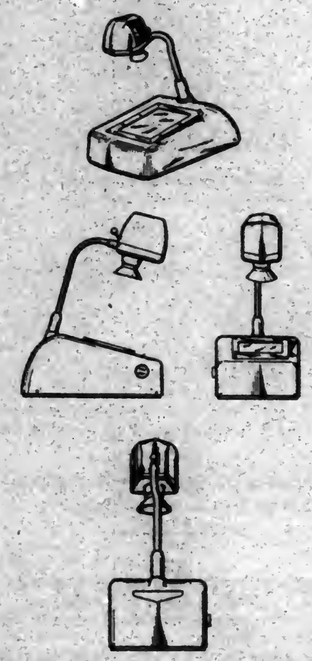


The ornamental design for a fountain pen receptacle unit, substantially as shown and described.

150,314
DESIGN FOR A DUAL WRENCH OR THE LIKE
Fred E. Nettleton, Saginaw, Mich.
Application January 25, 1946, Serial No. 125,958
Term of patent 7 years
(Cl. D54—16)

The ornamental design for a dual wrench or the like, substantially as shown.

150,315
DESIGN FOR A COFFEE MAKER STAND
Harper Richards, Chicago, Ill., assignor to Cory Corporation, Chicago, Ill., a corporation of Delaware
Application February 17, 1947, Serial No. 136,947
Term of patent 14 years
(Cl. D44—26)

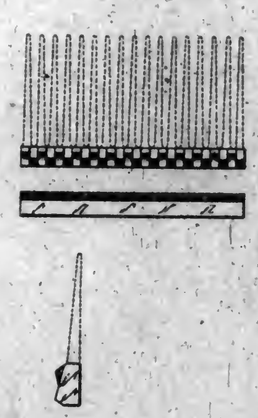


The ornamental design for a coffee maker stand, as shown.

150,316
DESIGN FOR AN INK CONTAINER OR SIMILAR ARTICLE
Frances Richman, New York, N. Y.
Application March 28, 1947, Serial No. 137,977
Term of patent 14 years
(Cl. D74—8)

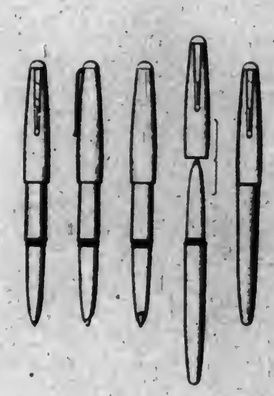
The ornamental design for an ink container or similar article, as shown and described.

150,317
DESIGN FOR A VISUAL EDUCATIONAL PROJECTOR
Hudson B. Roynher, Los Angeles, Calif., assignor to Ward Hickok, Beverly Hills, Calif.
Application February 14, 1948, Serial No. 144,499
Term of patent 14 years
(Cl. D61—1)



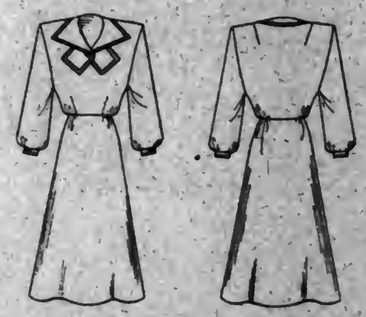
The ornamental design for a visual educational projector, as shown.

150,318
DESIGN FOR A SAFETY RAZOR
Henry Ruskin, Chicago, Ill., assignor of one-half to George E. Hale, Chicago, Ill.
Application January 31, 1947, Serial No. 136,580
Term of patent 14 years
(Cl. D22—3)



The ornamental design for a safety razor, as shown.

150,319
DESIGN FOR A COMB
Lester T. Sawyer, Leominster, Mass.
Application June 18, 1947, Serial No. 139,778
Term of patent 14 years
(Cl. D86—8)

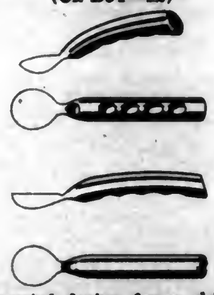


The ornamental design for a comb, as shown and described.

150,320
DESIGN FOR A FOUNTAIN PEN
Joseph Starr, Chicago, Ill., assignor to The Conklin Pen Company Inc., Chicago, Ill., a corporation of Illinois
Application April 3, 1947, Serial No. 138,132
Term of patent 14 years
(Cl. D74—17)

The ornamental design for a fountain pen, substantially as shown.

150,321
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application July 15, 1947, Serial No. 140,274
Term of patent 3½ years
(Cl. D3—26)

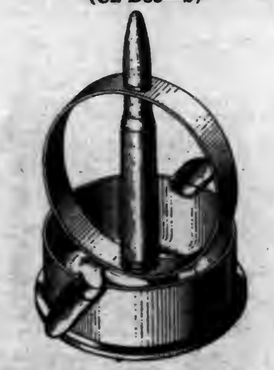


The ornamental design for a dress, substantially as shown.

150,322
DESIGN FOR A COAT
John F. Strassner, New York, N. Y.
Application July 15, 1947, Serial No. 140,277
Term of patent 3½ years
(Cl. D2—4)

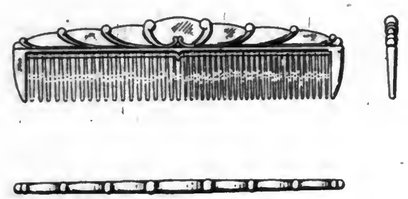
The ornamental design for a coat, substantially as shown.

150,323
DESIGN FOR A CHILD'S SPOON OR SIMILAR ARTICLE
Richard C. Stratton, Green River, Wyo.
Application February 12, 1947, Serial No. 136,868
Term of patent 14 years
(Cl. D54—12)



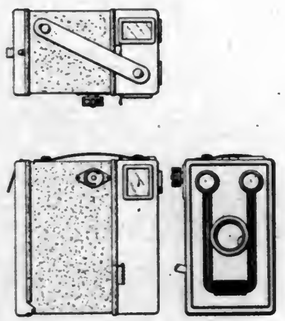
The ornamental design for a child's spoon or similar article, substantially as shown and described.

150,324
DESIGN FOR A LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Nathan Tall, Los Angeles, Calif.
Application March 25, 1946, Serial No. 130,867
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a link chain for a bracelet or similar article, substantially as shown.

150,325
DESIGN FOR AN ASH RECEIVER
John B. Tenczar, Wallingford, Conn.
Application April 9, 1946, Serial No. 128,403
Term of patent 14 years
(Cl. D85—2)



The ornamental design for an ash receiver, substantially as shown and described.

150,326
DESIGN FOR A COMB OR THE LIKE
Bernard Ulvad, Leominster, Mass., assignor to Fosgood Corporation, Leominster, Mass., a corporation of Massachusetts
Application December 24, 1947, Serial No. 143,315
Term of patent 14 years
(Cl. D86—8)

The ornamental design for a comb or the like, substantially as shown and described.

150,327
DESIGN FOR A CAMERA
Edward C. Zimmerman, Winnetka, Ill., assignor to Zenith Camera Corporation, Chicago, Ill., a corporation of Illinois
Application December 30, 1947, Serial No. 143,432
Term of patent 7 years
(Cl. D61—1)

The ornamental design for a camera, substantially as shown.

Leathers, Animal, reptile, fish, and bird. R. Neumann & Company. 257,060, May 28, 1929. Republished July 20.
Product consisting of fabric impregnated with a stiffening substance, Partly prepared. Celastic Corporation. 233,102, renewed Sept. 20, 1947. O. G. July 20.
Resins. Reichhold Chemicals, Inc. 414,603, June 19, 1945. Republished July 20.
Rubber, Cellular. Dunlop Tire and Rubber Corporation. 426,859, Apr. 8, 1947. Republished July 20.
Sand. Atlanta Sand & Supply Co. 243,700, renewed June 26, 1948. O. G. July 20.
Sand, clay, and various grades of stone. National Stone Company. 248,166, Oct. 16, 1928. Republished July 20.
Seed, Grass. E. W. Conklin & Son. 46,089, Sept. 5, 1905. Republished July 20.
Seed, Grass. E. W. Conklin & Son. 46,180, Sept. 12, 1905. Republished July 20.
Seed, Grass. Philadelphia Seed Co. 297,483, Sept. 13, 1932. Republished July 20.
Seeds, Vegetable and flower. Hygrade Seed Company, Inc. 397,535, Sept. 8, 1942. Republished July 20.

CLASS 2

Containers, Comparatively rigid shipping. Inland Container Corporation. 390,680, Sept. 30, 1941. Republished July 20.
Containers, Dispensing. Mirax Chemical Products Corporation. 325,465, June 25, 1935. Republished July 20.
Cylinders. Walter Kidde & Company, Inc. 413,088, Apr. 10, 1945. Republished July 20.
Hollow ware of all kinds, including cups, saucers, etc., Table. Brookes & Adams, Ltd. 241,067, renewed Apr. 17, 1948. O. G. July 20.
Metal ware, Enameled. Jacob J. Vollrath Mfg. Co. 70,317, re-renewed Aug. 18, 1948. O. G. July 20.

CLASS 3

Bags, Mesh. Whiting & Davis Company. 246,038, renewed Aug. 28, 1948. O. G. July 20.
Cases, etc., Toilet or dressing. D. Gray. 285,899. New certificate. O. G. July 20.
Wallets and bill folds. Nash, Inc. 431,764, Aug. 5, 1947. Republished July 20.

CLASS 4

Abrasive grinding wheels. Precision Grinding Wheel Company, Incorporated. 245,760, Aug. 21, 1928. Republished July 20.
Cleaner, Neutral paste. Clean Surface Products Company. 247,085, renewed Sept. 18, 1948. O. G. July 20.
Cleaning fluid, Dry. H. S. Benedikt Company, Inc. 298,377, Oct. 25, 1932. Republished July 20.
Cream, Shaving. Mentholatum Company. 246,955, renewed Sept. 18, 1948. O. G. July 20.
Detergent compound. Cowles Detergent Company. 386,572, Apr. 15, 1941. Republished July 20.
Dressing and preservative, Waterproof. Abercrombie & Fitch Company. 73,504, Apr. 27, 1909. Republished July 20.
Preparation for removal of rust and stain. L. C. Van Nest. 362,979, Dec. 6, 1938. Republished July 20.
Preparation to be used as a fabric cleaner. Industrial Chemical Products Co. 337,612, Aug. 11, 1936. Republished July 20.
Preparation to be used as a fabric cleaner and for washing and cleaning surfaces and materials. Industrial Chemical Products Co. 336,027, June 23, 1936. Republished July 20.
Soap. D. Gray. 284,053, June 16, 1931. New certificate. O. G. July 20.
Soap. Dorothy Gray Salons. 351,038, Oct. 12, 1937. New certificate. O. G. July 20.
Soap. Swift & Company. 69,140, re-renewed May 19, 1948. O. G. July 20.
Soaps and shoe polish. Wm. Filene's Sons Company. 266,608, Jan. 28, 1930. Republished July 20.

CLASS 5

Adhesive belt-cement. Chas. A. Schieren Company. 501,079, July 20; Serial No. 530,855, published Mar. 30, 1948.
Cement, Gasket. Pep Boys—Manny, Moe & Jack. 264,342, Nov. 26, 1929. Republished July 20.
Cement, Gasket and rim. Dunlop Tire and Rubber Corporation. 429,471, Apr. 29, 1947. Republished July 20.
Latex adhesive. Carter's Ink Company. 439,761, July 20; Serial No. 507,571, published Mar. 30, 1948.
Tape, Adhesive. Smooth-On Manufacturing Company. 330,256, Sept. 29, 1936. Republished July 20.

CLASS 6

Additive for motor fuels and oils. Leo Corporation. 410,679, Dec. 12, 1944. Republished July 20.
Ammonia. Sawyer Crystal Blue Company. 69,737, June 30, 1908. Republished July 20.
Antiseptic, etc. Lehn & Fink, Inc. 307,860. New certificate. O. G. July 20.
Antiseptic and germicide for ivy poison, etc. W. C. Meyer. 244,581, renewed July 24, 1948. O. G. July 20.
Catalytic addition agents for volatile combustible liquid fuels, etc. Physical and Chemical Corporation. 418,535, Jan. 1, 1946. Republished July 20.
Chemical preparation. Chemical Products Corporation. 206,654, Dec. 8, 1925. Republished July 20.
Chemical preparation. Industrial Chemical Products Co. 330,352, Nov. 26, 1935. Republished July 20.
Chemical preparation. Industrial Chemical Products Co. 331,558, Jan. 14, 1936. Republished July 20.
Chemical preparation. S. S. Seligman. 243,731, renewed June 26, 1948. O. G. July 20.
Chemicals for use in planographic printing. Multigraph Company. 307,408, Oct. 24, 1933. Republished July 20.
Chemicals used in photographic processes. H. S. Wellcome. 44,219, Feb. 21, 1906. Republished July 20.
Chewing tablets, Medicated. Health Products Corporation. 251,808, Jan. 15, 1929. Republished July 20.
Cod-liver-oil concentrate. Health Products Corporation. 281,025, Mar. 10, 1931. Republished July 20.
Cod liver oil concentrate. Health Products Corporation. 289,072, Nov. 17, 1931. Republished July 20.
Compacts containing face powder, etc., Filled. D. Gray. 285,634, Aug. 4, 1931. New certificate. O. G. July 20.
Compositions used as detergents. Alrose Chemical Co., Inc. 378,513, June 11, 1940. Republished July 20.
Compositions used as finishing agents. Alrose Chemical Co., Inc. 378,512, June 11, 1940. Republished July 20.
Compositions used as wetting agents. Alrose Chemical Co., Inc. 378,514, June 11, 1940. Republished July 20.
Compound of malt and cod-liver oil. Allen & Hanburys. 31,504, re-renewed May 3, 1948. O. G. July 20.
Compound to be applied to the surface of nonferrous metal to prepare the same for painting. Industrial Chemical Products Co. 386,167, Mar. 25, 1941. Republished July 20.
Concentrate of cod liver oil. Health Products Corporation. 328,798, Oct. 8, 1935. Republished July 20.
Cream, antiseptic for skin eruptions, etc., Face. Joseph Gutradt Company. 240,360, renewed Mar. 27, 1948. O. G. July 20.
Creams, face powders, etc., Face. Puritan Cosmetics, Incorporated. 391,582, Nov. 18, 1941. Republished July 20.
Creams, medicated suppositories, and extract of witch hazel, Toilet. H. S. Wellcome. 96,070, Mar. 31, 1914. Republished July 20.
Crystalline alkali silicate. Cowles Detergent Company. 388,273, June 17, 1941. Republished July 20.
Deodoriser and disinfectant. Abbott Laboratories. 395,054, May 12, 1942. Republished July 20.
Developers and photographic accelerators, Photographic. H. S. Wellcome. 71,460, Nov. 24, 1908. Republished July 20.
Disinfectant and air purifier. Huntington Chemical Company. 166,266, Mar. 27, 1923. Republished July 20.
Disinfectants. Corkins Chemical Company. 73,880, May 25, 1909. Republished July 20.
Drug known chemically as d-N-methylamphetamine or d-desoxyephedrine, etc. Burroughs Wellcome & Co. (U. S. A.) Inc. 406,542, Apr. 11, 1944. Republished July 20.
Drugs and chemicals. H. S. Wellcome. 43,569, Oct. 18, 1904. Republished July 20.
Dye. O. L. Gabriel. 246,712, Sept. 11, 1928. Republished July 20.
Dye especially designed for use in X-ray examination of the gallbladder. Burroughs Wellcome & Co. (U. S. A.) Inc. 399,609, Jan. 19, 1943. Republished July 20.
Dyestuffs. Cincinnati Chemical Works, Inc. 147,957, Nov. 8, 1921. Republished July 20.
Extract of witch-hazel. E. E. Dickinson Company. 209,362, Feb. 23, 1926. Republished July 20.

Extract of witch-hazel. Edward E. Dickinson & Co. 38,546, July 1, 1902. Republished July 20.
Eye remedies. Murine Company, Inc. 229,940, July 12, 1927. Republished July 20.
Eye remedies. Murine Eye Remedy Company. 47,813, Nov. 21, 1906. Republished July 20.
Eye remedies. Murine Eye Remedy Company. 49,888, Feb. 20, 1906. Republished July 20.
Eye remedies. Murine Eye Remedy Company. 140,494–5, Mar. 15, 1921. Republished July 20.
Eye remedies. Murine Eye Remedy Company. 140,655, Mar. 22, 1921. Republished July 20.
Face powder. D. Gray. 333,632, Mar. 31, 1936. New certificate. O. G. July 20.
Face powder and face creams. Colgate & Company. 244,642, renewed July 24, 1948. O. G. July 20.
Face powder, talcium powder, cold cream, etc. Paragon Distributing Corporation. 202,335, Aug. 18, 1925. Republished July 20.
Face powders, talcium powder, etc. D. Gray. 200,419, June 30, 1925. New certificate. O. G. July 20.
Flux, Soldering. Industrial Chemical Products Co. 386,168, Mar. 25, 1941. Republished July 20.
Fluxes, Soldering. Kester Solder Company. 302,757, Apr. 25, 1933. Republished July 20.
Fluxes, Soldering. Kester Solder Company. 302,846, May 2, 1933. Republished July 20.
Fluxes, Soldering. Kester Solder Company. 304,081, June 20, 1933. Republished July 20.
Glue preserver. Lysol, Inc. 200,701, July 7, 1925. New certificate. O. G. July 20.
Hair colorings, hair tints, and hair dyes. Paragon Laboratories, Inc. 213,695, June 1, 1926. Republished July 20.
Insecticides. Kentucky Color and Chemical Company. 372,150, Oct. 24, 1939. Republished July 20.
Insecticides. Kentucky Color & Chemical Co. 406,152, Mar. 14, 1944. Republished July 20.
Laxative compounds. Mother Seigels Syrup Company. 68,539, re-renewed Apr. 14, 1948. O. G. July 20.
Lipstick and rouge. Dorothy Gray Salons. 379,381, July 9, 1940. New certificate. O. G. July 20.
Lotions, face talcum, and sachet powders, etc., Toilet. Guy T. Gibson, Incorporated. 228,117, May 24, 1927. Republished July 20.
Lozenge, Medicated. Burroughs Wellcome & Co. (U. S. A.) Inc. 350,034, Sept. 14, 1937. Republished July 20.
Malt extract with beef and iron, with cascara segrada, etc. H. S. Wellcome. 91,280, Apr. 22, 1913. Republished July 20.
Medicinal preparation. Burroughs Wellcome & Co. (U. S. A.), Inc. 342,528, Jan. 19, 1937. Republished July 20.
Medicinal preparation in liquid form. C. A. Lesiak. 244,119, renewed July 10, 1948. O. G. July 20.
Medicinal preparations. Whorton Pharmacal Company. 247,507, renewed Sept. 25, 1948. O. G. July 20.
Medicinal preparations and medicated foods. Allen & Hanburys, Limited. 31,505–6, re-renewed May 3, 1948. O. G. July 20.
Medicinal preparations, glandular products. Reed & Carnrick. 243,916, renewed July 3, 1948. O. G. July 20.
Medicinal substances in hermetically sealed containers. H. S. Wellcome. 90,861, Mar. 26, 1913. Republished July 20.
Medicine for indigestion. Knox Company. 239,462, renewed Mar. 6, 1948. O. G. July 20.
Medicine for poultry. O. F. Luse. 240,923, renewed Apr. 10, 1948. O. G. July 20.
Medicine put up in liquid form for the treatment of syphilis. J. C. Ozan. 227,644, renewed May 10, 1947. O. G. July 20.
Mixture including an acid, a non-aqueous solvent, and other ingredients. Industrial Chemical Products Co. 421,334, May 28, 1946. Republished July 20.
Mixture of non-aqueous solvents, water, and other cleaning ingredients. Industrial Chemical Products Co. 421,335, May 28, 1946. Republished July 20.
Mixture with an acid such as a phosphoric acid. Industrial Chemical Products Co. 391,199, Oct. 28, 1941. Republished July 20.
Nail polish. O. B. Short. 242,562, renewed May 29, 1948. O. G. July 20.
Narcotic preparation. Endo Products, Inc. 399,421, Jan. 5, 1943. Republished July 20.
Oils or the like for treating cotton or other textile fabrics. E. F. Houghton & Co. 233,907, renewed Oct. 11, 1947. O. G. July 20.
Oils, processed oils, and synthetic oils. Reichhold Chemicals, Inc. 422,913, Aug. 20, 1946. Republished July 20.
Ointment. Omega Chemical Company. 246,576, renewed Sept. 11, 1948. O. G. July 20.
Oxides and salts, Metallic. Vanadium Corporation of America. 246,412, Sept. 4, 1928. Republished July 20.
Paste, Soldering. Mueller Brass Co. 283,781, June 9, 1931. Republished July 20.
Pastes and powders for beautifying and preserving the teeth, skin, and hair, and perfumery. E. Daltroff & Cie. 240,341, renewed Mar. 27, 1948. O. G. July 20.
Perfume and face powder. Dorothy Gray Salons. 346,341, June 8, 1937. New certificate. O. G. July 20.
Perfume and toilet water. E. Daltroff & Cie. 172,352, Sept. 4, 1923. Republished July 20.
Perfume in a concentrated or solid form. Richard Hudnut. 230,742, renewed Aug. 2, 1927. O. G. July 20.
Perfume in a concentrated or solid form. Richard Hudnut. 231,567, renewed Aug. 23, 1947. O. G. July 20.
Perfume, toilet water, rouges, etc. E. Daltroff. 164,476, Feb. 20, 1923. Republished July 20.
Perfumes and lipsticks, Coty, Inc. 239,833, renewed Mar. 13. O. G. July 20.
Perfumes, perfume extracts, bath salts, etc. D'Orsay Perfumeries Corporation. 247,431, renewed Sept. 25, 1948. O. G. July 20.

Pharmaceuticals and drug medication, Various. Endo Products, Inc. 345,724–5, May 4, 1937. Republished July 20.
Plant growth promoting substances. A. E. Staley Manufacturing Company. 402,629, Aug. 3, 1943. Republished July 20.
Polyvitamin preparation. Burroughs Wellcome & Co. (U. S. A.) Inc. 386,600, Apr. 15, 1941. Republished July 20.
Powder, cleansing creme, tissue creme, Complexion. Puritan Pharmaceutical Company. 250,030, Nov. 27, 1928. Republished July 20.
Preparation for lubricating metals. American Lanolin Corporation. 239,450, renewed Mar. 6, 1948. O. G. July 20.
Preparation for reducing acidity. Burroughs Wellcome & Co. (U. S. A.) Inc. 283,778, June 9, 1931. Republished July 20.
Preparation for softening the skin, treatment of sunburn, rough chapped skin, etc. E. E. Dickinson Company. 359,864, Aug. 30, 1938. Republished July 20.
Preparation for the hair, scalp, and skin, Medicated. Barclay & Barclay. 69,389, re-renewed June 9, 1948. O. G. July 20.
Preparation for use as an aid in dyeing. Celanese Corporation of America. 246,351, renewed Sept. 4, 1948. O. G. July 20.
Preparation of gold compound for use in arthritis. Endo Products, Inc. 398,432, Oct. 27, 1942. Republished July 20.
Preparations for banishing mosquitoes and other insects. Red Rosin Products Co. 94,563, Dec. 16, 1913. Republished July 20.
Preparations for the removal of freckles. O. H. White. 79,801, Oct. 4, 1910. Republished July 20.
Preparations in powdered, plastic, and liquid form for the poisoning of vermin and rodents. B. Heller and Company. 144,659, re-renewed Jan. 5, 1948. O. G. July 20.
Preparations of drugs and chemicals. H. S. Wellcome. 43,567, Oct. 18, 1904. Republished July 20.
Preparations of ergot. H. S. Wellcome. 60,447, Feb. 5, 1907. Republished July 20.
Pressor substances. H. S. Wellcome. 95,857, Mar. 17, 1914. Republished July 20.
Product presenting 5% tannic acid and 0.5 percent phenol. Burroughs Wellcome & Co. (U. S. A.) Inc. 399,610, Jan. 19, 1943. Republished July 20.
Protein, Concentrated vegetable. A. E. Staley Manufacturing Company. 391,702, Nov. 18, 1941. Republished July 20.
Remedies for constipation. J. Grunthal. 67,972, re-renewed Mar. 3, 1948. O. G. July 20.
Rouge, lip stick, and face powder. Richard Hudnut. 231,619, renewed Aug. 23, 1947. O. G. July 20.
Sodium para-aminophenylarsonates. H. S. Wellcome. 73,155, Mar. 23, 1909. Republished July 20.
Starch, Calendar. A. E. Staley Manufacturing Company. 337,733, Aug. 18, 1936. Republished July 20.
Starch, Industrial. A. E. Staley Manufacturing Company. 381,002, Sept. 10, 1940. Republished July 20.
Starch, Laundry. Hubinger Company. 393,194, Jan. 27, 1942. Republished July 20.
Starch, Laundry. Hubinger Company. 406,046–8, Mar. 7, 1944. Republished July 20.
Starch, Laundry. Hubinger Company. 407,431, June 6, 1944. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 82,269, June 13, 1911. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 83,698, Oct. 3, 1911. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 345,191, Apr. 20, 1937. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 358,338, July 5, 1938. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 366,206, Apr. 4, 1939. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 368,104, June 6, 1939. Republished July 20.
Starch, Laundry. A. E. Staley Manufacturing Company. 423,760, Sept. 10, 1946. Republished July 20.
Starch, Liquid. Hubinger Company. 430,350, June 10, 1947. Republished July 20.
Starch products. A. E. Staley Manufacturing Company. 331,461, Jan. 7, 1936. Republished July 20.
Starch products, Inedible. A. E. Staley Manufacturing Company. 331,462–3, Jan. 7, 1936. Republished July 20.

Starch products, Inedible. A. E. Staley Manufacturing Company. 337,166, July 28, 1936. Republished July 20.
Starch products, Inedible. A. E. Staley Manufacturing Company. 354,443, Feb. 16, 1938. Republished July 20.
Starch, Thin boiling. A. E. Staley Manufacturing Company. 361,266, Oct. 11, 1938. Republished July 20.
Substance used in medicine as a sweetening agent. H. S. Wellcome. 34,738, June 5, 1900. Republished July 20.
Sulphur bitters. A. P. Ordway & Co. 246,559, renewed Sept. 11, 1948. O. G. July 20.
Supplement for feed for poultry, live stock, etc. Farm Minerals Company, Inc. 426,397, Dec. 24, 1946. Republished July 20.
Therapeutic agents consisting of salicylates for internal use. H. S. Wellcome. 120,921, Mar. 12, 1918. Republished July 20.
Toilet preparation, etc., Cream-like. D. Gray. 328,854, Oct. 8, 1935. New certificate. O. G. July 20.
Toilet preparations. F. Denney. 365,850, Mar. 21, 1939. Republished July 20.
Toilet preparations. F. Denney. 368,727, June 27, 1939. Republished July 20.
Toilet preparations. F. Denney. 376,030, Mar. 12, 1940. Republished July 20.
Toilet preparations. F. Denney. 382,501, Oct. 29, 1940. Republished July 20.
Tonic in tablet form, Health. J. Breyer. 332,107, Feb. 4, 1936. Republished July 20.
Tonics. Barnes & Hille. 69,377, re-renewed June 9, 1948. O. G. July 20.
Tooth paste. D. K. Drug Co., Inc. 501,125, July 20; Serial No. 531,894.
Tooth paste. Lehn & Fink, Inc. 229,966, July 12, 1927. New certificate. O. G. July 20.
Tooth paste and powder. F. B. Tyler. 73,653, May 4, 1909. Republished July 20.
Vitamin preparation. Abbott Laboratories. 393,055, Jan. 27, 1942. Republished July 20.
Vitamin preparation. J. B. Roerig and Company. 424,731, Oct. 22, 1946. Republished July 20.
Washing-blue. Sawyer Crystal Blue Company. 68,224, Mar. 17, 1908. Republished July 20.
Washing-blue. Sawyer Crystal Blue Company. 69,268, June 2, 1908. Republished July 20.
Witch-hazel. E. E. Dickinson. 97,530, June 9, 1914. Republished July 20.

CLASS 7

Clothes line. John H. Graham & Co., Inc. 501,093, July 20; Serial No. 534,771, published Apr. 20, 1948.
Rope and wire rope cables, Wire. Union Wire Rope Corporation. 389,397, Aug. 5, 1941. Republished July 20.
Steel and iron strands. Page Steel and Wire Company. 288,003, Oct. 20, 1931. Republished July 20.

CLASS 8

Ash receivers. Smokador Co. 165,697, Mar. 20, 1923. Republished July 20.
Pipes, Smokers'. S. B. Goldman. 363,280, Dec. 20, 1938. Republished July 20.

CLASS 9

Chargers, Machine gun. Walter Kidde & Company, Inc. 406,325, Mar. 28, 1944. Republished July 20.

CLASS 10

Fertilizers. Bone Dry Fertilizer Company. 239,934, renewed Mar. 13, 1948. O. G. July 20.
Fertilizers. Virginia-Carolina Chemical Company. 66,941, re-renewed Jan. 7, 1948. O. G. July 20.
Fertilizers. Virginia-Carolina Chemical Company. 67,408, re-renewed Feb. 4, 1948. O. G. July 20.
Meal, Soy bean oil. A. E. Staley Manufacturing Company. 383,976, Dec. 31, 1940. Republished July 20.

CLASS 11

Ink, Printing. Multigraph Company. 305,209, Aug. 8, 1933. Republished July 20.
Inking ribbons and carbon paper. F. S. Webster Company. 245,776, renewed Aug. 21, 1948. O. G. July 20.
Toners and lakes for use in ink pigments. Reichhold Chemicals Inc. 378,807, June 18, 1940. Republished July 20.
Typewriter ribbon. Addressograph-Multigraph Corporation. 407,820, June 27, 1944. Republished July 20.
Writing fluid. Addressograph-Multigraph Corporation. 354,844, Feb. 22, 1938. Republished July 20.

CLASS 12

Asphalt, Emulsified. Crown Bitumens Corporation. 215,916, renewed Jan. 5, 1948. O. G. July 20.
Board, Fiber building. United States Gypsum Company. 337,072, July 28, 1936. Republished July 20.
Building materials for plaster work and suspended ceilings. Standard Plastering Systems, Inc. 240,619, renewed Apr. 3, 1948. O. G. July 20.
Cement, Water proof. Colorado Portland Cement Company. 245,460, renewed Aug. 14, 1948. O. G. July 20.
Fibrous sound absorbing units. United States Gypsum Company. 428,835, Apr. 8, 1947. Republished July 20.
Insulation board. United States Gypsum Company. 402,428, July 20, 1913. Republished July 20.
Iron cement in paste firm. Smooth-On Manufacturing Company. 349,727, Aug. 31, 1937. Republished July 20.
Iron cement in powder form, Hydraulic. Smooth-On Manufacturing Company. 349,728, Aug. 31, 1937. Republished July 20.
Iron cement in powder or paste form, Hydraulic. Smooth-On Manufacturing Company. 365,026, Feb. 21, 1939. Republished July 20.
Iron compound in the form of a dry powder. Smooth-On Manufacturing Company. 358,734, July 26, 1938. Republished July 20.
Iron compound in the form of powder and paste. Smooth-On Manufacturing Company. 340,167, Nov. 3, 1936. Republished July 20.
Lumber and lumber products. Canadian Western Lumber Company, Ltd. 283,628, June 2, 1931. Republished July 20.
Lumber products. Long-Bell Lumber Sales Corporation. 299,585, Dec. 13, 1932. Republished July 20.
Sound absorbing material. United States Gypsum Company. 265,549, Dec. 31, 1929. Republished July 20.
Substances consisting chiefly of comminuted iron in powder and plastic form, etc. Smooth-On Manufacturing Company. 377,960, May 21, 1940. Republished July 20.
Tape, Paper. United States Gypsum Company. 351,082, Oct. 19, 1937. Republished July 20.
Waterproof material made from paper or felt, etc. Paraffine Paint Co. 69,554, re-renewed June 23, 1948. O. G. July 20.

CLASS 13

Barn and stable equipment and equipment for chicken houses, etc. Drew Lipe Company. 243,523, renewed June 26, 1948. O. G. July 20.
Canners, milk strainers, barbed wire, bath tubs, etc., Pressure. Oakes & Company. 439,797, July 20; Serial No. 525,384, published Mar. 16, 1948.
Chains. Talon, Inc. 501,057, July 20; Serial No. 527,799, published Apr. 6, 1948.
Chains, chain products and hooks, etc. Chain Products Company. 217,347, Aug. 31, 1926. Republished July 20.
Chains, Iron and steel. Standard Chain Co. 82,374, June 20, 1931. Republished July 20.
Cocks, Stall. Rite-Way Products Company. 416,130, Dec. 4, 1945. Republished July 20.
Conduits and fitting therefor, Metal fluid. Mueller Brass Co. 274,272, Aug. 26, 1930. Republished July 20.
Cookers of various types and sizes, Pressure. National Aluminum Manufacturing Co. 439,764, July 20; Serial No. 510,190, published Mar. 30, 1948.
Fasteners of the slider controlled type, Separable. Seal Fastener Corp. 439,784, July 20; Serial No. 521,213, published Mar. 30, 1948.
Fasteners, Separable. Ultra Slide Fastener Corp. 439,782, July 20; Serial No. 519,706, published Apr. 6, 1948.
Fittings, Cast iron pipe. G. F. Haddican. 439,772, July 20; Serial No. 514,339, published Apr. 6, 1948.
Lawn maintenance equipment. Fortress Manufacturing Co. 439,743, July 20; Serial No. 502,283, published Mar. 30, 1948.
Metal or foil liners, Thin. Pannettes Company. 439,755, July 20; Serial No. 505,854, published Apr. 6, 1948.
Metal ware, Enameled. Jacob J. Vollrath Mfg. Co. 70,317, re-renewed Aug. 18, 1948. O. G. July 20.
Metal ware, etc., Enameled. Enamel Products Company. 201,617, Aug. 4, 1925. Republished July 20.
Nozzles. Kemgas Process Company. 439,759, July 20; Serial No. 506,453, published Mar. 30, 1948.
Pipe, steel tubing, and steel pipe couplings, Steel. Youngstown Sheet & Tube Company. 107,461, Nov. 30, 1915. Republished July 20.
Plumbing, steam fitting and gas fitting etc. Mueller Brass Co. 309,442, Jan. 16, 1934. Republished July 20.
Screws, sheet metal screws, etc., Wood. Continental Screw Company. 323,971, May 7, 1935. Republished July 20.
Staples. Powers Manufacturing Company. 439,767, July 20; Serial No. 510,796, published Apr. 13, 1948.
Staples, Machine. A. L. Hansen Mfg. Co. 314,190, June 19, 1934. Republished July 20.
Staples, Machine. A. L. Hansen Mfg. Co. 334,342, Apr. 28, 1936. Republished July 20.
Valves and regulators. H. O. Trerice. 439,802, July 20; Serial No. 499,172.
Valves, Boiler relief. Boston Brass Company. 230,823–4, renewed Mar. 13, 1948. O. G. July 20.
Valves, Metal gate. Lunkenheimer Company. 243,396, renewed June 19, 1948. O. G. July 20.
Wire cloth materials. Borg-Warner Corporation. 388,364. June 24, 1941. Republished July 20.

CLASS 14

Alloy metal mixture of high wearing qualities. Mueller Brass Co. 317,766, Oct. 2, 1934. Republished July 20.
Alloys of nonferrous metals, Metal. Maytag Company. 381,589, Oct. 1, 1940. Republished July 20.
Castings and forgings of non-ferrous metal, Sand. Mueller Brass Co. 411,057, Jan. 2, 1945. Republished July 20.
Castings, Iron. C. M. Loysted. 243,697, renewed June 26, 1948. O. G. July 20.
Forgings, and castings of nonferrous metal. Mueller Brass Co. 243,380, July 19, 1928. Republished July 20.

Forgings, Metals. Mueller Metals Company. 162,560, Dec. 19, 1922. Republished July 20.
Iron and iron alloys. Belle City Malleable Iron Company. 383,484, Dec. 10, 1940. Republished July 20.
Iron compound in plastic form. Smooth-On Manufacturing Company. 84,262, Nov. 21, 1911. Republished July 20.
Rod, Metal (commercial). Mueller Brass Co. 320,339–40, Dec. 25, 1934. Republished July 20.
Rods, sand castings and forgings, etc. Mueller Brass Co. 283,119, May 19, 1931. Republished July 20.
Solder. Kester Solder Company. 302,848, May 2, 1933. Republished July 20.
Solder. Kester Solder Company. 303,268, May 16, 1933. Republished July 20.
Solder. Kester Solder Company. 303,279, May 16, 1933. Republished July 20.
Solder. Mueller Brass Co. 287,255, Sept. 15, 1931. Republished July 20.
Wire, Spring. Page Woven Fire Fence Co. 78,347, June 7, 1930. Republished July 20.

CLASS 15

Candles, Wax. American Candle Co., Inc. 439,786, July 20; Serial No. 521,233, published Feb. 17, 1948.
Oil, Lubricating. International Harvester Company. 233,573, renewed Oct. 4, 1947. O. G. July 20.
Oils and greases, Lubricating. Hickok Producing Co. 241,779, renewed May 5, 1948. O. G. July 20.
Oils, gasoline, burning oils, etc., Motor fuel. Leo Corporation. 332,442, Feb. 11, 1936. Republished July 20.
Oils, Lubricating. Sinclair Refining Company. 247,014, renewed Sept. 18, 1948. O. G. July 20.

CLASS 16

Colors and wall coatings in the nature of paint, Limeproof. United States Gypsum Company. 276,997, Nov. 4, 1930. Republished July 20.
Paint colors and plastic paint. United States Gypsum Company. 272,804, July 15, 1930. Republished July 20.
Paint, Paste. United States Gypsum Company. 409,656, Oct. 17, 1944. Republished July 20.
Paint, Ready-mixed. Hockaday Inc. 254,627, Mar. 26, 1929. Republished July 20.
Paints. Sherwin-Williams Company. 246,774, renewed Sept. 11, 1948. O. G. July 20.
Paints and fixatif, Artists water color. F. W. Panepinto. 384,798, Feb. 4, 1941. Republished July 20.
Paints, Paste, semi-paste, and liquid. C. A. Woolsey Paint & Color Co. 240,117, renewed Mar. 20, 1948. O. G. July 20.
Paints, varnishes, leads, enamels, etc. Oliver Johnson & Co. 69,345, re-renewed June 9, 1948. O. G. July 20.
Paste-like mixture or coating. Industrial Chemical Products Co. 392,345, Dec. 23, 1941. Republished July 20.
Plastic material. H. L. Greenbaum. 247,505, renewed Sept. 25, 1948. O. G. July 20.
Preparation to be used as a paint, varnish and enamel remover. Industrial Chemical Products Co. 337,315–16, Aug. 4, 1936. Republished July 20.
Resins and oils. Reichhold Chemicals, Inc. 414,732, June 26, 1945. Republished July 20.
Sisings, Painter's wall. Craftex Company. 246,050, renewed Aug. 28, 1948. O. G. July 20.
Wall coating in the nature of paint. United States Gypsum Company. 270,833, May 13, 1930. Republished July 20.
Wall coverings in the nature of paint, Plastic. United States Gypsum Company. 425,315, Nov. 12, 1946. Republished July 20.
Wall finish and painter's sizing, Interior warm-water or oil. Craftex Company. 246,017, renewed Aug. 28, 1948. O. G. July 20.

CLASS 17

Cigars. A. J. Golden. 501,101, July 20; Serial No. 536,686, published Apr. 6, 1948.
Cigars. P. Lorillard Company. 439,800, July 20; Serial No. 525,632, published Apr. 20, 1948.
Cigars, Medalist Co., Inc. 501,078, July 20; Serial No. 530,664, published Apr. 13, 1948.
Cigars, chewing and smoking tobacco. Meads Tobacco Co. 243,867, renewed July 3, 1948. O. G. July 20.
Cigars, cigarettes, smoking tobacco, chewing tobacco, and snuff. De Nobili Cigar Company. 240,355, renewed Mar. 27, 1948. O. G. July 20.
Cigars, cigarettes, smoking tobacco, chewing tobacco, and snuff. De Nobili Cigar Company. 240,478, renewed Mar. 27, 1948. O. G. July 20.

Tobacco, Chewing and smoking. P. Lorillard Company. 501,104, July 20; Serial No. 536,918, published Apr. 20, 1948.
Tobacco, Chewing and smoking. P. Lorillard Company. 501,106, July 20; Serial No. 536,922, published Apr. 20, 1948.
Tobacco, Smoking. P. Lorillard Company. 439,799, July 20; Serial No. 525,617, published Apr. 20, 1948.
Tobacco, Smoking. P. Lorillard Company. 501,105, July 20; Serial No. 536,920, published Apr. 20, 1948.
Tobacco, Smoking and chewing. P. Lorillard Company. 501,103, July 20; Serial No. 536,915, published Apr. 13, 1948.

CLASS 19

Devices of flexible reciprocating shaft type. American Cable Company, Inc. 288,067, Oct. 20, 1931. Republished July 20.
Hardware for vehicle bodies, door handles and window regulators. A. L. Hansen Mfg. Co. 296,680, May 3, 1932. Republished July 20.
Seats, Two-passenger motorcycle. Harley-Davidson Motor Company. 386,124, Mar. 25, 1941. Republished July 20.

CLASS 21

Batteries and structural parts thereof, Wet storage. Trojan Battery Company. 284,175, June 16, 1931. Republished July 20.
Batteries, Wet storage. O'Neil Tire and Battery Company. 281,689, Mar. 24, 1931. Republished July 20.
Electrolytic water correction devices, Self-energizing and/or power induced energizing. E. M. Butler. 409,508, Oct. 10, 1944. Republished July 20.
Electronic apparatus for preventing precipitation of mineral particles. E. M. Butler. 415,180, July 31, 1945. Republished July 20.
Heaters comprising circulation, etc., Electric water. W. W. Hicks. 254,782–3, Apr. 2, 1929. Republished July 20.
Heaters, Electric. W. W. Hicks. 273,684, Aug. 5, 1930. Republished July 20.
Lighting fixtures, Electric. Edwin F. Guth Company. 356,607, May 3, 1938. Republished July 20.
Photo-electric cells, Barrier layer type. Bradley Laboratories, Inc. 384,852, Feb. 4, 1941. Republished July 20.
Radio receiving sets, A. C. operated receiving sets, etc., Battery-operated. Crosley Radio Corporation. 244,510, renewed July 24, 1948. O. G. July 20.
Radio receiving sets assembled, tubes, etc. L. S. Slagle. 228,701, renewed June 7, 1947. O. G. July 20.
Stoves, ranges, heaters, etc., Electric. Michigan Stove Company. 106,170, Oct. 12, 1915. Republished July 20.
Wire and cables, Insulated electric. John A. Roebling's Sons Company. 68,878, re-renewed July 9, 1947. O. G. July 20.
Wire, Steel and iron magnet core. Page Steel and Wire Company. 288,101, Oct. 20, 1931. Republished July 20.

CLASS 22

Bait, Artificial. Creek Chub Bait Company. 291,671. Feb. 28, 1932. Republished July 20.
Bait, Artificial. Creek Chub Bait Co. 291,675, Feb. 23, 1932. Republished July 20.
Balls. P. Goldsmith Sons Company. 229,344, renewed Jan. 5, 1948. O. G. July 20.
Baseballs, soft balls and playground balls, etc. Kelley-How-Thomson Co. 334,315, Apr. 28, 1936. Republished July 20.
Board game. Parker Brothers, Inc. 326,723, July 30, 1935. Republished July 20.
Board game played with movable pieces. Parker Brothers, Inc. 109,479, Apr. 11, 1916. Republished July 20.
Bowling pins. Brunswick-Balke-Collender Company. 322,964, Mar. 26, 1935. Republished July 20.
Fishing lines, silk and other fishing lines, floats, etc., Gut. Henry Milward & Sons, Limited. 240,180, renewed Mar. 20, 1948. O. G. July 20.
Fishing lure, Artificial. Creek Chub Bait Co. 325,659, July 2, 1935. Republished July 20.
Game played with cards. Parker Brothers, Inc. 99,354, Aug. 25, 1914. Republished July 20.
Games played with cards. Parker Brothers, Inc. 82,637, July 11, 1911. Republished July 20.
Golf bags, fishing-rod cases, tennis racket cases, etc. Abercrombie & Fitch Company. 346,982, June 15, 1937. Republished July 20.
Golf balls. Dunlop Rubber Company Limited. 164,526, Feb. 20, 1923. Republished July 20.
Golf balls, golf clubs, golf bags. Wm. Filene's Sons Company. 117,537, July 17, 1917. Republished July 20.
Pads, Gymnasium. Dunlop Tire and Rubber Corporation. 430,116, June 10, 1947. Republished July 20.
Playing cards, chess, checkers, etc. Abercrombie & Fitch Company. 240,424, Mar. 27, 1928. Republished July 20.
Toy sets comprising gardening tools, gardening implements, flowerpots, etc. Wolverine Supply & Manufacturing Company. 285,595, July 28, 1931. Republished July 20.
Toys and toy dishes, Automatic sand-operated mechanical. Wolverine Supply & Manufacturing Company. 135,363, Sept. 28, 1920. Republished July 20.
Toys, Sand and marble operated mechanical. Wolverine Supply & Manufacturing Company. 160,752–3, Oct. 24, 1922. Republished July 20.

CLASS 23

Antifriction-bearings, antifriction-bearing hanger-boxes, antifriction-balls, etc. Fafnir Bearing Company. 104,534, June 1, 1915. Republished July 20.
Antifriction-bearings, antifriction-bearing hanger-boxes, antifriction-balls, etc. Fafnir Bearing Company. 122,136, July 2, 1918. Republished July 20.

Apparatus for mechanical handling of bulk and packaged materials and constructive parts, etc. Mechanical Handling Systems, Inc. 245,122, renewed Aug. 7, 1948. O. G. July 20.
Apparatus for mechanical handling of bulk and packaged materials, etc. Mechanical Handling Systems, Inc. 244,357, renewed July 17, 1948. O. G. July 20.
Axes, cavadores, etc., Pick. Collins Company. 70,752–3, re-renewed Sept. 29, 1948. O. G. July 20.
Axes, scythes, etc. North Wayne Tool Company. 245,649, renewed Aug. 21, 1948. O. G. July 20.
Ball points, brad sets, tool makers' buttons, etc. L. S. Starrett Co. 85,923, Mar. 26, 1912. Republished July 20.
Bits, bit braces, etc., Screw driver. Simmons Hardware Company. 70,084, re-renewed July 28, 1948. O. G. July 20.
Bits, Tool. Henry G. Thompson & Son Company. 400,374, Mar. 2, 1943. Republished July 20.
Brad sets, center punches, clamps, etc. L. S. Starrett Company. 181,429, Mar. 18, 1924. Republished July 20.
Carburetors. A. P. Wetherbee. 439,751, July 20; Serial No. 504,591, published Apr. 20, 1948.
Chopping board. L. C. Bettner. 439,778, July 20; Serial No. 515,652, published Apr. 20, 1948.
Couplings, connectors, rod end couplings and bearings, etc., Flexible. Heim Company. 439,758, July 20; Serial No. 506,167, published Apr. 27, 1948.
Crushers, shredders, breakers, etc. Gruendler Patent Crusher and Pulveriser Company. 239,231, Feb. 28, 1928. Republished July 20.
Crushers, shredders, breakers, etc. Gruendler Patent Crusher and Pulverizer Company. 239,233, Feb. 28, 1928. Republished July 20.
Discs, saws, shovels, etc., Friction clutch. Borg-Warner Corporation. 327,944, Sept. 10, 1935. Republished July 20.
Drills, grinders and routers, etc., Flexible, shaft-operated radial. Speedo Manufacturing Co. Inc. 439,747, July 20; Serial No. 503,266, published Apr. 20, 1948.
Drills, reamers, end mills, etc., Twist. National Twist Drill & Tool Co. 407,580, June 13, 1944. Republished July 20.
Drills, twist drill bits, reamers, etc., Twist. National Twist Drill & Tool Co. 361,439, Oct. 18, 1938. Republished July 20.
Elevator cups. K. I. Willis Corporation. 349,865, Sept. 7, 1937. Republished July 20.
Elevator cups. K. I. Willis Corporation. 351,365, Oct. 26, 1937. Republished July 20.
Files and rasps. Arcade File Works. 247,659, renewed Oct. 2, 1948. O. G. July 20.
Fire extinguishers, wheeled portable hand operated fire extinguishing units, etc., Portable hand. Walter Kidde & Company, Inc. 426,786, Jan. 14, 1947. Republished July 20.
Fire-extinguishing apparatus, Portable hand. General Carbonic Company. 247,056, renewed Sept. 18, 1948. O. G. July 20.
Gear reduction units, Worm. Cleveland Worm & Gear Company. 412,291, Feb. 27, 1945. Republished July 20.
Gearing, Worm. Cleveland Worm & Gear Company. 182,385, Apr. 8, 1924. Republished July 20.
Gun, Spray. Black Manufacturing Co. 501,046, July 20; Serial No. 526,564, published Apr. 27, 1948.
Harvesters, Beet. Blackwelder Iron Works. 416,000, Aug. 21, 1945. Republished July 20.
Hoes, spades, shovels, etc. Chillington Tool Company, Limited. 67,850, re-renewed Feb. 25, 1948. O. G. July 20.
Hoes, spades, shovels, etc. Chillington Tool Company, Limited. 68,006, re-renewed Mar. 3, 1948. O. G. July 20.
Hoists, Overhead electric traveling-trunk. R. R. Howell Company. 422,693, Aug. 6, 1946. Republished July 20.
Injectors and boiler feeders, Steam boiler. Nathan Manufacturing Company. 68,695, re-renewed Apr. 21, 1948. O. G. July 20.
Injectors and boiler feeders, Steam-boiler. Nathan Manufacturing Company. 69,774, re-renewed July 7, 1948. O. G. July 20.
Jack-screws. Illinois Iron & Bolt Co. 501,047, July 20; Serial No. 526,687, published Apr. 20, 1948.
Jack-screws. Illinois Iron & Bolt Co. 501,048, July 20; Serial No. 526,689, published Apr. 20, 1948.
Knitting machines and stop motion mechanisms therefor. Stop Motion Devices Corporation. 366,018, Mar. 28, 1939. Republished July 20.
Knives and forks, poultry shears, and pocket knives, Kitchen. Manna Merchandise Co. 439,745, July 20; Serial No. 502,759, published Apr. 20, 1948.
Knives, Power cutting. Ohio Knife Co. 407,687, June 20, 1944. Republished July 20.
Lawn mowers. Great States Corporation. 415,492, Aug. 7, 1945. Republished July 20.
Lawn mowers. Pennsylvania Lawn Mower Works. 238,880, Feb. 14, 1928. Republished July 20.
Lawn mowers, hand lawn mowers, and garden tractors, etc., Power. Pioneer Gen-E-Motor Corporation. 439,741–2, July 20; Serial Nos. 498,927–8, published Apr. 20, 1948.
Lens machine tools, Optical. American Optical Company. 439,793, July 20; Serial No. 524,437, published Apr. 20, 1948.
Lubricating systems and parts thereof. Farval Corporation. 403,874, Oct. 19, 1943. Republished July 20.
Lubricating systems, Centralized. Lubrication Devices Incorporated. 256,649, May 21, 1929. Republished July 20.
Lubrication equipment. Balcrank, Inc. 420,105, Mar. 26, 1946. Republished July 20.
Machines for making printing plates. Addressograph Co. 37,119, Sept. 24, 1901. Republished July 20.
Machines for manufacturing cattle cake. Richard Sizer, Limited. 243,520, renewed June 26, 1948. O. G. July 20.
Materials-handling equipment. Lewis-Shepard Products Inc. 439,737, July 20; Serial No. 486,961, published Apr. 20, 1948.
Metal ware, Enameled. Jacob J. Vollrath Mfg. Co. 70,317, re-renewed Aug. 18, 1948. O. G. July 20.
Milker outfits. Rite-Way Products Co. 408,001, July 11, 1944. Republished July 20.
Printing machines. Addressograph Company. 70,013, re-renewed July 21, 1948. O. G. July 20.
Printing machines. Addressograph Company. 244,504, renewed July 17, 1948. O. G. July 20.
Printing machines. Multigraph Company. 306,791, Sept. 26, 1933. Republished July 20.
Pumps, deep well pumps, and jet pumps, Shallow well. Crane Co. 439,785, July 20; Serial No. 521,246, published Apr. 27, 1948.
Pumps, Water. F. E. Myers & Brother. 60,109, Jan. 29, 1907. Republished July 20.
Punches, screw drivers, and manually used mechanics and automobile body repair tools. Lynn Products Co. 439,777, July 20; Serial No. 515,573, published Apr. 20, 1948.
Ring travelers. Victor Ring Traveler Company. 266,913–4, Feb. 11, 1930. Republished July 20.
Ring travelers. Victor Ring Traveler Company. 320,822, Jan. 8, 1935. Republished July 20.
Ring travelers. Victor Ring Traveler Company. 407,600, June 13, 1944. Republished July 20.
Saws. Ohlen-Bishop Company. 329,767, Nov. 12, 1935. Republished July 20.
Saws. Ohlen-Bishop Company. 332,016, Jan. 28, 1936. Republished July 20.
Saws. Ohlen-Bishop Company. 343,392, Feb. 16, 1937. Republished July 20.
Saws and circular saws, Hand. Ohlen-Bishop Company. 318,711, Oct. 30, 1934. Republished July 20.
Saws and hack saw blades, Hack. G. W. Griffin & Co. 49,710, Feb. 13, 1906. Republished July 20.
Scissors and shears. Acme Shear Company. 104,244, May 11, 1915. Republished July 20.
Scissors and shears. Acme Shear Company. 328,118. Sept. 17, 1935. Republished July 20.
Scissors and shears. Acme Shear Company. 428,899, Apr. 8, 1947. Republished July 20.
Scissors and shears. Atlas Shear Co. 174,723, Oct. 23, 1923. Republished July 20.
Scraper-carriers and scrapers. La Plant-Choate Manufacturing Co., Inc. 358,265, July 5, 1938. Republished July 20.
Sealing machines. Anchor Hocking Glass Corporation. 501,060, July 20; Serial No. 528,605, published Apr. 27, 1948.
Sewing machines. Union Special Machine Company. 245,701, renewed Aug. 21, 1948. O. G. July 20.
Sewing machines and attachments, Family and manufacturing. Singer Manufacturing Company. 69,900–1, re-renewed July 14, 1948. O. G. July 20.
Sprayer, Electric air compressor. Tanglefoot Company. 501,050, July 20; Serial No. 526,813, published Apr. 20, 1948.
Sprayers adapted to be carried on the back, etc. Hudson Mfg. Company. 223,040, renewed Jan. 5, 1948. O. G. July 20.
Staple driving machines. A. L. Hansen Mfg. Co. 334,754, May 12, 1936. Republished July 20.
Stapling machines. A. L. Hansen Mfg. Co. 314,315, June 26, 1934. Republished July 20.
Strainers, Mixer. Automatic Wire Goods Mfg. Co. Inc. 439,795, July 20; Serial No. 525,178, published Apr. 6, 1948.
Straps for textile looms, Check. E. F. Houghton & Co. 234,206, renewed Oct. 18, 1947. O. G. July 20.
Supports in the form of containers of boxes, Typewriter-paper. Autographic Register Company. 501,055, July 20; Serial No. 527,568, published Apr. 6, 1948.
Swaging machines, cut-off machines, etc. Etna Machine Company. 501,058, July 20; Serial No. 528,436, published Apr. 27, 1948.
Tools, Fence erecting. Page Steel and Wire Company. 292,494, Mar. 15, 1932. Republished July 20.
Tools for sizing and flaring piping, etc. Mueller Brass Co. 289,612, Dec. 1, 1931. Republished July 20.
Tools, Machine cutting. Ohio Knife Co. 407,688, June 20, 1944. Republished July 20.
Vises and stocks and dies for pipe threading, Pipe. Armstrong Manufacturing Co. 156,990, July 25, 1922. Republished July 20.
Wrapping machines. Fellows & Hopkins. 76,145, Dec. 21, 1909. Republished July 20.

CLASS 26

Engineering and drafting instruments. A. Lietz Co. 346,718, June 8, 1937. Republished July 20.
Lenses, Optical. Titmus Optical Company, Inc. 247,106, renewed Sept. 18, 1948. O. G. July 20.
Lubrication equipment. Balcrank, Inc. 424,451, Oct. 8, 1946. Republished July 20.
Measuring instruments and parts thereof, Electrical temperature. Illinois Testing Laboratories, Inc. 418,880, Jan. 15, 1946. Republished July 20.
Measuring instruments and parts thereof, Electrical temperature. Illinois Testing Laboratories, Inc. 419,722, Mar. 5, 1946. Republished July 20.
Measuring instruments and parts thereof, Electrical temperature. Illinois Testing Laboratories, Inc. 419,828, Mar. 5, 1946. Republished July 20.
Measuring instruments and parts thereof, Electrical temperature. Illinois Testing Laboratories, Inc. 419,829, Mar. 5, 1946. Republished July 20.
Measuring instruments and parts thereof, Electrical temperature. Illinois Testing Laboratories, Inc. 422,201, July 9, 1946. Republished July 20.
Meters, Fluid. Neptune Meter Company. 31,156, re-renewed Jan. 18, 1948. O. G. July 20.
Millivoltmeter type of pyrometer. Illinois Testing Laboratories, Inc. 426,896, Jan. 21, 1947. Republished July 20.
Pilot controls for gas water heaters, Thermostatically-operated. Bastian-Morley Company, Inc. 238,523, renewed Feb. 7, 1948. O. G. July 20.
Projectors, Photographic. Ansco Photoproducts, Inc. 242,434, renewed May 22, 1948. O. G. July 20.
Pyrometers, thermo-couples, thermometers, resistance temperature measuring units, etc. Illinois Testing Laboratories, Inc. 341,746, Dec. 22, 1936. Republished July 20.

CLASS 28

Badges, label buttons; etc. Fraternity. Pi Beta Phi Fraternity. 244,812, renewed July 31, 1948. O. G. July 20.
Bracelets. Associated Attleboro Manufacturers, Inc. 322,236, Feb. 26, 1935. Republished July 20.
Chains for personal wear, swivels, fobs, etc., Metal. J. M. Fisher Company. 118,965, Oct. 16, 1917. Republished July 20.
Diamonds and diamond rings. Blue Bird Diamond Syndicate, Inc. 294,484, May 31, 1932. Republished July 20.
Jewelry. Olsen & Ebann. 196,507, Mar. 17, 1925. Republished July 20.
Jewelry and novelties, etc. Stein & Ellbogen Co. 232,743, Sept. 13, 1927. Republished July 20.
Jewelry for personal wear, etc. W. E. Richards Co. 415,665, Aug. 14, 1945. Republished July 20.
Precious metal, jewelry, etc. W. E. Richards Co. 358,792, July 26, 1938. Republished July 20.
Rings, buttons, studs, tie-clasps, etc. Larter & Sons. 59,485, Jan. 8, 1907. Republished July 20.
Rings, chain fasteners, etc., Key. Uncas Manufacturing Company. 247,216, renewed Sept. 25, 1948. O. G. July 20.
Rings, Finger. Jacob Segal & Company. 245,785, renewed Aug. 21, 1948. O. G. July 20.

CLASS 29

Powder puffs, etc. D. Gray. 283,935, June 9, 1931. New certificate. O. G. July 20.
Toothbrushes. J. C. Penney Company. 240,200, renewed Mar. 20, 1948. O. G. July 20.

CLASS 31

Carbons and carbonaceous materials, etc., Adsorptive. Darco Sales Corporation. 283,332, May 26, 1931. Republished July 20.
Ice boxes, Portable picnic. Prentiss Wabers Products Co. 431,094, July 29, 1947. Republished July 20.
Mineral material, Granular inert. Research Products Corporation. 413,727, May 8, 1945. Republished July 20.
Refrigerators. Frigidaire Corporation. 137,502, renewed Jan. 5, 1948. O. G. July 20.
Refrigerators. Gibson Electric Refrigerator Corporation. 347,565, June 29, 1937. Republished July 20.
Refrigerators. Gibson Electric Refrigerator Corporation. 397,844, Sept. 22, 1942. Republished July 20.
Refrigerators, mechanical-refrigerating parts, and refrigerating systems, Mechanical. Servel, Inc. 243,556, renewed June 26, 1948. O. G. July 20.

CLASS 32

Cushions, mattresses and mattress pads, etc. Dunlop Tire and Rubber Corporation. 430,909, July 1, 1947. Republished July 20.
Mattress for beds, box springs for beds, coil and fabric springs for beds, etc. Slumber Products Corporation. 430,037, June 3, 1947. Republished July 20.
Table-tops. Enamel Products Company. 116,830, May 29, 1917. Republished July 20.
Table tops. Enamel Products Company. 415,375, Aug. 7, 1945. Republished July 20.

CLASS 34

Air conditioning apparatus and cooling and ventilating systems. Arctic Nu-Air Cooling & Ventilating Company. 214,379, June 22, 1926. Republished July 20.
Blowers, blower cabinets, filters, etc. Lennox Furnace Company. 351,482, Nov. 2, 1937. Republished July 20.
Burners, Oil. Ray Oil Burner Co. 341,238, Dec. 1, 1936. Republished July 20.
Furnaces. Lennox Furnace Company. 288,058, Oct. 20, 1931. Republished July 20.
Furnaces, Gas burning and oil burning. Lennox Furnace Company. 383,382, Dec. 3, 1940. Republished July 20.
Furnaces, Steel warm air. Lennox Furnace Company. 222,885, Jan. 11, 1927. Republished July 20.
Heaters and parts thereof, Gas. J. H. Grayson Manufacturing Company. 209,352, Feb. 23, 1926. Republished July 20.
Heaters fired with gas and furnace stokers, Hot water. Tallman Company. 428,526, Mar. 25, 1947. Republished July 20.
Heaters, Gas-fired house. Bastian-Morley Company, Inc. 239,111, renewed Feb. 21, 1948. O. G. July 20.
Lighters, friction table lighters, fillers for lighters, etc., Friction cigarette. Wm. Filene's Sons Company. 268,379, Mar. 11, 1930. Republished July 20.
Ranges, stoves, and heaters. Majestic Manufacturing Company. 45,252, Aug. 8, 1905. Republished July 20.
Ranges, stoves, and heaters. Majestic Manufacturing Company. 45,638, Aug. 22, 1905. Republished July 20.
Stoves, furnaces, ranges, etc., Heating and cooking. Detroit Stove Works. 135,971, Oct. 26, 1920. Republished July 20.
Stoves, Gas and oil. Detroit Vapor Stove Co. 242,823, renewed June 5, 1948. O. G. July 20.
Wicks for oil cooking and heating stoves. Tallman-McCluskey Fabrics Co. 423,965, Sept. 17, 1946. Republished July 20.

CLASS 35

Belting and leather washers, Machinery. Graton & Knight Company. 246,268, renewed Sept. 4, 1948. O. G. July 20.
Belting, Balata. Turner Brothers Limited. 78,552, June 21, 1910. Republished July 20.
Belting, Grain elevator conveyor. R. R. Howell Company. 427,092, Jan. 28, 1947. Republished July 20.
Belts and belting. Graton & Knight Company. 245,791, renewed Aug. 21, 1948. O. G. July 20.
Brake linings and clutch linings. United States Asbestos Company. 239,088, Feb. 21, 1928. Republished July 20.
Tire protectors, outside tire protectors, etc., Inside. Goodyear Tire & Rubber Company. 245,817, renewed Aug. 21, 1948. O. G. July 20.
Tires. Dunlop Tire and Rubber Corporation. 385,621, Mar. 11, 1941. Republished July 20.
Tires. Kelly-Springfield Tire Company. 501,126, July 20; Serial No. 534,789.
Tires of fabric and rubber and inner tubes of rubber, Non-metallic. Dunlop Tire and Rubber Corporation. 349,000, Aug. 17, 1937. Republished July 20.
Tires, Vehicle. General Tire and Rubber Company. 246,976, renewed Sept. 18, 1948. O. G. July 20.
Tubing, Flexible rubber. Platka Export Inc. 501,127, July 20; Serial No. 535,745.

CLASS 36

Cymbals. Fred Gretsch Mfg. Co. 247,623, renewed Oct. 2, 1948. O. G. July 20.
Needles, Phonograph. Aero Needle Company. 439,774, July 20; Serial No. 514,583, published Apr. 20, 1948.
Phonograph records, Grooved. Royal Plastics Corporation. 501,044, July 20; Serial No. 513,940, published Apr. 20, 1948.
Xylophones. Wm. Filene's Sons Company. 269,451, Apr. 8, 1930. Republished July 20.

CLASS 37

Binders. General Binding Corporation. 388,395, June 24, 1941. Republished July 20.
Binders, Loose-leaf. Heinn Company. 349,625, Aug. 31, 1937. Republished July 20.
Binding devices, Ring-type. General Binding Corporation. 416,095, Aug. 28, 1945. Republished July 20.
Envelopes, Correspondence. Adams-Barker Envelope Co. 501,120, July 20; Serial No. 512,099.
Erasers made of rubber, Typewriter. American Lead Pencil Company. 241,629, renewed May 1, 1948. O. G. July 20.
Forms for accounting, Ruled and printed. Steck Company. 501,118, July 20; Serial No. 541,775, published Apr. 13, 1948.
